It has become a distracting habit of some Members to walk in front of another Member while he is addressing the House from a lectern here in the well of the House. Such practices are in violation of the long-established rule of this body and are a contributing cause to much of the confusion and distraction manifested on this floor every day. I have often heard our visitors in the galleries comment unfavorably about this apparent rudeness to the speaker. To walk in front of a Member who is speaking, or to walk between the Member who is speaking and his audience, is objectionable and discourteous.

We often notice Members who are aware of their discourtesy because they try to pass behind the Member speaking from the lectern, but this too distracts the Member who is speaking and in fact disturbs and obstructs the view of the Speaker. Other Members often bend down or duck as they pass between the Member speaking and the Members seated in the House. All of these feigned obsequities to courtesy are distracting to the Speaker and the Member addressing the House and certainly confusing to our visitors in the galleries. The better and courteous practice would be to cross the House floor behind the seats or to avoid the floor entirely by using the doors on either side of the Speaker's chair. Any transit of the well while another Member is addressing the House from the well is discourteous and distracting and should be avoided.

It should be remembered that when the Speaker is putting a question or addressing the House most Members want to hear the Speaker and plain courtesy to the other Members, as well as compliance with rule XIV, clause, 7, requires that no Member leave or cross the Hall.

ALL SMOKING IN THE HALL IS FORBIDDEN

Another part of clause 7 of rule XIV, which is grossly violated by a few Members, reads as follows:

During the session of the House no Member—shall smoke upon the floor of the House; and the Sergeant at Arms and Doorkeeper are charged with the strict enforcement of this clause. Neither shall any person be allowed to smoke upon the floor of the House at any time.

The rule, and purpose for the rule, is abundantly clear. There appears to be some question about what constitutes the "floor of the House." By precedent and definition, the space behind the rail is as much the floor of the House as the space in front of the Speaker's rostrum. Smoking behind the rail is smoking on the floor of the House and is equally an infraction of the rule as smoking while seated in one of the seats or standing in the well of the House. Smoking behind the rail is even more obnoxious to our visitors in the galleries.

Walking into the Chamber with a cigar or pipe held in the mouth, whether lighted or not, is an invitation for caustic criticism and disparaging remarks on the part of our constituents who visit our sessions and observe our conduct and our compliance with well-known rules of the House.

The prohibition against smoking dates from February 28, 1871. Prohibiting smoking at any time was added on January 10, 1896. When we think seriously about our rules of procedure and decorum, we can quickly and surely understand that technical compliance with the rules may not always be enough to satisfy our fellow Americans who are watching this legislative body in action.

When our constituents come to Washington, it is almost certain that they will visit the Capitol and a session of this House. Members who have served here any length of time have heard with chagrin and embarrassment the harsh criticism from visitors directed at, what appears to them, a lack of reverence, dignity, and respect for this historic Chamber. Information from doorkeepers and officials of the House indicate that hardly a day passes without some constituent complaint regarding our habits or conduct on the floor.

CARE OF SEATS AND FURNITURE

A practice as defenseless as it is objectionable is the habit of placing our shoes against or on top of the seat in front of us. This habit is a clear and distinct breach of the rules of decorum of this House or of any place where we may be a guest. It is most noticeable from the galleries and draws the sharpest criticism and adverse comment from those who visit our sessions.

We may sometimes look upon this great Hall very narrowly as a part of our "shop," but the public looks upon this great and historic edifice as their Hall and their furniture and they expect us to treat it as the furniture in a friend's living room or in the boss' office.

READING AND SIGNING MAIL IS BREACH OF ETIQUETTE

Reading newspapers or magazines on the floor when the House is in session may not violate any specific rule, but such a habit conveys to the public, and to the other Members of the House, an impression of disinterest and indifference to our legislative duties, a lack of attention to the matter under discussion on the floor, and a personal affront to our colleague addressing the House or the Committee.

The reading or signing of mail upon the floor while the House is in session is a similarly rude practice which offends Members who are participating in the debate and degrades the image of the Congress in the sight of our constituents and the public in the galleries.

The greatness of this body is inexorably eroded and degraded by violations of decorum, acts of discourtesy to each other and practices offensive to our constituents. These matters may seem small, even inconsequential, in themselves; but, cumulatively, they are destructive of the confidence and respect of the people in their Representatives and their House.

PRESERVATION OF ORDER AND DECORUM

The Speaker shall preserve order and decorum, and, in the case of any disturbance or disorderly conduct in the galleries, or in the lobby, may cause the same to be cleared. The rules of the House provide the Speaker "shall preserve order and decorum"—rule 1, clause 2. The Speaker does and can set the tone of the decorum and the procedure of the House. We notice a great difference among the various Chairmen who have presided over the Committee of the Whole House on the State of the Union. Every Member could help to improve the procedure and decorum of the House and the Committee of the Whole if he would constitute himself as a committee of one to assist the Speaker and the Chairman in the discharge of their respective duties by insisting that the rules are respected and obeyed.

By reason of our membership here, each of us is endowed with tremendous power over the destiny of our Nation and the lives of its people. With that power goes a concomitant responsibility to discharge the trust reposed in us by the people. Every word we speak, every decision we render is weighted with the position we hold. Our conduct and decorum is carefully observed and evaluated.

I am certain that each of us would want every visitor to these galleries to observe in us a genuine respect for this House of Representatives and for them to take their leave, even after a brief view, with a greater respect for our conduct of the people's business, with a greater pride in American citizenship, with a greater love for our Republic, and with a greater determination to help preserve our free representative parliamentary system of government.

Our compliance with the rules of the House, our courtesy to each other, and

our decorous behavior cannot guarantee these objectives, but it can help. Our failure in these respects can hurt immeasurably.

PROPER DESIGNATION OF COMMITTEES

The proper way to designate any committee of the House is to say "the Committee on Rules," the "Committee on Appropriations." Committees should not be referred to as "the Rules Committee" or "the Appropriations Committee." If we want to maintain the dignity of the committees of the House, we ought not to refer to them in a slip-shod manner. If we do not designate our committees correctly, we cannot expect better treatment from the news media or the public.

Orderly, fair, decorous, and effective parliamentary procedures are required by many and various organizations throughout the land. The rules, procedures, and decorum of the House of Representatives are widely copied by these organizations. Our example here not only influences official and unofficial organizations and institutions in every State of our Nation, but our rules, parliamentary procedures and decorum are widely copied, purposefully or inadvertently, by free nations throughout the world.

STAND TO OBJECT

One must always stand to object to any unanimous consent request and, of course, address the Speaker before voicing the objection: "Mr. Speaker, I object."

INTERRUPTION OF MEMBER ADDRESSING THE HOUSE

Anyone who wishes to interrupt a Member who has the floor should always rise and first address the Chair—"Mr. Speaker, will the gentleman yield?" In this respect, we oftentimes lapse into bad practices and discourtesies. Sometimes we make a quick verbal thrust in the middle of a sentence before the Member having the floor has had a chance to finish his thought—we just say, "Will the gentleman yield?" Some have been even more discourteous by interrupting without receiving recognition by the Chair or permission from the Member having the floor. Only the Member having the floor can yield to another Member; neither the Speaker nor a Member who may be addressing the House by leave of the Member having the floor may yield the floor. Any interruption of another Member should always be done courteously and always first by addressing the Chair, "Mr. Speaker, will the gentleman yield?"

If a Member having the floor yields for an interruption, the remarks of the Member yielded to must appear in the RECORD, but if the Member having the floor declines to yield, he may strike from copy for the RECORD the remarks so interjected—section 2465 of Hind's.

AUDIBLE CONVERSATIONS SHOULD BE AVOIDED

Other practices have been prescribed by an interpretation of the rules or by precedent. These may be of interest to those who sincerely desire to preserve the traditions of the House and to enhance the image of our proceedings. It is not good manners to, and we should not, engage in prolonged or audible conversation when someone else has the floor.

ETIQUETTE OF DRESS

If one breach of etiquette is tolerated by one Member, why should any etiquette be observed by others? The attire of the Members while on the floor is most important to the impression we project and the attitude we assume toward our representative parliamentary function. Although at one time it was considered to be beneath the dignity of the place to appear in anything but quite formal attire, the House long ago abandoned any regimen of special dress. Nonetheless, and in spite of widely individualistic taste and experimentation in wearing apparel by Members while in their home districts or while off the floor, the wearing of hats or sport clothes on the floor of the House is still considered either contrary to the formal rules of the House or a violation of longstanding unwritten rules of decorum for Members. Dark business suits—not bright colors, plaids, or sport clothes—plain, light-colored shirts; and dark single-colored shoes are prescribed for both summer and winter. There are many ways that we can attract the attention of the news media or our constituents in the gallery other than by wearing gaudy or casual clothes or behaving in a raucous or peculiar manner. Attire that is acceptable for folk dancing, sailing, or the horseraces may not be suitable for a session of the House.

We properly require high standards of dress and decorum of our employees, including committee staffs and pages. We should require no higher standards of our employees than we demand of ourselves.

Our constituents and the gentlemen representing the mass media know that adequate facilities have been provided for us immediately off the floor for the purpose of eating, reading, smoking, signing mail, talking, and meeting with constituents or visitors. As a courtesy to our colleagues who are engaged in the debate or who are anxious to hear and understand, and to enhance rather than mar the image of the Congress in the eyes of the public and the media, we ought not to eat, chew, sleep, read newspapers or magazines, sign mail, or try to communicate with the galleries by shouting, facial gestures, or arm and hand semaphores while the House is in session.

Members may not remain near the Clerk's desk during a vote. This practice of herding is contrary to the rules—see volume VI, section 190, Cannon's Precedents—it is distracting to the tally clerks and delays the vote; it gives the appearance of disorderliness to the galleries.

MISCELLANEOUS RULES RELATING TO PERSONAL REFERENCES DURING DEBATE

In debate, one Member should not even mildly impute the motives or intentionally misrepresent another Member—volume V, sections 5132 to 5138, Hind's Precedents.

It is unparliamentary and censurable for one Member in debate to declare that another Member has knowingly stated that which is false—volume II, section 1305, Hind's Precedents.

Language tending to hold a Member up to contempt is not in order in debate—Cannon's, volume VIII, section 2527.

It is not in order to cast reflections on either the House or its membership or its decisions, whether present or past—volume V, sections 5132 to 5138, Hind's Precedents.

It is a breach of order to reflect upon or to refer invidiously to the decisions of present or former Speakers. Cannon's, volume VIII, section 2531.

THIS IS THE PEOPLE'S HOUSE

Here in the House of Representatives, the people speak and hear their voices spoken. This is their forum, established by their forefathers as well as ours. This is their House of Representatives as well as ours. This is their furniture, furnishings, and works of art as well as ours.

Our behavior and decorum represents them as truly as our legislation.

We not only have an obligation to maintain the great traditions of this House, but we have a contemporary responsibility to comply with the rules and to present an image of behavior and decorum commensurate with our positions.

In an era when each of us has cried out for "law and order" or "justice and order under law," we, too, must make a special effort to comply with the known rules, and to strive to set high standards of decorum as a guide to other legislators and as proof that we want to maintain the confidence of the American citizen in our system of representative self-government.

WE MUST STRIVE TO MEASURE UP TO THIS GREAT PLACE

For those who think my suggestions may be picayune, I recall that when Thomas Jefferson came to write his famous parliamentary manual, he prefaced that great work with a classic axiom by one of the noted parliamentarians of the British House of Commons of a preceding generation to the effect that "careful and scrupulous adherence to orthodox rules of procedure was requisite to the maintenance of parliamentary etiquette and was especially necessary to the protection of the minority and the efficiency of successful majorities." Although this statement reaches back several hundred years, it is still one of the fundamental principles underlying applied procedure in every legislative assembly in the world today.

Mr. Speaker, our Capital is distinguished in many ways. It is the center of our Federal Government. It is the heartbeat of the world. Washington, D.C., is a magnificent city with majestic proportions, with wide tree-lined boulevards, expansive parks, impressive statues and monuments, thrilling sights, and the home of numerous American institutions. Most of the historic and popular sites in Washington are natural places or manmade structures—the Washington Monument, the Lincoln Memorial, the Smithsonian Institution, the Library of Congress, Arlington National Cemetery. They are beautiful, historic, and symbolic.

The House of Representatives, together with the other body, is also historic and symbolic. But it is alive, dynamic—here there is action. Here the diverse people of the United States are brought together.

Here there is history and tradition; here there is foresight and progress. Here many of the great voices of our future may speak. Here is the essence of representative government; here is the soul of our national life; here is the tenor of our national spirit; here is the standard of our Nation's compliance with law and the obedience to authority. Here is the hope for our Nation's future. I trust that we may preserve the influence and the labor of those who preceded us. I trust that we can safeguard this institution for those who succeed us. It would be my hope that we could make this House a beacon for other legislative assemblies throughout our Nation and our world.

National character without reverence for place, law and authority is analogous to a fireside without proper consideration for our guests. If proper decorum is disregarded by us, we will deface our image and impoverish our position in the eyes and minds of those who observe us and those we represent. The very stability and acceptability of our legislative acts may be threatened or enhanced by our conduct and behavior here.

Only a few of us, certainly not I, are entirely blameless of breaking the rules of the House or violating the proprieties of decorum. In an unguarded or thoughtless moment, we all have broken the written and traditional codes of conduct for this House. The penalties we pay for violating the proprieties of this body may be greater than we presently imagine. Here, as well as in any society, the loss of respect, the loss of prestige, the loss of faith and confidence, the unfavorable impressions, the adverse criticisms can all contribute to a gradual deterioration of self-government by a free people.

Mr. Speaker, I have recited numerous specific rules pertaining to procedure on the floor of the House and various traditions and precedents pertaining to conduct and decorum, but actually all of these rules and precedents are unnecessary. To paraphrase Robert E. Lee, American citizens expect their representatives in the Congress to be gentlemen—this is the essence of all the rules, I suppose. A gentleman, by definition, is considerate of place, purpose and people. Nevertheless, I trust it has been helpful to reiterate some of the rules and traditions which are part of our heritage and part of the traditions of this great body.

Mr. Speaker, I reiterate that a number of Members from both sides of the invisible center aisle have importuned me to make this study and presentation. I have done it with trepidation and humility as I have the greatest pride in the venerable traditions of this great House, as well as the highest respect for the individual Members of this body. I had hoped that some other Member or Members, more serious, knowledgeable, and decorous than I, would perform this task. For their individual reasons, others declined but each insisted that I proceed. I hope my presentation is helpful to the Members, employees of the House, and our guests in the galleries. I cordially invite other Members to revise or extend my remarks today or at some future time on this subject.

THE DEVELOPING SENTIMENT FOR A RENEWED ESCALATION OF THE VIETNAM WAR

The SPEAKER. Under a previous order of the House, the gentleman from California (Mr. TUNNEY) is recognized for 30 minutes.

Mr. TUNNEY. Mr. Speaker, all Americans realize that achieving peace in Vietnam will be an arduous task which will require patient and dispassionate as well as timely and decisive action. Unfortunately, there is fresh evidence of an emotional response to the problems achieving peace which may well undermine future peace efforts.

California Senator ALAN CRANSTON warned last week that a block of influential Republican Senators are encouraging the sentiment for a renewed escalation of the war. One of the most strident of these Senate advocates of returning to the disastrous policy of escalation is GEORGE MURPHY, who:

First, believes the United States can still win the war militarily;

Second, believes it was a mistake to stop the bombing of North Vietnam; and

Third, has advocated the adoption of a renewed military escalation of the war, if the Paris talks do not produce quick results.

This kind of emotional reaction to the difficult challenge of achieving peace is so obviously uninformed and out of touch with the feelings of Californians and indeed all Americans that it would be brushed aside if it had not come from a U.S. Senator, especially one whose views are shared by such other influential Republicans as STROM THURMOND and JOHN TOWER.

This is a group which has consistently opposed efforts to achieve peace in Vietnam and have felt that America's agony in the war requires our following the illusion of a military victory. Past efforts of escalation have led us further into the quagmire of Vietnam. Deescalation and political accommodation is our best hope of getting out of this tragic conflict. Those who advocate renewed escalation are asking that our present agony be compounded and our prospects for achieving peace be diminished.

Nothing could be more hollow as a threat to Hanoi than the threat of renewed bombing and escalation. They have absorbed at least as much bombardment as all our enemies in World War II and there is no indication that their will has been or can be broken by bombing.

What do we have to show for the bombing? There are about 600 brave American pilots in captivity in Hanoi. One of them is Lieutenant Alvarez of San Jose, Calif., who has been in captivity since August 1964. This is the longest that any American has ever been a prisoner of war in any war in our history.

We have also succeeded in strengthening the determination of the North Vietnamese to continue to resist.

Those who bow to their emotions in advocating a renewed military escalation of the war do a disservice to the country and offer a leadership that clearly will not be followed.

THE NATIONAL GAME

The SPEAKER. Under a previous order of the House, the gentleman from Ohio (Mr. FEIGHAN) is recognized for 30 minutes.

Mr. FEIGHAN. Mr. Speaker, professional baseball this year is celebrating its centennial, which reached its pinnacle here in Washington when the American League all stars played the National League all stars at Kennedy Stadium, Wednesday afternoon, July 23—the night after a great centennial dinner celebration at which baseball and many of its friends honored the greatest players who ever played in the major leagues.

This centennial year serves to remind us that at the age of 100 years, our national pastime is a lusty, progressive, and growing sport which well deserves its recognition as first among all the great team sports which bring so much enjoyment to people all over the world.

In this centennial year the major leagues expanded their membership from 20 to 24 teams, thus capping an exciting decade of growth which has seen the major leagues grow from 16 teams in 10 northeastern cities to 24 teams serving 22 great communities from coast to coast—from Minnesota to Texas—and including that beautiful metropolis in our northern neighbor, Montreal, Canada.

Under the progressive leadership of a youthful new commissioner, Bowie Kuhn, the major leagues continue to streamline their operations. One of the interesting developments of this centennial year is the revolutionary division of each major league into two six-club divisions, which has added immensely to the zest and excitement of the pennant races. There are, in effect, four pennant races now instead of two. The divisional winners will meet in a three-game series at the end of the season to determine which one will represent its league in the World Series.

This new dimension in the major league races is adding new appeal to the already tremendous interest Americans have in baseball. Last year the major league drew more than 23 million fans, and they are well on their way to setting a new record this year.

But paid attendance figures for the major leagues, impressive though they may be, do not begin to tell the story of the intense interest with which Americans follow the game of baseball. Each year, more than 10 million more fans pay their way to watch the splendid baseball played in 153 cities in the United States, Mexico, and Canada by minor league teams.

But these figures pale into insignificance when we consider the vast audience which listens to baseball games on radio and watch it on television. The number of listeners and viewers to each game, multiplied by the number of games played, mounts into the billions. More than 400 million viewers, for in-

stance, watched the seven games of the exciting 1968 World Series, when the Detroit Tigers made such a spectacular comeback to beat the St. Louis Cardinals for the championship.

More than 80 million persons watched on their television screens the stirring action of the all-star game.

Despite this great and growing prosperity, the men who lead baseball are always alert to maintain the exquisite balance between offense and defense which is one of the great charms of baseball. When the pitchers threatened to turn hitting into a lost art last year, the rulemakers acted swiftly and wisely to bring the game back into balance. The height of pitching mounds was reduced from 15 inches to 10, and the strike zone was reduced substantially. The result has been dramatic. If 1968 was the year of the pitcher, 1969 may go down in history as the year of the slugger. Men like the mighty Frank Howard of our Washington Senators, the exciting young Reggie Jackson of Oakland, and powerful Willie McCovey of San Francisco are leading an assault which has stirred excitement and interest everywhere.

And when I say everywhere, I do not mean just everywhere in the United States or even in Canada. Interest in our major leagues is worldwide. The World Series, and the all-star game, are followed with breathless interest in Mexico, in the Caribbean countries, in South America, in Holland, Spain and Italy, and most especially in Japan.

Baseball is one of our Nation's great ambassadors to other lands. Our national game has become the national game of Japan, of Mexico, of Venezuela, and the Caribbean islands. In all of them, it is played professionally with great skill and before huge crowds.

It is played on an amateur basis, on a constantly increasing scale of skill and participation, in Holland, South Africa, Australia, Italy, Spain, Korea, and the Philippines. Even in Cuba, baseball retains its popularity with boys and young men, and the results of major league games are a matter of vital interest to all who can listen to the radio broadcasts from the United States.

The tremendous interest in major league baseball reflects the fact that baseball is a vital part of every American's childhood and adolescence. Rare indeed is the American boy who has not played baseball.

More boys and young men are playing amateur baseball today than at any time in history. It is estimated that more than 4 million youngsters will play baseball in organized programs this summer.

Thanks to the unselfish volunteer activity of three-quarters of a million adults who donate their time and skills to supervising and sponsoring amateur baseball, these programs provide a healthful and wholesome recreational activity throughout the long, hot summer months.

These programs provide supervised league play at every age level from 9 to 21, and make a significant contribution to the mental, physical and emotional welfare of our young people.

Baseball is everybody's game—the American pastime. It is a game so simple that a 10-year-old can play it acceptably; and yet so incredibly difficult that the greatest athletes have never completely mastered it. The extraordinary appeal of baseball and our national fascination with major league baseball is based simply on the game itself.

Unknowing people sometimes complain that "nothing happens" in a baseball game. Innings pass, teams change sides, yet no one scores or appears to come close to it. This, of course, is far from the truth. It is only the fantastic ease with which a big league team completes the plays that makes it appear, when a good pitcher is working, that it will never be scored on. Yet disaster, as every player and every knowing fan knows, waits on every pitch, and can descend with appalling violence and speed. A pitcher can be working beautifully after six perfect innings, and then find himself, in the space of 4 minutes, on his way to the showers. A scratch hit, a bit of bad luck, an adverse call on a close pitch and a hit ball which just eludes the fingers of a racing outfielder, and the pitcher is done; his team defeated.

Here in its purest form is the drama, the perfection of baseball. Action and tragedy, defeat and triumph, are suddenly enacted against a background of apparent safety and invulnerability.

The more you analyze this splendid game, the more wonderful it becomes. Nothing in baseball is left to chance; nothing is slipshod. Although baseball is played outdoors, in an area so large that the contestants are dwarfed, every movement in a game can be and is measured against a standard of absolute perfection. If a runner gets on base, it is because he has either clearly earned it by a hit, or else because somebody has made a mistake—an error or a walk. And this is written down; records are kept.

The exactitude of the game is responsible for its endless statistics; the skill of a player can be precisely measured in his batting average, his runs batted in, his earned-run average. This all-pervading neatness in what should be, by all appearances, a sprawling, disjointed game, extends everywhere on the playing field. Almost never is there a baseball play which cannot be seen and instantly understood by everyone in the park; almost never does the baseball fan have to ask, "What happened?"

In this centennial year, and in every year, baseball remains the sport of America.

Mr. HAYS. Mr. Speaker, professional baseball, first and still the greatest of all team sports, is celebrating its centennial this year—a celebration which reached its climax here in Washington on July 21 and 22, when baseball and its friends joined in a great centennial dinner to honor the greatest players ever on July 21, and the American and National Leagues' greatest players met in the annual all-star game at Robert F. Kennedy Stadium the evening of July 22.

I take pride in the fact that this great game had its origin in Ohio, where the first professional sports team, the 1869 Cincinnati Red Stockings, set a baseball record that never will be equaled by winning 65 games without a defeat.

Ever since that beginning, Ohio has played a large and significant role in baseball.

Cincinnati was a charter member of the National League when it was organized in 1876, and Cleveland was a charter member of the American League when it was formed in 1900.

Cincinnati has been a proud member of the National League. Four times our battling Reds have won the National League championship, and in 1919 and 1940 they went on to win the world's championship.

The Cleveland Indians have won the American League championship three times, and twice, in 1920 and 1948, went on to win the world series.

It is men who make baseball great, and the annals of baseball are studded with illustrious names from the great State of Ohio.

Cy Young, the greatest baseball pitcher of all time, was born and spent his life in Tuscarawas County, and he won 268 of his amazing lifetime total of 511 major league victories for the Cleveland Indians.

Eppa Rixey, one of the great southpaw pitchers of all time, and like Young a member of Baseball's Hall of Fame, gained his fame pitching for the Cincinnati Reds, as did the incomparable "Bucky" Walters, who pitched the Reds to championships in 1939 and 1940.

Bobby Feller, the Hall of Famer with the blistering fast ball and unhittable curve, spent his entire pitching career with the Cleveland Indians, and still is an honored citizen of our State.

Tris Speaker, that nonpareil of center fielders, and Napoleon Lajoie, the epitome of grace at second base, reached the pinnacle of their careers with Cleveland. So also, Eddie Roush, still able and willing to play baseball at the age of 76, spent his greatest years with the Cincinnati Reds.

It was in Cleveland too that that grand old man, Satchel Paige, got his first opportunity to pitch in the major leagues.

Ohio has contributed hundreds of players to major league teams elsewhere, including such great ones as Hall of Famers George Sisler, Roger Bresnahan, Ed Delahanty, Elmer Flick, and Buck Ewing.

One cannot help wonder how the history of our national game might have been changed had it not been for such sons of the Buckeye State as Ban Johnson, founder of the American League; Kenesaw M. Landis, first commissioner of baseball; Miller Huggins, one of the alltime great managers; and the game's most creative genius of all time, Branch Wesley Rickey. Each one of these native sons of Ohio is enshrined in the Baseball Hall of Fame at Cooperstown.

Throughout the years Ohio has been the home of many great minor league teams too, and at this moment the fine teams from Toledo and Columbus are battling for the pennant in the International League.

Ohio has always been famous for its amateur baseball programs. We are proud that the American Amateur Baseball Congress, first of the fine youth baseball programs, has its headquarters in Akron, Ohio. Ohio's high school baseball championship tournament is renowned throughout the land as the best of its kind.

Baseball has always been an important sport in the colleges of Ohio, and Ohio

State University, under the leadership of that grand old coach, Marty Karow, has gone to the college world series at Omaha four times, and won the college championship in 1966.

Baseball is an integral part of life in Ohio, and Ohio has made contributions to professional baseball probably greater than those of any other State in the Union.

Mr. BURKE of Massachusetts. Mr. Speaker, baseball is more than a game.

Major league baseball has provided wholesome recreation and happiness to hundreds of millions of Americans, but the major league clubs have also made substantial contributions to the welfare of the community throughout the years.

One of the most important of these contributions is the generous program of free admissions given to young people, senior citizens, servicemen, the physically handicapped, and various groups of public servants.

Last year the 20 major league clubs gave away 3,867,965 free admissions to their baseball games. By far the greatest number went to youngsters. The clubs entertained 2,320,000 children and teenagers and nonpaying guests. Underprivileged children from the inner cities made up a large percentage of these admissions, and the rest went to young people as a reward to their contribution to the community as safety patrols, workers in charity drives, junior firefighters, honor students, and membership in constructive groups such as the Boy Scouts and Girl Scouts.

In addition to giving away their tickets, most of the big league ball clubs each year play in an exhibition game for the benefit of youth programs in the community. The New York Yankees and the New York Mets meet each year in the Mayor's Cup game which raises more than $60,000 annually for youth welfare programs in the metropolis. The Chicago Cubs and White Sox meet each year in a game which has raised more than $400,000 for health and recreation programs since 1952. All the other clubs are involved in similar programs.

And in the off season, the major league ballplayers and club officers and employees give much of their time to working with young people, and to visiting hospitals and military installations.

Each year, at the end of the season, a group of major leaguers visits our boys in Vietnam, and another group tours military hospitals in other parts of the world.

In its centennial year, we salute baseball as a good citizen.

Mr. CLANCY. Mr. Speaker, professional team sports are so much a part of our life, not only in the United States, but throughout the world, that it is hard to realize that it all began only 100 years ago, with a little band of 10 men in Cincinnati, Ohio.

The Cincinnati Red Stockings, first professional baseball team, were the progenitors of all the hundreds of professional leagues in all sports today.

Baseball, a popular game in the United States from the days of the American Revolution, began to take organized form after Alexander Cartwright drew up the first nationally accepted set of rules for the New York Knickerbockers in 1845.

After the Civil War, amateur baseball teams sprang up everywhere in the country, and as the game grew in popularity, all the inevitable evils of amateurism began to create dissension. Complaints of proselytizing and undercover payments to amateurs were rife.

Aaron B. Champion, president of the Red Stockings, hit upon a solution—the formation of an honestly professional team. He hired Harry Wright as manager, and hired nine other players who proceeded to set a winning record which has never been equaled. Touring from coast to coast and taking on all comers, the Red Stockings won 65 games without defeat.

Would you like to know the names of that pioneer group? Here they are: Harry Wright, manager and center fielder; Asa Brainard, pitcher, and the only pitcher; Douglas Allison, catcher; Charles Gould, first baseman; Charles Sweasy, second baseman; Fred Waterman, third baseman; George Wright, shortstop; Andrew Leonard, left fielder; Calvin McVey, right fielder; and Richard Hurley, substitute.

Harry Wright, as manager, was paid $1,200 for the season, and his brother, Shortstop George, got $1,400. Other salaries ranged from $600 to $1,100, and the total payroll for the season was $9,400. The minimum salary for a player on a 25-man major league roster today is $10,000.

The Cincinnati immortals pioneered in fashion, too. Baseball players had traditionally worn cricket uniforms, with long white trousers, but George Allard, one of the Red Stockings directors, designed a new baseball uniform, not too unlike that which still is worn.

Despite their sensational record on the field, the first professional team did not make its backers rich. Gate receipts were $29,726.26, salaries and expenses came to $29,724.87, leaving a net profit of $1.39 for baseball's—and sport's—first professional team.

Nonetheless, Aaron Champion, president of the Red Stockings, said proudly at the end of the season:

I would rather be president of the Red Stockings than be President Ulysses Grant of the United States.

The success of of the Red Stockings spurred the formation of many professional teams, and 2 years later, in 1871, the first professional league, the nine-team National Association, was organized.

The Red Stockings continued their incredible victory march in 1870 until June 14, when they lost an 8 to 7 decision to the Atlantics of Brooklyn, N.Y., after winning 130 straight games. Truly a record never to be approached again.

Mr. UDALL. Mr. Speaker, as one who has gained some infamy in these halls for his dabblings in partisan baseball, I am happy to lend my insights and experienced voice to this tribute to professional baseball. I am particularly pleased to note, with all due humility, on this centennial occasion that professional baseball's most promising young stars come from my home State of Arizona.

It wasn't always that way. A year before the first professional baseball team was even organized, Harvard University was the goliath of baseball, champion of the world, and no one would dispute its claim. Well, at Harvard they are doing other things now, and the two Arizona universities are America's best.

The University of Arizona and Arizona State University have in recent years fielded some of the best college teams in memory. Under the tutelage of the late and beloved J. F. "Pop" McKale and now under Frank Sancet, University of Arizona teams have consistently been in the running for the national title. More often than not, their rivals came from Arizona State University under Coach Bobby Winkles.

Just last month the great ASU Sun Devils won the College World Series for the third time in the last 5 years, and four of its members have entered professional baseball. Tradition indicates they will make it to the majors in very short order, as have fellow alumni Sal Bando and Reggie Jackson who play for the Oakland A's and recently starred for the American League all-star team. The University of Arizona is represented here in Washington, I might add, by Dave Baldwin, who pitches for the Senators.

Mr. Speaker, Arizona is proud of its baseball champions, and we feel the major leagues are fortunate to have this mine of future gold.

Mr. PATMAN. Mr. Speaker, it is a pleasure to join with the gentleman from Arizona in congratulating the fine Arizona State University and the University of Arizona baseball teams. However, I would like to recognize another college team in the Southwest that is capable, I believe, of giving even these schools a serious challenge. The Panola College Ponies, young ballplayers of wonderful talent from Carthage, Tex., recently brought great honor to themselves, their school, and their fine "winningest" coach, Bill D. Griffin, by becoming the junior college champions of the United States in Grand Junction, Colo.

These aggressive players fought their way back from an almost disastrous semifinal setback to become the outstanding team in the Nation. We in Texas are justifiably proud of Panola's exceptional accomplishment since this honor was won over 443 other junior colleges that fielded teams this year.

It is indeed noteworthy that although only 167 junior colleges supported baseball teams in 1961, just 8 years later, we find that an additional 276 teams have joined this fine sport.

When I first took an active interest in baseball, together with the companions of my youth, back in Cass County, Tex., the game was not quite so orderly, the facilities could be described as skimpy, and it was not so much a spectator sport because every young fellow took his turn at being a player, and I would not be surprised if at times there were more than nine players on a side. But that was a good 60 years ago, give or take a few years, a period during which baseball be-

came a highly organized game, as exciting for the onlookers as it was then for the sandlot players in Texas.

And having recently traveled out to the R. F. K. Stadium here in Washington I am firmly convinced that baseball is experiencing a mighty resurgence of interest. Personally, I never expect to see a player who will mean as much to me as Babe Ruth or Ty Cobb, and that latecomer, Joe DiMaggio, but it is also apparent that today's youth are in equal measure, fans of Willie Mays and Denny McLain.

Mr. Speaker, I respect the sentiment expressed by my good friend from Arizona, I admire the fine teams from his great State, but here today I would like to salute the indomitable practitioners of this great American sport in deep east Texas, the victorious Ponies of Panola College.

Mr. AYRES. Mr. Speaker, as we join in a salute to professional baseball's centennial, I think we should not forget the tremendous contribution to American life that is being made by the organized amateur baseball programs in this country.

Major league baseball has brought joy and excitement to hundreds of millions of Americans, and has offered thousands of young men an opportunity to gain fame and economic security. But our youth baseball programs are one of the most effective tools in fighting juvenile delinquency and in teaching young Americans the old-fashioned virtues of discipline, teamwork, and adherence to a code of rules.

Organized youth baseball gives millions of boys and young men a continuing interest through the long summer months when other boys find that idleness breeds mischief.

Sandlot baseball, as we used to know it, is fast disappearing, as the vacant lots on which neighborhood groups used to play their informal games have been covered with brick and concrete.

But more boys are playing baseball today than ever before in history, thanks to the vision and dedication of the youth programs which offer organized team play leading to State and National championships to our young people.

Almost 4 million youngsters take part in these programs, and there would be more if money was available to provide playing fields and equipment.

Each of these programs is spearheaded by a small band of dedicated administrators, but they exist only because of the devotion and self-sacrifice of hundreds of thousands of volunteer workers who raise funds, supervise the leagues, coach and supervise the boys, and do the thousand things that must be done to keep a program viable.

Baseball is unique in having this army of volunteers to keep the sport alive and growing. All other sports are sponsored and directed almost 100 percent by professional coaches in the high schools and colleges. The schools sponsor and teach baseball too—in 13,500 high schools, 971 colleges, and 443 junior colleges. But because of the nature of the game and its summer season, the school and college baseball players come from what we still call the sandlots, and play most of their baseball in the summer youth programs.

I would call your attention especially to the following fine youth programs:

The American Legion, whose posts sponsor highly competitive teams for 16- to 18-year-olds. More than 52 percent of the United States boys playing in the major leagues today are graduates of American Legion Baseball;

The American Amateur Baseball Congress is oldest of the youth baseball programs. Headquartered in Akron, Ohio, the Congress sponsors baseball in the Connie Mack Leagues for 16- to 17-year-olds, and in Stan Musial Leagues for older boys and men;

Babe Ruth Baseball, headquartered in Trenton, N.J., which provides a splendid baseball program for boys in the 15- to 16-year-old age level;

Boys Baseball, Inc., with headquarters in Washington, Pa., whose Pony, Colt, and Bronco Leagues offer competition on an advancing scale for boys from 12 to 17.

Little League Baseball, located at Williamsport, Pa., in which almost 2 million boys will compete this summer. Almost every American boy with any athletic ambition will have an opportunity to play Little League baseball if the program continues its phenomenal growth of recent years.

There are other worthy youth programs which sponsor baseball on a regional and local level.

As we salute professional baseball's great centennial, let us pay tribute also to the youngsters and the devoted volunteers in the youth baseball programs of America.

Mr. KUYKENDALL. Mr. Speaker, any discussion concerning baseball's 100th anniversary would not be complete without at least some mention of the American Legion baseball program. This program is active in every State of the Union, and I am proud to say that American Legion Post No. 1 of Memphis is the national champion by virtue of its victory in the national tournament at Manchester, N.H., last September.

Under our driving little coach, Tony Gagliano, Memphis won 52 out of 57 games last summer, including 22 in tournament play.

And though the two top pitchers on that team are now playing professional baseball, Memphis plans to make a strong bid for a repeat championship this year. Don Castle, Memphis' No. 1 pitcher and hitter in 1968, was No. 1 draft choice of our Washington Senators, and Ross Grimsley, another outstanding pitcher, has signed with the Cincinnati Reds.

Winning the American Legion championship is not an easy task. Every American Legion post team is a picked group of the best players in its community, and there are more than 2,800 of them. To finish on top in that select group is an honor of which to be proud, and we in Tennessee are proud of our Memphis boys.

American Legion baseball stands at the top of the Nation's competitive youth baseball programs. More than 52 percent of native-born Americans in the major leagues today are alumni of the American Legion program.

Since 1928, the major leagues of professional baseball have made substantial contributions to the Legion tournament program. They presently make a $75,000 grant to the program.

The association between baseball and the American Legion is surely one of the happy relationships in American culture. The Legion is devoted to perpetuating the ideals of patriotism, devotion to duty, and a disciplined approach to manhood. And baseball, the national pastime of the United States, always tries to instill these virtues in its players.

Mr. TAFT. Mr. Speaker, I am pleased to join in congratulating professional baseball on its 100th anniversary. I am also pleased to advise the House that the post office will issue a commemorative stamp in honor of this anniversary. Postmaster General Blount has informed me that the 6-cent stamp will be issued toward the end of the 1969 baseball season in Cincinnati where the first professional team, the Red Stockings, was organized in 1869.

While Cincinnati was the home base for the Red Stockings, the team toured almost 12,000 miles from Massachusetts to California in their spectacular 1869 season and succeeded in popularizing the sport on a national scale. The impetus of this coast-to-coast tour resulted in the establishment 2 years later of the National Association of Professional Baseball. This first pro league was succeeded in 1876 by the National League, which continues successful operation to this day.

This stamp, therefore, is in recognition of the role organized baseball has played throughout this Nation in the past 100 years. Parenthetically, I might add that baseball in this period has also been successfully exported to other parts of the world such as Latin America and Japan. It continues to attract large numbers of fans across the country and we believe that it deserves this kind of national recognition.

A number of baseball officials including Commissioner Bowie Kuhn and Cincinnati Reds President Francis Dale have joined me in efforts to win postal approval for this stamp. A bill I introduced earlier in this session to authorize printing of a commemorative stamp was cosponsored by former major league pitcher and now Congressman WILMER "VINEGAR BEND" MIZELL. I am grateful that through all of our efforts the Post Office will issue this stamp in honor of our national pastime.

Mr. O'NEILL of Massachusetts. Mr. Speaker, I am pleased to join with my distinguished colleague, MICHAEL FEIGHAN, in paying tribute to baseball. This centennial year of professional baseball serves to remind us that the game of baseball may truly be considered our "national pastime." It is a game whose popularity first developed during the first half of the 1800's. Interest in the game multiplied yearly, ultimately evolving into the establishment of the Cincinnati Red Stockings in 1869, America's first regular professional team. It is my pleasure to be able to enthusiastically join all Americans in the celebration of the 100th anniversary of this important moment in the history of the sport.

The game of baseball is actively enjoyed by large numbers of Americans. The youth of this country seem to gain an enthusiastic appreciation for the

sport which serves them throughout their lives. This enthusiasm is of a nature which allows one, when unable to actually participate in the game, to vicariously experience the many joys and sorrows connected with this great game. The many radio listeners and television viewers, as well as the thousands of fans who flock to the ballparks to support their favorite teams, all point toward this time-honored American baseball phenomenon.

In this country today Americans are forced daily to withstand the tension from the many existing national problems. It is an era where war and the threat of war is the order of the day. It is a time when urban problems and domestic strife place great pressure on every responsible American. It is thus my belief that there has never been a time as fitting as the present when the Nation should express its gratitude for having such a pleasurable national pastime. By attending one of the many games of baseball, an individual, if only for a few short hours, is often able to leave many of his troubling cares and worries at home. Viewing a game often allows one to be able to not only lose oneself in the excitement of the game, but to rid oneself of many of one's pent-up emotions. Few experiences are as totally carefree and enjoyable as to be able to root one's favorite team to victory. It is an enjoyment equally appreciated by all; it is an emotion that knows no social barriers.

The free expression of this type of emotional release has never been more clearly demonstrated than in regard to my hometown team, the Red Sox. Over the years, along with the thousands of other Red Sox fans, I have cheered and supported the team through its many trials and tribulations. At times, I must admit, it seemed that the Red Sox had more than their share of "bad breaks"; but my enthusiasm never waned. In 1967, after a long and particularly rigorous season, the Red Sox won the American League pennant. After an initial lull caused by the traumatic shock of actually winning the race, the fans broke out of their trance and went wild with elated joy. One could actually feel the emotional fervor and excitement. Names like "Reggie," "Yaz" and "Conig" were proudly on the lips of the many baseball enthusiasts in the Boston area. It was as if every Red Sox fan, through his tenacious and avid support for the team had personally helped the individual players earn the pennant.

This centennial year of baseball is of particular significance to me. One of my alltime favorite Red Sox baseball players, Ted Williams, has come to Washington, my second home, to aid the Washington Senators in their quest to win an American League pennant. I wish Ted all the luck in the world, and hope that he is truly successful in carrying his team to a second-place finish—behind the Red Sox, of course. Drawing from my observations of his managerial performance, he has already instilled much of the same kind of Boston enthusiasm and spirit which I have enjoyed over the years through the Red Sox.

I would also like to take this opportunity to sincerely congratulate Joseph E. Cronin upon his being recognized as the greatest living shortstop. Mr. Cronin is not only a fine baseball player, but is a great gentleman and a credit to the game of baseball. The award could not be given to a more deserving individual.

I should finally like to close by offering a salute to the game of baseball, and thank it for performing its continuing and important role of acting not only as a welcomed emotional outlet but as a source of pure enjoyment for all Americans.

GENERAL LEAVE TO EXTEND

Mr. FEIGHAN. Mr. Speaker, I ask unanimous consent that all Members who desire to do so may have 5 days in which to extend their remarks on the subject of my special order, which is the 100th anniversary of baseball.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

FEDERAL COAL MINE SAFETY REVIEW BOARD

The SPEAKER. Under a previous order of the House, the gentleman from Pennsylvania (Mr. SAYLOR) is recognized for 30 minutes.

(Mr. SAYLOR asked and was given permission to revise and extend his remarks, and include extraneous matter.)

Mr. SAYLOR. Mr. Speaker, in a colloquy on July 22 between the gentleman from West Virginia (Mr. HECHLER) and me, the subject of the Federal Coal Mine Safety Board of Review came under some discussion. I pointed out at that time that my colleague's statements about the qualifications of one board member, Mr. Lewis Evans, were in error. However, when our discussion ended, Congressman HECHLER left the impression that Mr. Evans had been "consistently outvoted" as a member of the Board.

In order to check the correctness of the statement, I asked for a résumé of the Board's hearings activity. I bring that record to the attention of my colleagues and point out that the Board has only heard two cases since Mr. Evans has been a member of the Board. The first case was settled by the parties involved without the Board taking a vote. The second case is still pending. That, I believe, puts the matter of Mr. Evans' voting record in proper perspective.

At this point, Mr. Speaker, I want the RECORD to show the history of the Board's actions in cases from 1952 to the present:

CASES INVOLVING FORMAL BOARD HEARINGS, TYPE OF ORDERS, BOARD DISPOSITION

Name	Docket No.	Hearing dates	Type of order (Board disposition)
Morrisdale Coal Mining Co	53-01	Oct. 17, 1952	Gassy classification order (Bureau order upheld).
Dominion Coal Co	53-02	do	Imminent danger closing order (Bureau order annulled by Director of Bureau, after compliance by operator; appeal dismissed).
Moshannon Smithing Coal Co	53-03	Jan. 27-28, 1953, Feb. 6, 1953	Gassy classification order (Bureau order upheld).
Snow Hill Coal Corp	53-04	June 8, 1953, June 17, 1953	Elapsed-time closing order (Bureau order revised, to extend time for abatement, upon agreement of parties at hearing).
Rebecca Coal Co	54-01	Nov. 10-11, 1953, Nov. 23, 1953	Gassy classification order (Bureau order annulled).
Kleaner Coal Co	54-02	Oct. 1, 1953	Imminent danger closing order (Bureau order annulled after compliance by operator, and agreement of parties).
Princess Elkhorn Coal Co	55-01	Nov. 30, 1954, Dec. 1-3, 1954, Dec. 6-10, 1954, Jan. 5, 1955.	Gassy classification order (Bureau order annulled).
Three Fork Coal Co	55-02	Dec. 13, 1954, Jan. 17-20, 1955, Feb. 15, 1955	Elapsed-time closing order (Bureau order annulled).
Gauley Mountain Coal Co	55-03	Jan. 31, 1955	Eapsed-time closing order, gassy classification (Bureau order upheld).
Inland Steel Co	55-05	Nov. 28, 1955, Dec. 12, 1955, Jan. 10-14, 1956, Jan. 16-17, 1956, Feb. 17, 1956, July 9, 1956, Sept. 11, 1956.	Glassy classification order (Bureau order upheld in part, and annulled in part).
Harlan-Wallins Coal Corp	55-07	July 6-8, 1955	Gassy classification order (Bureau order upheld).
Crucible Steel Co	56-01	July 30, 1955, Aug. 29-Sept. 2, 1955, Sept. 28, 1955, Oct. 24, 1955, Nov. 2, 1955.	Elapsed-time closing order (Bureau order annulled).
Rosedale Coal Co	57-02	Jan.31-Feb.1,1957,Feb.4,1957,Feb. 21,1957	Gassy classification order (Bureau order upheld.)
St. Marys Sewer Pipe Co	58-01	Jan. 3, 1958	Do.
Straight Fork Coal Co	61-01	Jan. 6, 1961	Elapsed-time closing orders (case settled at hearing; operator complied with orders and appeal withdrawn).
Pittsburgh Plate Glass Co	61-02	Aug. 3, 1961, Aug. 28-30, 1961, Oct. 9, 1961	Gassy classification order (Bureau order annulled, but increase in number of inspections ordered).
Panther Coal Co	64-1	Apr. 14-17, 1964	Gassy classification order (Bureau order upheld).
R. & W. Coal Co	67-11	June 27-28, 1967	Do.
Johnson Coal Co	67-19	Aug. 8, 1967	Coal designation: anthracite or bituminous (appeal dismissed upon motion of Bureau, for lack of jurisdiction).
Midvale Coal Co	68-01	Oct. 10-12, 1967	Gassy classification order (Bureau order upheld).
S. & F. Coal Co	68-18	May 10, 1968	Gassy classification order (appeal withdrawn).
Ratliffe Coal Co	69-77	Mar. 1, 1969	Imminent danger closing order (Bureau order annulled after compliance by operator and agreement of parties).
Barnes & Tucker Coal Co	69-109	Apr. 22-23, 1969	Pending.

Note: Out of 22 litigated cases, the Bureau was fully upheld in 10; upheld in part in 1; and reversed in 5; and 6 cases were settled upon agreement of the parties after a hearing. Therefore, of cases fully litigated and decided, the Bureau was upheld in whole or in part in 69 percent, and reversed in 31 percent, of the cases. 5 of these cases were appealed to the U.S. courts of appeals (3 by operators and 2 by the Bureau), and the Board's decisions were affirmed in 4 cases, and in 1 case the appeal by the Bureau was dismissed as untimely filed. All decisions of the Board were unanimous, except in Princess Elkhorn (1955), in which the worker representative dissented and St. Marys Sewer Pipe (1958), in which the operator representative dissented; both majority decisions were affirmed unanimously by the courts of appeals. There were, of course, a number of other cases involving disputes, which were filed formally or informally, and which were resolved without a hearing. Also, there were a large number of State plan cases which were decided upon stipulation and without dispute of the parties.

This table should go a long way toward dispelling the notion that the Board is not carrying out its statutory function or that the Board is consistently deciding cases to the disadvantage of one group over another. There have been charges that the Board has a built-in bias in favor of the mine owners in that the Chairman of the Board is required to be a graduate mining engineer. The presumption is that such a person would normally come from the ranks of the coal operators as opposed to the miners.

This particular concern was recognized by the Congress when it created the Board and with particular reference to the Chairman, the United States Code provides:

> One person who shall be chairman of the Board, who shall be a graduate engineer with experience in the coal mining industry or shall have had at least five years' experience as a practical mining engineer in the coal mining industry, and who shall not, within one year of his appointment as a member of the Board, have had a pecuniary interest in, or have been regularly employed or engaged in, the mining of coal, or have regularly represented either coal mine operators or coal mine workers, or have been an officer or employee of the Department of the Interior assigned to duty in the Bureau.

The purpose of this section of the code is to make the Chairman of the Board the "public representative" and in my opinion, this is as close as one can come to having the best of two worlds; that is, a trained, experienced, technical expert to head the Board, yet one who is not beholding to either of the two groups—owners and miners—otherwise represented on the Board.

Mr. Speaker, in highly technical fields, such as coal mine safety, metal mine safety, and transportation safety, the legislatures have progressively sought to delegate the initial review of administrative orders to quasi-judicial boards rather than to the courts. Unlike the courts, these boards are equipped with the special competence to resolve technical conflicts, and can act with the speed, economy, and uncomplicated procedures particularly adapted to the problems involved.

The danger from the alternate course of sanctioning initial review by the courts was tragically demonstrated in the explosion which resulted in the deaths of five men at the O'Brien coal mine, Lovilia, Iowa, on March 30, 1953. That disaster, which was a direct consequence of a State court injunction prohibiting enforcement of the Federal act in the O'Brien mine, illustrates only too vividly the grave hazard of granting immediate jurisdiction over mine safety disputes to a court which lacks the technical experience and training, and the specialized procedures necessary to discharge this responsibility.

Apart from the foregoing, the tripartite review board, created within the framework of a coal mine safety program, provides benefits to each segment of the industry and to the Government inspection agency. The advantages to the mine operators are obvious: appeals can be rapidly and economically taken to an independent agency; the merits of the operator's claim receive technically competent consideration; the management experience is applied to the resolving of disputes; loss of production from unwarranted orders can be minimized; and the existence of the board itself helps to assure a fair and reasonable enforcement of the act.

While the advantages to the workers and to the inspectors may be less obvious, they are fully as real and vital to the respective interests of each group. For example, as to the mine workers, the review board can act quickly to prevent unnecessary mine closings, and the workers are protected thereby from substantial losses of personal income and employment, uncalled for by the requirements of mine safety. Moreover, labor representation on the board guarantees that the viewpoint and experience of the workers will be a major consideration at all times and will command the close attention of the Government and of the general public. Furthermore, the decisions of the review board are themselves a forceful means of specifying and compelling a more vigorous enforcement of particular requirements in the statute. As shown by the Federal experience, these decisions are equivalent to a court mandate to correct deficiencies in administration disclosed during the conduct of board hearings. Finally, the joint efforts of labor and management on a review board encourage the cooperation and the common purpose of the workers and operators on safety matters within the individual mines, without which no mine safety program, however well formulated, can possibly succeed.

As to the inspection agency, an independent review board can prove an extremely valuable ally to increase the freedom, stature, and effectiveness of a strong administration. For instance, since the board is readily available to consider appeals by the operators, the inspectors are completely free to probe the enforceable limits of each provision in the law, leaving to the board the responsibility for defining those limits and for the derivative effects of such actions. Also, as a matter of human nature, the mere right of a prompt and fair hearing of a dispute promotes a far greater willingness on the part of the operator to cooperate with the inspector, and to carry out his orders and recommendations. In this regard, since an operator is provided a simple method of taking an appeal, he is less likely to conform superficially with what he is convinced is an improper order and then to ignore the order after the inspector has left the mine. Consequently, a more intensive and persistent compliance with the laws is encouraged. Furthermore, the handling of disputes by a qualified review board often stimulates new ideas for resolving technical problems, and assists the inspection agency in obtaining the adoption and acceptance by the industry of changes in operating methods. Last, the direct participation of management and labor on a board within the very framework of the regulatory program strongly reinforces the inspection agency in its efforts to secure additional legislation and to maintain the independent status so essential to the effective performance of its statutory duties.

In conclusion, Mr. Speaker, experience under the Federal Coal Mine Safety Act has firmly established that an independent review board is of critical importance to the effective operation of any comprehensive mine safety program. The reasons outlined above show that the benefits derived from such a tripartite body are equally important to the operators, the workers, the Government inspectors, and the public at large.

LEGISLATION TO PROHIBIT SALE OF CARS POWERED BY INTERNAL COMBUSTION ENGINE

The SPEAKER. Under previous order of the House, the gentleman from New York (Mr. FARBSTEIN) is recognized for 15 minutes.

Mr. FARBSTEIN. Mr. Speaker, I have today introduced H.R. 13225, legislation to prohibit the manufacture and sale of cars powered by internal combustion engines after January 1, 1978.

My bill is similar to one passed by the California State Senate last week and currently pending in the State assembly. The California legislation would become effective in 1975.

It is generally recognized that the automobile represents the most important single source of air pollution in the United States. It currently is responsible for 60 percent of all air pollution in the country and over 95 percent of carbon monoxide in the air. In terms of the total quantity of pollutants, it produces more contaminants by weight than all other sources combined. In addition to carbon monoxide, it is the prime source of hydrocarbons and the chief source of lead in the atmosphere and produces nearly half of the total nitrogen oxides released.

Even aside from the health and safety hazards, which are so often dwelled upon, the dollar loss resulting from air pollution is staggering. It is estimated at $11 billion a year or $600 per family.

Despite these facts, the automotive industry has resisted all proposals designed to reduce air pollution resulting from internal combustion engines. It would not install pollution reduction equipment in its automobiles until required to do so by Federal law. It would not equip its auto with safety belts or other safety equipment until the Federal Government told it that it had to. And it would not even recall defective vehicles for adjustments until after public agitation got too great. The industry does not appear to have any concern for the public's health and safety.

It is impossible to produce a low-pollutant engine powered by gasoline because uniform burning is impossible. Attempting to reduce pollution by stricter emission can only partially reduce the level of pollution emission. The rigid emission limitations of the Public Health Service set to go into effect in 1970 will be more than offset by the greater number of cars on the road.

As the Public Health Service's projection of the level of automotive pollution suggests, the increasing number of cars

will begin to offset the decrease in pollution brought about by exhaust emission control devices after 1980.

POLLUTION LEVEL FROM AUTOMOBILES BASED ON 1970-71 PUBLIC HEALTH SERVICE STANDARDS

HYDROCARBONS

[In millions of tons per year]

	1968	1972	1975	1980	1990
Urban	7.0	6.0	5.0	4.5	7.0
Total emissions, nationwide	12.0	10.0	8.5	7.0	10.0

CARBON MONOXIDE

Urban	47.5	40.0	32.5	27.5	43.0
Total emissions, nationwide	68.0	55.0	45.0	37.5	58.0

OXIDES OF NITROGEN [1]

Urban	3.0	4.0	4.5	6.0	10.5
Total emissions, nationwide	6.5	8.5	9.5	12.0	19.5

[1] There are no current Public Health Service emission standards.

We must seek alternative methods of propulsion for our cars. The auto industry has the technical capacity. Indeed, if it wanted, it could market a low-cost, low-emission vehicle today. But as brought out by hearings held by the Senate Commerce Committee, none of the Big Three automakers are actively moving toward this goal because they are satisfied with the market status quo. Only American Motors, which is not satisfied with its share of the current market, is moving to explore alternative methods of propulsion.

Among the alternative propulsion systems that have received the most publicity is the steam engine. It produces less than 5 percent of the pollution of the internal combustion or gasoline engine. Turbine engines are another practical alternative. Electric engines would have to be recharged quite often and while they cut down on carbon monoxide pollution, they would cause sulfur dioxide pollution.

The legislation I am today introducing would prohibit the manufacture, sale, or transporting into commerce any new motor vehicle powered by an internal combustion engine manufactured after January 1, 1978, unless the vehicular engine produces a level of exhaust emission of not more than .5 grams per mile of reactive hydrocarbons, 11 grams per mile of carbon monoxide, and .75 grams per mile of oxides of nitrogen.

Since the automobile complex in Detroit, bolstered by the oil industry, refuses to take the initiative to insure a livable world in the year 2000 Congress must act now. The problem is not one of technology, but of will.

The text of the bill follows:

H.R. 13225

A bill to amend the Clean Air Act to ban the use of certain internal combustion engines in motor vehicles after January 1, 1978

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That title II of the Clean Air Act is amended by renumbering section 212 as section 213 and by adding immediately after section 211 the following new section:

"INTERNAL COMBUSTION ENGINE BAN

"SEC. 212. (a) Notwithstanding any other provision of law, except as otherwise provided in subsection (c) of this section, it is hereby prohibited to manufacture for sale, to sell, or to offer for sale, or to introduce or deliver for introduction into commerce or to import into the United States for sale or resale, any new motor vehicle powered by one or more internal combustion engines and any new internal combustion engine manufactured for use in a motor vehicle if such vehicle or engine is manufactured after January 1, 1978.

"(b) Violations of this section shall be subject to injunction and the penalties provided in sections 204 and 205 of this Act in the same manner and to the same extent as is provided therein for violations of paragraphs (1), (2), and (3) of section 203(a) of this Act.

"(c) This section shall not apply to any new motor vehicle powered by one or more internal combustion engines or to any new internal combustion engine manufactured for use in a new motor vehicle which vehicle or engine produces a level of exhaust emissions of not more than .5 grams per mile of reactive hydrocarbons, 11 grams per mile of carbon monoxide, and .75 grams per mile of oxides of nitrogen."

CAMP LEJEUNE PROBLEM

The SPEAKER. Under previous order of the House, the gentleman from Louisiana (Mr. RARICK) is recognized for 15 minutes.

Mr. RARICK. Mr. Speaker, earlier today the gentleman from Mississippi (Mr. COLMER), and the gentleman from New York (Mr. BIAGGI), described to this body the deplorable disciplinary conditions which exist at Camp LeJeune, N.C. The incident they referred to resulted in the most ghoulish death of one marine, serious facial disfiguration to another, and illustrates an explosive situation which must be recognized and severely dealt with by the command to prevent any such further terrorism.

I would like to state that these incidents are not the first, for last November 28, Pvt. Thomas L. Morrow III, a constituent from my district, an honor student from both Louisiana State University and Colorado State, was brutally assaulted and murdered by three marines while he was walking on the base at Camp LeJeune near his barracks.

One of the assassins was convicted of murder and sentenced to 15 years, one was acquitted, and charges against the third were dropped. The three assassins were colored; the victim was white. But it would be difficult to say that Pvt. Morrow, who had just arrived at Camp LeJeune, was a racist or had precipitated the incident since he had just left the Peace Corps prior to enlisting in the Marines.

I join with my colleagues in demanding a congressional investigation of the violent "packs" who have infiltrated into and roam about our military institutions terrorizing and victimizing our young men who are serving their country.

Especially I think that this body is entitled to know whether the problem is lack of competent leadership in the military or whether the leadership is being handcuffed from enforcing discipline because of officious intermeddling by "judicrats" of our Federal judiciary.

Mr. Speaker, I include several news clippings on this topic:

[From the Baton Rouge (La.) State-Times, Nov. 28, 1968]

THREE ARE HELD IN PROBE OF BATON ROUGE MARINE'S DEATH

CAMP LEJEUNE, N.C.—Three men, reported to be Marines, are being held in connection with the fatal beating of Pvt. Thomas L. Morrow III, 26, Baton Rouge, a spokesman at Camp LeJeune said yesterday.

Names of the three suspects were being withheld pending further investigation.

Morrow, son of Mr. and Mrs. Thomas Lindsey Morrow of 2024 Cloverdale and a graduate of Baton Rouge High School, was attacked on the base last Thursday night and died shortly after midnight Monday.

A base spokesman said Morrow suffered a fractured skull in the attack, which occurred in the Montford Point area of the base. Robbery was thought to have been the motive.

The young marine had been beaten and robbed on the base last Thursday night while he was walking back to his barracks. He was hospitalized at the U.S. Naval Hospital at Camp LeJeune.

Morrow was a student in the Marines' service support school training to work in the Corps' disbursement section, the information officer said.

The death is under investigation by the provost marshal at the camp. No affirmative results have been reported so far, the officer said.

Morrow's parents were at his bedside over the weekend.

They were returning to Baton Rouge this afternoon.

A graduate of Baton Rouge High School, Morrow, 26, received a bachelor's degree in wildlife and forestry from LSU in 1964. This June he received a master's degree in wildlife management from Colorado State University.

He graduated with honors from both universities and received numerous academic awards while he was a student.

He was with the Peace Corps briefly before joining the Marines. Morrow received his basic training in California and had been transferred to Camp LeJeune shortly before the fatal beating.

[From the Baton Rouge (La.) State-Times, Feb. 10, 1969]

LOCAL MARINE'S SLAYER IS METED 15-YEAR SENTENCE

JACKSONVILLE, N.C.—A Camp LeJeune Marine court martial board Friday convicted Pfc. Clarence E. Johnson, 20, of Kansas City, Mo., of murder and larceny in the slaying of another Marine from Louisiana.

Johnson was sentenced to 15 years at hard labor, dishonorable discharge, reduction in rank to enlisted man, and forfeiture of pay. The maximum penalty would have been life imprisonment.

He had been charged with murder and robbery in the death on the post of Pvt. T. L. Morrow, 26, of Baton Rouge, La.

Johnson's lawyer said he would ask the 10 members of the general court martial board to recommend clemency—a reduction of the sentence. Three-fourths of the board, or eight members, would have to assent. Johnson also can appeal through military channels.

Johnson and two other Marines were originally charged in the case. One of them, Pfc. Adam L. Vanlandingham, 18, of Baltimore, was acquitted of a murder charge last Friday. But he was convicted of larceny and sentenced to a bad conduct discharge and six months at hard labor.

Witnesses at the Vanlandingham trial testified that Morrow was knocked to the ground by another marine, kicked in the head, and robbed of $60.

The third original defendant, Pfc. Harold McDonald, whose address was unavailable, had been charged only with robbery. This charge was dropped Wednesday, the day Johnson's court martial opened.

CAMP LEJEUNE CONFIRMS BLACK POWER PROBLEMS

(By Ted Fox)

CAMP LEJEUNE.—The joint informational services office confirmed Saturday reports published in New York that some Camp Lejeune Marines have armed themselves with chains, knives and clubs for "self protection" and also the black power salute was being publicly exchanged in service clubs, mess halls and other public places.

Capt. Larry LePage said that the base provost marshall is investigating each report and that some such incidents have been confirmed.

Capt. LePage said that reports of weapons being carried started shortly after a racial affray last Sunday when about 30 Black Marines are alleged to have attacked small groups of two or three White Marines or individuals.

Two of last week's victims are still in serious condition in the Naval Hospital at Portsmouth, Va., where they were taken with severe head injuries.

Investigations of the incidents that have occurred are given priority attention and those persons carrying weapons, including firearms, are being apprehended by the military police and base provost marshalls.

Those Marines giving the Black Power salute or otherwise trying to create racial tensions are being required to give an explanation to the commanding officers and could be charged under the Articles for the Government of the U.S. Navy.

LePage said in reply to a query from a Star-News Newspapers correspondent, "none of the base training session have been interrupted by agitators or that any of the thousands of reservists presently undergoing training had been involved in the racial conflict reported at the huge base during the past week.

Base authorities admitted that most of the militants identified so far have been Black. White militants reported to have accompanied the Black gang last week have not been located.

Investigators are also looking into the possibility of a connection with drug abuse on the part of the racial agitators.

LePage said that most of the reports of individuals arming themselves occurred after the Black-White battle last week near the Hadnot Point enlisted man's service club. He said many of those were apparently carrying chains and knives for fear of a reprisal for the attacks on the White Marines.

About 11 White Marines were injured in addition to those still hospitalized and one other who suffered several stab wounds in the back.

No firearms have been involved so far, according to LePage. He said that these are carefully controlled since Base regulations require that private weapons be registered and locked in the unit armory.

Married personnel may keep weapons in their quarters but still must register them with Base authorities.

MARINE DIES OF INJURIES FROM BASE RACIAL RIOT

(By Ted Fox)

CAMP LEJEUNE—Capt. Larry LePage, joint information officer, said Sunday that Cpl. Edward Bankston, 20, of Picayune, Miss. died as a result of injuries he received in a racial attack a week ago.

He said the corporal was one of 14 Marines who had been attacked by a group of some 30 black Marines that resulted in Bankston's eventual death, skull injuries to James S. Young who continues in serious condition, and 13 others injured to varying degrees. One man is recovering from several stab wounds in the back.

LePage said the unit involved, 1st Battalion of the 6th Marines, had been celebrating their departure for duty in the Mediterranean. He said the unit has since departed and they do not anticipate further incidents.

An explanation was given for chains being carried by the men, reportedly being carried for defensive weapons after the racial attack. LePage said each man had been issued a short chain to be used to lock their weapons to the tubular frame of their bunks aboard ship.

He speculated they hadn't any place to put them and had to carry them.

Investigation continues into the causes of the attacks in which single white Marines or groups of not more than two or three were beaten. It was originally thought the attacks were precipitated by an incident at an enlisted man's dance during which a black Marine tried to cut in on a white sailor's partner.

This, however, is believed to have had no relationship to the subsequent attacks, which some authorities thought were organized. Nine of the participants have been identified and possible charges are now being investigated.

The death of Bankston puts the episode in a much more serious light according to local authorities.

UNFAIR BURDENS ON AMMUNITIONS DEALERS AND SPORTSMEN

The SPEAKER. Under previous order of the House, the gentleman from Georgia (Mr. HAGAN) is recognized for 10 minutes.

Mr. HAGAN. Mr. Speaker, because of the strong reaction not only in my congressional district, my State, but across this vast Nation to the idea of firearms and ammunition registration, I have introduced legislation to correct what I consider unfair burdens on small ammunitions dealers and sportsmen in this country.

The following editorial, "Why Not Prohibit Crime?" from the Stars and Stripes points up well the fact that the good and decent citizen will be the only ones to give up possession of souvenir or protective firearms if the proposal of the President's Commission on the Causes and Prevention of Crime went into effect.

The editorial follows:

WHY NOT PROHIBIT CRIME?

Why does not Congress pass a law making it a crime to commit a crime in America? Foolish question? Not much more foolish in our opinion than that proposed by the President's Commission on the Causes and Prevention of Crime. In a report released early this week, the commission, which was appointed by Ex-President Johnson, proposed to prohibit most citizens, except policemen, from possessing a pistol or revolver. It would compel them to turn in their guns, ancient or modern to the federal government.

Any veteran of World War I who toted home a German Luger or other prized weapon 50 years ago to abide by the proposed law would have to surrender his gun. In many cases, he would have to dig it up from the bottom of a trunk or barracks bag where it may have been stowed these many years. Of course, the World War II man of some 20 years later too would have to throw his prized trophies into the government's pile.

But does anyone with a grain of sense think the professional crook and law breaker would dutifully turn in his tools of the trade? Crime has gone only one way in recent years—up. A courageous home or store owner now and then has thwarted a burglar or would be murderer with a revolver or pistol kept for meeting such an emergency. On occasions, he has put a professional crook or killer out of business for good.

Now the President's Violence commission comes up with the proposal to take away the honest householder's gun; to deny the sportsman who likes to shoot at targets his pleasure; to take from the ex-serviceman the captured gun he prizes and which he gained in the service of his country. These types of citizens are honest men. Under compulsion to abide with the law, most of them would turn in their guns.

The result would be leaving the criminal as the only man in possession of a pistol or revolver. Laws against more serious crime mean nothing to him. Yet, the President's commission apparently reasons that in this little matter of turning in his pistols and revolvers, he would readily comply. Started with a foolish question, we end with this foolish thinking on the part of the Violence commission.

YES, HUGH SIDEY, THERE IS ANOTHER AMERICA, THANK GOODNESS:

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, in the July 18 issue of Life magazine, Hugh Sidey, a writer who endeavors to keep tabs on the condition of the Presidency, wrote a piece which prompts this response from me.

(The Sidey article is reprinted at the end of these remarks.) Briefly, he leaps all over the President. The cause, apparently, is that the President has not solved all the woes of the Nation and the world in 6 months' time. He goes on to wonder why the popularity polls show the President enjoying the outright approval of more than 60 percent of the population. He wonders, somewhat grumpily, whether there are really two Americas. He writes:

Some observers are asking whether or not (sic) there really are two Americas; one, which dominates the national dialogue, is hyper-liberal, Eastern-oriented, righteously arrogant, intellectually ferocious—but is now totally out of touch with the other America which is crime-fearing, inflation-weary and sick of being preached to, family-oriented and suburban-based, and which is the same as Richard Nixon mentally, culturally and, now, emotionally.

On the matter of the President's performance to date I would like to point out that it is easy to run down hill; it is hard to pull up hill. We have been going down hill as a country at a great rate for the past several years. I think President Nixon is doing very well if he can, in his first 6 months, just slow the downhill run appreciably.

For a general answer to the Sidey article, and I think it requires an answer,

I say "Yes. Most certainly there are two Americas":

There is the majority of the country and there is a small, but highly audible, overly visible segment, which he describes reasonably well in the part of the article which I quoted earlier.

In addition to the tiny segment of this self-styled elite, which talks to itself mostly and listens little, America consists of:

First. Hard-working white persons, struggling to meet their obligations, pay their taxes, and raise their children under increasingly chaotic social and moral conditions, and with a shrinking supply of money in terms of real purchasing power;

Second. Hard-working black persons trying to do the same thing;

Third. Young persons in school and college to learn. They work hard—and, yes, some of them join the ROTC to become leaders of our citizen-oriented armed services and many others report for induction without desperately exploring alternatives or contemplating flight from the country.

These are young people with pride in their country. Indeed, many of them are this moment fighting for our Nation's commitment to freedom. They are idealistic and, therefore, deeply distressed, and rightly so, by much that they see on the contemporary landscape;

Fourth. Many poor persons, of every age, weary in their poverty and sick of the soft and easy promises of vote-seeking politicians who do not deliver when they do get into office;

Fifth. Large numbers of citizens of every description who understand well the power of the Lord and the force which the love of the Lord has exercised upon the development of this country. They are sick of having the spiritual side of life downgraded and discounted while material things are elevated.

A large segment of this America, which I like to consider the real America, is encompassed by the famous phrase "The Forgotten Man." Who is the Forgotten Man? I described him partially above. Last year, in a July report to my constituents, I defined him as "the guy in the middle, the hard-working taxpaying, law-abiding, God-fearing citizen. He is not rich enough to fight the ravages of inflation by investing in the stock market or real estate, nor to command the advice of lawyers and accountants to steer him through the tax loopholes. He is not poor enough to have a Federal program smother him with affection, nor does he seem to be young enough nor old enough."

It should not be a matter for wonder—much less a full page in Life magazine—that the real America should welcome the change in tone brought to the administration of affairs by our new President.

Naturally, Americans welcome into power a man who reflects their concerns, who understands the spiritual power which underlies and still inspires everything good done in this land.

This style, for some reason, is not to the liking of most of that little band of self-styled elite. Perhaps they do not like it, because they see an early end to their days of living off the fat of the land. Those days went on far too long. Mesmerized by words and visions of Utopia, which these elegant drones are so adept at conjuring up, a lulled population left them too long in power.

Almost too late we have discovered that their talk of peace meant costly war; their talk of progress in civil rights meant riots in the streets and the near collapse of education; their talk of prosperity for all has meant feverish inflation and in the midst of material riches, the greatest amount of poverty, relatively, that our country has ever seen.

Their talk of individual liberty meant soaring crime and floods of pornography. Their talk of strength has meant a weakened national defense in spite of record spending on defense.

Their talk of morals in public life has meant a terrible falling off in public morals flagrantly illustrated by shocking personal, unethical behavior by one high public official after another in all branches of Government.

Small wonder that the young are disillusioned, that many are led to attempt to tear down what they regard as the corrupt establishment.

The arrogant little band, which has dominated the thinking and the political power of America for 40 years has failed the country miserably.

Yet, they are ever ready to find fault, noisily, with the new President.

It ill behooves them to do so against the background of their own failure.

President Nixon and his administration are striving to make sense and order out of the wretched mess they inherited. Nixon must pull the country together, cool the economy without a recession, calm the troubled fears that have gripped so many, fulfill an honorable commitment in Vietnam without further damage to the United States but without ceding the field to the Communists, and, generally, lead the country into the moon age, so full of unknowns, and all for the good of free men everywhere.

While he is engaged in these tasks, it is pathetic and galling to see him sniped at by those whose bitterness can only be a reflection of their own frustration at realizing how badly they have failed in their days of power.

They are out now. The torch has passed into new hands. And in the reason lies the answer to the question posed by Hugh Sidey: Yes, there is another America. And thank goodness for that.

The article follows:

THE PRESIDENCY: A SUDDEN SHIFT IN THE CAPITAL MOOD

(By Hugh Sidey)

On the surface nothing seems changed. Richard Nixon bounced back to Washington last week with a coat of Florida tan and his best Chamber of Commerce smile. He buried himself in background material for his round-the-world trip, summoned his legislative leaders for breakfast tax talk, studied the sports pages with satisfaction because of the Senators' steady improvement. Then one morning he was standing on a brilliant red carpet under the North Portico toeing the tape marker ("Pres. Nixon") and waiting for Ethiopa's Haile Selassie to come up the driveway and break a new monarchial endurance record—the emperor has paid visits on four U.S. Presidents in his 53 years of power.

The novice Nixon was rounding out his first half-year, sideburns steady at about seven-eights of an inch, hair held to courtroom respectability, chin up (photographers watching, waiting), arms and hands unnaturally immobile at the sides, suit dark and blue (face still suffused with the light of triumph and the satisfaction of being President. *Hail to the Chief* was full and gripping. The tough little emperor came in bearded and smiling at nostril height. The tourists—Nixon's people—pressed against the far fence in awe. But it was not the same as it was a month ago, or even a week ago.

There is always change in the Presidency, of course, but sometimes as in a river there is a sudden plunge or turn and everything is profoundly altered. That happened to Richard Nixon's Presidency in a fortnight.

There are those very close to him who will argue that the hour actually came one hot morning last month in the Air Force Academy's Falcon Stadium when the Depression-ridden boy, the unsuccessful school athlete, the Communist-fearing senator, the vilified and exiled presidential candidate all rose up and asserted themselves in that ringing fusillade against military critics, doubters and waverers. But when the announcement of Vietnam troop withdrawal followed, incipient critics hunkered and hushed. Then came the case of Dr. John Knowles, and the unveiling by the dour Attorney General John Mitchell of a plan to broaden the Voting Rights Act which jeopardizes it more than helps it. Hard after that development came the announcement of new school desegregation guidelines which appear to relax the civil rights pressure that has been brought so painfully through 15 years.

The tone of many newspapers altered. Hostility replaced hope. The nation's leading cartoonist, Herblock, who flavors the morning coffee in the capital, left a huge dagger initialed R.M.N. in the back of HEW Secretary Robert Finch. Black leadership voices in Mississippi and New York rose in anger and fear. A liberal Republican lunching in the refined elegance of Washington's Jockey Club heard the Knowles news, called for a silver tray and burned his GOP registration card. A powerful and intelligent Republican senator leaned against his Georgetown doorway and said he was still waiting for the Presidency to force Nixon to grow bigger, as it had men like Truman and Kennedy. The Washington *Post's* letters column one morning was completely devoted to reader tirades against Nixon.

In small ways concern is acknowledged in the White House. Nixon's global tour is in part a diversionary tactic for the subsurface alienation. There is more talk among Nixon's men about how all this is only a creation of the press (a position, incidentally, taken by Lyndon Johnson as the nation gave him the bum's rush toward the exit). Suddenly, the Nixon family is cruising the river with poor children and explaining the Queen's Room to tourists. Disenthralled senators and congressmen have been invited down with increasing regularity for poached eggs in the morning or a Fresca (another L.B.J. habit) at night.

Yet with all of this there is about the White House a solid base of undamaged confidence. Aides dine with gusto on the delectable soft-shell crabs of the Sans Souci just a block from Nixon's office and point to the Gallup Poll showing 63% approval. Indeed, therein lies the heart of this fascinating drama.

Some observers are asking whether or not there really are two Americas: one, which dominates the national dialogue, is hyper-liberal, Eastern-oriented, righteously arrogant, intellectually ferocious—but is now totally out of touch with the other America, which is crime-fearing, inflation-weary and

sick of being preached to, family-oriented and suburban-based, and which is the same as Richard Nixon mentally, culturally and, now, emotionally.

Riots and crime and hippies and race and war have taken a toll in the mainstream of American life that still has not been calculated. It has been Nixon's avowed purpose to give these mainstreamers their voice, right or wrong, to show them that they are indeed the majority.

Not long ago Teddy Kennedy went to dinner to listen to one of the most respected Democratic seers of this city. What he heard was that if Richard Nixon plays his cards right and events are kind to him, the Republicans could capture this new political center and rule for the next decade. Kennedy came away no more enchanted with the White House occupant than before—but with a sober new view of political America.

NO FREEWAY TO PARADISE

(Mr. GROSS asked and was given permission to extend his remarks at this point in the RECORD and to include a sermon.)

Mr. GROSS. Mr. Speaker, this week I received a copy of one of the finest sermons I have had the privilege of reading on the subject of welfare and the responsibility of individuals to help themselves.

It was delivered by Dr. Adam Baum, pastor, Central Baptist Church, Springfield, Ill., on June 29, 1969. In concluding the sermon, Dr. Baum offers this sound advice:

I wonder if the time should not come soon when preacher and politician alike all across our land will declare a moratorium on speeches and sermons about human rights, and shift the emphasis to the subject of human responsibility?

I commend the sermon to the attention of my colleagues:

NO FREEWAY TO PARADISE

It was nearly 40 years ago that Aldous Huxley, eminent novelist and skeptic, wrote an essay under the title, "Wanted, a New Pleasure." In this essay Mr. Huxley said, "If I were a millionaire I should endow a band of research workers to look for the ideal intoxicant. If we could sniff or swallow something that would abolish inferiority and atone us with our fellows in glowing exultation of affection and make life in all of its aspects seem not only worth living but divinely beautiful and significant, and if this heavenly world-transforming drug were of such kind that we could wake up the next morning with a clear head and undamaged constitution, then it seems to me that all of our problems would be solved and earth would be a paradise."

Whether we agree with Mr. Huxley's definition of paradise or his method of achieving it, one thing must be admitted: most people are in search of some kind of paradise—a world where life would be completely free of all that is unpleasant and painful and where life would be filled with undiminished joy and tranquility. It should be pointed out, however, that Mr. Huxley was willing to pay for his paradise. Said he, "If I had a million dollars I would endow . . ." There is evidence, however, that many of our present-day seekers for paradise are of the impression that all one has to do to obtain this glorious state of life is to demand it. Indeed, one of the conditions of the paradise of their choosing would be a freedom from all obligations. They want rewards without responsibilities, security without sacrifice.

One of the interesting and highly instructive words of our language is the familiar word "hitchhike." Its origin came about long before the era of air conditioned cars, and high speed freeways. It came into use in the days when travel on horseback was a common mode of transportation. When it happened that only one horse was available for two travelers, the plan was for one man to start out on horseback while the other began his journey on foot. When the first rider reached a certain point along the way he would then hitch the horse and proceed to hike on foot. When the second person caught up with the horse he would mount it and continue his journey. Once having passed his travel companion he again at a predetermined point dismounted the horse and hitched it to a post or a tree while he proceeded on foot. In this manner they would hitch and hike until their destination was finally reached. Hence the term "hitchhike." For us moderns, however, the term conveys a different meaning. To hitchhike means to ask for a free ride. It is to expect the advantages and benefits of travel without any of the cost. Someone else pays for the vehicle, the fuel, the tires, the taxes, the maintenance, and the insurance. The hitchhiker gets all the benefits while someone else assumes all the responsibilities. Should there be an accident along the way and the hitchhiker gets hurt it would not be altogether unlikely that he would sue the driver for the recovery of damages.

But hitchhikers are found not only along our highways but in many other areas of our social and economic structure. There is mounting evidence that we are giving encouragement to a social and economic system which suggests the story of a man who when applying for employment said, "I like the sound of the job but the last place I worked paid me more." The interviewer went on to ask, "But did you receive fringe benefits?" "Oh yes," said the applicant. "Did you have rest periods?" "Yes." "Life and health insurance?" "Yes." "Vacation with pay?" Again the answer was "Yes." The applicant went on to state that at his previous job he also received a substantial Christmas bonus. Somewhat puzzled the interviewer went on to ask, "Then why did you leave their employment?" The reluctant reply came, "The company went bankrupt."

Of no less concern is the rapidly growing group which brings to mind the case of the small boy who asked his father if he had any work that he could do around the house to replenish his finances. The father assured the boy that he could think of nothing for him to do at the moment. After a brief hesitation this modern child replied, "Then why don't you put me on relief?" There are now more than eight million people on the relief rolls of our nation. These receive some six billion dollars annually. But this is only a small part of the story. In addition to these eight million there are another twenty-five to thirty million who have been qualified by the government for financial assistance of one kind or another. This means that approximately one out of every six people is being subsidized by the government. The prediction is that it will not be long before these people will cost the American taxpayer about one hundred billion dollars annually.

Without question, as all of us know, there is a need, even a desperate need, for some of this program. There are families which remind one of the man who said to his boss: "I really would not have asked you for a raise if my kids hadn't found out that other children eat three meals a day." We would be guilty of the most deplorable sin if we failed to realize that even in our nation, wealthy as we are, there are those who are too old, too young, too sick, or to uneducated to earn an adequate living. Many of them are the forgotten members of the human family. These must be our collective responsibility. For it must have been people like these to whom Jesus was pointing when He said, "Inasmuch as ye have done it to the least of these ye have done it unto me." Yes, there are those who need our help. Indeed, there are some who should be receiving much more than we are now willing to give them.

But the deep mystery lies in the fact in a period of unprecedented prosperity the cost of our relief program is rising at a rate much faster than the growth of our population or the gain in our economy. During the past 20 years our population increased by some 40% while the number on relief rolls has gone up by 98%. Could it be that we are forgetting one of the most important lessons that history can teach us; namely, that the road to paradise is not a freeway. It is a long, hard, rough road and most of it is uphill. Professor S. M. Miller of Syracuse University saw our situation quite clearly when he wrote: "Welfare assistance in its present form tends to encourage dependence, withdrawal, indifference, and indolence." Or, to put it more positively, the best insurance against poverty is a steady job, a living wage, a willingness to work, and sound management of one's resources. But there is nothing new about this. From beginning to end the Bible gives strong emphasis to this principle as an effective rule of life.

It could well be that one of the critical needs of our day in our land is a return to a biblical philosophy of work. We must learn again that work is not intended as punishment, but as a preventative. One does not have to read far into the Bible to learn that it was in his paradise of idleness and abundance (all of which, incidently, was given to him without effort on his part) that mankind got into serious trouble. This is still true. Give a child or young person everything he wants without his having to earn it and see what happens to that human being.

It should be noted that according to the Bible when it comes to work God always sets a good example. Jesus said it like this: "My Father worketh and I work." God has placed us into a world in which gold must be mined, pictures must be painted, houses have to be built and maintained and crops have to be harvested. This is how human beings enter into a partnership with God and discover that work is not primarily what a person does to live but what he lives to do.

When the fires of Watts in Southern California had been put out and the riots brought to a temporary halt sociologists, economists, and politicians set themselves to the task of finding out the causes for this eruption and this senseless destruction. They were unanimous in their reporting that conditions were deplorable. Illiteracy was high and crime was rampant. They found that at least 60% of the people in the area were on relief. But at the same time it was learned that not many miles from the Watts community fruit crops were being lost in the fields because of a shortage of workers. Certainly there must be something tragically wrong with the system that permits that to happen.

It was about the time of the Watts uprising that someone made a study of another important minority group—the nation's 300,000 Chinese-Americans. It was learned that in spite of hardships and discrimination these people were becoming a model of self-respect and achievement in our national structure. In crime-ridden cities Chinese districts turned up as islands of peace and stability. As one Protestant pastor of the New York City Chinatown said, "This is the safest place in the city. They have a crime rate far below the nation's average." It is reported that New York City schoolteachers are competing for positions in schools where there is a large number of Chinese-American children enrolled. Few Chinese-Americans are getting welfare handouts. They simply do not want them. Instead they place a high value on a willingness to work often long hours and not infrequently for a pay far lower than it ought to be. Somehow they have learned that the road to paradise is not

a freeway, but is a long, rough, hard road most up hill. But back of this remarkable group of Americans is a story of adversity and prejudice that would shock those now complaining of the hardships endured by other minority groups.

On a recent trip through the state of Alabama we started earlier than necessary one morning so that we could turn off the freeway and visit the Tuskegee Institute. We arrived there about mid-morning and to our surprise found that the most prominent building on the campus was a beautiful modern chapel being made ready for dedication. We were told that the old chapel, a wooden structure, was destroyed by fire when struck by lightning a few years ago. For years alumni, trustees, and friends labored to raise funds and to make plans for a new religious center and chapel. Now they could see the fruits of their sacrificial efforts. We were profoundly impressed and deeply moved by what we heard and saw.

From the chapel we went to the George Washington Carver museum. We walked reverently and spoke softly as we reviewed the benefits that have come to mankind through the tireless labors of that great Negro scientist, George Washington Carver. Here was eloquent evidence of what one person can do when his energies are devoted to a noble task. On our way from the museum we paused before the statue of that magnificent man, Booker T. Washington, the founder of the Institute and for some three decades its distinguished president. I could not help but wonder how much strife and turmoil our nation would be spared if we could take seriously words of wisdom spoken by this great black American when he said to his own people and to the nation: "Our greatest danger is that we fail to keep in mind that we shall prosper in proportion as we learn to dignify and glorify common labor and to put brains and skills into common occupations of life. No race can prosper until it learns that there is as much dignity in tilling the field as there is in writing a poem. It is at the bottom of life that we must begin and not at the top. Nor should we permit our grievances to overshadow our opportunities." So spoke Booker T. Washington in Atlanta, Georgia, in 1895.

In conclusion, therefore, I wonder if the time should not come soon when preacher and politician alike all across our land will declare a moratorium on speeches and sermons about human rights, and shift the emphasis to the subject of human responsibilty?

INCOME TAX SURCHARGE

(Mr. HARSHA asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HARSHA. Mr. Speaker, yesterday I voted against the proposal to extend for 15 days the withholding of income tax surcharge deductions from workers' paychecks.

The Congress was advised by the Nixon administration officials that any surplus for fiscal 1969 would be a very thin amount, less than $1 billion, and we were further advised that unless the surtax was extended for an additional period of 1 year as proposed, there would be rampant inflation, a great deficit, and economic chaos in the country and international money market.

Most of us accepted those statements in good faith, and as recently as only a month ago, the Bureau of the Budget advised at least one body of this Congress that the surplus for fiscal 1969 would be less than $1 billion.

Now just within the period of a week the Treasury Department and the Bureau of the Budget suddenly announced that fiscal year 1969, which closed June 30, ended with a surplus of more than $3 billion, the biggest surplus since 1957 and three times what they estimated only 1 short month ago.

Let me say that I want to commend the administration for its effectiveness in holding down expenditures. This new surplus is in remarkable contrast to the $25.2 billion deficit suffered during the previous fiscal year. But I find myself highly critical of the administration's estimates for fiscal 1969 made in testimony before the Senate Finance Committee.

If only 1 short month ago the administration was off in its estimates by such a dramatic amount, there is every reason to believe that their estimates projected over a 12-month period for fiscal 1970 may prove even less accurate, and under the circumstances I could not in good conscience ask the American people to pay still more taxes based on fiscal estimates which in less than 1 month have proved so unreliable.

I find myself, like many of my colleagues, in the serious dilemma of being asked to support taxing procedures against which I have voted throughout my congressional tenure.

It was for that reason that I was one of the 105 Members of the House who yesterday voted against that which I found to be the unnecessary effort to extend the surtax withholding procedure for another 15 days.

MY OIL IMPORT QUOTA 'TIS OF THEE

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. PODELL. Mr. Speaker, an absolutely minimal cut in accumulated oil industry tax advantage is to be offered to Congress. Early indications from the oil industry show strenuous opposition. One of their rebuttals states that any tax reform of the industry will raise gasoline prices by as much as 3 cents per gallon. A bit of enlightenment is in order.

The consuming public is being victimized at the gasoline pump. Retail operators are constantly squeezed. Home heating oil prices are maintained at artificially high levels.

Last week, Senate testimony revealed that abolition of quotas on oil imports could reduce gasoline prices by 5 cents per gallon, and fuel oil for home heating by 3.9 cents per gallon. For an average auto owner purchasing 700 gallons annually, a yearly saving is envisioned of $35. For homeowners with oil heat, an annual saving might be possible of $58.50. Since quotas were instituted in the Eisenhower era, it is estimated that retail prices of petroleum products have risen between $40 and $50 billion to the public.

Incontrovertible proof exists, backing these contentions. Americans today pay twice the going world price for oil. A barrel of oil from Iran costs $2 delivered in Philadelphia-New Jersey. A similar barrel of east Texas sweet crude sells at the same place after tanker delivery for $3.75.

With higher priced crude, a refinery wholesales a gallon of gasoline for 12.8 cents, and a gallon of heating oil for 10.5 cents. With $2 crude, comparable prices would be 8 and 6.6 cents. The American buying public absorbs the entire cost difference directly, to the tune of $7.8 billion, according to several estimates. Lowest estimate of extra annual cost to the public is $4 billion.

It is officially contended by the Federal Trade Commission that many auto owners pay for higher octane gas needlessly. Others pay for "regular" gasoline, which is supposed to cause engine damage. This is entirely due to failure by the oil industry to post octane ratings of their respective products. Today an average consumer has no way of choosing his brand intelligently.

What do we receive instead? Credit cards sent unsolicited. Sumptuous retail locations. Fraudulent games of chance. Full price of all these "added attractions" is passed on to the public, often by unwilling retailers who are required by oil companies to do so in order to remain in business.

Further, credit cards are not only being sent without solicitation to uncounted consumers, but are being abused by oil companies in other ways. They follow up successful credit sales by selling other consumer items. Recently, oil companies have inserted propaganda in their billings containing dubious arguments defending the oil depletion allowance. Credit card holders therefore become unwilling subjects of special-interest lobbying efforts. This is particularly fascinating, especially when we are aware that costs of printing and mailing such material is tax deductible for the oil company—a subsidy consumers cannot avail themselves of.

Title this latest scenario "The Oil Industry Versus America's Consumers." Title it unfair and intolerable. When they speak, they assault truth. When silent, they are trundling away what is left of our Treasury.

At the very least, we should expose every questionable practice of this industry. No matter how they lobby, truth will be told and the public will at last find out what is transpiring. Any victory oil scores now will be as hollow as a jug. Eventually a clean sweep will be made of their privileges, leaving them as bare of preference as they are now devoid of public spirit and fairness. The best is yet to come.

SHADOW OVER OUR LAND

(Mr. PODELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PODELL. Mr. Speaker, a shadow looms and lengthens daily over all America. Title it abrogation of civil liberties. Its father is fear, and its mother is bigotry. Its children are hatred, estrangement, and terrible danger to any further hope for a pluralistic society. That shadow emanates from the Justice Department, which has, in the past 6 months,

changed from champion of the dispossessed to challenger of previous progress.

In the past several years our land has suffered severely from internal dissension which has more often than not taken the form of civil disobedience. Such activities have ranged the entire spectrum of dissent, alienating many Americans and frightening even more. Through our mass media we have been confronted with sights often strange and repellent. Because many dissenters deliberately depart from social norms of dress and behavior, they are of course difficult to accept with equanimity, much less understanding.

Accompanying this has been a growth of crime, use of drugs, and revelations of major activity by organized crime in our midst. Greater permissiveness in the fields of art and culture has resulted in excesses by both profiteers and pornographers. Everyone is familiar with these horrors. Yet taken together, these do not constitute cause for national overreaction and harsh repression. Yet, this seems to be the case today. Such overreaction not only erodes liberties, but also defeats its own ends. If a nation does not possess faith in its national vitality and that of its basic institutions, then repression will only accelerate the process of decay. This however, seems to be outside the political horizon and philosophical understanding of the administration and its chief law-enforcement officer, the Attorney General. As a direct result of his activities, a pall of fear now creeps like a darkening shadow across the face of our Nation, inhibiting behavior, endangering traditional liberties, and bringing into the open with shocking boldness the worst elements in national life. Our divisions are accentuated suspicions sharpened, and cracks appear in the fabric of our society that dissent could never have placed there.

We seem to have lost sight of the fact that dissent is an inalienable right. That almost all those who respectfully disagree are taking issue with acts and national policies which are repugnant to them—immoral, if you will.

Instead of calm in the face of disagreement, which is the mature reaction to be expected from national leaders, we have shrill condemnation and outright demagoguery. A steady stream of repressive utterances, negative legislative proposals, and punitive policies emanates from the Justice Department. Cumulatively, they are far worse than any other aspect of this new McCarthy era we have suddenly been plunged into.

Talk has been heard publicly of detention camps for dissenters. Punitive measures are proposed for student radicals, including stripping them of all Government aid. These are bare beginnings. What is actually taking place or in preparation, we can only conjecture over.

A bold, damning attempt has been made by the administration to roll back painfully won gains in the area of Negro voting rights. Corporations which discriminate in the most obvious fashion are awarded lush Government contracts. Generally, there has been deliberate, calculated catering to the most reactionary elements in American life as a purposeful policy of the administration.

Invasion of individual privacy by Government is attaining astronomical proportions. Wiretapping or fear of it is pervading the entire life of our Nation. Precedents are being set of public revelations of such eavesdropping which are fraught with frightening implications. No one is immune, and increasingly, millions of citizens are loath to utilize their telephones for truly private discussions of any type. All this is being done with full knowledge of the telephone company, which not only acquiesces but calmly covers for these spying activities when queried. On a nationwide basis such activities are spreading, prying into a multitude of personal situations under guise of protecting national security and domestic tranquillity. Let us be ever mindful that every dictatorship in history has used such excuses to deprive all its citizens of their guaranteed rights piecemeal.

A steady stream of legislative proposals are offered by the administration through the Justice Department which strike fear into the lives of law-abiding people by the millions as well as criminals. Rather than address Government full force at causes of criminality and antisocial behavior, the Attorney General is attacking, with loud public relations-minded battle cries and shouts of virtue, the effects alone.

The narcotics traffic is an abomination which should be stamped out through use of harsh penalties. Youth must be protected against those who would prey upon it. But that is only half a solution. It is all well and good to emerge with one of the harshest laws, complete with punitive measures and penalties. Yet what about causes? What of foreign countries producing, shipping, and looking the other way at this traffic? What about rehabilitation? How about adequate detention and treatment centers? Or education against the menace?

Not a word on these subjects. All this administration can offer is a spiked club raised in rage rather than a hand outstretched to heal. Instead of attacking problems at their roots in our deteriorating cities, they offer half-baked solutions slanted at taking advantage of or even exacerbating hatreds and emotions. With a grand shout of political indignation, they heave the baby out the window with the bathwater and shoot the sick person in order to cure him.

Following this comes a proposal for preventive detention of "dangerous" defendants in Federal criminal cases. Again constitutional rights are bypassed. Coupled with this is the Justice Department's outrageous assertion in Chicago last month that it possesses unfettered powers to eavesdrop in national security cases. No restraint can be placed upon their eavesdropping activities by either courts or legislature is the Attorney General's implied assertion. Is this not a threat to the innocent as well as the guilty? Who decides what is a threat to national security?

Now we are confronted by the concept of preventive detention advocated by the administration. This is simply pretrial imprisonment based on "pretrial trial," "probability" of guilt, and "dangerousness" of a person to the community. Rather than addressing itself to the real cause of this problem, which is our jammed judicial system, the administration proposes to cram our detention centers and jails with accused people. There is automatic presupposition of guilt, which is diametrically opposed to our traditional supposition of innocence.

However, the final assault upon the citadel of individual liberty emanates from the administration in form of a request to Congress to grant Federal narcotics agents authority to break into residences unannounced to seize drug evidence quickly.

They propose to seek legalization and nationwide establishment of a precedent fraught with disaster for individual privacy, liberty, and security of a citizen within the confines of his own home. If they succeed, a citizen can have his home broken into without any warning, indication of intent, or notification that his privacy is in jeopardy. In Hitler's Germany, at least there was a knock. And there is another element of danger to be considered.

A man has a right to resist any unauthorized entrance into his home or apartment. Suppose a totally innocent person seizes a pistol he happens to own and have handy, and kills several narcotics agents who enter the wrong domicile? Weapons aplenty are available in our society. Mistakes of this sort and others are made daily. Shall all Americans live in apprehension of a knock on the door? Or lack of one? Remember those old movies about Hitler's Germany and Stalin's Russia? Familiar?

Each of these measures, in the name of war on crime, assault the most basic constitutional rights of every citizen of our Nation. They are a direct menace to our Bill of Rights. The very linchpin of American criminal law is presumption of innocence until proven quilty. Those careful guarantees of our Bill of Rights were constructed to protect the innocent for very good reason. The fourth through eighth amendments of our Constitution take penetrating note of historical abuses of individual rights. Yet this administration disregards past lessons, instead toying with abrogation of individual liberties in the name of fighting crime. Woe unto any society which allows such steps to be taken in its name. The world's desolate places abound in the ruins of such civilizations.

Mr. Speaker, Alexis de Tocqueville warned of the "tyranny of the majority more than a century ago. He expressed fear that the severest test of American liberties and institutions would arrive when a majority used its massive weight to crush rights of a minority which caused it apprehension. Such is the case today.

Similar maladies have beset us in our history. There were the Alien and Sedition Acts. During the Civil War, President Lincoln abrogated civil rights on innumerable occasions, including suspension of habeus corpus. After World War I, Attorney General Palmer staged his notorious "raids." All are objectively

noted as unforgettable and disagraceful blots upon our national escutcheon. All were dangerous outbreaks of political pustules on the body politic. America survived each with scant glory and much sorrow. Not too long ago, the acrobatic gyrations of Senator McCarthy, of Wisconsin, scarred many Americans. Today, instead of guilt by association and innuendo, we have presumption of guilt and overwhelming repression by forces charged with protection of our liberties.

It has all been seen and done before by those who possessed too little faith in our dreams, ideals, institutions and national fiber. This time it is heightened by a worsening climate of fear and fruits of a science which cannot differentiate between a good and an evil master.

So it falls upon those among us who choose to stand up to these dark forces from the abyss of American life. We must and shall challenge them.

When we study past disasters, we wonder how such excesses could be tolerated. It was because those who should have spoken out maintained silence. Such reticence is inexcusable today. America is too powerful to lose its political senses—even momentarily. So it is that we must publicly oppose politics of oppression and repression—aimed solely at political grandstanding. We must halt onslaughts against the Bill of Rights.

In time, this will be a dreary nightmare confined to a line or two in history texts, and perhaps a specialized study or two. Today, however, it is an imminent peril. Let us face these forces with firmness and determination. In our hands we hold one weapon only—the Constitution, backed by America's faith in it.

WHAT THE FLAG MEANS TO ME

(Mr. HANLEY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HANLEY. Mr. Speaker, recently, a young man in my congressional district was the recipient of the first prize in an essay contest. The title of that essay was "What the Flag Means to Me." The author of this essay is David James Coffey. The message he imparted in his essay was, in my judgment, eloquent. I would like to share with my colleagues David Coffey's opinion of what our Nation's symbol means to him:

WHAT THE FLAG MEANS TO ME

(By David Coffey)

To me, the flag of the United States means freedom. The country we live in is different from other countries because each and every American has the right to vote, the right to his own business, the right of free speech. These rights are what make our country different from others.

Liberty was not always here for us. The people of the United States fought hard for these freedoms. To me the flag is a beautiful symbol of equal justice and liberty for all Americans.

Our flag has represented us during war and during Olympic Games. It has represented us all during the history of our country as our nation has become a leader in world power. Love of the flag has made our country grow strong. Fighting men and boys have kept our flag waving high as a banner of liberty for all.

What made Francis Scott Key write the words which now make our National Anthem? It was the Stars and Stripes which were then as they are now, a symbol of freedom and bravery.

Every morning as we start school we pledge allegiance to the flag of the strongest and greatest country in the world. I am glad I am a citizen of this country. I am proud of my love for the flag.

HIGHWAY SAFETY: COMMENTARY NO. 11

(Mr. CLEVELAND asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLEVELAND. Mr. Speaker, the following excerpt from the testimony of Dr. Robert Brenner, Acting Director of the National Safety Council, before the Subcommittee on Roads of the House Public Works Committee, brought to light a potentially effective way to perhaps deter traffic accidents in the future and certainly to advance safety research. During the dialog between Dr. Brenner and myself, the subject of the "little black box" for cars was brought up.

This device is similar to a flight recorder carried on all commercial airplanes. This recorder could provide valuable information concerning automobile accidents. Its presence in a car might cause the driver to exercise restraint and caution.

I wish to share this bit of dialog with my colleagues and other readers of the RECORD, who are concerned with the matter of highway safety:

Mr. CLEVELAND. Another question I would like to ask is: Why is it difficult to document one way or another, the role of excessive speed in highway accidents? I wonder if any studies have been done to show the correlations of changing speeds and accident rates? We discussed that a little earlier.

Have any studies been done to show whether there is correlation between traffic flow and the accident rate? By traffic flow I mean where the flow is smooth and constant as compared to where it is not.

For example, where lights are not properly staggered, or where the roads, side roads come in and people stop to shop, or something like that.

Dr. BRENNER. Answering your first question, sir; the reason why it has been extremely difficult to accurately document the role of excessive speed in highway accidents is the ability or the inability to know exactly or accurately what the speed of the vehicle was at the time of impact by such methods as looking at the skidmarks.

Skidmarks are one of our better means for determining speed at impact; but they are notoriously unreliable, depending upon the condition of the road surface, weather conditions, things of this sort.

There has been some work done to identify impact speed by the amount of crushing of the vehicle structure. This, too, is in its infancy as a usable technique.

We have investigated and are investigating the possibility of building into vehicles devices, such as flight recorders that will enable us to read the device following an impact and get an accurate measurement of how fast the motorist was traveling.

Mr. CLEVELAND. I would like to stop you there.

That sounds like a pretty interesting idea. I have not heard about it before. It is a little black box for the car.

Have there been any cost studies on that? How much this recording is going to cost to put in the car that would tell us the story of what happened to the car, before the accident? Is there any cost figure on that?

(Mr. Clark assumed the chair.)

Dr. BRENNER. No, sir. I very arbitrarily established that it would have to cost less than $10, and this has caused something of a problem.

Mr. CLEVELAND. What would this relate to—what would this recorder relate, that would be of significance?

Speed, obviously?

Dr. BRENNER. Speed, impact forces.

Mr. CLEVELAND. Time?

Dr. BRENNER. Well, there are devices of this sort now being used on trucks to monitor the speed, time histories of trucks. These have been used by fleets for many years. They are rather expensive.

But with regard to the specific measurement of the speed at impact, I believe we must come up with something for less than $10. That is an arbitrary figure.

Mr. CLEVELAND. Besides speed, which is one of the obvious ones, how about whether or not brakes are applied? Could that be cranked into this?

Dr. BRENNER. I think these ideas could be cranked into devices of this sort but every time you crank in something additional, the cost goes up. There is a question as to how much money can be spent on devices of this sort.

Mr. CLEVELAND. Is this one of your research projects?

Dr. BRENNER. Yes, sir; we have a program now at Indiana University in which we are examining the relationship of speed to crashes.

Mr. CLEVELAND. I am getting back to this recording question.

Dr. BRENNER. I am sorry. We have included this in our program plans. We were going to fund the start of a development activity of this nature this fiscal year. We were unable to do so. We hope to do so in fiscal year 1970; but we do have the basic program.

Mr. CLEVELAND. This particular item is one of the ones you had to defer for at least a year because of shortage of funds?

Dr. BRENNER. We had to allocate our funds where we felt the priorities were a bit higher.

Mr. CLEVELAND. How much is research on this?

What do you have slated for the cost of the research on this recording device?

Dr. BRENNER. I would have to submit that for the record, because I cannot tell exactly how much it will cost to bring a device of this sort into practice. It might be almost an off-the-shelf kind of item. It might take a lot of development, particularly because of the cost factor.

We could put a $200 or $300 instrument in without any difficulty today but, for our purposes, we must develop methods that are much cheaper.

There has been some research that attempted to establish the impact speed by looking at the filaments in the headlamps. There is comparatively little mass in these filaments and there is some indication that, by measuring the amount of bending in the filament you could do a pretty good job of estimating what the impact forces were. That works fine, unless the light is on, which makes the metal soft and it does not work.

We are working on the problem.

Mr. CLEVELAND. Was your thinking on this recording device coupled with aspect of law enforcement, for example, if somebody were stopped for speeding, they could take a look at this recording device and see who is right?

Dr. BRENNER. This is one possible application of a device of this nature. However, I want to emphasize that our first requirement with regard to devices of this sort is research, to assist impact forces.

Now, some corollary benefits, which might ultimately take place, would have to await the development of the product.

THE PROUDEST WEEK IN THE HISTORY OF THE UNITED STATES

(Mr. HANLEY asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. HANLEY. Mr. Speaker, last week has to be one of the proudest in the history of the United States. Not only has America's space program accomplished almost the impossible in landing a man on the moon; more incredibly, it has brought him home safely. The splashdown in the South Pacific was the culmination of months, indeed years, of backbreaking effort on the part of thousands of people, not the least of whom were the three brave astronauts who made the journey.

The names of Neil Armstrong, "Buzz" Aldrin, and Mike Collins will not only be enshrined in history, they will be remembered fondly and warmly by every American, and every young man and woman who has a dream for the future.

This victory, Mr. Speaker, was not a victory for the United States alone, however. It was a solid accomplishment for man seeking to unlock many of the cosmic mysteries which have hung like a dangled carrot before his mind for thousands of years.

There is a great lesson to be learned from our successful moon shot, Mr. Speaker. If we can achieve this goal, then certainly it is within the power of mankind to achieve the goals of progress here on earth. With solid determination, we can eliminate poverty, we can eradicate discrimination, we can rebuild our cities, we can reclaim our polluted rivers and lakes and air, we can provide jobs and educational opportunities. It takes guts and vision to achieve these goals, Mr. Speaker. I think we have already demonstrated that we have a measure of both.

NATIONAL TIMBER SUPPLY

(Mr. MCMILLAN asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous matter.)

Mr. MCMILLAN. Mr. Speaker, I insert in the RECORD an editorial written by Mr. Harold J. Sugarman, publisher of the Building Supply News.

This item gives some information which I think the Members of the House should read in connection with the national timber supply bill recently introduced by me and approximately 40 other Members of Congress.

The editorial follows:

A CALL TO PROMPT ACTION

Only a few short weeks ago, the home building industry was bemoaning high lumber-plywood prices.

You don't hear much about that these days; because the market "took care" of those prices. Instead, it's tight money that holds us back. At least that is what everyone seems to be saying.

Yet, the temporary shortages of timber that caused lumber-plywood prices to escalate are but a foretaste of much more serious shortages likely in the future, unless action is started this year on a long-range timber supply program. Money, however, is always available at a price; and the home buyer is less concerned with the price of money than with the amounts of his down payment and monthly payments.

In any case, the money problem will solve itself in due course; but the timber supply problem requires prompt remedial action.

ROOT CAUSE OF PROBLEM

Because the Federal government owns by far the greatest timber stands in the Western States, stands which are actually deteriorating steadily because of inadequate harvesting, the cost of saw and peeler logs regulates lumber-plywood prices in periods of short supply. Uncle Sam in effect regulates log prices by limiting access to much of the supply of ripe timber.

A bill now in Congress, the National Forest Timber Supply Act (H.R. 12025), is languishing in the Agriculture Committees of both House and Senate, despite the fact that the bill has many prestigious sponsors. This bill will enable the Forestry Service to take the steps necessary to open up vast timber tracts that are now "dying on the vine."

Delay in enactment of this bill only hastens the day when we will experience a lumber shortage that "will curl your hair."

The plans for 26,000,000 new and rehabilitated dwelling units in the next decade, can be slashed in half if action is not started soon to get at the causes of recurrent timber shortages.

You should write at once to your Congressman and Senators to support this legislation. Also, write to the heads of the two Agriculture Committees, Senator Allen Ellender (La.) and Representative W. R. Poage (Texas).

LEAD POISONING AMONG CHILDREN

(Mr. RYAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RYAN. Mr. Speaker, I am pleased to announce that today 18 of my colleagues have joined me in cosponsoring a legislative package consisting of three bills which I previously introduced to combat one of the major diseases among the children of our cities—lead poisoning.

The following Members of the House are cosponsoring the three bills: Mr. BRASCO, Mr. BURKE of Florida, Mr. BURTON of California, Mr. BUTTON, Mr. DADDARIO, Mr. EDWARDS of California, Mr. HALPERN, Mr. HORTON, Mr. HAWKINS, Mr. KOCH, Mr. MIKVA, Mr. MCCARTHY, Mr. MURPHY of New York, Mr. PODELL, Mr. PUCINSKI, Mr. ROSENTHAL, Mr. SCHEUER, and Mr. WOLFF.

This disease has been largely ignored in the past, and only recently the nature of lead poisoning and its effects has become known.

Young children eat anything they can get their hands on. In our urban centers, the thing that children living in dilapidated housing get their hands on easiest is bits of paint and plaster that have peeled or fallen from the walls and ceilings—and from this they get lead poisoning.

Many localities have recognized the danger of lead-based paints, and they have outlawed their use on the interior surfaces of housing. But lead-based paint that has been previously applied remains, and peels and falls off.

Children living in the substandard housing of city slums, therefore, are exposed daily to this deadly health hazard. It has been estimated that 9,000 to 18,000 New York City children have lead poisoning. Recent studies in Cleveland, Chicago, and Baltimore, show that 5 to 10 percent of the children tested had lead levels serious enough to qualify them as poisoned.

To make matters worse, lead poisoning cases are seldom reported. In New York, for example, cases were reported to the health department only after the disease had reached its most critical stages. When the poisoning gets this far, it results in permanent mental retardation, cerebral palsy, epilepsy, and death. In the last 10 years, 138 children died in Chicago of lead poisoning 128 children died in New York between 1954 and 1964. The early stages are very much like the flu or virus, and so are ignored by parents and doctors. Health officials and parents must be made aware of this health menace, or it will continue at a tragic rate.

In a recent article entitled "Lead Poisoning: A Diet of Death," which appeared in the New York Sunday News on June 22, Bert Shanas pointed out that the toll of children suffering from this insidious disease was astonishingly high. For example, last year in the city of New York alone, 863 children were reported to have lead poisoning. He also pointed out that this figure was really misleading because thousands of cases are not reported.

This last spring, three children in one family died of lead poisoning. The specter of this one fact alone to me is most ominous. For, if one child in a family is stricken, then other children will most likely be stricken.

Congress must take steps to halt this needless waste of humanity. It must again act to protect children from this hazardous condition, and spare their families the grief and suffering brought on by the untimely death of an otherwise healthy child.

The three bills being introduced today will help alleviate, and hopefully, terminate the problem of lead poisoning in our urban children.

The first bill establishes a fund in the Department of Health, Education, and Welfare from which the Secretary could make grants to local governments to develop programs to identify and treat individuals afflicted by lead poisoning.

The second measure is directed at the problem of slum housing itself, and the need to eliminate the causes of lead poisoning. It authorizes the Secretary of Housing and Urban Development to make grants to local governments to develop programs designed to detect the presence of lead-based paints and to require that owners and landlords remove it from interior walls and surfaces.

The third bill, a potentially effective tool to combat the spread of this disease, would require that a local government submit to the Secretary of Housing and Urban Development, an effective plan for eliminating the causes of lead-based

paint poisoning as a condition of receiving any Federal funds for housing code enforcement or rehabilitation. It also would require that these plans be enforced.

Mr. Speaker, the situation in our major cities today, particularly with respect to the lack of available funds to eliminate lead-based paint poisoning, requires Federal Government assistance in the effort to eliminate the causes of lead poisoning in children.

There is no excuse for our permitting this poisoning to continue. Lead poisoning is not a disease whose cause is questionable and cure nonexistent. We know its causes and its cure.

There must be a national commitment to assist local areas to find those children with lead poisoning and give them proper treatment. Even more necessary, we must attack the problem at its roots. We must eliminate the lead-based paints from inner city housing. The three bills we have cosponsored today are aimed at achieving these goals.

SELECTION PROCEDURES FOR RURAL CARRIERS

(Mr. OLSEN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. OLSEN. Mr. Speaker, today I am introducing a bill to offset the very serious problem which was created by the new selection procedures for rural carriers administratively effected by the Post Office Department in April of this year. Under these new selection procedures, approximately 25,000 dedicated, loyal substitute rural letter carriers are denied the opportunity of ever securing a rural carrier appointment. Needless to say, this is a crushing blow to the morale of this group.

It is little known, but the large group of substitute rural carriers are noncareer appointees. They hold no civil service status. They are paid only a daily rate for each day they are employed. Yet, I am sure we all know these substitute carriers stand constantly ready to report for duty on any occasion when the regular rural carrier is on leave, or because of any emergency reason he is unable to make his appointed rounds.

As you know, it is extremely rare indeed when any of the Nation's 31,000 rural routes are not given service due to the absence of the regular carrier. With these thoughts in mind, I have drafted a bill providing each qualified substitute rural carrier of record with at least 3 years of satisfactory service will be eligible to receive a career appointment upon satisfactory completion of a noncompetitive examination. Appointments in this category would be made to any rural route vacancy remaining unfilled after reassignment procedures and consideration of career employees at the local post office have been completed.

Mr. Speaker, I sincerely hope this legislation can be given immediate attention by the proper committee and that it will be sent to the floor of the House for action and a vote prior to our recess at the end of this session.

OHIO RIVER—LIFELINE TO MID-AMERICA

(Mr. HECHLER of West Virginia asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HECHLER of West Virginia. Mr. Speaker, the mighty Ohio River, often described in song and verse as "the beautiful Ohio," is undergoing a multimillion-dollar lock and dam modernization program by the U.S. Army Corps of Engineers to avert a 981-mile traffic jam. The important role this river played in the early history of our country, the vital part it is playing today and what the modernization program means is described in the following article from the summer 1969 issue of Water Spectrum, a new quarterly publication by the Corps of Engineers:

LIFELINE TO MID-AMERICA

(By John W. Lane, public information officer, Ohio River Division)

It has been a long time since anybody shipped a barrel of whiskey, a dozen hogs or even their Aunt Betsie on an Ohio River Packet boat. But the river is closer to Ohio basin people than ever before.

There was a time when everything that moved in this part of the country traveled by river boat. Furniture, machinery, livestock, farm produce, hoopskirts and buggy-whips, all were shipped on river boats before the railroads and modern highways.

Ohio Valley merchants and manufacturers shipped and received their goods by packet boat. Barrels of Kentucky whiskey came on the same vessels with hogs and pianos. A cousin visiting from Pittsburgh probably came by river boat rather than endure an arduous journey over rough and possibly dangerous roads. During its pre-Civil War heyday, the Nation's inland fleet annually carried more tonnage than that handled by all the vessels of the British Empire—and in a day when Britannia really ruled the waves.

This movement of people and miscellaneous freight on the river ended with the rapid growth of the railroads, starting during the latter years of the Civil War. Just too fast for the graceful but plodding steamboats, the railroads soon took over the passenger and freight trade.

The end of the packet was as dramatic as its beginning. Within four years of the establishment of rail service between Cincinnati and Pittsburgh, the Pittsburgh and Cincinnati Packet Line failed. This had been one of the most luxurious of the inland fleets with the fastest and most comfortable vessels. The line annually carried $35 million in freight and some 80,000 passengers, or about 50 percent of the freight and some 75 percent of the passengers traveling over this reach of the river.

The death of the packet boats marked the beginning of a far more efficient, if less colorful, system of river transportation. This was the movement of bulk materials in barges pushed by towboats. After a shaky start in the late 1800's, America's inland waterways shipping has grown into a major industry with about $2 billion invested in equipment and employing about 200,000.

Lost with the steamboat era was the personal touch with the river that everyone in the Ohio Valley had in their daily lives. With more than 8,000 steamboat arrivals recorded at Cincinnati in 1852—about one an hour—Cincinnatians must have felt very close to the Ohio.

Today the river is as important as ever in our lives—probably even more than it was in the last century. Each year tonnage moving on the river surpasses the previous year. In 1967 some 113.5 million tons of freight were shipped on the Ohio, considerably more than the amount which went through the Panama Canal that year.

The materials that are shipped by barge on the Ohio are, however, in a condition not readily usable by the average resident. None of the 49 million tons of coal that traveled on the river in 1967 found its way into anyone's home as coal. But the electricity generated by that coal helped run our homes, schools and factories.

The river carried 21 million tons of petroleum for our cars and industries. Another 14 million tons of stone, sand and gravel fed to the burgeoning highway construction and urban rebuilding throughout the country.

Most people probably haven't ordered a ton of bituminous coal in their lives. Many have never been on a towboat. But while the public landing isn't the social gathering place it was a hundred years ago, the river and the low cost transportation it provides has helped generate the tremendous development in the Ohio Valley. The river could be accurately described as the lifeline of the Ohio Valley.

We are often asked how the Army Corps of Engineers became involved in building dams on the Ohio. This all began early in our Nation's history when, after the Revolutionary War, early Congresses, because of a shortage of engineers in the country, called upon the Corps to perform surveys and act as engineering consultant. This grew over the years into the Corps' present mission in comprehensive water resource development which includes navigation, flood control, water supply, hydroelectric power, recreation, flow augmentation and fish and wildlife enhancement.

The Corps' first work on the Ohio was in 1824 when Congress authorized $75,000 for the removal of snags, a major cause of steamboat accidents. The navigation problem of the Ohio, however, was more than simply snags. Almost annually, the river would run so low that a man could wade across at several places. When this happened, river traffic sat on its hulls in the mud and waited for high water.

Congress, recognizing an obvious threat to the Nation's economy, directed the Corps of Engineers to canalize the river by means of a series of low-lift locks and dams. The first dam, Davis Island near Pittsburgh, was completed in 1885, and the entire system of 46 structures was dedicated in 1929.

Most of the dams were of the movable wicket type. It consists essentially of a line of slats, or wickets, resting on a concrete foundation which stretches across the river. The sections of thick timber slats are nearly four feet wide and in the neighborhood of ten feet long. In the raised position each slat has one end resting on the foundation and the other projecting above water, and is supported by a strut. The whole effect is of a picket fence set across the river, the pickets so close together that only a trickle of water passes between, and the fence leaning slightly downriver better to withstand the pressure.

The advantage of the wicket dam is that when the river rises and becomes navigable without the aid of dams, the wickets can be lowered. The struts are released and the wickets are folded down flat against the foundation. Instead of using the locks, river traffic just sails right on over the dam. Thus the only time a tow has to go through a lock is when without a lock the river would be impassable.

The dams, designed to hold navigable pools during periods of low flow, had single 600-foot by 110-foot locks. The system adequately handled the 20 to 30-million tons of freight that moved on the river annually in the 1920's and '30s.

After World War II, the diesel-powered towboat began appearing on the river, and with its greater horsepower and load capacity it soon shoved the steam towboats into obscurity. The diesels also shoved the system of 46 locks and dams into obsolescence.

With their added horsepower the new boats handled loads twice as long as the 600-foot locks, resulting in tows having to be broken and put through the locks in two sections. This double-locking, taking up to two hours, threatened to strangle further development in the Ohio Valley.

To avert a 981-mile traffic jam, the Corps of Engineers in the early 1950's began replacing the 46 old structures with 19 modern high-lift dams. The new dams feature a 1,200-foot-long lock chamber for larger tows, plus an auxiliary 600-foot lock for pleasure boats and smaller tows.

The new structures speed transportation on the river with faster locking and by creating longer open pools. Markland Locks and Dam, just downstream from Cincinnati, creates a 95-mile long pool and replaces five old low-lift structures. Currently, there are 33 navigation structures on the Ohio, 10 of which have modern lock facilities.

Brig. Gen. Willard Roper, Division Engineer of the Corps' Ohio River Division, says the river's heaviest traffic moves on the stretch below the confluence of the Ohio and Kentucky's Green River. This traffic has been engendered by the boom in the coal business along the Green and other tributaries.

"The Division's biggest immediate problem," General Roper says, "is the replacement of Lock & Dam 50 and Lock & Dam 51, the two movable dams scheduled to be replaced by the Smithland Lock & Dam. We hope to start contracting next May to begin construction sometime in fiscal 1970. But the new dam will not be ready before a serious bottle-neck has developed."

As a result of the unexpected traffic pressure in the lower Ohio, Smithland Lock & Dam will be constructed with two 1,200-foot locks instead of the one 1,200-foot and one 600-foot lock found in the other new dams.

Corps planners are considering putting two long locks in the Mound City Lock and Dam, also.

This farthest-downriver dam has had other problems, however. The main one was finding a suitable site for a fixed dam near the mouth of the Ohio.

The foundations of the old wicket dams are relatively light and can be supported on piling in almost any kind of river bottom, but the heavy new dams are a different matter.

Pending completion of design, and construction at Mound City, L&D 52 and 53 will have to carry the traffic. These are both wicket dams. As noted already, Dam 53 is on the bottom of the river a majority of the time. Dam 52 is up half the time and down half the time. In order to meet the traffic load a temporary 1,200-foot lock has been constructed at Dam 52 at a cost of about $10 million. This should pay for itself within seven years in delays avoided alone. It will be at least this long before Mound City can be open for use.

But in spite of construction delays and traffic jams, tonnage projections indicate the Ohio will play a vital role in the future economy of the basin.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. PEPPER, for Thursday, July 31, 1969, on account of official business.

Mr. SAYLOR, for 3 days, August 4 to 6, 1969, on account of personal business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. FEIGHAN, for 60 minutes, today, to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. TUNNEY) to revise and extend their remarks and include extraneous matter:)

Mr. REUSS, for 30 minutes, today.

Mr. FARBSTEIN, for 15 minutes, today.

Mr. GONZALEZ, for 10 minutes, today.

Mr. RARICK, for 15 minutes, today.

Mr. HAGAN, for 10 minutes, today.

Mr. SAYLOR (at the request of Mr. FISH), for 30 minutes, today, to revise and extend his remarks and include extraneous matter.

EXTENSIONS OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. MADDEN and to include extraneous matter.

Mr. MICHEL prior to the Committee rising during the consideration of H.R. 13111 and to include extraneous matter.

Mr. RANDALL while in the Committee of the Whole on H.R. 13111 prior to vote on the Sikes-Smith amendment.

Mr. RYAN and to include extraneous matter during his remarks in the Committee of the Whole on the Smith-Sikes amendment.

Mr. RYAN prior to the adoption of the Kyl amendment while in Committee of the Whole on H.R. 13111 on Wednesday, July 30.

(The following Members (at the request of Mr. FISH) and to include extraneous matter:)

Mr. HASTINGS.
Mrs. HECKLER of Massachusetts.
Mr. HARSHA.
Mr. GROSS.
Mr. ROBISON.
Mr. BUTTON.
Mr. CONTE.
Mr. ANDERSON of Illinois.
Mr. BEALL of Maryland.
Mr. WYMAN in two instances.
Mr. HORTON in two instances.
Mr. DERWINSKI in two instances.
Mr. DENNEY.
Mr. BUSH.
Mr. COUGHLIN in two instances.
Mr. DON H. CLAUSEN.
Mr. CARTER.
Mr. SNYDER.
Mr. WHALEN.
Mr. FULTON of Pennsylvania in five instances.
Mr. PELLY in two instances.
Mr. HOSMER in two instances.
Mr. DELLENBACK.

(The following Members (at the request of Mr. TUNNEY) and to include extraneous matter:)

Mr. HAMILTON in 10 instances.
Mr. MATSUNAGA in two instances.
Mr. CHARLES H. WILSON.
Mr. ASHLEY.
Mr. OBEY in three instances.
Mr. GONZALEZ in two instances.
Mr. SLACK.
Mr. GALLAGHER.
Mr. MIKVA.
Mr. WOLFF.
Mr. RODINO in two instances.
Mr. JONES of Alabama in two instances.
Mr. DORN in two instances.
Mr. EDMONDSON in two instances.
Mr. RARICK in four instances.
Mr. O'HARA in two instances.
Mr. TUNNEY.
Mr. HELSTOSKI.
Mr. HANLEY in two instances.
Mr. SCHEUER in three instances.
Mr. YOUNG in two instances.
Mr. TIERNAN.
Mr. MARSH in two instances.
Mr. BIAGGI in two instances.
Mr. DULSKI in three instances.
Mr. ROGERS of Florida in five instances.
Mr. RIVERS in two instances.

SENATE BILL AND JOINT RESOLUTION REFERRED

A bill and joint resolution of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 2678. An act to amend section 203 of the Flood Control Act of 1962 to provide for optimum development at Tocks Island Dam and Reservoir; to the Committee on Public Works, and

S.J. Res. 140. Joint resolution to provide for the striking of medals in honor of American astronauts who have flown in outer space; to the Committee on Banking and Currency.

ENROLLED BILL SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 13079. An act to continue for a temporary period the existing interest equalization tax.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to enrolled bills of the Senate of the following titles:

S. 38. An act to consent to the upper Niobara River Compact between the States of Wyoming and Nebraska; and

S. 1590. An act to amend the National Commission on Product Safety Act in order to extend the life of the Commission so that it may complete its assigned task.

BILLS PRESENTED TO THE PRESIDENT

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee did on this day present to the President, for his approval, bills of the House of the following titles:

H.R. 2785. An act to authorize the Secretary of the Interior to convey to the State of Tennessee certain lands within Great Smoky Mountains National Park and cer-

tain lands comprising the Gatlinburg Spur of the Foothills Parkway, and for other purposes;

H.R. 3379. An act for the relief of Sgt. 1C Patrick Marratto, U.S. Army (retired);

H.R. 5833. An act to continue until the close of June 30, 1972, the existing suspension of duty on certain copying shoe lathes;

H.R. 6585. An act for the relief of Mr. and Mrs. A. F. Elgin; and

H.R. 10946. An act to promote health and safety in the building trades and construction industry in all Federal and federally financed or federally assisted construction projects.

ADJOURNMENT

Mr. TUNNEY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 9 o'clock and 2 minutes p.m.), the House adjourned until tomorrow, Friday, August 1, 1969, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1008. A letter from the Comptroller General of the United States, transmitting a report on selected automatic data processing activities, District of Columbia government; to the Committee on Government Operations.

1009. A letter from the Secretary of the Treasury, to extend the authority for exemptions from the antitrust laws to assist in safeguarding the balance-of-payments position of the United States; to the Committee on the Judiciary.

1010. A letter from the Secretary, Export-Import Bank of the United States, transmitting a report on the export expansion facility program for the quarter ended June 30, 1969, pursuant to the provisions of Public Law 90–390; to the Committee on Banking and Currency.

1011. A letter from the Comptroller General of the United States, transmitting a report on the administration and effectiveness of the work experience and training project in Wayne County, Mich., under title V of the Economic Opportunity Act of 1964, Department of Health, Education, and Welfare; to the Committee on Education and Labor.

1012. A letter from the Acting Director, Bureau of Land Management, Department of the Interior, transmitting a report on negotiated sales contracts for disposal of materials during the period January 1 through July 31, 1969, pursuant to the provisions of Public Law 87–689 (76 Stat. 587); to the Committee on Interior and Insular Affairs.

1013. A letter from the Attorney General, transmitting a report on exemptions from the antitrust laws to assist in safeguarding the balance-of-payments position of the United States, for the 6 months ended June 30, 1969, pursuant to the provisions of section 3 of Public Law 89–175; to the Committee on the Judiciary.

1014. A letter from the Chairman, U.S. Civil Service Commission, transmitting a draft of proposed legislation to adjust the maximum salaries for full- and part-time U.S. magistrates; to the Committee on the Judiciary.

1015. A letter from the Chairman, U.S. Civil Service Commission, transmitting a draft of proposed legislation to amend title 5, United States Code, to provide that agency heads be paid on a biweekly basis; to the Committee on Post Office and Civil Service.

1016. A letter from the Administrator of Veterans' Affairs, transmitting a draft of proposed legislation to provide for the adjustment, by the Administrator of Veterans' Affairs, of the legislative jurisdiction over lands belonging to the United States which are under his supervision and control; to the Committee on Veterans' Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. TAYLOR: Committee on Interior and Insular Affairs. S. 912. An act to provide for the establishment of the Florissant Fossil Beds National Monument in the State of Colorado; with amendment (Rept. No. 91–411). Referred to the Committee of the Whole House on the State of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. MESKILL: Committee on the Judiciary. H.R. 3629. A bill for the relief of Mrs. Sabina Riggi Farina (Rept. No. 91–408). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. H.R. 3955. A bill for the relief of Placido Viterbo (Rept. No. 91–409). Referred to the Committee of the Whole House.

Mr. RODINO: Committee on the Judiciary. H.R. 9001. A bill for the relief of William Patrick Magee, without amendment (Rept. No. 91–410). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDERSON of Illinois:

H.R. 13220. A bill to authorize appropriations to be used for the elimination of certain rail-highway grade crossings in the State of Illinois; to the Committee on Public Works.

By Mr. BIAGGI:

H.R. 13221. A bill to amend the District of Columbia Police and Firemen's Salary Act of 1958 to increase salaries, and for other purposes; to the Committee on the District of Columbia.

By Mr. BUSH:

H.R. 13222. A bill to afford protection to the public from offensive intrustion into their homes through the postal service of sexually oriented mail matter, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. DADDARIO:

H.R. 13223. A bill to provide more efficient and convenient passport services to citizens of the United States of America; to the Committee on Foreign Affairs.

By Mr. GIAIMO:

H.R. 13224. A bill to amend the Tariff Schedules of the United States with respect to the rate of duty on whole skins of mink; to the Committee on Ways and Means.

By Mr. FARBSTEIN:

H.R. 13225. A bill to amend the Clean Air Act to ban the use of certain internal combustion engines in motor vehicles after January 1, 1978; to the Committee on Interstate and Foreign Commerce.

By Mr. HARSHA:

H.R. 13226. A bill to amend title II of the Social Security Act to provide a 10-percent across-the-board increase in the benefits payable thereunder, with subsequent cost-of-living increases in such benefits; to the Committee on Ways and Means.

By Mr. MURPHY of New York:

H.R. 13227. A bill to provide additional Federal assistance in connection with the construction, alteration, and improvement of air carrier and general-purpose airports, airport terminals, and related facilities, to promote a coordinated national plan of integrated airport and airway systems, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. NIX:

H.R. 13228. A bill to amend title 18, United States Code, to prohibit the establishment of emergency detention camps and to provide that no citizen of the United States shall be committed for detention or imprisonment in any facility of the U.S. Government except in conformity with the provisions of title 18; to the Committee on the Judiciary.

By Mr. RODINO (for himself and Mr. SANDMAN):

H.R. 13229. A bill to amend title 18 of the United States Code in order to provide that committing acts dangerous to persons on board trains shall be a criminal offense; to the Committee on the Judiciary.

By Mr. SCHADEBERG (for himself, Mrs. HANSEN of Washington, Mr. JONES of North Carolina, Mr. UTT, Mr. MATSUNAGA, Mr. WHITEHURST, Mr. CAHILL, Mr. POLLOCK, Mr. CHAPPELL, Mr. CASEY, Mr. ASHLEY, Mr. HOWARD, Mr. SANDMAN, Mr. TIERNAN, and Mr. VAN DEERLIN):

H.R. 13230. A bill to amend the act of August 13, 1946, relating to Federal participation in the cost of protecting the shores of the United States, its territories, and possessions, to include privately owned property; to the Committee on Public Works.

By Mr. THOMPSON of Georgia:

H.R. 13231. A bill to amend the Internal Revenue Code of 1954 to allow a credit against income tax to individuals for certain expenses incurred in providing higher education; to the Committee on Ways and Means.

By Mr. UDALL (for himself, Mr. STEIGER of Arizona, and Mr. RHODES):

H.R. 13232. A bill to designate certain lands in the Petrified Forest National Park in Arizona as "wildnerness"; to the Committee on Interior and Insular Affairs.

By Mr. WOLFF (for himself, Mr. ABBITT, Mr. ABERNETHY, Mr. ALEXANDER, Mr. ANDREWS of North Dakota, Mr. BLACKBURN, Mr. BROTZMAN, Mr. CAFFERY, Mr. CUNNINGHAM, Mr. FINDLEY, Mrs. GREEN of Oregon, Mr. GUDE, Mr. ICHORD, Mr. KING, Mr. MATHIAS, Mr. MELCHER, Mr. MONAGAN, Mr. MURPHY of New York, Mrs. REID of Illinois, Mr. STUCKEY, and Mr. WIDNALL):

H.R. 13233. A bill to amend the Internal Revenue Code of 1954 to provide the same tax exemption for servicemen in and around Korea as is presently provided for those in Vietnam; to the Committee on Ways and Means.

By Mr. ANDREWS of Alabama:

H.R. 13234. A bill to provide for orderly trade in textile articles; to the Committee on Ways and Means.

By Mr. ANDERSON of California:

H.R. 13235. A bill to amend title 10, United States Code, to equalize the retirement pay of members of the uniformed services of equal rank and years of service, and for other purposes; to the Committee on Armed Services.

By Mr. ANDREWS of Alabama:

H.R. 13236. A bill to amend section 13a of the Interstate Commerce Act, to authorize a study of essential railroad passenger service by the Secretary of Transportation, and

for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. BRADEMAS:

H.R. 13237. A bill to establish in the State of Michigan the Sleeping Bear Dunes National Lakeshore, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. CASEY:

H.R. 13238. A bill to provide that the half dollar shall bear the official symbol of the Apollo 11 flight; to the Committee on Banking and Currency.

By Mr. CONABLE:

H.R. 13239. A bill to establish the calendar year as the fiscal year of the U.S. Government; to the Committee on Government Operations.

By Mr. DIGGS (for himself, and Mr. BROYHILL of Virginia):

H.R. 13240. A bill to extend benefits under section 8191 of title 5, United States Code, to law enforcement officers and firemen not employed by the United States who are killed or totally disabled in the line of duty; to the Committee on the Judiciary.

By Mr. ERLENBORN (for himself, Mr. ANDERSON of Illinois, Mr. ANNUNZIO, Mr. ARENDS, Mr. CARTER, Mr. CHAMBERLAIN, Mr. COLLIER, Mr. CORBETT, Mr. DERWINSKI, Mr. DONOHUE, Mr. EDWARDS of Louisiana, Mr. FLOWERS, Mr. HAMILTON, Mr. LUKENS, Mr. McCLORY, Mr. McCLURE, Mr. McEWEN, Mr. MANN, Mr. MICHEL, Mr. MOSHER, Mr. PRICE of Illinois, Mr. PUCINSKI, Mr. RAILSBACK, Mr. RONAN, and Mr. SCOTT):

H.R. 13241. A bill to protect the privacy of the American home from the invasion by mail of sexually provocative material, to prohibit the use of the U.S. mails to disseminate material harmful to minors, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. FOLEY:

H.R. 13242. A bill to amend the Agricultural Adjustment Act, as reenacted and amended by the Agricultural Marketing Agreement Act of 1937, as amended, and for other purposes; to the Committee on Agriculture.

By Mr. FULTON of Pennsylvania:

H.R. 13243. A bill to amend title III of part I of the Foreign Assistance Act of 1961 to provide for a program of investment guaranties in developing countries to encourage local participation in self-help community development projects; to the Committee on Foreign Affairs.

By Mr. HANLEY:

H.R. 13244. A bill to amend title 39, United States Code, to restrict the mailing of unsolicited credit cards; to the Committee on Post Office and Civil Service.

My Mr. HICKS:

H.R. 13245. A bill to prohibit the mailing of certain obscene matter; to the Committee on Post Office and Civil Service.

By Mr. HORTON:

H.R. 13246. A bill to amend the Public Health Service Act so as to add to such act a new title dealing especially with kidney disease and kidney-related diseases; to the Committee on Interstate and Foreign Commerce.

By Mr. LENNON (for himself, Mr. GARMATZ, Mr. MOSHER, Mr. ROGERS of Florida; Mr. PELLY, Mr. ASHLEY, Mr. KEITH, Mr. DOWNING, Mr. SCHADEBERG, Mr. KARTH, Mr. DELLENBACK, Mr. HATHAWAY, Mr. POLLOCK, Mr. CLARK, Mr. RUPPE, Mr. ST. ONGE, Mr. GOODLING, Mr. JONES of North Carolina, Mr. BRAY, Mr. HANNA, Mr. LEGGETT, and Mr. FEIGHAN):

H.R. 13247. A bill to amend the Marine Resources and Engineering Development Act of 1966 to establish a comprehensive and long-range national program of research, development, technical services, exploration, and utilization with respect to our marine and atmospheric environment; to the Committee on Merchant Marine and Fisheries.

By Mr. MacGREGOR:

H.R. 13248. A bill to amend the Higher Education Act of 1965 to authorize Federal incentive payments to lenders with respect to insured student loans when necessary, in the light of economic conditions, in order to assure that students will have reasonable access to such loans for financing their education; to the Committee on Education and Labor.

By Mr. MESKILL:

H.R. 13249. A bill to permit a Federal employee to transfer his enrollment from a Federal health benefits plan to another plan under certain additional circumstances; to the Committee on Post Office and Civil Service.

By Mr. MORSE:

H.R. 13250. A bill to establish an urban mass transportation trust fund, and for other purposes; to the Committee on Banking and Currency.

By Mr. OLSEN:

H.R. 13251. A bill to provide career status as rural carriers to certain qualified substitute rural letter carriers of record; to the Committee on Post Office and Civil Service.

By Mr. PATMAN (for himself and Mr. WIDNALL):

H.R. 13252. A bill to carry out the recommendations of the Joint Commission on the Coinage, and for other purposes; to the Committee on Banking and Currency.

By Mr. REID of New York:

H.R. 13253. A bill to establish an urban mass transportation trust fund, and for other purposes; to the Committee on Banking and Currency.

By Mr. RYAN (for himself, Mr. BRASCO, Mr. BURKE of Florida, Mr. BURTON of California, Mr. BUTTON, Mr. DADDARIO, Mr. EDWARDS of California, Mr. HALPERN, Mr. HAWKINS, Mr. HORTON, Mr. KOCH, Mr. McCARTHY, Mr. MIKVA, Mr. MURPHY of New York, Mr. PODELL, Mr. PUCINSKI, Mr. ROSENTHAL, Mr. SCHEUER, and Mr. WOLFF):

H.R. 13254. A bill to provide Federal financial assistance to help cities and communities of the United States develop and carry out intensive local programs to eliminate the causes of lead-based paint poisoning; to the Committee on Banking and Currency.

H.R. 13255. A bill to provide that Federal assistance to a State or local government or agency for rehabilitation or renovation of housing and for enforcement of local or State housing codes under the urban renewal program, the public housing program, or the model cities program, or under any other program involving the provision by State or local governments of housing or related facilities, shall be made available only on condition that the recipient submit and carry out an effective plan for eliminating the causes of lead-based paint poisoning; to the Committee on Banking and Currency.

H.R. 13256. A bill to provide Federal financial assistance to help cities and communities of the United States develop and carry out intensive local programs to detect and treat incidents of lead-based paint poisoning; to the Committee on Interstate and Foreign Commerce.

By Mr. STAGGERS:

H.R. 13257. A bill to amend section 310 of the Communications Act of 1934 to require the Federal Communications Commission to make additional findings and hold additional proceedings before approving the transfer of station licenses or construction permits, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. TUNNEY:

H.R. 13258. A bill to authorize the Secretary of the Treasury to carry out a program of research and development relating to devices and techniques for the detection of illegal importation of dangerous drugs into the United States; to the Committee on Ways and Means.

By Mr. WOLFF (for himself, Mr. ADAMS, Mr. ALEXANDER, Mr. ANNUNZIO, Mr. BRASCO, Mr. DADDARIO, Mr. FLOWERS, Mr. FRIEDEL, Mr. PRYOR of Arkansas, Mr. RUPPE, and Mr. TEAGUE of Texas):

H.R. 13259. A bill to amend title 39, United States Code, to provide for the return to the sender of pandering advertisements mailed to and refused by an addressee, at a charge to the sender of all mail handling and administrative costs to the United States; to the Committee on Post Office and Civil Service.

By Mr. BENNETT:

H.R. 13260. A bill to prohibit former Federal employees who participated in a contract formulation from being employed by anyone who has a direct interest in the contract for a period of 2 years; to the Committee on the Judiciary.

By Mr. CRAMER (for himself, Mr. WYMAN, Mr. CLEVELAND, Mr. ROTH, Mr. KING, Mr. DEVINE, Mr. WHITEHURST, Mr. MIZELL, Mr. HARSHA, Mr. EDWARDS of Alabama, Mr. COLLINS, Mr. BOB WILSON, Mr. DUNCAN, Mr. WATSON, Mr. SNYDER, Mr. SCOTT, and Mr. BURKE of Florida):

H.R. 13261. A bill to amend section 245 of title 18, United States Code, to make it a crime to deny any person the benefits of any educational program or activity where such program or activity is receiving Federal financial assistance and to provide for injunctive relief; to the Committee on the Judiciary.

By Mr. BOLAND:

H.J. Res. 853. Joint resolution to authorize and direct the Franklin Delano Roosevelt Commission to raise funds for the construction of a memorial; to the Committee on House Administration.

By Mr. BROTZMAN (for himself, Mr. CLEVELAND, Mr. WHALEN, Mr. McCULLOCH, Mr. FLYNT, Mr. KLEPPE, Mr. POWELL, Mr. RIEGLE, Mr. HUNT, Mr. RONAN, Mr. WINN, Mr. BUCHANAN, Mr. DON H. CLAUSEN, Mr. GRAY, Mr. BURKE of Florida, Mr. McDADE, Mr. HALPERN, and Mr. FISH):

H.J. Res. 854. Joint resolution providing for the display in the Capitol Building of a portion of the moon; to the Committee on House Administration.

By Mrs. MAY (for herself, Mr. ANDERSON of Illinois, Mr. BERRY, Mr. DENNEY, Mr. HANSEN of Idaho, Mr. HORTON, Mr. KLEPPE, Mr. McCLURE, Mr. McKNEALLY, Mr. MARTIN, Mr. PELLY, Mr. POLLOCK, Mr. REIFEL, Mr. SEBELIUS, Mr. SHRIVER, Mr. UTT, Mr. WINN, and Mr. ZWACH):

H.J. Res. 855. Joint resolution providing for the establishment of an annual "Day of Bread" and "Harvest Festival Week" in the United States; to the Committee on the Judiciary.

By Mr. MINISH:

H.J. Res. 856. Joint resolution to provide for the designation of third week in May of each year as "Municipal Clerk's Week"; to the Committee on the Judiciary.

By Mr. LANDGREBE (for himself and Mr. DENNIS):

H.J. Res. 857. Joint resolution providing for the establishment of the Astronauts Memorial Commission to construct and erect with funds a memorial in the John F. Kennedy Space Center, Florida, or the immediate vicinity, to honor and commemorate the men who serve as astronauts in the U.S. space program; to the Committee on House Administration.

By Mr. MELCHER (for himself, Mr. HICKS, and Mr. OLSEN):

H.J. Res. 858. Joint resolution requesting the President of the United States to issue a

proclamation calling for a "Day of Bread" and "Harvest Festival"; to the Committee on the Judiciary.

By Mr. BOGGS:

H. Con. Res. 311. Concurrent resolution expressing the sense of the Congress with respect to the future exploration of space frontiers jointy by the United States and other technologically advanced nations of the world; to the Committee on Foreign Affairs.

By Mr. FARBSTEIN:

H. Con. Res. 312. Concurrent resolution to invite members of the Supreme Soviet to visit the United States; to the Committee on Foreign Affairs.

By Mr. ST GERMAIN:

H. Con. Res 313. Concurrent resolution to encourage displaying the flag of the United States; to the Committee on the Judiciary.

By Mr. BIAGGI:

H. Res. 506. Resolution creating a select committee to conduct an investigation and study of all aspects of crime and disorder on U.S. military installations; to the Committee on Rules.

By Mr. ASHBROOK:

H. Res. 507. Resolution amending rule XXXV of the Rules of the House of Representatives to increase fees of witnesses before the House or its committees; to the Committee on Rules.

By Mr. KLUCZYNSKI:

H. Res. 508. Resolution providing funds for the Select Committee on the House Restaurant; to the Committee on House Administration.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BURTON of California:

H.R. 13262. A bill for the relief of Vasilios Stavropoulos; to the Committee on the Judiciary.

By Mr. HORTON:

H.R. 13263. A bill for the relief of John R. Groves; to the Committee on the Judiciary.

H.R. 13264. A bill for the relief of Leda Kemmet; to the Committee on the Judiciary.

H.R. 13265. A bill to confer U.S. citizenship posthumously upon Lance Cpl. Frank J. Krec; to the Committee on the Judiciary.

H.R. 13266. A bill to provide for the free entry of one electron spin resonance spectrometer for the use of the University of Rochester, N.Y.; to the Committee on Ways and Means.

By Mr. MIZE:

H.R. 13267. A bill to direct the Secretary of the Interior to convey certain lands in Geary County, Kans., to Margaret G. More; to the Committee on Interior and Insular Affairs.

By Mr. BIAGGI:

H.R. 13268. A bill for the relief of Agostino D'Ascoli; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

199. The SPEAKER presented a petition of the Board of Supervisors, Los Angeles County, Calif., relative to the Interstate Taxation Act, which was referred to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

GOOD SENSE ON THE CAMPUS

HON. PAUL J. FANNIN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, July 31, 1969

Mr. FANNIN. Mr. President, we have had a plethora of advice from the left informing us that unless there is a great deal of change toward accommodating student dissidents there will be disorder and chaos. News reports of campus violence and recorded instances of administrative backbone turning to quivering jelly in the face of unthinking, nonnegotiable demands coupled with the threat of violence as well as actual violence, has led many members of the academic community to think that "the sky is falling."

Nowhere has controversy swirled with greater rage than in those locations where "defense research" was being conducted. The first silly outbreak of this kind of action occurred on campuses where Dow Chemical recruiters were working. Because this company makes, among many other products, a part of the weaponry called napalm, it has become a convenient target for campus radicals, spurred on by professional reactionaries and revolutionists.

These "third world" people cry on their beads and in the beards about burning babies with napalm and conveniently ignore the deliberate rocket attacks the Vietcong mount, aimed strictly at the civilian population. In instance after instance, brutalities, atrocities, and arms caches designed for civilian mayhem have been discovered and documented—but these bearded bleeding hearts look the other way. South Vietnamese civilians apparently do not feel pain, are not subject to atrocities, have no place in the third world dreams of these "great unwashed."

When I recently ran across a cogent and clearly stated document detailing the activities of these antiwar protesters it was like a breath of springtime. I wish to share it with the Senate and ask unanimous consent that an address by Charles A. Anderson, president of Stanford Research Institute, Menlo Park, Calif., given on June 6, 1969, before the Commonwealth Club of California meeting in San Francisco, be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

DEFENSE RESEARCH AND THE ACADEMIC COMMUNITY

(By Charles A. Anderson)

(NOTE.—SRI is a nonprofit organization, performing contract research for industry, government, and foundations in the United States and abroad. Its fields of interest are in the physical and life sciences, economics, management sciences, system sciences and engineering.)

Here and there throughout the country, news stories have cropped up in recent months, stories that are very similar and, to some people, rather disturbing. To a few others, they are good news. But, like most news items, they disappear the next day or the next week and there really hasn't been any real impact on the general public.

I am talking about the news story not long ago that Massachusetts Institute of Technology would not for the time being accept any more classified research programs in two of its affiliated laboratories. More recently, a faculty-student committee urged a cutback in military research at MIT.

There was a story some time ago that the Institute for Defense Analysis had ended its ties with a number of major universities that had sponsored it.

American University has ended all classified research for the government.

Here at home the faculty Senate of Stanford University voted not to engage in classified research after the sit-in by dissident students at the Applied Electronics Laboratory on campus.

And, of course, Stanford Research Institute has had its share of attention lately, most of it unwanted. It has been decided by the Trustees of Stanford University that the formal ties between Stanford University and SRI will be determined. Meanwhile, various campus groups, led mainly by the radical Students for a Democratic Society, have been demanding that SRI stop certain kinds of national security research.

If all these separate actions had happened on the same day, or if we saw them all as part of a national problem, we might look at them more soberly. Indeed, many of our citizens might be alarmed.

Put all these isolated incidents together and think about what's happening in America. We have a small but very active population of dissidents who have told us openly that they disagree with the national goals of the majority. They tell us openly they will destroy us by destroying our institutions and our ability to defend ourselves and our country, and that they will use violence and bloodshed when necessary. Recently, I was told that personally by a young SDS leader who was shaking his fist under my nose at the time. And then these revolutionaries go out and do exactly what they said they would do. They have succeeded on campus after campus and they are doing serious harm to America's research for national security. They get away with it, usually. I think it's high time for people of this country to be alarmed at this situation.

I should make it clear that I mean no special criticism of the Stanford University administration or faculty. We have had some 23 years of pleasant and mutually beneficial relationships with the University and we look forward to many more years. The academic community, however, has a difficult problem in dealing with violence and law-breaking on the campus.

I can understand the argument that classified research should not be carried out by a university. The university must keep in mind its purpose to make its knowledge known to the general public—in particular, to its students. SRI, on the other hand, was formed as an independent contract research organization that could work on projects resulting in classified and proprietary information for both government and industry.

College faculties over the years have demanded for themselves a great deal of authority in the government of the campus but they have never before been faced with conditions such as they face today. In their efforts to protect the campus tradition of academic freedom and freedom of dissent—and harrassed as they are by the inevitable minority of faculty members who belong to the radical fringe—they find it very difficult

to exercise the authority they have won. Ironically, they sometimes end up doing serious damage to the very ideas they seek to protect.

A faculty friend of mine said this about the recent radical activities on the Stanford campus: "These tactics are alien to the community; it remains to be seen whether they can be countered through means which themselves do not destroy the essence of the University.

He made another interesting point I would like to quote. He said: "I have never felt constraind from projecting my own views and actions into the outside community as an individual. The University has provided the firm base making such actions possible for all members of groups so stimulated.

"Unhappily, we seem now to be entering a period of 'consensus' in which the University itself is urged to adopt a position on issues moral and political, and those within who do not naturally subscribe to the consensus view must conform or be quiet." And he continued: "My alarm is heightened by the apparent ability of any hyperactive group, perhaps a group small in numbers, to gain enormous strength from the tacit enlistment through this process of the force of the total Universtiy community. It is dangerous to the University and, through extrapolation, to the outside community."

The extremists, the radical dissidents, have been successful on university campuses because each incident usually is small enough to leave the majority of the community uninvolved personally. Not until the cumulative effect of many incidents affects enough people directly will there be concerted efforts to stop the use of violence as a political tactic. In this connection, it is significant, I believe, that just this past week both the Congress and the President have officially noted this problem. There is, of course, the great danger that the country's reaction, if too long delayed, will be an over-reaction. I trust this will not be the case.

I am not an authority on these antigovernment movements on college campuses; I've been preoccupied with my own troubles lately. But I think the situation we've had at SRI contains many of the typical elements of the trend and some comments about our experience may be helpful.

It's important, I believe, to start off by telling you about Stanford Research Institute and its work. An understanding of SRI is necessary in order to see the radicals' demands in perspective.

SRI was the result of a strong need in the West for an independent contract research organization. With the help of West Coast business leaders, the Trustees of Stanford University chartered SRI in 1946 as a nonprofit, tax-exempt scientific research organization under the laws of the State of California. It now performs contract research for industry, government and foundations throughout the free world. Its fields of competence include the physical and life sciences, economics, management sciences, systems sciences and engineering. Its relationship to Stanford University has been that of a coequal, sister organization under a common Board of Trustees. As you know, the Trustees have now decided that this formal tie to the University will be terminated.

SRI has almost 3,000 employees and 1,500 of these are members of the professional and scientific staff. At the moment, SRI is at work on some 775 separate research projects. In a typical year, we will work on a total of 1200 projects. This is a contract research volume in excess of $60 million per year—and constitutes our only source of income. We have no endowment such as the University enjoys.

Most of the SRI staff is in our headquarters in Menlo Park. We also have a major facility in Southern California. Other SRI offices are located in Washington, New York, Chicago, Huntsville, Zurich, Stockholm, Tokyo and Bangkok. Project offices are established in other areas from time to time depending on particular requirements.

One of the most valuable assets of Stanford Research Institute is the fact that its unique position makes it one of the very few, perhaps the only research organization that can serve effectively as the point of contact, the interface between business, government, the universities, foundations and the public. Many of the problems facing the world today are too complex to be solved by the academic world alone, or by government alone, or by private enterprise alone. SRI is able to work freely and objectively with all these sectors of society throughout the world and in virtually all of the major disciplines of knowledge. In that position, it can—and does—make significant contributions to the solution of man's problems. In its short lifetime, SRI has become a very important and strategic national resource.

Last year the Institute created a new office to direct and co-ordinate major Institute-wide programs of research supported largely by the Institute's own research and development funds. In these broad programs we are concentrating on research in the areas of education, health, communications, transportation, pollution, public safety and urban development.

Our own internal resources for undertaking such program efforts are, of course, limited but we are investing in them in the belief that we will be able to make constructive beginnings that will attract major outside support.

For example, SRI has done a great deal of work on the problems of environmental pollution. Our medical people are studying the effects of many kinds of pollutants on the human system, our chemists are studying the composition of contaminants, our economists and corporate planners are studying market opportunities in pollution control.

In communications, in addition to the technical aspects, we are working more and more on the operational, economic, and social aspects of communications. Our activities range from experiments on space probes and satellite systems to communication aids for the blind.

In urban problems, we have worked with communities to improve their joint planning in providing education, health, welfare, housing and other social services.

We were accused of working in domestic counter-insurgency because of a project for the Small Business Administation, aimed at helping small businesses find better ways to guard against burglary, robbery and vandalism.

The SDS frowns on a village information project we have under way in Thailand to help the government plan, develop and implement a computer-based information system that will provide data on villages that are pertinent to improving the life of the common man in that country.

In engineering, which makes up about 30 percent of SRI's research activity, our scientists are working on microwave and laser technology, radio communication, radio physics, weather science, computer and information sciences, mechanics, system control and electron physics. About 90 percent of this work is sponsored by various agencies of federal and state government.

Dr. Donald Scheuch, who heads the engineering division, was discussing our ABM research in a presentation recently and made a very important point about SRI.

"Our government has major decisions to make," Dr. Scheuch said, "and competent and pertinent studies can only help the decision process. The crucial issue here is objectivity. The Army recognizes its own institutional bias; it also recognizes that it cannot expect complete objectivity from a manufacturer who could potentially sell a multi-million-dollar system. Precisely because the military services need objective advice, they turn to not-for-profit organization such as SRI."

In the division of life sciences, the largest part of our work is funded by various Federal agencies and is mainly directed at some disease condition. Research is being conducted on cancer, leprosy, kidney disease, organ transplants, malaria and other tropical diseases, emphysema, muscular dystrophy, nutritional problems and central nervous system problems.

In the physical sciences, programs are under way in structural dynamics, high-pressure and fluid physics, polymers, process metallurgy, the development of exotic new materials, crystal growth and chemical engineering. Personnel in management and systems sciences are working on resource management, airport planning, decision analysis and education policy.

About one-third of our work is for industry. Much of it involves relating the onrush of new technology to economic opportunities—helping management identify areas of opportuntiy and developing programs to contribute to and capitalize on the change taking place about us.

About 20 percent of SRI's work is in the international field. There is scarcely a country in the free world in which SRI has not contributed to progress.

You may be familiar with the International Industrial Conference sponsored by SRI every four years here in San Francisco. We have conducted other major conferences recently in Djakarta, Singapore, Lima, Manila and Vienna.

I realize that this recitation of SRI research has been long and perhaps a bit tedious, even though it doesn't even scratch the surface of what is going on. I just wanted to convey to you some sense of the tremendous range and scope of work at SRI, some appreciation of the kinds of people working there.

With that background, you can better imagine our feelings when members of SDS and other campus dissidents at the University—some of them well-intentioned but misinformed—attacked SRI as something sinister.

Unfortunately, the truth is no deterrent to the revolutionaries who are bent on destroying America's work in national security research and on the destruction of our important institutions.

What this element lacks in moral responsibility, however, it makes up in shrewdness. What finally was named the April Third Movement at Stanford is led by some very good tacticians. They appeal to feelings that most of us share—a desire for peace, frustration about Viet Nam, a longing for a better world for all peoples. They bring many sincere students and faculty into their orbit, or at least temporary.

The hard-core radical group in and about our universities is small but we should not mislead ourselves because of that fact. Their influence is out of proportion to their numbers.

In addition to the hard-core radicals and those who sympathize in some degree with their publicized aims (which aren't necessarily their real aims, as they themselves admit), there are a great many with no strong ideology one way or the other but, as John Gardner said in a recent lecture at Harvard, they "are running a chronic low fever of antagonism toward their institutions, toward their fellowman and toward life in general; they provide the climate in which disorder spreads."

Another factor in this climate is the average person's fear of seeming to be against dissent, or seeming to be "a square" in the

eyes of others. This desire by so many to seem tolerant, to seem concerned and avant garde, to be popular with everyone, makes it possible for dissidents to get away with unbelievable liberties while those who should be trying to educate them are instead pointing out that the dissidents have legitimate complaints that justify illegitimate means.

I know there *are* some legitimate complaints but I do not condone violence as a means of seeking correction. Nor do the vast majority of those on our campuses.

I have a real admiration for the vast majority of our college students. My associates and I have talked with hundreds of them over the past months and I am very much impressed with their sincerity, ability and intelligence.

As to the hard-core radicals, they are different. They feel the way to reform is to destroy. They offer no alternatives and no apologies.

Now let me summarize for you the events of unrest at Stanford, at least as they affected SRI.

Some months ago, the hard-core radical group began a campaign to convince others that it is morally wrong for a university or university-affiliated research center to do defense-related research—indeed, to do any classified research. As I indicated earlier, their definition of what is wrong is pretty broad and would include a number of projects at SRI and at Stanford funded by the Department of Defense. Of our $64 million volume last year, about $45 million was supported by government. About half our total volume was supported by the Department of Defense but only about 11 percent of our projects were classified.

As a result of the radical's agitation, the then-acting president of Stanford University appointed a faculty-student committee to make recommendations on whether the affiliation between the University and SRI should be maintained, altered, or terminated.

While this committee deliberated, the campaign against research in support of national security went on unabated. The radicals and their temporary supporters violently disrupted a Trustees' meeting. Then they seized the University's Applied Electronics Laboratory a full six days before the committee report was due to be released. It was obvious they knew the majority report was going against some of their demands and they decided, it seems, not even to go through the motions of due process and to force their own views on the majority.

The University lab was held from April 9 through April 18. Despite some pious protestations, the radicals caused a good bit of damage. To quote a laboratory official, "There was thievery, senseless vandalism, personal abuse, and threats of violence against our staff, a deliberate misuse of personal and laboratory property that cannot be described as careless or casual."

After the students left the laboratory on April 18, the University administration kept the lab closed an additional week—that is, until April 25—as part of the settlement. To repeat, the radicals' primary target was national security research at SRI but they seized a University building instead. The primary reason, I understand from students, is the fact that we had made it clear to the campus that we welcome sincere students who want to visit and talk with us but that anyone interfering unlawfully with out operations would be arrested and prosecuted.

On April 15, the faculty-student committee issued its report. It recommended various ways to control research at SRI but in that regard, it was pretty much agreed: there should be tight control to see that SRI stopped doing so-called immoral research, which in their definition, turns out to be largely research in the interests of national security.

The staff at SRI, by an overwhelming majority, let it be known they would quit rather than submit to control of their work by some outside morals committee. Strangely enough, the morals committee idea seemed to have some support among faculty members until others began pointing out how deadly such an idea could be to their own academic freedom. As one professor said, academic freedom is not a law, but an idea—and it is terribly fragile.

Through it all SRI remained firm in its stand that it would not permit the dissidents to disrupt its work and it would not permit outside control of its work.

On May 13, the University Trustees decided to terminate the SRI-University affiliation and said there would not be any artificial outside control of research. We agreed wholeheartedly with that decision.

As expected, the SDS-led April Third Movement, unhappy with having its demands turned down, lashed back. Using University buildings—the auditorium and the chapel—they held a public planning session in which they openly plotted the destruction of SRI. This meeting, frequently marked by obscene language, was carried on the student radio station to listeners in the Stanford area. Imagine. This was a public meeting to plot the harassment of our professional staff, the destruction of SRI property and the crippling of research for our national defense.

That night, May 14, they broke a door and a window in one of our buildings, and, incidentally, surrounded and held the car in which my wife and I were driving home. Two days later, after some more open meetings on the destruction of SRI, they attacked the building breaking most of the windows they could reach and causing about $10,000 worth of damage before police were able to clear them away. That sounds bad but there were only about 500 dissidents involved in contrast to the 1500 or 2000 they had tried to muster.

This was on a Friday. Over the weekend—with the aid of a number of Stanford students—we studied the hundreds of photographs that had been taken of the demonstrators and went over tapes of their meetings. By Sunday night we were serving the leaders and their organizations with a temporary restraining order.

The following Monday they tried again but could muster only about 200, plus another 100 high school youngsters looking for excitement. There was no damage.

On the next Friday, May 23, they tried again and could muster only about 35 hard-core radicals. By this time quite a few of their leaders had been arrested.

Through it all, no one was able to force his way into our buildings. There have been absolutely no compromise of security. Not one SRI employee has been injured. Our work has not been seriously disrupted.

But we have not relaxed. This is a long-term problem that we face. The radical groups have convinced me that they will persist perhaps for several years in their attempts to disrupt our work and to destroy our institutions.

I think we have convinced them that we're willing to fight for our rights just as hard and for just as long. I hope many others will join us in that determination.

I would like to share with you what I think I have learned from this experience.

Let's not by any means lose faith in the majority of the university and college students. Remember, most of them have been studying while a few have been breaking windows and laws. I do think it is important that we talk with these students on every possible occasion. We are I believe, uncomfortably close to a breakdown of communication and understanding with these students. They have many reasons for being discontent—and some good reasons from their viewpoint. We should listen to them—try to understand them. And in the process, they will better understand us, "the establishment" and isolate the few "hard-core" radicals who want only to destroy.

As for the hard-core radical student—the SDS type—I have found that they do not really want the so-called rational dialogue they speak of. It is only a phrase they use in trying to set up confrontation. They are bent on destroying the "establishment" and reducing our institutions to chaos. With them I believe we must be absolutely firm and make it clear that lawlessness and violence are unacceptable tactics in our society under any circumstance. We must make it clear that we will insist upon and protect our rights.

And above all, we must know in our hearts and explain to others that we have faith in this country's system of representative government and that we work for change in national goals when we vote.

On April 14, the first day of the radicals' spring offensive and the day several hundred appeared in front of our building for what they always call a "rational dialogue," we issued a statement. It ended with this thought:

"I have great faith in our form of government by elected representatives and in the basic good sense and decency of the American people who elect them. When that government, responsive as it is to the majority will of the people, asks our help, it will get our help (to the degree of our capability)—whether the problems deal with national security or with urban problems, economic problems or problems of housing, hunger or health. We will not abdicate that responsibility to suit the whims of dissident groups who do not represent the majority will of the people or their government. Neither will we tolerate disruption of our operations or of the work we are doing for our clients."

As I said, the last chapter has yet to be written about violence in America and about those who would destroy our institutions. In the meantime, SRI will stand with that statement of belief.

It seems to work.

NEW KIND OF POPULATION PROBLEM

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. DERWINSKI. Mr. Speaker, in the process of inserting into the RECORD an article in the Tuesday, July 29 Christian Science Monitor, I must briefly comment on slight inaccuracies in this item.

The basic approach and point is excellent, but constructive criticism is in order. Specifically, the phraseology oversimplifies the power structure of the Soviet Union since there is much more to it than "Russians and Asians." It is necessary to point out that the Latvians, Lithuanians, Estonians, Ukrainians, Byelorussians, Armenians, Georgians, Tartars, and other peoples in Azerbaijan and Turkestan are all non-Russian.

It is also important to note that they are not only non-Russian, but that they are, for the most part, legitimate nationalists who are oppressed by the Soviet Government.

I feel that this brief explanation on my part is a necessary forward to the editorial that follows since the captive nations are often referred to as the "Achilles' heel" of the Soviet Union:

NEW KIND OF POPULATION PROBLEM

The next Soviet census is expected to reveal startling population figures. It is believed that this nose-counting will confirm what experts in Moscow now think is the case—Russians are no longer a majority in Russia. In short, preliminary and unofficial estimates reckon that minority groups now outnumber Great Russians for the first time in Soviet history.

What is more, every indication points to a proportionate increase in this non-Russian majority in the years ahead. Whereas the Russians made up some 55 percent of the Soviet Union's population as recently as 1959, it is not at all impossible that, 10 years hence, the racial minorities will put together, account for 55 percent of all citizens.

The reason for this is clear. It is the same reason which is increasingly plaguing (from one point of view, of course) almost all European Communist lands: a low and steadily dropping birthrate. It is now reckoned that the birthrate of those racially Russian is only 14 per thousand a year. On the other hand, among the various Asian minorities, many have yearly birthrates around 35 per thousand. And since the deathrate differences between Russians and Asians is nowhere near as great, this means the latter have a far higher rate of natural increase.

This steadily dwindling Russian presence (proportionately speaking) has intensified the Kremlin's nightmares over the growing restlessness of national minorities, some of whom are making demands for self-expression which Moscow looks upon as extremely dangerous in a closely controlled society. While no one expects the Great Russian control to be broken early on, it is obvious that Moscow has no small future problem on its hands.

Meanwhile, the very foundations of economic progress, as presently achieved, are being threatened in a number of other Eastern European Communist lands by an increasingly unfavorable population situation. Indeed, in East Germany, this has already reached crisis proportions. Between 1961, when East Germany put up the Berlin Wall to stop the flow of those wishing to leave and 1968, its population (including East Berlin) dropped from 17,125,000 to 17,084,000. At the same time, West Germany (including West Berlin) rose in population from 56,227,000 to 60,165,000. Worst of all, by 1968, East Germany's birthrate had dropped so sharply that virtually the same number of persons died (14.2 per thousand) as were born (14.3). Unless there is a drastic change, this means that the population drop could soon reach industry-crippling proportions.

While the world as a whole fights one kind of a population problem, European communism faces a very different kind of population challenge.

TWO VIEWS OF ELECTIONS

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, July 31, 1969

Mr. THURMOND. Mr. President, great hopes for peace in Vietnam should not be placed on the proposal for free elections in South Vietnam. An astute analysis of this view is expressed in an editorial of the July 7 issue of the State newspaper in Columbia, S.C. Mr. William D. Workman, editor, has made an objective appraisal of this proposal. Hanoi's present reaction to the free elections validates his analysis.

Mr. Workman points out that:

Your offer of free elections is probably predicable on all but certain knowledge that the Viet Cong cannot win in a fair-and-square contest at the polls. So the concept of self-determination does not at this time seem to offer much hope for a quick peace. What is logical and fair to us is not so to the Reds.

Mr. President, America's patience is again being tested. Mr. Workman warns that our Nation must "pass the test." His appraisal of the election proposal provides an insight to the Communist intransigent attitude. His viewpoint is worthy of our attention.

Mr. President, I ask unanimous consent that this editorial be printed in the Extensions of Remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TWO VIEWS OF ELECTIONS

False hopes for peace in Vietnam soar like gas-filled balloons. It doesn't take much to cut the strings, filling the sky for a fleeting period of time.

This is understandable. The American people—hawks, doves and those in between—want peace, of one kind or another, so badly they are ready to dance in the streets at any prospect.

Perhaps no concept so appeals to the American sense of fairness as the idea of self-determination for the people of South Vietnam through free elections. This is the carrot that the Nixon administration is dangling in front of Hanoi and the Viet Cong.

It tells them this: You might can get a voice in the Saigon government if you will quit fighting and submit the issue to the people of the south in free elections supervised by a mixed commission to assure there's no hanky-panky. Win or lose, the results stand and all parties will accept them.

This is the American way; this is the way things are done in a democracy.

But is such a carrot tempting to the Asian Communists? The answer is almost certainly no, unless certain conditions exist. Hanoi might buy such a plan in an effort to salvage something out of defeat. Has 20 years of off and on fighting so wearied the North that it is willing to give up its cherished desire to unify Vietnam under its control? There is little to suggest this is true now.

In fact, in a rare interview recently, Hanoi's hero of Dienbenphu, Gen. Vo Nguyen Giap, said, "We shall militarily beat the Americans." He even bragged that North Vietnam had lost half a million men in the war—the equivalent of six million Americans in terms of population. Columnist John P. Roche thinks this exaggeration of death figures was an effort on the part of the hawkish and brilliant Giap to indicate his country's total commitment to victory.

Another condition that may tempt Hanoi to accept self-determination is the feeling that non-Communists in the South are so fragmented that the Viet Cong, as a militant, well-organized minority, might gain control.

Otherwise, the elections have no appeal to our Asian enemies. Most Asians, even non-Communists, do not accept the winner-take-all view of elections. To them, the public goes to the polls simply to rubber stamp political conditions predetermined by the leadership. The result must be almost totally predictable in advance.

The American government, of course, knows this. Indeed our offer of free elections is probably predicated on the all but certain knowledge that the Viet Cong can't win in a fair-and-square contest at the polls. The best estimates are that they represent no more than 15 per cent of the population.

The recent formation by the VC of the so-called "provisional revolutionary government" is taken by some as meaning they have discarded the "free-election" idea. This is an ideal vehicle for taking over after U.S. troops leave and staging an election, Communist-style.

So the concept of self-determination does not at this time seem to offer much hope for a quick peace. What is logical and fair to us is not so to the Reds.

And yet can our negotiators go very far beyond this offer without selling out Saigon? Clearly not. It is a situation calculated again to test American patience and purpose. If America is to continue its role as a world leader and a protector of freedom, as President Nixon had said it will, then it must pass the test.

THE STUDENT REVOLT: A PROFOUNDLY HOPEFUL ANALYSIS

HON. ABNER J. MIKVA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. MIKVA. Mr. Speaker, there is much debate and discussion in our society, and in the Congress, today about the causes of the generation gap, student unrest, and student disorder. Much of the discussion has centered on those few violent and disruptive representatives of the student generation who all too often capture the headlines. Little thought has seemingly been directed at the underlying causes of the malaise which afflicts students of this generation and which is so incomprehensible to many of their elders.

In the June 7, 1969, issue of Saturday Review the distinguished author and poet Archibald MacLeish has published what I believe to be a profoundly encouraging analysis of student unrest and student dissatisfaction. It is an analysis which not only asks the right questions, but puts us on the road to finding some of the right answers as well. Mr. MacLeish asks:

Why does the generation of the Sixties make itself morally responsible for the war in Vietnam, while the generation of 1917 stood on the Marne and quoted Woodrow Wilson . . .? Why, for the first time, do university students . . . demand a part in the process?

Later in his article Mr. MacLeish provides at least a part of the answer—an answer which I find both convincing and encouraging:

It is an angry generation, yes, but its resentment is not the disgust of the generation for which Beckett speaks. Its resentment is not a resentment *of* our human life but a resentment *on behalf of* human life; not an indignation that we exist on the Earth but that we *permit* ourselves to exist in a selfishness and wretchedness and squalor

which we have the means to abolish. Resentment of this kind is founded, can only be founded, on belief in man. And belief in man—a return to a belief in man—is the reality on which a new age can be built.

The article referred to follows:

[From the Saturday Review, June 7, 1969]

THE REVOLT OF THE DIMINISHED MAN

(By Archibald MacLeish)

(NOTE.—This article is adapted from a speech delivered by Mr. MacLeish on Charter Day at the University of California.)

Robert Frost had the universe, not the university, in mind when he wrote his laconic couplet about the secret in the middle, but the image fits the academic world in crisis as well as the mysteries of space.

We dance around in a ring and
suppose
But the secret sits in the middle and
knows.

Indeed, we do. Faculty committees, state legislatures, alumni associations, police departments, and all the rest of us whirl in a circle with our favorite suppositions—which increasingly tend to roll up into one supposition: that the crisis in the university is really only a student crisis, or, more precisely, a crisis precipitated by a small minority of students, which would go away if the students would stop doing whatever it is they are doing or whatever they plan to do next.

Which, needless to say, is not a wholly irrational supposition. Those who have seen a purposeful task force of Harvard students take over University Hall, carry out reluctant deans, break into files, shout down professors are within their logical rights when they conclude that the occupying students were the cause of the crisis thus created. But the supposition remains a supposition notwithstanding for it does not follow—did not follow at Harvard certainly—that the crisis is a student crisis in the critical sense that it can be ended merely by suppressing the students involved. When the students involved were suppressed at Harvard, the crisis (as at other universities) was not reduced but enlarged. Which suggests, if it suggests anything, that the actual crisis is larger than its particular incidents or their perpetrators.

And there are other familiar facts which look in the same direction; as, for example, the fact that it is only when the general opinion of an entire student generation supports, or at least condones, minority disruptions that they can hope to succeed. The notion that the activist tail wags the huge, indifferent student dog is an illusion. Had a minority of the kind involved at Harvard attempted to bring the University to that famous "grinding halt" in the Forties or the Fifties it would have had its trouble for its pains no matter how forceful the police. It succeeded in the Sixties for one reason and for one reason only—because the climate of student opinion as a whole had changed in the Sixties; because there has been a change in the underlying beliefs, the accepted ideas, of an entire academic generation, or the greater part of it.

To look for the cause of crisis, therefore, is to examine, not the demands of the much discussed minorities but something larger—the changes in belief of the generation to which they belong. And there at once a paradox appears. The most striking of these changes far from disturbing the academic world should and does encourage it. There are, of course, romantics in the new generation who talk of destroying the university as a symbol of a defunct civilization, but the great mass of their contemporaries, however little they sometimes seem to understand the nature of the university—the vulnerability, fragility even, of that free and open community of minds which a university is—are nevertheless profoundly concerned with the university's well-being and, specifically, its relation to the world and to themselves.

This is a new thing under the academic sun—and, in itself, a hopeful thing. Down to the decade now closing, demands by any considerable number of American undergraduates for changes in the substance or manner or method or purpose of their instruction were rare indeed. In my day at Yale, back before the First World War, no one concerned himself less with matters of curriculum and teaching and the like than a college undergraduate. We were not, as undergraduates, indifferent to our education, but it never occurred to any of us to think of the curriculum of Yale College as a matter within our concern, or the policies of the university as decisions about which we—we of all creatures living—were entitled to an opinion. Some of my college classmates protested compulsory chapel (largely because of its interference with breakfast), but no one to my knowledge ever protested, even in a letter to the *News*, the pedantic teaching of Shakespeare, from which the college then suffered, or the non-teaching of Karl Marx, who was then on the point of changing the history of the world.

And the same thing was true of the relation between the university and the world outside. We in the class of 1915 spent our senior year in a Yale totally surrounded by the First World War, but we were "inside" and all the rest were "outside," and it was not for us to put the two together—not even for those of us who were to go from New Haven to die on the Marne or in the Argonne under extremely unpleasant circumstances in the most murderous, hypocritical, unnecessary, and generally nasty of all recorded wars, the present one included. Our deaths, as we came to know, would be our own but not their reasons. When I myself was asked by a corporal in my battery what we were there for—"there" being the second battle of the Marne—I quoted President Wilson: "to make the world safe for democracy." It was not my war. President Wilson was running it.

And the generation which fought the next war twenty years later saw things in much the same way. They too were in a sense observers—observers, in their case, of their own heroism. When the war came they fought it with magnificent courage; no citizen army in history ever fought better than theirs after that brutal North African initiation. But until the war came, while it was still in the agonizing process of becoming, it was somebody else's war—President Roosevelt's, as the Chicago *Tribune* kept insinuating, or Winston Churchill's. "America First" was, in part, a campus movement but the terrible question posed by Adolf Hitler—a question of life or death for thousands of young Americans and very possibly for the Republic itself—was little argued by the undergraduates of 1941. The political aspects of fascism they left to their elders at home and the moral agony to their contemporaries in the French Resistance. They themselves merely fought the war and won it—fought it with a kind of gallant indifference, an almost ironic gallantry, which was, and still remains, the hallmark of that incredible generation and its improbable triumph.

It is in this perspective and against this background that the attitudes of the undergraduates of the Sixties must be seen. Here, suddenly and almost without warning, is a generation of undergraduates that reverses everything that has gone before, rejects the traditional undergraduate isolation, refuses the conventional segregation of the university from the troubled world, and not only accepts for itself but demands for itself a measure of responsibility for both—for university *and* world, for life as well as for education.

And the question, if we wish to understand this famous crisis of ours, is: Why? Why has this transformation of ideas—metamorphosis more precisely—taken place? Why does the generation of the Sixties make itself morally responsible for the war in Vietnam, while the generation of 1917 stood on the Marne quoting Woodrow Wilson and the generation of 1941 smashed the invincible Nazi armor from Normandy to the Rhine without a quotation from anybody? Why, for the first time in the remembered history of this Republic, do its college and university students assert a responsibility for their own education, demand a part in the process? Are we really to believe with some of our legislators that the whole thing is the result of a mysterious, country-wide conspiracy among the hairier of the young directed perhaps by a sinister professor somewhere? Or is it open to us to consider that the crisis in the university may actually be what we call it: a crisis *in* the university—a crisis in education itself precipitated by a revolution in ideas, a revolution in the ideas of a new generation of mankind?

There are those who believe we must find the answer to that question where we find the question: in the decade in which we live. Franklin Ford, dean of the Faculty of Arts and Sciences at Harvard and one of the ablest and most admired of university administrators, attributes this changed mentality in great part to "the particular malaise of the Sixties." Undertaking to explain to his colleagues his view of what we have come to call "student unrest," Dean Ford defined it in terms of concentric circles, the most important of which would include students who had been profoundly hurt by the anguish of these recent years: "The thought-benumbing blows of successive assassinations, the equally tragic though more comprehensible crisis of the cities, the growing bitterness of the poor amid the self-congratulations of affluence, the even greater bitterness of black Americans, rich or poor . . . all these torments of our day have hit thoughtful young people with peculiar force . . . Youth is a time of extreme vulnerability to grief and frustration, as well as a time of impatient, generous sympathy." And to all this, Dean Ford continues, must be added the war in Vietnam, which he sees as poisoning and exacerbating everything else, contributing "what can only be described as (a sense) of horror."

Most of us—perhaps I should qualify that by saying most of those with whom I talk—would agree. We would agree, that is to say, that the war in Vietnam has poisoned the American mind. We would agree that the affluent society—more precisely the affluent half-society—has turned out to be a sick society, for the affluent half as well as for the other. We would agree that the cancer of the cities, the animal hatred of the races, the bursting pustule of violence has hurt us all and particularly those of us who are young and they in particular *because* they are young, because, being young, they are generous, because, being young and generous, they are vulnerable. We would agree to all this, and we agree in consequence that there is a relationship between the malaise in the universities and Dean Ford's "particular malaise of the Sixties."

But would we agree, reflecting on those considerations and this conclusion, that it is the tragic events of the decade which, alone, are the root cause—the effective cause—of the unrest of which Dean Ford is speaking? If the bitterness, the brutality, the suffering of the last few years were the effective cause, would the *university* be the principal target of resentment? If Vietnam were the heart of the trouble, would the university curriculum be attacked—the

methods of teaching, the teachers themselves? Would the reaction not have expressed itself, as indeed it once did, at the Pentagon?

What is resented, clearly, is not only the present state of the Republic, the present state of the world, but some relation or lack of relation between the state of the Republic, the state of the world, and the process of education—the process of education at its most meaningful point—the process of education in the university.

But what relation or lack of relation? A direct, a one-to-one, relationship? Is the university blamed *because* the war is being fought, *because* the ghettos exist, *because* the affluent society is the vulgar, dull, unbeautiful society we see in our more ostentatious cities? Is the demand of the young a demand that the university should alter its instruction and its practices so as to put an end to this ugliness, these evils—reshape this society?

There are some undergraduates, certainly, who take this position. There are some who would like to bring the weight and influence of the university to bear directly on the solution of economic and social problems through the management of the university's real estate and endowments. There are others who would direct its instruction toward specific evils by establishing courses in African affairs and urban studies. Both attitudes are familiar: they are standard demands of student political organizations. They are also reasonable—reasonable at least in purpose if not always in form. But do they go to the heart of the matter? Is this direct relationship of specific instruction to specific need—of specific land-use program to specific land-use evil—the relation undergraduates have in mind when they complain, as they do, over and over, that their courses are not "relevant," that their education does not "respond to their needs," "preach to their condition"? Is it only "applicability," only immediate pertinence, the generation of the young demands of us? Is the deep, almost undefinable restlessness of the student generation—the dark unhappiness of which Senator Muskie spoke in that unforgettable speech at Chicago—an unhappiness which Centers of Urban Studies, however necessary, can cure?

I do not think so and neither, if you will forgive me for saying it, do you. The distress, the very real and generous suffering and distress of an entire generation of young men and young women is related certainly to the miseries of the Sixties, but it is not founded in them and it will not disappear when they vanish—when, if ever, the war ends and the hot summers find cool shade and the assassinations cease. The "relevance" these students speak of is not relevance to the *Huntley-Brinkley Report*. It is relevance to their own lives, to the living of their lives, to themselves as men and women living. And their resentment, their very real resentment and distress, rises not only from the tragedies and mischances of the last ten years but from a human situation, a total human situation involving human life as human life, which has been three generations in the making, and which this new generation now revolts against—rejects.

At the time of the Sorbonne riots a year ago a French politician spoke in terms of apocalypse: We had come to a point in time like the fall of Rome when civilizations collapse because belief is dead. What was actually happening in Paris and elsewhere was, of course, the precise opposite. Belief, passionate belief, had come alive for the first time in the century and with it rage and violence. The long diminishment, the progressive diminution of value put upon man, upon the idea of man, in modern society had met the revulsion of a generation of the young who condemned it in all its aspects, left as well as right, Communists as well as capitalist, the indifference of the Marxist bureaucracies as well as the bureaucratic industrial indifference of the West.

This diminishment of the idea of man has been a long time in progress. I will not claim for my generation that we witnessed its beginning, I will assert only that we were the first to record it where alone it could be recorded. The arts with us became aware of a flatness in human life, a loss of depth as though a dimension had somehow dropped from the world—as though our human shadows had deserted us. The great metaphor of the journey of mankind—Ulysses among the mysteries and monsters—reduced itself in our youth to that other Ulysses among the privies and the pubs of Dublin, Ireland. Cleopatra on her flowery barge floated through a Saturday night in the Bloomsbury Twenties. Even death itself was lessened: the multitudes of Dante's damned crossed T. S. Eliot's London Bridge, commuters in the morning fog. Nothing was left remarkable beneath the visiting moon.

And in the next generation—the generation, as we are now beginning to see, of Joyce's secretary and disciple, Samuel Beckett—the testimony of the arts went on. The banality of the age turned to impotence and numbness and paralysis, a total anesthesia of the soul. Leopold Bloom no longer maundered through the musty Dublin streets. He was incapable even of maundering, incapable of motion. He sat to his neck in sand, like a head of rotting celery in an autumn garden, and waited, or did not even wait—just sat there. While as for Cleopatra—Cleopatra was an old man's youthful memory played back upon a worn-out tape.

The arts are honest witnesses in these matters. Pound was right enough, for all the well-known plethora of language, when he wrote in praise of Joyce's *Ulysses* that "it is a summary of pre-war Europe, the blackness and mess and muddle of a 'civilization,'" and that "Bloom very much *is* the mess." The arts, moreover, are honest witnesses in such matters not only when they achieve works of art as with Joyce and Eliot and frequently with Beckett. They testify even when they fail. The unpoem, the nonpainting of our era, the play that does not play, all bear their penny's worth of witness. The naked, half-embarrassed boy displaying his pudenda on an off-Broadway stage is not actor nor is his shivering gesture a dramatic act, but still he testifies. He is the last, sad, lost reincarnation of L. Bloom, the resurrection of the head of celery. Odysseus on his lonely raft in the god-infested sea has come to this.

What was imagined in Greece, reimagined in the Renaissance, carried to a passion of pride in Europe of the Enlightenment and to a passion of hope in the Republic of the New World—John Adams' hope as well as Jefferson's and Whitman's; Lincoln's that he called "the last, best hope"—all this grimaces in pitiful derision of itself in that nude, sad, shivering figure. And we see it or we hear about it and protest. But protest what? The nakedness! The morals of the playwright! Undoubtedly the playwright needs correction in his morals and above all in the practice of his art, but in his *vision*? His *perception*? Is he the first to see this? On the contrary, his most obvious failure as playwright is precisely the fact that he is merely one of thousands in a thronging, long contemporary line—a follower of fashion. He testifies as hundreds of his betters have been testifying now for years—for generations—near a century.

Why have they so testified? They cannot tell you. The artist's business is to see and to show, not answer why: to see as no one else can see, and to show as nothing else can show, but not to explain. He knows no more of explanation than another. And yet *we* cannot help but wonder why—why the belief in man has foundered; why it has foundered *now*—precisely *now*—now at the moment of our greatest intellectual triumphs, our never equaled technological mastery, our electronic miracles. Why was man a wonder to the Greeks—to Sophocles of all the Greeks—when he could do little more than work a ship to windward, ride a horse, and plow the earth, while now that he knows the whole of modern science he is a wonder to no one—certainly not to Sophocles' successors and least of all, in any case, to himself?

There is no easy answer, though thoughtful men are beginning to suggest that an answer may be found and that, when it is, it may very well relate precisely to this vast new knowledge. George W. Morgan states the position in his *The Human Predicament*. "The sheer weight of accumulated but uncontrolled knowledge and information, of print, views, discoveries, and interpretations, of methods and techniques, inflicts a paralyzing sense of impotence. The mind is overwhelmed by a constant fear of its ignorance. . . . The individual man, feeling unable to gain a valid perspective of the world and of himself, is forced to regard both as consisting of innumerable isolated parts to be relinquished, for knowledge and control, to a legion of experts." All this, says Mr. Morgan, diminishes human understanding in the very process of augmenting human knowledge. It also, I should wish to add, diminishes something else. It diminishes man. For man, as the whole of science as well as the whole of poetry, will demonstrate, is not what he thinks he knows, but what he thinks he *can* know, can become.

But however much or little we comprehend of the cause of our paradoxical diminishment in our own eyes at the moment of our greatest technological triumphs, we cannot help but understand a little of its consequences and particularly its relation to the crisis in the university. Without the belief in man, the university is a contradiction in terms. The business of the university is education at its highest possible level, and the business of education at its highest possible level is the relation of men to their lives. But how is the university to concern itself with the relation of men to their lives, to the living of their lives, to the world in which their lives are lived, without the bold assumption, the brave, improbable hypothesis, that these lives matter, that these men count—that Odysseus on his battered, drifting raft still stands for a reality we take for real?

And how can a generation of the young, born into the world of the diminished man and in revolt against it—in revolt against its indifference to humanity in its cities and in its wars and in the weapons of its wars—how can a generation of the young help but demand some teaching from the universities which will interpret all this horror and make cause against it?

Centuries ago in a world of gods and mysteries and monsters when man's creativity, his immense creative powers, had been, as Berdyaev put it, "paralyzed by the Middle Ages"—when men had been diminished in their own eyes by the demeaning dogma of the Fall—centuries ago the university conceived an intellectual and spiritual position which released mankind into a new beginning, a rebirth, a Renaissance. What is demanded of us now in a new age of gods and mysteries and monsters, not without dogmas and superstitions of its own, is a second humanism that will free us from our new paralysis of soul as the earlier humanism freed us from that other. If it was human significance which was destroyed by the Middle Ages, it is human significance which we ourselves are now destroying. We are witnessing, as the British critic F. R. Leavis phrases it, the elimination of that "day-by-day creativity of human response which manifests itself in the significances

and values without which there is no reality—nothing but emptines that has to be filled with drink, sex, eating, background music, and . . . the papers and the telly."

Mr. Leavis, not the most optimistic of dons on any occasion, believes that something might be done to revive "the creative human response that maintains cultural continuity" and that gives human life a meaning. I, with fewer qualifications to speak, would go much further. I would say that a conscious and determined effort to conceive a new humanism which would do for our darkness what that earlier humanism did for the darkness of the Middle Ages is not only a present dream but a present possibility, and that it is a present possibility not despite the generation of the young—the generation of the Sixties—but because of it.

That generation is not perhaps as sophisticated politically as it—or its activist spokesmen—would have us think. Its moral superiority to earlier generations may not, in every instance, be as great as it apparently believes. But one virtue it does possess to a degree not equaled by any generation in this century: It believes in man.

It is an angry generation, yes, but its resentment is not the disgust of the generation for which Beckett speaks. Its resentment is not a resentment *of* our human life but a resentment *on behalf* of human life; not an indignation that we exist on the Earth but that we *permit* ourselves to exist in a selfishness and wretchedness and squalor which we have the means to abolish. Resentment of this kind is founded, can only be founded, on belief in man. And belief in man—a return to a belief in man—is the reality on which a new age can be built.

Thus far, that new belief has been used by the young largely as a weapon—as a justification of an indictment of earlier generations for their exploitation and debasement of human life and earth. When it is allowed to become itself—when the belief in man becomes an affirmative effort to re-create the life of man—the crisis in the university may well become the triumph of the university.

For it is only the university in this technological age which can save us from ourselves. And the university, as we now know, can only function effectively when it functions as a common labor of all its generations dedicated to the highest purpose of them all.

TIMID GREEK JUDGE SUFFERS FOR UPHOLDING PRINCIPLES

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, July 31, 1969

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that there be printed in the Extensions of Remarks an article entitled "Timid Greek Judge Suffers for Upholding Principles," written by Mr. Alfred Friendly, and published in the Washington Post for Friday, July 25, 1969.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TIMID GREEK JUDGE SUFFERS FOR UPHOLDING PRINCIPLES

(By Alfred Friendly)

ATHENS.—Harassment of Greece's highest judge, who recently ruled against the government and refused its demands to resign, has reached the point where his physician was apparently pressured to declare him able to face an inquisition when, in fact, he had just suffered a heart attack.

The judge is Michael Stasinopoulos, president of the Greek Council of State. His illness is thought to be the result of the ordeal he was subjected to after he ordered the reinstatement of 11 Supreme Court judges fired by the junta. His physician is dependant on the government's favor for keeping his job in the state medical care system.

The 67-year-old jurist, subjected to attempted intimidation by a police officer who accused him of faking illness, has so far avoided the command to appear before the junta's No. 2 personage, the deputy prime minister. Another doctor, engaged only in private practice and accordingly not subject to official intimidation, was called in by Stasinopoulos and has declared that he is indeed seriously ill.

The history of the continuing ordeal of the judge was disclosed in circumstantial detail by a thoroughly informed source. The story that emerges is of a timid, conservative, ultra-cautious man forced to become a hero in spite of himself, when there was no escape from putting his legal principles on the line.

The chronicle begins more than a year ago when the government purged some 60 judges, getting around the provision that they had permanent status by suspending the constitution, by official decree, for three days.

MORAL CALIBER

Among those ousted were 11 judges of the Supreme Court, the highest appeals tribunal for all cases in which the state itself is not a party. The principal grounds were that the incumbent either had been identified with a political party in a way that rendered him unfit to serve, or was not of the requisite "moral caliber." Those purged were also disbarred.

The jurists appealed to the Council of State, the highest appeals court for matters in which the state is directly involved. They won their case on rescinding the disbarment, only to have the government overrule it by decree the next day. Thus they remain forbidden to practice.

In a different case, based on provisions of the new constitution that the junta itself prepared and had confirmed in a national referendum last September, the judges appealed their ouster on the grounds that the constitution provided them lifetime tenure.

Stasinopoulos realized the dilemma the case would present him and his 22-judge court. A small, fragile man, chosen for the presidency of the council by the colonels themselves, he had no stomach for a fight. A deep-dyed conservative, he is distinguished, if at all, as the author of rather mediocre poetry and as someone who has tried throughout his tenure to keep his court from coming into conflict with the regime.

His thesis has been that the Council of State, an institution created in 1930, does not have the Marbury v. Madison tradition of determining the constitutionality of government acts and will only get into trouble—especially with the present dictatorship—if it tries.

CASE STALLED

For a year, Stasinopoulos tried to duck the case, stalling it, urging the appellants to withdraw, arguing that whatever the outcome, both they and the court would lose. He did not need the warnings, which he got anyway, from his first cousin, Gen. Hadjipetros, head of the Greek equivalent of the FBI, to "be careful."

But in the end, the case was not to be avoided. In June Stasinopoulos summoned a public session of the full court. The case had been thoroughly debated and the president may or may not have known how the vote would go. He made a short speech, bidding his colleagues to take into account the position of the state but also to reflect on the requirements of their honor as judges.

Under the usual procedure, an open vote was taken, with each member, beginning with the most junior, announcing his vote and the reasons for it. By the time the tally reached the president, it was 10 to 10 (there was one absentee). Stasinopoulos voted to sustain the appeal.

He chose the narrowest possible of the six grounds on which the appeal was based: due process. He ruled that the judges could not be dismissed without first having been formally presented with reasons and charges, and having the opportunity to answer them, and being given a proper legal finding.

For the first time since it took power more than two years ago, the hitherto cool regime publicly lost its composure. It has been proceeding ever since from one flagrant action to another.

JUDGE SUMMONED

Premier Georges Papadopoulos immediately summoned Stasinopoulos to his office and, in a rage, demanded his resignation.

At 9 the next morning, the judge presented a letter to the Ministry of Interior refusing, on grounds of the self-respect of the judiciary, to resign merely because the Premier told him to. An hour later, the official gazette published a governmental decree "accepting the resignation of the President of the Council of State" and naming his successor.

Whereupon, the 10 members of the council who had voted with Stasinopoulos submitted their resignations, also as a matter of self-respect. The chief judge's successor, meanwhile, showed himself to be a good lawyer too. He pointed out that he was not the legal President of the council until the incumbent had formally resigned, and that until then a litigant could impeach any decision on grounds that the court was illegally constituted.

The pressure on Stasinopoulos to submit a pre-dated resignation was now immense. He was chivvied and argued with. His phone was cut off and police were placed in front of his dwelling to challenge all visitors and examine their papers.

The heart attack ensued. Shortly thereafter, about three weeks ago, Stylianos Patakos, the deputy prime minister phoned the judge—it turned out that the phone could be put back into operation when it suited the regime's convenience—and ordered him to present himself at Patakos' office. He replied that he was in no condition to leave his bed.

Next day, Stasinopoulos' physician made his morning call and without examining his patient told him he looked fine. The sick man protested that he felt terrible. At this point, the commandant of the regional police station pushed his way into the sick room and engaged in muttered conversation with the doctor. It was clear that some collusion was afoot. In a few moments, the doctor turned back to the judge and declared loudly: "You are now in good health."

FAKE ILLNESS

"So," said the police officer to the judge, "you've been faking illness. The doctor says you are well and therefore at 9 next Monday morning"—two days hence—"you will be in Gen. Patakos' office."

The judge's wife called in a physician in private practice. He has succeeded so far in forestalling Patakos's demand for Stasinopoulos' appearance.

Frustrated and all thumbs, the regime went Andrew Jackson one better, declaring that the court's ruling was not only unenforceable but unfounded because the subject matter was "excluded from its jurisdiction."

Also, it immediately disbarred and ordered one year banishment to a small island and to two remote hamlets for the three lawyers who had argued the Supreme Court justices' case.

George Christopoulos, Greece's ambassador to Paris, a former undersecretary of state

and the Junta's nominee, reported the nature of European reaction. According to those who have seen it, the gist of his message was that Greece could not expect to remain in the Council of Europe, which is considering ousting it, unless it chooses to abide by the conventional legal and moral standards of other member governments, otherwise, it should resign from the council before it is kicked out.

The regime's response was to fire Christopoulos and replace him in Paris with a general.

KEE FIELD—A RECOGNITION OF PUBLIC SERVICE

HON. JOHN M. SLACK

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. SLACK. Mr. Speaker, last Sunday, July 27, it was my privilege to be in attendance at the dedication of a new airfield near Pineville, W. Va., which will offer a new service to the residents of nearby coal mining communities.

A great crowd was present, far exceeding expectations for a very warm July day, and the new facility was appropriately named "Kee Field" in honor of a family which has maintained a record of continuous service in the House of Representatives since 1932.

From that year until his death in 1951 the late John Kee served with distinction and capped his career with the chairmanship of the House Foreign Affairs Committee. During the following six Congresses, his widow, Mrs. Elizabeth Kee, served the same Fifth West Virginia District with notable skill. Upon her retirement in 1964, their son JIM was elected, and has been with us as a valued colleague and friend, identified always with well-founded proposals aimed at improving the prospects for the people of southern West Virginia.

Unswerving dedication to the service of the Fifth District's people has been a Kee family tradition for almost four decades. That tradition is not only recognized, it has long been considered by the people to be as rockbound and unchangeable as the mountains of the Fifth District itself. A reflection of the firm belief in that Kee tradition is found in the following commentary by J. E. Faulconer in the July 28, Hinton, W. Va., Daily News:

DEDICATION OF KEE FIELD

"Senator" Earl Hayes and the writer were among several thousand grateful West Virginians who gathered at the new airfield near Pineville that was named in honor of the Kee family who have served the Fifth Congressional District so well for the last 37 years . . . The late John Kee served the district from 1932 until his death in 1951, and his wife Elizabeth served until her retirement in 1964, and was followed by son Jim who was elected for his first term in 1964 . . . Regardless of what you may think of Jim Kee it is doubtful if any congressman in the entire United States has accomplished more for his district, and this is especially true for Summers County . . . It would be impossible for us to mention all the many things Jim has done for this county and individuals, but to mention some of the r-e-a-l-l-y big things put down magnificent Pipestem Park . . . It belongs to the state, but it would never have happened without his hard work on the Federal level, and don't you forget it . . . Then there is the new hospital here, new post office, National Guard Armory, fire station, street improvements, and he even had a hand in the People's Plant at Pence Springs.

Yours truly really received a fine reception at the airport dedication that was marred some by the traffic congestion that delayed motorists from leaving for nearly two hours, never-the-less it was a great affair and the people of Wyoming are deserving of much credit for completing the $610,000 facility . . . The first person we met was former Secretary of State Bob Bailey who took us to Jim and his wife . . . Then Senator Jennings Randolph arrived by plane with officials from Washington that included Rep. Ken Hechler, William Whittle, District Airport Engineer for the FAA, and others . . . Rep. John Slack was nearly two hours late, and had to walk over a mile after his car was blocked by the heavy traffic on the narrow access road to the airport . . . Three students from West Virginia U put on a great show as they parachuted to earth amid the big airport crowd . . .

Louie Kaman was there with his Mullens High School band, and most of you will remember that he was Hinton's first band director . . . Following the dedication there was a big luncheon at the well appointed Cow Shed . . . Former Governor Hulett Smith was the Master of Ceremonies and did his usual excellent job, and Mr. Kee's hard working Administrative Assistant was also on the scene . . . The beautiful bronze placque that was unveiled read:

"Kee Field, Dedicated to West Virginia's Kee Family; John Kee, Mrs. Elizabeth Kee; James Kee; Who served West Virginia and The United States of America With Distinction, Dedication and zeal As members of Congress from the Fifth W. Va. Congressional District."

AX HANDLE JOURNALISM

HON. PAUL J. FANNIN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, July 31, 1969

Mr. FANNIN. Mr. President, it has been called to my attention that one of the magazines which regularly espouse a liberally "left" line has elected itself to "take apart" a speech by the Secretary of the Air Force Dr. Robert C. Seamans, Jr.

This exercise, of course, is a prerogative of the free press in our Nation. However, it should continually be borne in mind that freedom bears responsibilities and the freedom to disagree with a point of view is not responsible when it is taken as a license to misrepresent and distort. All too often, in the current debate over our national defense strategy, members of the editorial fraternity become rather too emotionally involved with the issues and lose their perspective. This generally renders their comment invalid, irrelevant, or just plain silly.

Mr. John F. Loosbrock, editor of Air Force/Space Digest magazine, has undertaken to call attention to the objective shortcomings of one of his fellow editors, and by all accounts he has done a good job of it. His editorial, entitled "Truth Knows No Deadlines," in the August issue, should be read by those who are interested in a fair assessment of some of the editorial comment which has attended our debate. I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRUTH KNOWS NO DEADLINES

(By John F. Loosbrock)

On June 17 the Secretary of the Air Force made a dignified and thoughtful address in Denver, Colo. The occasion was the Honors Night banquet of the joint national meeting of the American Astronautical Society and the Operations Research Society of America. As one might logically expect the Secretary of the Air Force to do, Dr. Seamans chose to talk on a subject having to do with his duties and responsibilities. He called his talk "Planning for Strategic Deterrence in the '70s."

In the July 12 issue of *The Saturday Review*, the magazine's editor, Mr. Norman Cousins, took public umbrage at the Secretary's remarks. Or at least he purported to do so. A close reading of both the speech and the editorial reveals an almost flawless lack of resemblance between what Dr. Seamans actually said and what Mr. Cousins said he said. There are several ways to account for this singular lack of verisimilitude.

Perhaps Mr. Cousins did not read the speech, in which case his credentials for commenting upon it could be questioned. Perhaps he was merely told about the speech, in which case he was victimized by his source. Perhaps Mr. Cousins can't read, in which case it is difficult to account for his acknowledged success in publishing, a business in which few editors have become millionaires, as has Mr. Cousins.

Or perhaps he deliberately chose to deceive his readers in an effort to prove that the Secretary of the Air Force and the Department he heads represent a threat to the forthcoming arms-control talks and to world peace and stability generally.

In any case, Mr. Cousins chose to phrase his editorial in what is, literally, reverse English. He described the Secretary's speech as if it were one delivered by the Soviet Minister of Military Aviation before a Moscow audience of scentists at which two American physicists were present. (It turns out there were two Russian physicists present at the Denver meeting.) Only at the end does Mr. Cousins reveal he actually is referring to the Secretary of the US Air Force. Bearing this device in mind, let's see what Mr. Cousins said Dr. Seamans said.

Mr. Cousins said Dr. Seamans "called for a full program of antiballistic missile development."

The Secretary actually said: "The ABM program proposed by the President provides an orderly, step-by-step plan that can be halted at an early level of deployment if further expansion is not required for our security."

Mr. Cousins said Dr. Seamans said the USSR "was well advanced with a maximum ABM missile program."

We can't find a statement in the Seamans' speech that even comes close.

Mr. Cousins said Dr. Seamans said that US planners "were going to seize and maintain superiority over the USSR—not just in antiballistic missiles but in the use of space stations and devices that could deliver a succession of nuclear bombs on a string of Soviet targets."

The closest we can find is a Seamans' statement which says, "We are now working on a satellite early-warning system that would detect missiles as they are launched from land or sea."

Mr. Cousins went on to assert that the Secretary "ignored the forthcoming arms-control talks between the USA and the USSR."

Let's quote a bit more at length from Dr. Seamans: "Arms-control agreements are not

incompatible with necessary improvements in our current forces. Both arms-control and new-weapon developments must be designed to maintain deterrence. Neither side can accept and arms-control agreement unless it is certain that the proposed arms limitation will preserve its ability to retaliate against surprise attack.

"Arms-control agreements must structure opposing forces in a way that makes a first strike more difficult and retaliation more certain. This task should be eased by the growing realization that any effort to achieve a first strike will be countered heavily by the other side."

And, after further discussion of the relationship between deterrence and arms control, which Dr. Seamans knows is something quite different from either disarmament or peace—a fact that seems to have eluded Mr. Cousins—the Secretary went on to say:

"If both sides favor arms control, both missile payload and ABM defenses can be fixed at levels consistent with deterrence."

In all, more than three pages of a thirteen-page speech are devoted to a discussion of arms control, the subject which Mr. Cousins said the Secretary ignored.

We hope Secretary Seamans is not discouraged by his recent experience in the world of axe-handle journalism. He should keep on saying what he said in Denver and not worry about the Norman Cousins' of the world. They have forgotten the sage advice of a great liberal reporter, Heywood Broun, who used to say:

"Truth knows no deadlines."

ANSELM FORUM OF GARY, IND.

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. MADDEN. Mr. Speaker, one of the outstanding civic organizations in northwest Indiana is Gary's Anselm Forum, which originated in 1932 during our Nation's great depression. Nine Gary men of various nationalities huddled around coffee cups and released their intermost depression fear—fear of the future of mankind.

The basis for this organization's great success and expansion has been the Anselm World Tape Forum which has been under the able direction of Mr. Reuben Olson. Mr. Olson stated:

Many people in the world have a distorted idea of Gary. We try, in our tapes, to show them that there is good in our town.

The following excerpts from the article from the Glen Park Herald, of Gary, Ind., written by Mary Jo Mucha, narrates some of the organization's history, purposes, and civil and charitable accomplishments:

ANSELM FORUM OF GARY, IND.

(By Mary Jo Mucha)

These Anselm members are now 125 strong under Dr. Nicholas Bucur, president of the Forum. They represent 45 different ethnic groups and all the religions of the world. There is even an agnostic among them.

The 1932 days are in the past. And now, the Forum has begun to broaden itself. In 1959, a New Yorker named Harry Plissner was reading of all the racial tensions in the U.S. and came to the realization that our world image was being terribly degraded. He knew that people in other countries were thirsting for knowledge. So he decided to be an unofficial good will ambassador.

Plissner found that Americans throw away over 30 million magazines a month. This started his thinking. He sent 20 letters to newspapers all over the world and told the people that there were many American friends who were willing to send them magazines free. The response was overwhelming.

In Gary, Olson heard about Plissner's program. By contacting individuals and organizations, he located some 205 correspondents in Northwest Indiana for overseas letter writers who wanted the magazines. This was enough to prove Olson's point: "People are just aching to reach across the pond and shake hands!" Today, Anselm Forum is only partially active in this program.

The newest breakthrough in the world of understanding is going on in the medium of sound. It all started with an organization called World Tape Pals. This organization promoted the exchange of sound tapes between people of all nations. On its own, Anselm took part in recording tapes with the representative from Ghana, an attache from the Israeli Embassy and a religious leader from Johannesburg, South Africa. The tapes were sent to each of the respective countries.

Under the direction of Olson, the Anselm World Tape Forum has been organized. Members work on the premise that there is good in everyone and this theme is carried through all the tapes. But, even though the tapes carry on a wide variety of topics, they are not limited to friendly gestures. The men disagree and are very willing to accept the right to disagree.

There is no topic that the tape enthusiasts would not dare to touch upon. They discuss every thing—Vietnam, world population, birth control, race relations, loneliness, industry, art, music, judicial reform, police work, and juvenile delinquency. These are just a few topics.

Every conceivable stature in life is represented in the Tape Forum. Some of the participants include a lighthouse keeper from the coast of New Zealand, a blind judge who is also cripple, an Italian stylist from Brooklyn who designed the original Playboy Bunny outfits, a shopkeeper in Wales, a casino clerk who loves poetry and the finer things in life.

How are interested people contacted? Olson belongs to several "tape clubs" which publish names and addresses of "tapespondents" monthly.

A teacher in New Zealand became interested in tapes and started a club after school. They sent a tape of their first science lesson on the Atom Molecule. Melton School students in Gary answered the tape with a lesson of their own. The New Zealand teacher liked the tape so much that she played it in front of the PTA as part of meeting program.

Round-robins are a popular feature of the program. Each participant puts his opinions on ½ of a side of a tape and sends it to the next person who does the same. The tapes in this case are not erased.

Mrs. Ray Sanderson, of Lansing, Illinois, was for several years international judge for the Sweet Adelines, Inc. which is the woman's equivalent of the men's barber shop quarters. When Mrs. Sanders accepted the position as assistant director she became so involved in handling tapes for the blind and the handicapped, that she had to resign her post as judge. Ross Sheldon of Alabama now assists Mrs. Sanders.

The library of Mrs. Sanders contains tapes which are not erased. Of particular interest to the blind are the tapes of a Capetown, South Africa man named Harold Ewins. They have sounds of jungle animals, capture of an elephant and sea gulls fluttering above the water. Others are the tapes of a blind singer, organist, and composer of New South Wales, Australia. Someday Nellie Sweeney will publish her own hymn book.

She received a letter from Frank Senn, Jr., a blind organist at the Holiday Inn of Buffalo, New York. After hearing Mrs. Sanders sing on tape Senn wanted to play the organ on the tape, send it to Mrs. Sanders, and have her add the singing.

The assistant director is a talented lady well suited for the job. She has sung with the Merchandise Mart Chorus, Trinity Evangelical Covenant Church Choir, and the Aristocrats of Song. Mrs. Sanders is also quite creative and has numerous handicraft projects.

As an indirect result of the world tape project, Olson has a fabulous collection of postage stamps. In reciprocation, he buys commemorative US stamps whenever he can. He uses these in his correspondence so that every piece of mail from Gary arrives in some foreign land with a new and different stamp.

Olson says that "it gets in your blood and you keep going." He started out with 1 tape recorder and he now has four recorders and an assortment of amplifiers, microphones, receivers and electronic equipment.

Summing up the work of his organization, Olson says its all a part of "shakng hands across world boundaries in a neighborly sort of way."

The Anselm World Tape Forum will be an integral part of Festival 69. Olson will tape free for anyone in Gary who has sons or daughters in the military. Last year he taped for 99 people all over the world.

POEM WRITTEN BY A SERVICEMAN IN VIETNAM

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, July 31, 1969

Mr. THURMOND. Mr. President, an inspiring poem has been written by a serviceman in Vietman. It is entitled "A G.I.'s Protest." It reflects the American spirit of our boys in Vietnam. It reveals their disgust with the protesters back home who burn their draft cards, dodge the draft, use drugs and demonstrate against the war and our democratic institutions. It is my understanding that this poem was circulated among our boys in Vietnam as an expression of their protest to the irresponsible demonstrators back home who are not loyal to their effort.

Mr. President, I wish to quote a part of the poem:

You burn your draft cards
and march at dawn,
And you leave your signs on the White House lawn
And all you want is to ban the bomb
There is no war, you say,
in Vietnam!
And you refuse to lift a gun.

Mr. President, I am proud to report that Pfc. Timothy E. Heaton, of Clinton, S.C., wanted his friends in South Carolina to know this poem reflected his view of the protesters. He sent it home, and it was published in the Clinton Chronicle newspaper on July 2. The Reverend J W. Spillers, of Clinton, informed me about Timothy Heaton.

The Reverend Mr. Spillers' son, Major Jack C. Spillers, who was shot down over North Vietnam and is now assigned in Washington, D.C., has volunteered to return to Vietnam. It is the Heatons and the Spillers and the millions of others like them who deserve our Nation's eternal support, loyalty, and gratefulness.

Mr. President, I ask unanimous consent that the poem be printed in the Extensions of Remarks.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

A G.I.'s PROTEST

(EDITOR'S NOTE.—The following poem was sent by a Clinton serviceman now in Vietnam who commented, "It states how a great deal of us feel about some people back home. . . . We do not want it to sound like we are big heroes or anything but only that we are ashamed of some of our own people.")

Take a man then leave him alone,
Then put him 12,000 miles away from home.
Then you empty his heart of blood
And make him live in sweat and mud
This is the life I have to live
And why my soul to the Lord I leave
You "peace boys" rant from your easy chairs
But you don't know what it's like over here.
You have a ball without near trying
While over here our boys are dying.
You burn your draft cards and march at dawn,
And you leave your signs on the White House lawn,
And all you want is to Ban the Bomb
There is no war, you say, in Vietnam!
You use your drugs and have your fun
And then refuse to lift a gun.
There's nothing else for you to do
And I'm supposed to die for you?
I'll remember you until the day I die
Cause you made me hear my buddy cry
I saw his arm a bloody shread,
I heard them say, "This one's dead!"
It's quite a price he had to pay
For you to live another day!
He had the guts to fight and die
He paid the price. What did he buy?"
He bought your life by losing his!
But who gives a damn what a soldier gives!

God have mercy on you and help us to continue, in our faith.

WE MEN OF VIETNAM.

MORE GUN CONTROL NONSENSE

HON. WILLIAM H. HARSHA

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. HARSHA. Mr. Speaker, one of the most ridiculous proposals to come out of a Presidential commission in many a time is that recommendation recently made by the task force of the President's Violence Commission to totally disarm every American citizen in the United States.

Should this soft-headed recommendation ever go into effect, it will be like sounding a clarion call to every criminal in the United States informing him that the American public is totally disarmed and completely at his mercy.

Yesterday's Evening Star contained an editorial entitled "More Gun Control Nonsense," which expresses the sentiments of many American citizens more adequately than I, and I include it in my remarks and commend it to my colleagues:

MORE GUN CONTROL NONSENSE

As an introductory note to this editorial comment, an item in the crime news is worthy of attention. On Monday there were 22 armed robberies in Washington. This brought the July total as of that date to 450, compared to 332 armed robberies in all of July of 1968.

In the face of this a task force of the President's Violence Commission (appointed by President Johnson) comes forward with a wacky recommendation. Its proposal is, except in a very small number of cases, that all Americans should be required to surrender any hand guns they own to the government.

Here is the task force's reasoning: This is the only way in which the United States can break "the vicious circle of Americans arming to protect themselves from other armed Americans." Now what does this really come down to? Even the task force, we suppose, would concede that criminals are not going to surrender their hand guns. So what they are saying is that no homeowner, to cite one example, should be permitted to keep a hand gun in his own house to protect himself, his wife, and his children against the night when some armed criminal might break into his home. Their argument is that home owners "may" seriously overrate firearms as a method of self-defense against crime. The "loaded gun in the home creates more danger than security."

This strikes us as blithering nonsense. How many members of this task force have been awakened in the middle of the night by a scream for help by some member of his family? Probably not one. But thousands of Americans are exposed to this dreadful experience every year. And in such a situation what is an unarmed householder supposed to do against an armed intruder? Hide under his bed, and never mind what happens to his family?

The major thrust of this soft-in-the-head report is that the requirement to surrender your hand gun, of which there are an estimated 24 million in the country, would reduce crime. This is absurd, for the criminals are not going to surrender their guns. A better and much more realistic way to deal with this problem will be found in legislation now being considered in Congress.

The intent of this legislation is to provide tough, really tough, mandatory penalties for criminals who use guns in the commission of a felony, such as rape, robbery or burglary. For a first offense the penalty generally favored would be a mandatory jail sentence in a federal jurisdiction, which includes Washington, of from one to 10 years. A judge would be forbidden to suspend this sentence or to make it run concurrently with the sentence for the primary offense. In case of a second offense, much stiffer jail sentences are proposed, and they should be written into law.

A similar bill passed the House last year, but was watered down in the Senate before becoming law. The argument then was that mandatory sentences deprive judges of discretion in imposing penalties. And so they would. But in one week at the time the watered-down bill was passed 17 criminals in this city were found guilty of crimes in which guns were used. In six of these cases, more than one-third, the judge imposed suspended sentences, which means that no jail terms were served for using a gun.

So we say let's make the sentences mandatory. And let's not deprive the law-abiding citizen of hand guns in his own home while the criminal element will remain armed to the teeth.

THE TRUTH ABOUT INTERCITY TRAINS

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. ROBISON. Mr. Speaker, in my continuing search for comments on and solutions to the problem of the decline in rail passenger service I came across the following editorial from the Wall Street Journal of July 29, 1969, which points up the need for Federal action in this area. I hereby insert it in the RECORD as further evidence of a growing awareness that something must be done soon:

THE TRUTH ABOUT INTERCITY TRAINS

As the Interstate Commerce Commission says in a new report, it's high time to decide what—if anything—to do about the disappearance of intercity rail pasesnger service. If some decision isn't made soon, there will be little service left to discuss.

In June 1968 there were 590 regular passenger trains. Now there are fewer than 500, and railroads are seeking to discontinue about 50 of those. In the past 10 years total noncommuter passenger revenue has fallen by nearly 50%, reflecting the disappearance of both trains and passengers.

Under present law, the ICC notes, there is nothing the Government can do to stop the eliminatin of service, although the agency's leisurely procedures do slow it somewhat. Carriers cannot be required to continue the operation of trains which constitute "unreasonable financial burdens."

While there may be reason to debate what is and what isn't reasonable, there's no question that passenger service is a heavy financial burden for the railroads. The ICC study of eight major rail lines, handling 40% of the noncommuter passenger miles, showed that in 1968 they sustained $118 million in "avoidable expenses" in the process.

That, of course, brings up the problem of defining passenger deficits. An avoidable expense is one that a railroad would not have incurred if it had not been operating passenger trains. The usual accounting formula assigns passenger service a share of the cost of maintaining tracks and other facilities that are also used by freight trains—and must be kept up even if no passenger trains run.

Under the conventional formula, the eight railroads reported a $214.3 million passenger deficit in 1968, nearly double the avoidable-expense figure. For all railroads, the Association of American Railroads estimates that the 1968 deficit, on the conventional basis, was around $485 million, which also far exceeds the estimated $170 million deficit for all roads on items solely related to passenger service.

Arguments over accounting have in the past tended to obscure whether the railroads "really" were losing on passengers. It should be clear now that even the smaller $170 million figure for all roads is too high to be borne for long by an industry which, last year, had net income of less than $600 million and a net return of less than 2.5% on its invested capital.

If the railroads can't carry the burden alone, the ICC figures the next question is whether the Government should carry any of it and, if so, how much. Any reasonable answer depends on a careful assessment of just what the public's need is for intercity service.

People who enjoy—or used to enjoy—riding the railroads often argue that patronage would be much greater if there were more, and higher quality, service. It's certainly true that passenger trains are not only fewer but often dirtier and less dependable.

It is, however, more than a little unreasonable to expect the railroads to pour huge amounts of fresh capital into passenger service in the hope that eventually it would make money. In some places it might work. In many areas, though, the hope would at best be a weak one; where airlines service is plentiful and reliable between distant cities, it is unrealistic to think that enough people would ride the trains to make them pay.

If the Federal Government gets deeply into passenger-train subsidies, then, it should

make sure that any service it subsidizes will provide a fairly popular alternative to air and auto travel. One example that may meet that description: The fast, Federally aided trains between New York and Boston and between New York and Washington.

Even in less populous areas there may be some argument for maintaining skeletal rail passenger service—possibly for use in some unforeseeable emergency. If so, the Government presumably would assume a large share of the cost.

Americans for years loved riding passenger trains, and some of us still do. But the truth is that the nation cannot expect the private railroad industry to continue forever financing this romance.

A BILL TO STOP PORNOGRAPHY SENT THROUGH THE MAIL

HON. GEORGE BUSH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. BUSH. Mr. Speaker, I introduce for appropriate reference, a bill aimed at stopping the purveyors of pornography and sex-oriented advertising from using the mails as a means of transmitting their vile materials into private homes and businesses.

The volume of mail that has poured into my office in recent weeks decrying the use of the mails for this purpose has been staggering. It is readily apparent that American homes are now being inundated with more of this salacious matter than at any other time in history. This clearly indicates that it is time to stem this mushrooming tide of smut and obscenity that is violating the privacy of homes and corrupting the minds of our youth.

My bill requires mailers of obscene materials to first purchase from the Post Office Department a list of all families who have submitted their names to the Postmaster General indicating they do not want to receive such mail. The list would be made available only upon request and payment of a service charge, a fee covering all costs of compiling and maintaining the list.

The bill offers a refinement of present law in that it permits families to request that no obscene materials be sent them before, not after, they receive it.

This would be accomplished by a family simply informing the local post office that its mailbox is off-limits for smut mailings. Any mailer who violated this request and sent obscene materials to a family on the list would be subject to fine or imprisonment. The bill also contains penalties for sales, rental or lending of this list.

Further, the bill gives the Postmaster General the power to request the Attorney General to commence civil action against those who violate any provisions of the bill.

During preparation of the civil suit, the Attorney General may enter a temporary restraining order containing such terms as the court deems just, including provisions enjoining the defendant from mailing any sexually oriented advertisement to any person or class of persons.

I concur with President Nixon in his conviction that no governmental approach provides the final solution to this problem.

In his words:

The ultimate answer lies not with the Government but with the people. What is required is a citizens' crusade against the obscene. When indecent books no longer find a market, when pornographic films can no longer draw an audience, when obscene plays open to empty houses, then the tide will turn. Government can maintain the dikes against obscenity, but only people can turn back this tide.

This bill represents the sort of measure needed now to stop the abuse of the postal service for this depraved purpose and reinforce a man's right to privacy in his own home.

RETIREMENT OF LT. GEN. WILLIAM F. CASSIDY, CHIEF OF U.S. ARMY ENGINEERS

HON. ROBERT E. JONES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. JONES of Alabama. Mr. Speaker, today marks the date of the retirement of Lt. Gen. William F. Cassidy, the Chief of U.S. Army Engineers, a distinguished soldier-engineer who has been a national leader in the development of the water resources of this great country.

General Cassidy's retirement will mark the end of a distinguished military career that commenced in 1931 when he was commmissioned in the Army Corps of Engineers after graduation from the U.S. Military Academy, West Point. General Cassidy's major military responsibility has been as the supervisor of all military engineering functions in the Army. He has been deeply involved in counseling, advising, and assisting in the constructio and combat support mission of the Army Engineer troops in Southeast Asia as well as in the expanding world-wide military construction program.

In his military service in the Army, General Cassidy has held many positions but I believe his greatest accomplishments have been when he was engaged in the field of water resources development, where he is truly one of the great experts. He has served as Division Engineer, South Pacific Division—as Director of Civil Works, and Deputy Chief of Engineers as well as in the position of Chief of Engineers. In all of these positions he has served his Nation well in bringing flood control to areas previously ravaged by floods, opportunities for industrial development along navigable waterways, municipal and industrial water supply to water-short areas, water-oriented recreational opportunities at reservoirs, and beaches throughout the country.

Mr. Speaker, I am pleased to have this opportunitly to congratulate Bill Cassidy for a job well done, and to wish him continued health, happiness, and success in the years to come.

GLUE-SNIFFING CAN BE ELIMINATED

HON. JOHN B. ANDERSON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. ANDERSON of Illinois. Mr. Speaker, recently, the Testor Corp., of Rockford, Ill., announced an important discovery. By the addition of a certain chemical to its glue products, the problem of "glue-sniffing" can be eliminated. We extend our sincere congratulations to the Testor Corp., on this important discovery. In particular, we commend the manufacturer of its generous offer to make its findings available to other concerns producing inhalable products such as nail polish remover, paint thinner, cleaning fluid, and propellants in aerosol spray cans.

A statement detailing the background of the Testor Corp. discovery follows:

STATEMENT

NEW YORK.—The largest manufacturer of plastic model cements has found a solution to the problem of glue-sniffing in a basic chemical that could also be used to end the sniffing of solvents from scores of household products used by millions of consumers.

The Testor Corporation, a division of the Chicago-based Jupiter Corporation, has been adding oil of mustard to its plastic model cements since May, 1968, after six years of development and testing.

Oil of mustard—known scientifically as allyl isothiocyanate—acts as a deterrent to the misuse of plastic model cements by providing the same jolt in the nasal area as that occurring after eating very hot mustard or horseradish.

At a press conference, Charles D. Miller, president of Testor, said that his company is offering its research and development results concerning the additive to any manufacturer whose products contain inhalable solvents.

The products include nail-polish remover, paint thinner, cleaning fluid, gasoline, and even the propellants in pressurized hair sprays, cocktail glass chillers, and the sprays that keep foods from sticking to pots and pans.

The oil of mustard, also called essence of horseradish, is a lacrimator, an irritant which produces excess tearing. Its effects are reversible—they cease as soon as exposure to the chemical ends.

James L. Badinghaus, assistant administrator of the Hamilton County Juvenile Court, Cincinnati, Ohio, and an authority on juvenile delinquency and drug abuse, said that several youngsters, arrested for glue-sniffing, told the Court that they could no longer sniff Testor plastic model cements.

"The youngsters told the Court, 'We can't use Testor's anymore—they've put something in it and it smells too bad to sniff'," Badinghaus said.

Hobbyists, who use plastic model cements for their appropriate purposes, have not noticed the existence of the additive in the cement.

Miller said that "solvent inhalation is the problem of all manufacturers whose products contain such ingredients. We are offering to these manufacturers whatever assistance we can give to help them add a deterrent to solvent-inhalation into their products too."

Forrest Elson, Testor vice president for research and production and a chemist pointed out that allyl isothiocyanate is approved by the Food and Drug Administration as a food additive, and is used to add spice to many food products. In different

forms, it is also used as a food preservative and in drug production.

Attempts to develop either a deterrent to solvent inhalation or products without such solvents have been made for decades. Investigations focused on developing an additive after it was learned that the solvents themselves are almost always basic to the functions of the products in which they are found. In plastic model cements, for example, solvents give the cements their excellent adhesive power and the ability to dry immediately after application.

The New York-based Hobby Industry Association of America, in 1962, commissioned an independent laboratory to investigate possible plastic model cement additives. In late 1962, the laboratory issued its report which contained a list of almost 100 possible additives.

In the two years until late 1964, the Testor Corporation combed through the list of potential additives, testing their safety, effectiveness and practicality, and finally selected the oil of mustard.

From 1964 to 1968, the company tested the additive in its plastic model cement production processes to be sure that the additive did not affect the adhesive qualities of its cements.

The Testor Corporation is the largest producer of plastic model cements, turning out more than 25 million tubes of the product annually, about two-thirds of the industry total.

Its model cements are used by hobbyists to build the millions of plastic models sold each year.

In addition to its plastic model cements, The Testor Corporation, a 40-year-old hobby products producer, manufactures other special-formula cements for various materials, decorative and hobby enamels paint-by-letter kits, styrofoam gliders, model airplane and automobile engines, and other model building and decorating supplies. The company has plants in Illinois, California, and Canada.

APOLLO 11

HON. EARLE CABELL

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 24, 1969

Mr. CABELL. Mr. Speaker, all of us in America and in all parts of the earth are proud of the success of the Apollo 11 trip to the moon. This achievement is one in which all of mankind has shared via worldwide television, made possible by our space age technology. The openness with which the United States has shared its exploration in space has made this international interest possible. Unlike the other space power, our program has been open for all to share in its successes and in any possible failure.

Many in the Congress, Government, industry, and education are due credit for a team effort unsurpassed in our history. Dallas County industries have played a significant part on this team. The courage of Neil Armstrong, Buzz Aldrin, and Mike Collins and their dedication made the final triumph on the lunar surface possible. However, if I had to choose one man to thank for the fact that the first flag planted on the moon was the Stars and Stripes, I would pick our former President, Lyndon Johnson.

During the early Russian exploration and success in space during the 1950's, then Senate Majority Leader Johnson was chairman of the Senate Space Committee and led the way in convincing the Eisenhower administration to go at least the first mile on this vital program.

Later, as head of the Space Council, then Vice President Johnson worked hard to assure that the American space effort moved smartly ahead. Finally as President Lyndon Johnson continued his support and enthusiasm for maintaining the momentum of the program whose success we have now witnessed.

With this background, nothing could have been more fitting than that former President and Mrs. Johnson were honored guests at the launch of Apollo 11 on its epic voyage.

At this time of exhilaration over man's most spectacular feat to date, it is fitting and proper that the three space heroes who made the final steps out onto the moon should be honored. However, many, many others contributed to this success and first among these is our fellow Texan, Lyndon Baines Johnson.

THE FUTURE OF SOUTHERN MARYLAND

HON. J. GLENN BEALL, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. BEALL of Maryland. Mr. Speaker, recently my colleague, Representative ROGERS C. B. MORTON of Maryland's First District, addressed the annual meeting of the Southern Maryland Electric Cooperative, Inc. He spoke about the future and growth of this area, which is presently rural, and urged the residents to make the necessary preparations for this expansion. I think his remarks are of interest, especially to my colleagues in this body whose districts face similar developments.

I include the remarks in the RECORD at this point:

REMARKS BY CONGRESSMAN ROGERS C. B. MORTON, ANNUAL MEETING OF SOUTHERN MARYLAND ELECTRIC COOPERATIVE, INC., JULY 14, 1969, CHARLOTTE HALL, MD.

Today I've spent a few hours at Patuxent River Naval Air Station, at the Naval Ordnance Laboratory at Solomons, at the site of the new electric power plant being constructed at Scientist's Cliffs, and in the major communities of St. Mary's and Calvert Counties.

Every time I come to Southern Maryland, I am impressed with the opportunity that exists here. I am impressed with the beauty of the place, but most of all I am impressed by the people. I regard it as a high privilege that the General Assembly of Maryland included in the First District—Calvert, St. Mary's and part of Anne Arundel Counties. I wish I represented Charles County.

I see great change coming to Southern Maryland and I'm sure you do. It is something you and I together must think about; it is something we have to do something about. We have to maintain certain balances and just for a moment I am going to talk about those balances.

Practically everything you and I do today, when we go to the store—when we get up in the morning and turn on the lights—when we heat our homes—when we drive our cars—no matter what, we use energy. Basically, there are only three great sources of energy available to this civilization at this point in time. They are oil and oil derived from shales, coal and uranium. Those are the three sources of energy we use as tools. The other great source of energy, of course, is the solar energy from the sun.

We must remember that in our time on the crust of this earth, it will be necessary for us to keep in balance the great sources of energy. This is important. We must remember that in this we have known oil reserves of only about 8 years. Therefore, it will become necessary to use more coal and more uranium, which can be converted into nuclear energy.

If we fail to keep the consumption of these resources in balance, we will reach a point of crisis when drastic changes will take place. Imagine how it would be if you could burn the light in your living room only from 2 o'clock in the morning to 3 o'clock in the morning, if that's the schedule you were assigned. Or if you could run your refrigerator only 2 or 3 hours a week; or if you could buy only enough fuel oil to heat your house for 25 days through the winter period? This could happen if we run out of oil if we don't balance the use of that source of energy with other resources available to us.

New technologies are going to come along. There is a great power plant right here in Calvert County. One that is subject to controversy—mostly speculation on what might happen. But our technology has reached a point where we can control what will happen, if we are patient and if we are careful.

Because of my deep interest in the conservation of the Bay and its surrounding shore land, I would never approve an installation which would warp, destroy or in any way injure the integrity of a great resource which means so much to us—namely, the Chesapeake. So I am going to be as demanding as I can on the technology put forward, so we can insure this installation will not heat up the Bay and thereby deteriorate the ecology of the Chesapeake, and insure that no radioactivity in any toxic amount will be put into the environment. If it is done correctly and it is done with care and patience, this can be the cleanest and most efficient kind of energy conversion process we have. Let us demand of the officials who are in charge of that project the very best, but realize too that we as a people must begin to use a balanced mix of our energy sources.

There is one other balance I want to talk about, because it is a very important balance to you and to me and to every Southern Marylander. The three counties of Southern Maryland—Charles, Calvert and St. Mary's, are going to be under more stringent population pressures during the last quarter of this century than any other area in the State and on the entire eastern seaboard complex. The storekeeper down the street thinks in terms of new customers when he thinks in terms of growth. The fellow who is selling automobiles thinks in terms of more sales when he thinks of more people.

But there are greater balances which you and I have to think about if we are going to preserve the beauty and the spirit and the personality of this great part of the country. We've got to think in terms of balancing this growth with jobs. We've got to think in terms of balancing this growth with transportation so we don't become just a suburban traffic jam to Metropolitan Washington.

The leadership for this will come from many sources. It will come from the Board of Directors you've just elected of this great organization. It will come from the Planning Councils of groups like your Tri-County organization. It will come from the hard work of the County Commissioners. I've spent a good portion of the day with the County

Commissionrs of St. Mary's County on this very matter.

Let us preserve the jewel-like atmosphere of Southern Maryland by carefully planning what our future is going to be, and not let some authority from Washington or some mysterious happening plan our destiny and our lives for us. We can do it if we try. We can do it if we work together. We are now at a density of only about 84 people per square mile. We now have a population in these three counties of only about 85,000 people. But in 1985, it is predicted that we will be 190,000. Everywhere you look on the road, where you now see one car there will be two. Everywhere there is a house, there will have to be two; but likewise, everywhere there is a new house, there has to be a new job.

Today, the people in St. Mary's, Calvert and Charles Counties have an average age which is 4 years younger than the State average. Let's convert the energy of all that youth and enthusiasm into the building of a great community that has balance—balance in its energy sources, balance between jobs and growth, balance between open space and closed space, balance among systems of transportation. Let's build a place that is exciting to live in, a place that is profitable to work in, a place that has a feeling of security and not one of frustration. Today is the day we should start with those plans.

Thank you very much.

THE ARMS TRADE—PART I

HON. R. LAWRENCE COUGHLIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. COUGHLIN. Mr. Speaker, I am compelled to comment on a state of affairs so dangerous and out of control that it threatens man's very existence on earth. Specifically, I am referring to the international trade in the weapons of war.

Since Hiroshima, mankind has been urgently preoccupied with devising ways in which atomic weapons will never again be used. Yet, while we have focussed our attention on this most worthy goal, we have virtually ignored the critical need to control the vast proliferation of conventional arms that has been a stark fact of life for the past quarter century.

Mr. Speaker, there have been 56 wars of significant size in this world since 1945, 54 of which have been fought in the underdeveloped areas. The nations doing most of the fighting do not have the capacity to make their own arms. Thus, the weapons they use to fight these wars have all been imported from the major industrial powers.

The worldwide volume in the trade in arms is currently $5 billion per year. Fifteen years ago it was only $2.5 billion; by the early 1970's it is estimated that the trade will double to $10 billion a year. This vast trade in arms is carried out largely unimpeded by any international laws or restraints.

The largest arms merchant in the world, Mr. Speaker, is the U.S. Government, currently distributing in excess of $2 billion in arms per year to some 70 countries. The Soviets are second, distributing some $1 billion a year, mostly to the Middle East. Vying for third are Britain and France, each of which is selling some $400 to $500 million in arms each year. Also aggressively involved in the sale of arms are Belgium, Italy, West Germany, Canada, Czechoslovakia, and Red China, as well as two peace-loving "neutrals," Sweden and Switzerland.

In addition, there exist several score major private arms dealers who buy and sell arms for personal gain. Their business collectively runs to some $100 million per year. The largest private dealer in the world, by the way, is a firm called the International Armament Corp. or Interarms for short, and it is located in Alexandria, Va., less than 8 miles from this Chamber.

All in all, some $66 billion worth of conventional arms have been pumped into the world markets since the end of World War II. Of this, the United States alone has been responsible for $50 billion. Thus, one might say that the post-war arms trade is fifty sixty-sixths an American responsibility. And it should be noted that in this atomic age, conventional arms are doing the killing, and not a thing is being done to stop the proliferation of these weapons of death.

A $5 billion arms trade becomes significant when one reviews the Cuban revolution. Fidel Castro had less than 1,000 regulars in the field; for an aggressive arms salesman to have supplied Castro's entire weaponry needs at that time would have required gathering together only 1,500 to 2,000 small arms, a value not exceeding $50,000. To deliver such a small order would have taken any reasonably efficient arms merchant less than 1 week.

It must be remembered that 2,000 small arms represent about one-three hundredths of one large dealer's inventory—a relatively small quantity. If a private arms dealer, with a mere $50,000 worth of arms, has the power to underwrite a revolution as significant as the one Castro led, it is obvious what can occur as the result of the U.S. Government distributing more than $2 billion in arms per year, and the entire rest of the world distributing another $3 billion.

There are virtually no regulations controlling the arms trade today: The few rules which exist are breaking down, not only because the trade is growing so fast and thus overwhelming the little control machinery that exists, but because of an excess of bureaucratic obscurantism, intellectual rigidity, and sheer human ignorance and greed.

This is why the potential mischief of the arms trade is so dangerous. I am convinced that the reason conventional warfare is dangerous in the atomic age is that, if a general atomic holocaust breaks out, it will occur as the direct result of a conventional war escalating out of control. That is why the Middle East is so critical: the Soviets have put their prestige on the line with Egypt; more and more we, the United States, are being forced to put our prestige on the line with Israel, the responsible Arabs, or both. If it comes to the point where neither great power can back down, then the buttons are going to be pushed.

I am disturbed that those nations distributing arms around the world are more and more involving themselves in the trade for economic rather than military reasons. Once arms were given away or sold, because it was in the military interests of the donor country. However, over the last decade, the emphasis has changed from military to economic. Now nations sell arms, because it is good for business, it brings in hard currencies, it keeps people employed, it off-sets an unfavorable balance of payments, it cements international relationships, it promotes the international flow of technology, and it keeps nations up in the state of the art.

In order to bring this subject to the attention of my colleagues and to increase the pressure on our Government to seek changes in the disastrous direction of our arms aid policies, I plan to speak out from time to time on this topic whenever I believe I have information which may be relevant.

Today, for instance, I am including in the RECORD an article from the New York Times concerned with the recent 5-day "Soccer War" between Honduras and El Salvador in which some 3,000 soldiers lost their lives and which saw both sides using arms supplied by the United States.

I believe the facts speak for themselves:

O.A.S. PEACE MOVE IS BACKED BY UNITED STATES; INDEPENDENT EFFORT TO SETTLE SALVADOR-HONDURAS WAR BARRED BY WASHINGTON

(By Peter Grose)

WASHINGTON, July 15.—The Nixon Administration deplored today the use of United States-supplied arms by two Central American republics to fight each other.

White House and State Department spokesmen expressed full support for the efforts of the Organization of American States to bring about a cease-fire between Honduras and El Salvador, ruling out any independent United States role to mediate the dispute.

[The Honduran Government said that its planes had attacked targets in El Salvador in retaliation for attacks on the ground and in the air by Salvadoran forces Monday. It said that a Salvadoran plane had been downed.]

The Organization of American States sent a team of diplomats from seven nations, including the United States, to Central America to report on the air and ground combat and to try to induce both sides to break off hostilities.

At an O.A.S. Council meeting today, special representatives from Honduras and El Salvador exchanged accusations of aggression. A former Foreign Minister of Honduras, Roberty Perdomo, charged that the Salvadoran armed forces were staging a "large-scale invasion" of Honduras. The President of El Salvador's Supreme Court, Alfredo Martinez Moreno, accused Honduras of carrying out a policy of genocide against thousands of Salvadoran citizens who live in Honduras.

An authoritative State Department official conceded the possibility that the military equipment being used by the two sides had been supplied by the United States under military assistance programs. "Such a situation is not without precedent," he said, "and we consider it very regrettable."

Senator J. W. Fulbright, chairman of the Senate Foreign Relations Committee, said he was "embarrassed" by the warfare between the two hemisphere neighbors "to the degree that we have responsibility."

"They might have solved it with fists and feet if we had not furnished them the arms to use instead," the Arkansas Democrat said.

United States military assistance to Honduras last year amounted to about $800,000;

to El Salvador $500,000. As Secretary of Defense Melvin R. Laird said, in testifying before Senator Fulbright's committee, the total military aid to Latin America is "a very small amount."

Senator Jacob K. Javits, Republican of New York, said the fact of the aid, not the amount, is what is important. Senator Fulbright suggested that the Pentagon might consider complete elimination of military grants to Latin American and other underdeveloped countries.

The O.A.S. peace-making commission flew to Guatemala City this morning in two aircraft, one a commercial flight, the other supplied by the United States Government. The Nicaraguan Ambassador to the United States Guillermo Sevilla Sacasa, heads the team. The United States members are Richard A. Poole and John W. Ford, senior delegates at the O.A.S.

President Nixon's representative at the O.A.S., Joseph John Jova, was quickly sworn in this morning so that he could take part in today's Council meeting. He had been Ambassador to Honduras since 1965.

The State Department spokesman, Robert J. McCloskey, said there were about 3,200 United States citizens in El Salvador and 2,100 in Honduras. The State Department has received no reports of American casualties in the combat.

RETALIATION RAIDS STAGED

TEGUCIGALPA, HONDURAS, July 15 (Reuters)—Honduras said today that her planes had shot down a Salvadoran plane during an air raid on the Toncontin International Airport here.

A government spokesman said there were no Honduran casualties in the bombing attack and damage to the airport was slight. The airport was closed to civilian traffic.

There was no indication what happened to the crew of the downed Salvadoran plane.

The spokesman said that Honduran planes had earlier bombed targets in El Salvador in swift retaliation for the attacks on Honduran territory.

Honduran planes destroyed fuel tanks at El Salvador's principal airport in Ilipango, knocked out airport installations and damaged port facilities, the spokesman said.

A military spokesman said that Salvadoran troops attacking frontier positions were being repelled.

The situation in San Salvador, meanwhile, was tense, with schools closed and a third of the shops and offices closed, the Salvadoran newspaper La Prensa Gráfia reported by telephone.

La Prensa Gráfia said that Salvadoran troops were penetrating deeper into Honduran territory in a march on Tegucigalpa. They were within 75 miles of the Honduran capital, according to an official Salvadoran announcement quoted by the newspaper.

The official announcement said that the purpose of the march was to protect the lives of more than 200,000 Salvadorans still living in Honduras. The San Salvador Government feared reprisals against the residents.

Radio reports from the mountainous border between the two countries said that fighting was continuing along the length of the 860-mile frontier. La Prensa Gráfia said. The border area is dotted with small farming villages growing rice, beans and corn.

HONDURAS IDENTIFIES TARGETS

TEGUCIGALPA, July 15 (AP).—The Honduran Government identified the targets attacked by its World War II Corsairs in El Salvador today as military bases and fuel depots at La Union, Acajutla and the Ilopango international airport. It said the airport had been put out of action, structures damaged and oil supplies destroyed.

There were unofficial reports that the Honduran port of San Lorenzo had been damaged by machine-gun fire, and that there had been casualties in Salvadoran air attacks on Ocotepeque, a town of about 5,000, and Santa de Copán, with 9,500 residents.

A Red Cross official in Managua, Nicaragua, said that 500 refugees of various nationalities had fled into Nicaragua from neighboring Honduras.

A good deal of the ill feeling between the two countries arises from the resentment of Hondurans toward the nearly 300,000 Salvadorans living in their country. Most of the Salvadoran immigrants are peasants who have gone to Honduras in search of land—something that cannot be obtained in their small and overpopulated country. Honduras, with 2.5 million people, has an area of 43,227 square miles; El Salvador has 3.1 million people living in 8,260 square miles.

These feelings came to a head last month during a three-game soccer match to determine which team would play in the World Cup matches. A wave of violence flared against Salvadorans in Honduras after charges of mistreatment of Honduran fans after a game in San Salvador.

DEATHS FROM KIDNEY DISEASE APPALLS HORTON

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. HORTON. Mr. Speaker, today a man will die from a disease for which a cure has been found 10 years ago. It is appalling to me that people continue to die from kidney disease, while techniques to save these victims' lives have been developed.

Kidney transplants and the kidney machines are two techniques that could save the lives of 10,000 patients. And yet, less than 5 percent of these patients receive these life-saving treatments, solely because of lack of funds.

Many of my colleagues may have read of a tragic example of this in the Star last week. It was a story of a young woman, a victim of kidney failure, who lay unconscious in the hospital. She was denied the use of the machine that might save her life because she could not guarantee payment. The machine could cost up to $15,000 a year.

Mr. Speaker, the citizens of the richest country in the world cannot stand by and see this happen. We can no longer let this ironic tragedy exist. We can no longer force a physician to choose who will live and who will die on the basis of money.

Today, I am introducing the National Kidney Disease Act. It is designed to provide needed training facilities, treatment centers, specialized professional personnel, and even the costs of necessary equipment and supplies for patients to treat themselves in their own homes.

My bill calls for the combined efforts of Federal, State, local governments, medicine, universities, nonprofit organizations and individuals.

This comprehensive approach to planning and implementing a national program for the treatment of kidney disease will secure the latest advances in diagnosis and research.

Mr. Speaker, aside from kidney transplants and kidney machines, basic research into the nature of the disease and mass testing procedures for the early detection is urgently needed.

This dreaded disease is one of our Nation's most widespread afflictions. Over 7 million Americans suffer from kidney-related disease and 100,000 deaths a year result from it.

Seventy-nine Members have cosponsored this bill. I am pleased to add my support to this urgently needed legislation, and I believe it is now time for Congress to take action.

LEGISLATION INTRODUCED TO COMBAT SHORELINE EROSION

HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. ASHLEY. Mr. Speaker, I am introducing today legislation designed to combat the growing problem of shoreline erosion.

Under present law the Corps of Engineers may spend up to $50,000 in one locality in any one fiscal year for the construction of emergency bank protection works to prevent flood damage to highways, bridge approaches and other public works endangered by bank erosion.

However, the corps can provide assistance for damaged privately owned property only when the President declares that a disaster exists. The Office of Emergency Preparedness does not have available funds or programs for shoreline erosion relief. The Small Business Administration, which can purportedly lend money at 3 percent interest rates, cannot lend to a private property owner unless 25 homes have been destroyed—the criteria for the SBA declaring an area a disaster area.

Thus we are faced with a situation in which private property owners are often helpless until their lands and homes, and those of 24 of their neighbors, have been destroyed. This absence of preventative measures in the laws leaves property owners across the country in a bind. If they try to buttress up their own land, their efforts may result in more damage to the surrounding unprotected property and, at best, provide only temporary relief. Similarly, when the Corps shores up publicly owned property, its efforts often endanger the surrounding privately owned property.

On the other hand, if they do nothing, they may have a front row seat to watch their homes gradually slip into the water.

In Maumee, Ohio, for example, the erosion of the shoreline is so acute that homeowners are living on borrowed time as their houses inch ever closer to the Maumee River. One property owner graphically described the problems of the area to me in a recent letter:

Our homes and land have been slipping gradually toward the river, due to layers of silt and consequent veins of water lying up

to 30 feet under the town of Maumee, Ohio. For example the Lucas County Library itself is in danger of collapsing in the not-too-distant future.

* * * * *

. . . the natural flow of these veins of water is toward the (Maumee) river and our homes are in its wake, so actually the drain off of the town is responsible for the slippage and erosion on our land.

Personally, we built a $5000 terrace on our home toward the river and half of it has sunk 24 inches and is still moving. The terrain all along this area appears as a huge crust of the earth that has broken away. Many of our poor neighbors are having more damage than we are experiencing; near Judge Alexander's home it has dropped 5 to 6 feet.

This same scenario is repeated time and time again across the country and the amount of damage runs into the millions each year. It is clear that only a combination of private and public action can curb the problem. The Federal Government, acting through the Army Corps of Engineers, must coordinate the placement of abutments, retaining walls, jetties, and such other measures as may be necessary to prevent erosion from destroying productive lands, both public and private, from contaminating our waterways with large amounts of silt and sediment.

The private landowner whose property is benefited, for his part, must be required to pay his fair share of the cost.

The bill I have introduced seeks to effectuate a national program to abate shoreline erosion by allowing private property owners to qualify for assistance from the Corps of Engineers in accordance with already established procedures for civil projects to abate shore erosion on public lands. The bill would permit the Federal matching grant formula of 50–50 reimbursement to be met by responsible local interests. In this manner, private citizens, through the process of special municipal assessments, would be able to match Federal aid to solve a problem whose effects are of national importance.

In addition to the assistance provided by this bill, long-range erosion control must include adequate zoning measures to assure wise development policies in erosion susceptible areas. Only with such a two-pronged effort can we achieve lasting control—control which at the same time retains land and topsoil and eliminates the siltation pollution that results from erosion.

Mr. Speaker, the present situation can only worsen unless we authorize preventive measures immediately. I hope the House Committee on Public Works will act promptly on this measure.

ANN HENRY DELEGATE TO GIRLS NATION

HON. ROBERT V. DENNEY

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. DENNEY. Mr. Speaker, yesterday, I had the extreme pleasure of meeting Ann Henry, one of two Nebraska representatives to the 1969 Girls Nation.

Ann is the daughter of Mr. and Mrs. Herbert C. Henry of Lincoln. She will be a senior next year at Lincoln East High where she participates in a number of various clubs and other activities. Upon graduation, Miss Henry plans to enroll at the University of Nebraska, majoring in science.

At Nebraska Girls State, Ann was elected state auditor and on the final day selected to attend Girls Nation by her fellow girls staters. Here in Washington at Girls Nation, Ann was appointed Director of the Federal Bureau of Investigation and was hoping to meet with her actual counterpart.

Mr. Speaker, I would like to commend the American Legion Auxiliary for providing our youth with the citizenship training, practical experience in the processes of government and a clear understanding of their responsibilities as citizens of the United States.

A SALUTE TO THE ENGINEERS' GEN. WILLIAM CASSIDY

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. EDMONDSON. Mr. Speaker, today a fine soldier and great American is being honored with a review at Fort Belvoir upon his retirement from active military service.

That man is Lt. Gen. William F. Cassidy, who has ably served for the past 4 years as Chief of Engineers for the U.S. Army.

To me, General Cassidy is a fine example of the soldier-builders of the Army Corps of Engineers. Trained and capable in the skills of war, these men have literally changed the face of America when they have turned their skills and expertise to civil works. They have tamed rivers, opened vast areas of our heartlands to river navigation, stabilized our beaches, and improved our Nation's water supply. No job is too big for them to tackle and successfully complete.

General Cassidy's career exemplifies this dual role of the Army Engineers. During World War II, General Cassidy commanded troops charged with building airfields. His war record was outstanding.

Following the war, he was assigned to flood-control works in the lower Mississippi Valley. When the Korean war broke out, he was sent to Japan and put in charge of engineer supply for the war effort. Once again, he performed his duties with great ability.

His next assignment was South Pacific division engineer where his work once again was directed toward flood control and navigation-related projects in California, Nevada, Utah, Arizona, and Hawaii—including disaster relief activities during severe flooding in 1955 and 1956.

He returned to the Far East as an adviser to the Republic of Korea Army, then came home to become chief of the corps' civil works division with overall charge of water-resources development in the United States. As Chief of Engineers, of course, he has been in charge of both phases of the Army Engineers' job, and has once again demonstrated splendid qualities of leadership and achievement.

Mr. Speaker, General Cassidy has become a close, personal friend of mine during the past 10 years, and is highly regarded by all Oklahomans. I have the greatest respect for him and for his splendid career, and wish him well in his well-earned retirement.

TRIBUTE TO ASTRONAUTS

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. BROYHILL of Virginia. Mr. Speaker, a constituent of mine, Miss Lena G. Doll, of Arlington, Va., was so impressed with the flight of our moon astronauts, and especially with the arduous contribution toward their flight made by Dr. Wernher von Braun and his colleagues, that she has composed a tribute to them which I insert at this point in the RECORD, as follows:

All mankind is beholden to Dr. Wernher von Braun for his extended contribution to the technology of space exploration. In Germany in 1945 when the Russians took Berlin, Dr. von Braun, then technical director of Germany's rocket program, his brother and team of 120 engineers loaded what rocket equipment they could truck and made way to the near American unit where they surrendered.

In America, Dr. von Braun was first sent to White Sands, then to Fort Bliss, and later to the Redstone Arsenal in Alabama. There he and his team developed the Redstone, the Jupiter and the Pershing missile systems.

After the Russians launched Sputnik I in the autumn of 1957, Dr. von Braun was authorized to make a satellite. Explorer I was sent into orbit at Cape Kennedy the last of January of the next year. Since then progress in space exploration has been continuous and rapid. The 18-pound Explorer was the beginning in America, and Saturn 5 with its 7½ million pound thrust is not the end. Americans dare not ignore the urgent dedication of Dr. von Braun and his colleagues in their abilities to promote man's farther reach towards learning the secrets of the universe. The Time is now. God bless them in their undertakings.

L. G. DOLL.

APOLLO AND THE EAGLE—SALUTE TO Dr. WERNHER VON BRAUN

Man escaped from his bindrage
On Saturn 5 to the Moon
Where he landed with his module
And walked about thereupon.

He scooped up some of the surface
Of rocks, and dust, and such,
He also made two borings
To bring back to the Earth.

The whole feat accomplished
Indescribably neat
Safe landing on earth again
Made cycle complete.

"Once in a lifetime"
Said tearful, von Braun
Historic accomplishment
My forty-year dream.

Only one comparison
In historic span
That of aquatic life
Crawling out on the land.

From the sea to the land—
From Earth to the Moon—
Space calls to man's yearnings
To reach Mars very soon.

Yes, Mars, and then Venus,
Other planets in time,
The blueprints all readied
Rocket engines designed.

What an inspired vision,
Man's farther-reach plan!
Our salute to the team work
Of Wernher von Braun.

SMALL WATERSHED PROGRAMS

HON. CLARENCE E. MILLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. MILLER of Ohio. Mr. Speaker, flood control is a serious problem in many areas of our country. The small watershed program has proven to be an effective and economic measure in harnessing nature's water excesses. Watershed development results in many advantages in addition to flood control. Conservation, recreation, wildlife, irrigation, and cultivation benefits often accompany a well-managed watershed project.

An excellent account of the progress of the watershed programs in Ohio was recently published in the Sunday magazine of the Columbus Dispatch. I insert the article at this point in the RECORD:

HOW TO STOP A FLOOD—SMALL WATERSHED PROGRAMS TO BENEFIT MANY AREAS OF OHIO

(By Bob Waldron)

Water has a stubborn tendency to run downhill. When it runs too fast and in too large a quantity it can cause enormous damage. Fortunately there are ways to slow it down.

The land from which water drains to a given point is called a watershed. Everyone lives in a watershed of some sort. It may be very small, draining into a low spot in the backyard to form a mud puddle, or it may be very large like the Mississippi River basin which covers 1,243,000 square miles and is made up of thousands of smaller watersheds including the Ohio River and all its tributaries.

But a watershed is more than just a piece of land. It is a community shaped by natural rather than political boundaries. The people who live within a particuler watershed community have common interests in the proper management of the land and its water resources. Some of them take an active interest, others do not.

The problem started many years ago. Much of Ohio originally was forested, and rains sifted down through the trees into the thirsty leaf mold. There was not much runoff, the floods were inconsequential.

Early settlers cleared the good bottom land first, then moved up the slopes with their axes. No longer held back, the rain water poured down the hillsides and pushed across the cultivated fields, taking good topsoil with it. The faster it ran the more soil it carried away and the more flood damage it caused downstream.

Years passed and many millions of dollars in farm crops and urban properties were lost before any concerted effort was made to control the water run-off. Big dams have been erected to hold back flood waters on a large scale and to furnish water to burgeoning cities, but until recent years too little has been done in the upper reaches of the watersheds to control the rainfall run-off before it had a chance to get rolling in large quantities.

The tide is turning, however. Today many local areas which have problems of too much water, at the wrong time and in the wrong place, are doing something about it with the aid of a federal program designed especially for flood control on small watersheds.

Public Law 566, known as the Watershed Protection and Flood Prevention Act, provides technical and financial help to local groups that wish to establish watershed control projects. Although flood control in limited areas is the primary purpose of this legislation, many projects add to their importance by also providing public recreation facilities such as fishing and boating, and potential water supplies for villages and small cities. The federal program is administered through the Soil Conservation Service of the United States Department of Agriculture.

Small watershed projects depend on two main factors, (1) conservation practices on the land and (2) structures for water impoundment, drainage or irrigation.

The conservation practices are applied by the landowners themselves to absorb as much of the rainfall as possible, control run-off of the rest, reduce erosion and improve crops. Methods generally include such things as grass waterways, contour planting, terraces, reforestation, farm ponds and other control measures.

Structures are mainly earth fill dams fitted with mechanical spillways. Together, all these practices are aimed at one major objective—to trap the raindrops in the hills or at least slow them down.

So far, only five small watershed projects have been completed in Ohio, but many others are either under construction, approved for construction, in various stages of planning, or have gone through at least the preliminary application step.

The completed jobs are on the Upper Hocking in Fairfield County; Rocky Fork-Clear Creek in Highland County; Marsh Run in Crawford, Richland and Huron counties; Upper Wabash in Mercer and Darke counties, and the East Fork of Buck Creek in Champaign County.

The Upper Hocking plan was the first in Ohio, and served as one of several pilot projects across the nation to try out the new legislation. Desperate need for just this kind of water control had been experienced in the Lancaster area. Eight inches of rain one July night in 1948 inflicted $650,000 damage in the community. Water and silt washed off the bare cornfields north and west of the city, overflowed ditches, wrecked bridges, caved in foundations and covered the flood plain up to four feet deep.

Residents of the area, determined to stop such devastation, asked the federal Soil Conservation Service to develop a watershed protection and flood prevention plan. The Hunter's Run Conservancy District was formed, and under its direction the protection plan was enlarged to include two watersheds totaling 31,418 acres. Eight flood dams and 21 smaller water control structures were built. The entire project was completed in 1961 at a total cost of nearly $2 million.

Cost of the structures was paid by the Soil Conservation Service under the small watershed program. Cost of land rights and easements, approximately $160,000, was raised by the county, city of Lancaster, and property owners who stood to benefit directly. In addition, the wildlife division of the Ohio Department of Natural Resources purchased land around two of the dams and opened it to the public for fishing and hunting.

In the eight years since the project was completed Lancaster has escaped major flood damage from at least three storms that could have caused serious trouble if the built-in deterrents had not been there. It is estimated that more than 60 per cent of the cost already has been recouped through savings from flood damage that otherwise would have occurred. Property valuation in the area has increased tremendously.

Rocky Fork-Clear Creek watershed also was a pilot project, but not nearly so extensive. It involved only land treatment and stabilization features.

Marsh Run is a 20,000-acre watershed furnishing irrigation water for vegetable crops in the muck area of north central Ohio as well as serving as a protection against floods. It includes 15 miles of channel improvement and a 75-acre irrigation water supply reservoir.

Upper Wabash project covers 80,540 acres on the west side of the state. It features three flood prevention dams and 38 miles of stream channel work.

Smallest watershed project in Ohio so far is on the East Fork of Buck Creek in southeastern Champaign County. It includes only 6,570 acres, but to the farmers involved it is just as important as any of the larger programs. After repeated crop losses because of floods the farmers got together and asked the Champaign County Soil and Water Conservation office for help. USDA soil conservation technicians assisted in developing a plan for the valley. A local conservancy district was formed to handle details such as acquisition of land rights and the administration of contracts.

The project includes five earthen dams and a few miles of channel improvement, plus conservation practices on individual farms. Local costs were moderate because farmers donated most of the land easements. Edgar Hodge, whose 467-acre farm is in the upper corner of the watershed, typifies the cooperative spirit which makes such a project possible. He had been practicing soil conservation before the present plan was proposed, but he increased his efforts and accepted chairmanship of the local conservancy district board. Others joined enthusiastically in the program and as a result flooding of valuable crop land in the valley was reduced markedly.

Among other watershed projects now in progress, Rush Creek in Fairfield, Hocking and Perry counties is one of the largest. It involves 151,460 acres, 18 flood prevention dams, five multiple purpose dams, 22 miles of channel improvement and levee protection for the town of Bremen.

Margaret Creek project in Athens County will cover a 38,600-acre watershed with six dams and nearly 10 miles of channel improvement.

The West Fork of Duck Creek is designed to control run-off from 68,380 acres in Noble, Guernsey and Washington counties.

Local initiative and enthusiasm are major factors in getting approval for these small watershed projects, says Jesse L. Hicks, an assistant to state conservationist Raymond S. Brown in Columbus. "It is encouraging to see land owners in the upper reaches of a watershed cooperate unselfishly in a program which is designed mainly to keep flood waters off another man's property down in the valley."

Small watershed projects are limited to 250,000 acres. The average is about 85,000. "There is no competition between programs for construction of big dams by the Army Corps of Engineers and the small upstream systems built under Public Law 566," says James S. Bennett, another assistant state conservationist. "In fact, the two programs supplement each other. We work very closely with the Corps of Engineers and with the Ohio Department of Natural Resources in the development of joint projects."

Local project organizers have a choice of either forming their own conservancy district as a legal vehicle, or of making their bid

through the county commissioners if the board is willing to serve in that capacity. One of the few examples of county commissioner participation in Ohio is a joint Fayette-Madison County project now in the planning stage.

The Soil Conservation Service provides technical help in setting up the project and agrees to finance a generous share of the cost if the local community does its part. The federal government insists that a project must show at least a dollar's worth of value, through property protection and other benefits, for every dollar spent. State approval is required on all projects.

THE WARSAW UPRISING

HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. HELSTOSKI. Mr. Speaker, the story of the heroic Warsaw uprising and Soviet treachery goes back 25 years—to July 1944.

The invasion of the European continent by the Western Powers was progressing rapidly. In the East, the Soviet Army already occupied large portions of Polish territory which was won from the retreating Germans.

To induce the Polish people to take up arms against the Germans, Moscow radio, through its "Kosciuszko" station began to broadcast appeals to the Poles:

Warsaw . . . the hour of action has struck. Your houses, parks, bridges, railroad stations, factories, buildings, stores, have to be transformed into centers of resistance. The Germans will attempt to make a stand in Warsaw—to destroy the whole city. In Bialystok they were busy for six weeks destroying everything and murdering thousands of people. Let us do everything in our power to prevent them from committing the same crimes in your city. People of Warsaw, to arms . . .

These calls were repeated day in and day out, and finally, on July 29, when the Russian offensive ground to a halt on the right bank of the Vistula River, in the Warsaw suburbs of Praga, Moscow radio sent out a "more urgent appeal to Warsaw," urging the Poles to "fight against the Germans," for "the hour of action has arrived. Warsaw never surrendered, never ceased to struggle. And now everything will be lost in the Hitlerite deluge unless you save it through action. Poles, the time for freedom approaches. Poles, take to arms. There is no second to be lost."

The Polish underground authorities adhered to the instructions given by the Polish Government in London, where the Western Powers insisted that the Poles must actively cooperate with Russia. Accordingly, the Polish Government-in-exile issued such orders.

Then, on July 31, 1944, a delegate of the Polish Government in London, and the Vice Premier of the Polish underground branch of this government, Jankowski, after having heard the opinions of the commander-in-chief of the Home Army, General Bor-Komorowski and his chief of staff, General Monter, issued orders to the Home Army to start a revolt against the Germans the next day, August 1, 1944, at 5 p.m.

Three days later, on August 4, all activities on the German-Russian front ceased, although the Soviet forces already consolidated their positions in Praga. Even the heavy guns were silenced.

Instead of the promised and anticipated roar of the Soviet artillery, which was to herald a new phase of a Russian offensive, all was quiet on the Eastern front of Warsaw.

There was only one explanation: Warsaw had been betrayed by the Russians.

On August 17, Premier Churchill and President Roosevelt appealed directly to Stalin to help Warsaw. Stalin did not even reply to these pleas.

An Anglo-American staff drew up a plan in London for the bombing of German positions in Warsaw by means of shuttle operations. British and American aircraft were to bomb German strongholds in Warsaw, then fly for refueling at nearby Luck, already occupied and secured by the Soviet Army.

Stalin not only rejected this plea, but at the same time accused the Poles, fighting and dying in Warsaw, of "betrayal and collaboration" with the Germans.

The Poles fought on against all odds, against all hope. They forced the Germans to send three armored divisions, badly needed on the Western front, to Warsaw. These, with incessant bombing by German planes, finally crushed the uprising.

After 63 days of fighting, Warsaw capitulated.

Over 250,000 Polish men, women, and children died in this struggle, in which even juvenile Scout troops rose to the heights of heroism and sacrifice.

The Germans, with a Teutonic fury destroyed, burned, pillaged the remnants of the city.

Warsaw did not die, however.

The indominable spirit of the Polish people rebuilt the city from desolation and ruin.

Warsaw, rising like Phoenix from the ashes, remembers Nazi brutality and Soviet treachery, and it longs for the day on which a truly free and independent Poland returns to the Western family of nations.

The uprising became one of the most heroic chapters in the history of fighting Poland and, as such, its anniversary is observed by the Poles.

Mr. Speaker, at this time I would like to present to my colleagues a brief history of the 63 days of gallant fighting by the Poles in defense of their capital city:

THE 63 DAYS

The Warsaw Uprising broke out on August 1, 1944, and lasted for 63 days. Some 50,000 Polish soldiers took part in it. Against them the Germans used about 25,000 troops organized in a special corps under the SS general Erich von dem Bach. German units were recruited at first mainly from the SS, police and auxiliary Wehrmacht detachments under generals: Heinz Rheinefarth, Hans Bohr and Hans Köllner. The insurgents fought armed with light weapons: pistols, rifles, grenades and tommy guns. They also had some heavy machine-guns, anti-tank guns and mortars.

The Germans used air-force and artillery, including heavy guns and all types of tanks.

During the first six weeks of fighting the insurgents suffered a great shortage of weapons. The weapons flown from the West were reaching the insurgents in small quantities, due to transportation distance, strong anti-aircraft fire and small drop-areas.

Historians do divide the Uprising in Warsaw into two stages: the offensive (1 to 4 August) and defensive ones (August 5 to October 2, 1944). In the first stage the insurgents attacked the Germans, forced them into a defensive posture and seized large sections of the city, mainly in its center, situated on the left (Western) bank of the Vistula river. The Uprising in the Eastern part of the city, called Praga, was not successful and was put down by the Germans already on the 2nd of August. The success of insurgents in the first days of the Uprising resulted—to a large extent—from the support of the civilian population of Warsaw, which joined them en masse. It was thanks to them that the areas seized by the insurgents were fortified with numerous barricades and anti-tank trenches. However the weapons were scarce and the supply of ammunition inadequate (the successes of insurgents were only temporary. All major German posts in Warsaw which were protected by concrete bunkers and barbed wire managed to defend themselves, although some of them were encircled by insurgents. Thus the part of the city in the Polish hands did not present a whole entity. It was rather composed of 4 separated areas: the Center, Mokotów, Ochota and Zolibórz (the latter being the South, South-West and North Warsaw districts). An attempt at linking those centers into one tactical-operational entity did not succeed, a fact which later facilitated the Germans in the liquidation of the Uprising. The Uprising spread also to the neighboring areas of Warsaw, especially to the great forest units (Puszcza Kampinoska, Chojnów and Kabaty Forests), which were used as supply and air drop bases. In those areas there were large partisan groups of the Home Army.

The first German counter-attack began on the 5th day of August and after 2 days of bitter fighting resulted in dividing of the insurgent forces in the Center into two separate groups. The Nazis became masters of one of the two main East-West arteries of Warsaw and surrounding the Old Town from all directions. Till August 11 the Germans liquidated the insurgent forces in the Wola and Ochota districts, killing the civilian population amidst acts of pillage and violence. In both those districts some 50,000 civilians were killed. Reluctant to weaken their front lines the Germans could not launch large forces against the insurgents, especially the crack front troops. That is why von dem Bach took full advantage of the existence of isolated resistance centers and applied the tactics of successsive concentrated attacks against those centers depending on which center presented in a given moment the greatest threat to the Germans.

Wishing to stabilize their positions and aggravate the isolation of the insurgent Headquarters in the Center, the Germans launched a mass attack against the insurgent Old Town garrison, composed of over 9,000 soldiers, including some 1200 soldiers of People's Army, Polish People's Army and the Security Corps. The defense of Old Town, attacked on all sides, subjected to aerial and artillery bombardment lasted from August 12 to September 2, 1944. It remains in the history as one of the most heroic chapters of the Uprising. In spite of the crushing superiority the Germans did not succeed in breaking the resistance of the insurgents or forcing them into capitulation. After exhausting all possibilities of defense, when there was not a single house left and the tormented civilian population suffered from thirst and hunger, the insurgents left the Old Town and through the city sewers withdrew to the Polish held position in the

Center of the city. Having entered in the Old Town the Nazis organized a new massacre of the civilian population killing and, in several cases, burning alive almost all gravely wounded insurgent soldiers who were left there.

After the fall of the Old Town the Germans began to storm the center of the city. The attack was stopped however when the Red Army and the Polish People's Army started their offensive against Praga. Fearing the possibility of Polish and Soviet troops forcing the Vistula river in order to link with the insurgents, von dem Bach sent his main forces (including armoured units withdrawn from the front) to fight against insurgent areas adjacent to Vistula (Powisle and Upper Czerniaków) with a view of pushing the insurgents away from the river and establishing the German front on the western bank of the Vistula river. On September 15—when the units of the First Polish Army began to cross the Vistula to help the insurgents, the Germans had the situation on the West bank of the river already well under control. The Polish detachments crossing Vistula were therefore landing in the area occupied by the enemy, who was well prepared to repulse the attack. Only in the Upper Czerniaków sector two Polish battalions of the 9th Infantry Regiment landed on a small bridgehead, still held by the insurgents. Bitter fighting over the bridgehead, entirely isolated from the insurgents main forces in the Center lasted till September 23, and brought no success to the Polish forces. Altogether in attempts to force the Vistula river the First Polish Army lost, between September 15–23, 3,764 soldiers (killed, gravely wounded or missing). During the fighting over the Czerniaków bridgehead the People's Army Command proposed to the Home Army a joint attack from the Center towards the Vistula river with a view of joining the troops fighting in the bridgehead. However the Home Army Command rejected this proposal owing—as it was explained—to lack of sufficient forces.

After the fall of Czerniaków, general von dem Bach concentrated his troops at Mokotów, Zolibórz and Puszcza Kampinoska. Mokotów capitulated on September 27, Zolibórz—after heavy fighting—in the evening of September 30. A day earlier on September 29, the Germans crushed near Zyrardów a large concentration of Home Army troops which tried to break away from Puszcza Kampinoska to the Swietokrzyskie Mountains in the Kielce District. In this situation the Home Army General Command gave up further struggle and on October 2, 1944, signed at Ozarów near Warsaw the final act of capitulation. The document signed by the Home Army Command and the Germans assured relatively favorable conditions for the insurgents who were given by the Germans the full combatant rights (which were however not universally observed by the Germans afterwards). With respect to the civilian population however the capitulation act contained provisions leaving it entirely at the mercy of the occupant. Warsaw was to be completely evacuated and all its inhabitants sent to the transit camp at Pruszków, from where they were to be directed to various localities in the country still occupied by the Germans. In practice however, all young and fit persons were sent from Pruszków to various concentration and labor camps in Germany.

The Warsaw Uprising in spite of its great contribution to the armed struggle against the Nazi occupant brought the losses out of all proportions to its results. During the two months of fighting in Warsaw over 200,000 people lost their lives, including some 15,000 armed fighters (killed and missing), other thousands were wounded. The remaining civilian population had to leave the city, leaving everything they possessed, at the mercy of the bestial enemy.

LEADER AIDS KIDS FOR A BUCK A YEAR

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. FEIGHAN. Mr. Speaker, the occasion of the centennial anniversary of professional baseball is a particularly appropriate time to recognize those individuals whose dedication to baseball accounts for its perpetuation as America's most popular sport. One such individual is I. S. "Nig" Rose. His able management of the Cleveland Baseball Federation enables thousands of Cleveland's youths to participate in baseball. I commend to my colleagues the following article concerning this remarkable individual from the Cleveland Plain Dealer on July 6, 1969:

CBF Leader Aids Kids for a Buck a Year

(By Dan Coughlin)

Ever hear of CBF and its leader? Read on:

The morning sun already is high and burning a blinding yellow in the mid-summer sky when City Hall wipes the sleep from its eyes and shakes off its slumber.

The mammoth front doors, swing open and those who play the game of politics stream into their coliseum.

The young and ambitious in their $50 cord and cotton suits are the first to arrive. The elders, who carry the secrets of the city locked inside themselves, are next.

Among them moves one man who is secure in his job. He is not elected and he is not exactly appointed. He is treasurer of the Cleveland Baseball Federation because he is the only one who can do it.

He is I. S. (Nig) Rose.

Rose is on a first name standing with more rabbis, ministers, priests, monsignori, bishops, educators, businessmen, industrialists, millionaires, sports figures, celebrities and politicians than most politicians themselves.

Now 76, Rose retired from his $30,000 a year job as vice-president of Rosenblum's two years ago. He stepped into the one dollar a year job with CBF.

The CBF, an arm of the City Recreation Department, is located in Room 8 actually in a cluster of interconnected offices.

Rose sits at a desk in the busy main room behind a file cabinet in which is stored the history of sandlot baseball in Cleveland. If the file cabinet doesn't have all the chapters, Rose can fill in the missing pages from memory.

He's been with the CBF since 1919. He's been married to his wife, Tillie, only one year longer.

For as long as anyone can remember, Nig Rose has been in charge of the CBF coffers. A penny never has been lost. He signs the checks and raises the money to cover them.

Until two years ago, his office at Rosenblum's was the CBF fiscal headquarters. When he moved to City Hall, files went with him and his role with the CBF became full time.

Rose's most important job is raising close to $80,000 each year to balance the budget.

While taxpayers maintain the parks, playgrounds and baseball diamonds, it is left to private enterprise to equip the 20,000 Cleveland youngsters who play on them.

Rose provides it. He also gets a little bit of help.

Every year since 1948, the Indians have played an exhibition game for the benefit of sandlotters. Next game is Monday night, July 28, when the Indians play the Cincinnati Reds. It is the fulcrum on which the fund-raising drive rests.

It is left to Nig Rose to persuade people to buy tickets for the game. He learned long ago that, while every $2 ticket purchase is welcome and they add up, the selling of tickets piecemeal is an exhausting and time-consuming job.

"It takes just as long to cash a five dollar check and mail two tickets as it does to cash a $100 check and mail 30 tickets," he says.

So—In 1961, he instituted the Century Club. Although there had been several persons who had purchased more than $100 of tickets for the Sandlot Day game before that, in 1961, Rose put a label on this group and made it an exclusive organization.

"We only had 25 or 30 charter members," he recalls.

Last year the membership swelled to 260 and was directly responsible for $30,000 of the $78,000 budget.

Because he was highly successful during his life in both business and sports, he travels as comfortably in well-to-do circles as he does among ragamuffin kids on the sandlots.

"Not a day goes by that I don't pick up another Century Club member at lunch at the Theatrical Grill," he reveals.

Rose keeps a card file on every Century Club member. He can relate a history of every member.

Rose rattled off a list of names of former Clevelanders now living out of town who never forget to renew their Century Club membership.

"Here's Marty Friedman," Rose said as he pulled out another file card. "He was my first pro basketball coach. I fired him in 1927 but we're still good friends. He always sends his $100."

Rose was general manager of the old Cleveland Celtics pro basketball team which employed Friedman.

Some people have been donating to the Cleveland Baseball Federation since 1941.

Although some firms which donate to the CBF fund distribute the game tickets among their employees, many benefactors simply send their checks and instruct Rose to give the tickets to kids. Other donors send caddies from Hawthorne, Pine Ridge, Oakwood and Beachmont Country Clubs to the game.

Clearly, this is big business. Last year's budget was $78,057.70. Forty years ago the CBF budget was $9,100.

Rose estimates a professional fund-raising company would charge $15,000 to raise enough to balance the CBF budget. With Rose at the helm, it costs only one dollar.

Because it is such a big business . . . and so essential to Cleveland's sandlot program . . . and Rose does such a great job . . . there is a very real worry among sandlot leaders in this city.

What happens when Nig Rose isn't here to do it? Rose has given considerable thought to it, also.

"I dream of a foundation," he said. "The Cleveland Baseball Federation Foundation." Rose envisions a million dollar foundation and he estimates that the CBF could live off the interest for time immemorial.

He is ready to donate $25,000 of his personal funds to such a foundation. On the 50th anniversary of his affiliation with the CBF, Rose would like to leave behind a permanent largess to the kids of Cleveland.

SLEEPING BEAR DUNES NATIONAL LAKESHORE

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. BRADEMAS. Mr. Speaker, I have today introduced a bill to establish the

Sleeping Bear Dunes National Lakeshore in the State of Michigan.

Mr. Speaker, I have long been a supporter of the effort to create a similar dunes park on the shores of Lake Michigan, the Indiana Dunes National Lakeshore. Creation of this lakeshore took over 10 years of debate in this body before it was finally authorized in 1966. Proponents of the Sleeping Bear Dunes have now campaigned for a similar number of years.

Mr. Speaker, the time has come to make Sleeping Bear Dunes a national lakeshore. I note that creation of such a lakeshore has the bipartisan support of the Michigan congressional delegation. My bill should bear evidence to my colleagues in Michigan that a Sleeping Bear Dunes national lakeshore has support in the neighboring State of Indiana.

Mr. Speaker, I have introduced today a bill to create a Sleeping Bear Dunes national lakeshore. I am sure that differences between it and other similar bills introduced recently can be worked out by the Committee on Interior and Insular Affairs. I hope that early hearings will be held and that this body will be allowed to act favorably on this legislation during this session.

RISE REFLECTS NOT ONLY TIGHTER CONTROLS BUT MORE DEMAND FOR MEXICO'S NARCOTICS

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. CHARLES H. WILSON. Mr. Speaker, it seems that a day cannot go by without some reminder of the seriousness of the drug and narcotics addiction problem. Today an article in the Los Angeles Times July 27 edition came to my attention. This article points out the fantastic increase over the last 6 years of drugs seized at the Mexican border. While there has been a 2,000-percent rise in seizures which reflects tighter controls, there is also evidence that tremendously greater quantities of drugs are being smuggled into the United States.

Last year some 32 tons of marihuana plus more than 50 pounds of heroin, morphine, and cocaine were seized. No one knows, however, how much of the contraband of misery and death that these drugs represent were successfully smuggled across the border. This traffic will undoubtedly keep increasing especially because it is so very profitable for these dope peddlers.

Joint United States-Mexican efforts and cooperation must be increased. The 1,500 miles of common border must be more strictly controlled. This control must be present on both sides of the border with Mexican authorities taking cognizance of their responsibilities to destroy sources of supply as well as patrolling their side of the frontier. Concerned individuals such as Mr. William J. Hunt, publisher of the Gardena Valley News, have been crusading for tighter border security and legislation calling for greater cooperative efforts between the United States and Mexico. Consequently, legislation has been put forward and support is mounting.

The enactment of my Comprehensive Narcotic Addiction and Drug Abuse Care and Control Act of 1969 will become even more effective when measures to halt the influx of heroin, cocaine, morphine, marihuana and other substances subject to abuse are strengthened.

The Los Angeles Times' article follows:

DRUGS SEIZED AT BORDER UP 2,000 PERCENT IN 6 YEARS—RISE REFLECTS NOT ONLY TIGHTER CONTROLS BUT MORE DEMAND FOR MEXICO'S NARCOTICS

(By Francis B. Kent)

MEXICO CITY.—The body in the coffin looked ordinary enough but there was something about the men accompanying it across the border into the United States that bothered the customs agents.

An informal autopsy revealed extraordinary contents: a fortune in heroin.

Not everyone connected with the illicit drug traffic goes to such bizzare lengths. Simpler techniques have been far more successful. Yet the incident serves to illustrate what U.S. customs men are up against and their task gets more difficult all the time.

In the past six years, according to customs officials in Washington, the quantity of narcotic drugs seized at border points has increased by 2,000%. Joseph Jenkins, the Customs Bureau's director of investigations, said this increase reflects not only intensified control efforts but a sharp rise in the dope traffic as well.

As a result of the growing demand among U.S. users, the production of illicit drugs has become a big business in Mexico. Just how big, no one knows, but the figures are sizeable.

CUSTOMS AGENTS

For example, U.S. customs agents along the 1,500 miles of border between Mexico and California, Arizona, New Mexico and Texas seized more than 32 tons of marijuana last year, plus more than 50 pounds of heroin, morphine and cocaine.

Mexican authorities, meanwhile, destroyed more than 7,500 fields of poppies, the source of opium and its derivatives, and burned off hundreds of acres of marijuana.

How much managed to get across the border and into the hands of users is anybody's guess. The consensus: considerable.

Illicit drugs cross the border in every conceivable manner. The young long-haired marijuana smoker may smuggle it over concealed in his surfboard. The professionals are more likely to use trucks with false bottoms, boats or airplanes. Unpoliced coastal landings and airstrips proliferate on both sides of the border.

Arrests and stiff prison sentences appear to be no more than a minor factor in slowing the traffic. Border arrests for trafficking in marijuana alone numbered 945 in 1965, and by last year had risen to 2,273. Conviction, under the Narcotics Control Act of 1956, brings a mandatory 5- to 20-year prison sentence with no hope of probation or parole. A second offense means 10 to 40 years.

On the Mexican side the law is even tougher and Mexican jails are not renowned for their luxurious facilities.

Until relatively recently, narcotics had not been much of a criminal problem in Mexico. Indians had smoked what is now called marijuana and munched on hallucinatory mushrooms long before the Spanish arrived in the early 16th century. Marijuana came into more popular usage about 100 years ago when the peasant took it up to ease his hunger pangs.

Now its use has been noted among secondary-school students, and an occasional homicide has been attributed to organized crime's efforts to control distribution, not only of marijuana but the so-called hard narcotics such as heroin as well.

Just one thing keeps the international traffic alive: money. And, according to agents of the U.S. Treasury Department's Bureau of Narcotics, not all of it flows into the hands of that sinister organization known as the Mafia.

"Dope smuggling," one agent told The Times, "is about as exclusive as betting on the ponies."

LARGE PROFITS

Profits are enormous. The 2-pound brick of marijuana that nets its grower about $4 in Mexico sells for as much as $300 in the United States. The usual price in, say, Los Angeles or New York, is $150. Much more profitable are the hard drugs: morphine, heroin, cocaine. They come in smaller quantities and provide vastly more effective results.

Calculating the profit margin on hard drugs is next to impossible, since they are invariably diluted at every stage of processing and handling and the price varies not only geographically but according to the balance between supply and demand. Almost any illicit narcotic, though, is worth at least twice as much on the U.S. side of the border.

Controlling the production and processing of drugs in Mexico is no easy task. Much of the interior is virtually inaccessible except by Jeep or burro. Yet the authorities here have mounted what is generally considered to be the most effective grassroots campaign in Latin America.

Under the supervision of Asst. Atty. Gen. David Franco Rodriguez, federal agents work closely with the army and with local and state police departments. Each spring, when the opium poppy is ripe for milking, mixed teams move out into the eight-state area where cultivation of the poppy is concentrated. Traveling by whatever means is necessary, often on foot, they descend on illegal plantations that have been spotted from the air, destroy the growth and arrest the grower.

Equally tough measures are directed against those in Mexico who serve as links in the narcotics traffic that originates in South America, the Middle East and the Orient. The South American countries of Bolivia and Peru, are a major source of cocaine, a derivative of the cocoa leaf that is chewed by Indians. The Mideast and the Far East produce heroin.

TURKISH HEROIN

Heroin is a particularly nettlesome problem because it is manufactured legally, under government license, in Turkey and India. U.S. officials estimate that up to 15% of the Turkish heroin finds its way into the contraband market.

Getting narcotics across the border into the United States, despite increasingly strict controls, presents no great challenge. Literally millions of U.S. and Mexican nationals cross the border every year and to search every one would be physically impossible.

"If we did," a customs agent observed, "cars would be lined up for miles and the congestion at airports would be outrageous."

Still, the number of U.S. agents along the border has almost doubled, to a total of 92, since 1965, and the combined efforts of U.S. and Mexican authorities have produced results, as can be seen by the increase in seizures and arrests.

MEETINGS HELPFUL

Jenkins, the bureau's investigations chief, is convinced that further cooperation will pay even greater dividends in the future. Joint meetings such as the recent roundtable conducted here between U.S. and Mexi-

can experts have been particularly helpful, he said.

What the authorities on both sides hope for and expect is a change of attitude on the part of young people, especially in the United States, where marijuana has acquired widespread acceptance.

Medically, according to a Narcotics Bureau agent, it has yet to be established that marijuana is harmless or not habit-forming, and the evidence indicates that its use often leads to hard narcotics.

"About 80% of our confirmed addicts," he said, "started with marijuana."

Jenkins, who was with the Customs Bureau in Los Angeles for 10 years before his transfer to Washington in January, recalls a grim courtroom scene in which a 37-year-old offender had just been sentenced to 40 years in prison.

"I don't think I'm going to make it," the defendant said.

"Son, you just do the best you can," the judge replied.

LESTER DECHMAN JOHNSON

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. CONTE. Mr. Speaker, tomorrow, August 1, Lester Dechman Johnson will step down as U.S. Commissioner of Customs. Thus, Mr. Johnson will end a very long and very distinguished career in the public service. He served for 36 years in the Bureau of Customs, five of which were spent in the top and most difficult position of Commissioner.

I have worked closely with Commissioner Johnson on the House Appropriations Subcommittee for the Treasuury and Post Office, on which I am the ranking minority member. I have always found him to be a hard worker, a dedicated servant, and a superb administrator. In addition, he has always been extremely cooperative with all of us on the committee in our efforts to improve the Bureau.

Mr. Speaker, under the leadership of Mr. Johnson, the Bureau of Customs made fantastic progress. It should be remembered that this was during times of increasingly heavy workloads for customs. Nonetheless, collections soared while the cost of these collections continually decreased. Customs became, and remains, an example of real efficiency.

I have studied the Bureau very closely in my work on the committee. That is why I was so disturbed by the effects of manpower restrictions in this fine revenue-producing agency, and why I argued for lifting them on the floor of the House when we considered appropriations for the Treasury. In spite of these restrictions, Commissioner Johnson did remarkably well in running his shop. And, I might add, that was no easy task, given the severe strains caused by the personnel restrictions. He was operating, in effect, with his hands tied behind his back. For this reason, I think all of us owe him an additional note of thanks.

It is a real tribute to the greatness of this man that throughout the Customs Service he is known as the man who did more for it in 5 years than his predecessors achieved in the preceding 175 years. At the same time he was extremely loyal to the men and women in the service, and in turn achieved their respect and admiration.

Mr. Speaker, I could go on with numerous examples of Commissioner Johnson's great work at the Bureau of Customs. But I think it would be more fitting to conclude my remarks with what I said during the hearings this year. After commending Mr. Johnson for his outstanding service as a dedicated public servant, I said:

"He has been one of the truly great Commissioners at the Bureau of Customs. He has lived with a great tradition and done an outstanding job. He will be sorely missed. His shoes will be hard to fill. I wish him many decades of good health and happiness in which to enjoy a very well deserved rest."

That, Mr. Speaker, pretty well sums up the great respect that I have for Commissioner Johnson and the extent to which, I think, he will be missed by all of us.

Thank you, Mr. Speaker, for the opportunity to make these remarks about Commissioner Lester Johnson.

NEWARK YOUNG PEOPLE EXPRESS CONCERN OVER CIGARETTE SMOKING

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. RODINO. Mr. Speaker, through the courtesy of Mr. Vincent O'Rourke, Jr., I have received several letters from some of my younger constituents regarding cigarette smoking and its danger to our health. These letters certainly support the purpose of H.R. 5212, calling for stronger labeling on cigarette packages, of which I am a cosponsor. It is most heartening to me that these young people have expressed such an interest in this problem, and for this reason I would like to call the attention of my colleagues to the following letters:

DEAR MR. RODINO: I have saw a film about smoking and I think that it is no good for the heart. Because it is no good for any other part of the body. And I think you should stop selling cigarettes. And I am not going to start to smoke. And no one can make me smoke.

And this is to go to Mr. Rodino, the Congressman of Newark. Can you send me a picture of you?

Sincerely yours,

RANDY RICHARDS.

NEWARK, N.J.

Mr. PETER W. RODINO,
House Office Building,
Washington, D.C.

MR. PETER RODINO: My name is Michael Cook (son of George H. Cook) age 15 and I attend Barringer High School and this letter is to let you know how I feel about the subject of smoking. I do not like smoking even though I do it. It is a bad habit and I know that the cigarette commercials are only telling a one-sided fabricated story. So when you put your vote in whether you are against or for it please remember this letter.

Sincerely yours,

MICHAEL COOK.

NEWARK, N.J.,
July 29, 1969.

DEAR MR. RODINO: I think people shouldn't smoke because they will have cancer and cancer is no good. I have saw a film about. "Smoking and you."

SUSAN SEGARRA.

NEWARK, N.J.,
July 29, 1969.

DEAR MR. RODINO: My name is Pinky Brunson. I am 12 years old. I go to Webster Junior High. On July 29, 1969, I was at St. Lucy recreation center. I go there to improve my English. That day we saw a film about smoking and you. My opinion about smoking is that it should be stopped. Because the world is getting smaller and smaller. Some parents tell their children not to smoke, but they smoke their self. One day when I was looking at TV, I saw a commercial about cancer that you get from smoking, but right they finish telling us not to smoke and other commercial to smoke a certain cigarette, and I think smoking should be stopped.

Sincerely yours,

PINKY BRUNSON.

MR. RODINO: My name is Mike Riveres. I live at 927th Avenue Apt. 1F Newark New Jersey 07104 St. Lucy School Age 11. The reason of smoking is because it gives you cancer. I don't smoke. I'm to young too smoke, and I ain't going to smoke, I hate smoking!

Smoking is dangerous to your body. Smoking has kill many liver. There should be no such thing as cigarette.

Sincerely yours,

MIKE REVERES.

MUDSLIDES FROM A BUILDING SITE PLAGUE NORTH SHORE COMMUNITY

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. WOLFF. Mr. Speaker, for the most part, this summer in Washington has been quite hot and dry, that is, until the torrential rain a little over a week ago which left many drivers wishing that their cars were boats and many citizens wishing they had a penthouse apartment, if only to escape the floods.

Here the situation was but a temporary inconvenience with a few exceptions. Yet, there are a considerable number of Americans who find the exception the rule. Indeed, they face each heavy rainfall with strong trepidation since even a seemingly minor rainstorm can produce an expensive and dangerous problem—mudslides.

The people of the Third Congressional District, which I represent, is well aware of what I am describing. Unfortunately, they are among those who know the hardship of slides, pollution, and expensive repairs as a result of rainfall coupled with blatant abuses by builders and others who despoil vitally important soil-clinging trees, grass, and shrubs.

I have authored a bill, H.R. 12839, to establish an intergovernmental commission on the Long Island Sound. It would establish a 15-member commission to study the problems of the Long Island Sound and its shoreline and make suggestions for their improvement. The

measure, I would like to note, is aimed at combating problems such as mudslides, pollution, and other manmade imbalances of nature.

Today the New York Times had a story concerning the chronic mudslides that Cold Spring Harbor, which falls within my district, has been experiencing. Since the article clearly describes one situation which could have been adequately handled by the establishment of a Long Island Sound Commission, I would like to extend my remarks to include it in the RECORD:

MUDSLIDES FROM A BUILDING SITE PLAGUE NORTH SHORE COMMUNITY

(By Roy R. Silver)

COLD SPRING HARBOR, LONG ISLAND, July 30.—Torrents of water and mudslides from a building site on a high hill overlooking this rural North Shore community have been plaguing residents here for the last 18 months.

The steady and often heavy rainfall of the last two weeks has added to the fears and frustration of the occupants of almost 100 homes and businesses and has brought concern over the damage that could be caused by hurricanes next month.

Piles of brown mud and watery gray clay have slithered onto roadways, lawns and driveways and into basements and one resident's swimming pool.

The office of the Town of Huntington Supervisor, Jerome A. Ambro, acting in response to the clamor of protest from irate homeowners, said that starting tomorrow town personnel "will begin stabilization of the land by completing the storm drains, roads and dry wells."

Mr. Ambro's office said that Walter Stackler, the builder of 35 high-price homes in the Heritage Hill area, would be billed for the work. Only a few of the new homes are occupied.

MUDSLIDE ON ROAD

Residents said builders at the site, which was started about two years ago, had removed trees and underbrush from the steep slopes of the hill, leaving water and mud to run unchecked to the homes below.

The residents said they had complained to Mr. Stackler who replied: "Sue me." Town officials, they added, had told them there was nothing that could be done. Mr. Stackler was not available for comment today.

One effect of the heavy rainfall was a large deposit of mud on Route 25–A, which is called Main Street here. Two bulldozers worked all morning today to remove the slide.

Mrs. Frank Marshall, the wife of a dentist who lives in a home at the foot of the hill below the construction site, gazed despondently at their new swimming pool, which was filled with muddy water.

Pointing to a $700 water heater near the pool, she said: "It's ruined and I don't know who's going to pay for it."

While workmen pumped out her pool and removed some of the mud from a rear patio, she showed visitors her huband's basement office, from which two inches of mud had been removed in the early morning hours.

"We sleep with the bedroom windows open even though we have air-conditioning so that if we hear rain we grab our brooms, shovels and towels to start cleaning up," she said.

Meanwhile, in an unrelated incident, commuter service on the Port Jefferson branch of the Long Island Rail Road was disrupted this morning when 18 inches of mud slid onto the tracks.

The slide, which occurred at 6:12 A.M. between Huntington and Cold Spring Harbor, was cleared by workmen at 7:52.

THE PEOPLE'S RIGHT TO KEEP AND BEAR ARMS

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. WYMAN. Mr. Speaker, illustrative of what can happen when you go overboard on the subject of gun control is the recommendation of the President's Violence Commission (President Johnson) that all Americans surrender their handguns to the Federal Government. The difficulty with all such attempts to "confiscate" the people's arms is that such measures will not keep arms from the criminal element but will deny law-abiding citizens their constitutionally protected right to keep and bear arms in the defense of life, liberty, and family.

Let us never be guilty of burning down the barn to save the horse, much less running roughshod over fundamental constitutional liberties of all Americans, as the attached Washington Star editorial of July 30 points out:

MORE GUN CONTROL NONSENSE

As an introductory note to this editorial comment, an item in the crime news is worthy of attention. On Monday there were 22 armed robberies in Washington. This brought the July total as of that date to 450, compared to 332 armed robberies in all of July of 1968.

In the face of this a task force of the President's Violence Commission (appointed by President Johnson) comes forward with a wacky recommendation. Its proposal is, except in a very small number of cases, that all Americans should be required to surrender any hand guns they own to the government.

Here is the task force's reasoning: This is the only way in which the United States can break "the vicious circle of Americans arming to protect themselves from other armed Americans." Now what does this really come down to? Even the task force, we suppose, would concede that criminals are not going to surrender their hand guns. So what they are saying is that no homeowner, to cite one example, should be permitted to keep a hand gun in his own house to protect himself, his wife, and his children against the night when some armed criminal might break into his home. Their argument is that home owners "may" seriously overrate firearms as a method of self-defense against crime. The "loaded gun in the home creates more danger than security."

This strikes us as blithering nonsense. How many members of this task force have been awakened in the middle of the night by a scream for help by some member of his family? Probably not one. But thousands of Americans are exposed to this dreadful experience every year. And in such a situation what is an unarmed householder supposed to do against an armed intruder? Hide under his bed, and never mind what happens to his family?

The major thrust of this soft-in-the-head report is that the requirement to surrender your hand gun, of which there are an estimated 24 million in the country, would reduce crime. This is absurd, for the criminals are not going to surrender their guns. A better and much more realistic way to deal with this problem will be found in legislation now being considered in Congress.

The intent of this legislation is to provide tough, really tough, mandatory penalties for criminals who use guns in the commission of a felony, such as rape, robbery or burglary. For a first offense the penalty generally favored would be a mandatory jail sentence in a federal jurisdiction, which includes Washington, of from one to 10 years. A judge would be forbidden to suspend this sentence or to make it run concurrently with the sentence for the primary offense. In case of a second offense, much stiffer jail sentences are proposed, and they should be written into law.

A similar bill passed the House last year, but was watered down in the Senate before becoming law. The argument then was that mandatory sentences deprive judges of discretion in imposing penalties. And so they would. But in one week at the time the watered-down bill was passed 17 criminals in this city were found guilty of crimes in which guns were used. In six of these cases, more than one-third, the judge imposed suspended sentences, which means that no jail terms were served for using a gun.

So we say let's make the sentences mandatory. And let's not deprive the law-abiding citizen of hand guns in his own home while the criminal element will remain armed to the teeth.

PRESIDENT'S POPULATION STUDY COMMISSION DESERVES PROMPT SUPPORT

HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. HORTON. Mr. Speaker, it is with a great deal of pride that I point out to our colleagues the very firm commitment our administration has shown to problems of population growth. As a member of the Republican task force on earth resources and populations, which has held many sessions on the problems of population growth, I was very pleased to see President Nixon propose a National Commission on Population Growth and the American Future.

At our present rate of growth, the population of the world will double by the year 2000. If growth is allowed to proceed at this uncontrolled rate, economic progress, good education and adequate food supplies will be impossible goals in many countries of the world, and will be extremely difficult goals for portions of our own country.

The nations of the world can no longer endure the seriousness of this situation. Widespread famine and even more serious pollution, economic and environmental problems in the years ahead must be contended with now. President Nixon may at last, be providing the world with the leadership that it will take to harness international energies needed to meet this problem.

For this reason, I am very pleased to cosponsor legislation which will create the National Commission which the President seeks. Beyond his call for a study commission, the President has joined many of us in Congress in calling for more funds in the area of population planning. The United States should provide aid in family planning to the developing countries of the world and should develop its own program of population planning to a much greater extent than we have to date.

In addition we need better coordination of our population planning assistance efforts both at home and abroad. As the President has also pointed out, flexible family planning programs must be developed to cope with the complexity of the problem. This can only be done with greater coordination between the various Government agencies dealing with these problems.

To accomplish these goals, up-to-date knowledge, new ideas, and dynamic leadership will be required. I believe that the new administration has shown the willingness to provide the leadership; I feel that the proposed Commission on Population Growth and the American Future can provide the knowledge and ideas, if the Congress will provide the essential resources and support.

PRESIDENT MEANY OF AFL–CIO BELIEVES GOVERNMENT SHOULD CARRY THE MAIL, TELLS WHY

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. DULSKI. Mr. Speaker, former President Lyndon B. Johnson named 10 distinguished citizens to the President's Commission on Postal Reform, which became known as the Kappel Commission since it was headed by Frederick R. Kappel. The report was issued in June 1968.

Postal reform hearings began on April 22 before our Committee on Post Office and Civil Service. Mr. Kappel came before the committee on June 5.

On Wednesday, July 30, another member of the Commission was a witness: Mr. George Meany, president of the American Federation of Labor and Congress of Industrial Organizations—AFL–CIO.

Mr. Meany was an excellent, candid witness. It is interesting to note that he was the only member of the Commission to note an exception to the recommendations made to the President.

In a footnote on page 2 of the Commission's report, Mr. Meany said:

> I agree with the goal of modernizing the postal system and improving working conditions and job opportunities for its employees. However, the status of the Post Office as a Cabinet Department has a positive value that should not be discarded lightly.

Mr. Speaker, President Meany made an excellent formal presentation of his views to the committee and I am including his text as a part of my remarks:

STATEMENT BY GEORGE MEANY, PRESIDENT OF AFL–CIO

Mr. Chairman, my name is George Meany. I am President of the AFL–CIO. The AFL–CIO is firmly opposed to H.R. 11750.

There are a number of specific objections which we intend to raise in support of our position. But our basic reason can be quickly stated:

We believe the government should carry the mail.

We agree with the Kappel Commission's documented description of low wages, poor working conditions and inefficient operations in the Post Office. There is no disagreement on the need for substantial reform.

However, there is substantial disagreement on how to achieve the needed improvements most effectively, in the best interests of the American people and the postal employees.

We are not convinced that a drastic reorganization of the Post Office Department into a corporate structure, removed from Congressional control, will improve the postal service. We believe that the substantial reform of the Post Office, required to improve its operations, can be achieved within the general framework of a federal government department.

ESSENTIAL GOVERNMENT SERVICE

The Post Office is an essential government service. The founding fathers reorganized the vitality of communications, the need to provide people of all walks of life and in all parts of the country with cheap, regular means for correspondence and education and the dissemination of knowledge.

The Congress, in its wisdom and in recognition of a changing society, has from time to time expanded the Post Office Department's duties and responsibilities. For most Americans, the postal service is their most direct and regular contact with the federal government.

Despite the various and often valid criticisms of the service, the Post Office works. It gets millions of pieces of mail collected and delivered each day, across a huge country of over 200 million people and a multitude of businesses and other private and public organizations.

Over 80 billion pieces of mail are handled in a year.

ERROR FACTOR IS MINIMAL

Even a 1% error factor would result in misdirecting 800 million pieces of mail a year. Few critics of the Post Office can find any giant operation with a better error record. Certainly America's big car manufacturers—now calling back thousands of defect-marred automobiles—can't claim such a record.

The Post Office performs this service, moreover, with such a high degree of integrity and honesty, that America's trust in the mails is legendary.

However, this performance is far from efficient. Often, there are delays and, at times, the delays in delivery are lengthy.

The truth of the matter is that the Post Office is woefully undercapitalized. It is compelled to use old structures in traffic-jammed areas of city streets, some distance from modern major roads and miles away from airports.

These structures were built near railroad terminals, when the railroads were almost the only means of transportation. The use of these structures today means built-in inefficiencies in a time when so much of the mail is carried by trucks and planes.

Moreover, most of these structures and much of their equipment were installed to serve the needs of a population that was about 40% or more smaller than today, when the volume of mail was much less than it is at present.

The Congress just has not kept the Postal Service abreast of a changing, growing nation. Dependence on such buildings and equipment in 1969 results in conditions that are most inadequate for postal employees, for the public and for the improved handling of the mail.

POOR WORKING CONDITIONS

The Post Office is burdened by unrealistic rates for the service provided for the daily outpouring of circular mail, the so-called junk mail. It is so burdened by a high rate of employee-turnover, reflecting poor working conditions and inadequate wages in today's job market.

Workable solutions are needed. But it is ridiculous to claim that the so-called efficiency operations of private corporations, use of new technologies, etc., can solve every problem.

What about direct postal service—mail delivery to homes and places of business? The only way to keep that from being a major cost item is to eliminate it—return to the days when a citizen strolled through the streets of his village to get his mail at the post office window.

Such a suggestion is ridiculous.

And how will major new machinery in post offices eliminate the delays caused by mid-city traffic jams or airplanes stacked-up over airports that can no longer handle the volume of air traffic?

H.R. 11750 NOT THE ANSWER

H.R. 11750 won't solve those problems and they are an important factor in the so-called postal problem.

Efficiency can and should be improved, within the practical limitations of existing and foreseeable technology and means of transportation. New and improved post office buildings and equipment can increase the volume of delivered mail per employee. Productivity and working conditions are in urgent need of improvement.

A major trouble is the lack of funds for modern plant and equipment.

Remedy of this problem requires a change in the means of financing Post Office investment—to provide the Post Office with some method to obtain self-liquidating funds for investment, instead of the present reliance on annual Congressional appropriations.

An adequate investment program for the Post Office requires long-term planning of research and development, as well as access to funds for the planned expansion of investment-outlays for rapid modernization.

I believe that such changes in the provision of investment-funds, in accounting for long-term investment outlays, and in improving the management of postal operations can be achieved within the structure of the Post Office as a federal government department.

The establishment of a Postal Modernization Authority, within the Post Office Department, as proposed in H.R. 4, introduced by Congressman Dulski, indicates a general approach towards this end.

An Authority of this type, with authorization to issue its own bonds, can achieve the financing objective of a corporate setup—and do it within the structure of the Post Office Department.

REFORM EXISTING STRUCTURE

It seems to me that a realistic rate structure and an improved wage level for employees can also be achieved through substantial reform of the existing structure, without the need for drastic reorganization of the Post Office into a corporate setup.

As a nation-wide government service, the Post Office is not comparable to any business enterprise. It is vastly different from such government enterprises as the Tennessee Valley Authority, which produce and sell products and services that can be compared with private business, in terms of production, prices, wages and productivity.

The Post Office is also much different from such government-regulated monopolies as the telephone service, in terms of provding direct personal service such as mail delivery, as well as a more limited potential for improvements in technology and profitability.

POST OFFICE IS SERVICE—NOT BUSINESS

The so-called postal deficit is part of the cost of underwriting essential government services. We regard the Post Office as a government service and not as a business. We do not think that whether any particular service pays its own way should determine whether the service should be maintained.

For example, rural mail service does not pay its own way and the Congress has deliberately decided that magazines and newspapers should be carried at a reduced rate.

We believe that those are political determinations made in the light of the value of the service to the public. Such determinations are not and should not be treated as business decisions on a simple cost basis.

Therefore, the AFL–CIO views subtantial reform of the Post Office Department's existing structure as workable and necessary.

We do not believe the widely advertised efficiency of a postal corporation can be achieved except by elimination of postal services, such as home delivery of mail. We oppose the abandonment of such service.

If the objective is efficient and necessary postal service for all Americans, then let us get on with the job of reforming the Post Office Department to reach that goal. Substantial reform—rather than a corporate set-up—is the prudent, realistic and workable approach to the problem.

REGARDING EMPLOYEE PROVISIONS

I turn now to the provision of H.R. 11750 with regard to employees. These are the provisions which are, of course, of most direct concern to the AFL–CIO and its affiliated unions which represent postal employees.

The philosophy of the Administration is that the postal service s not sufficiently governmental for postal employees to continue to have all the rights and protections of government employees, but that it is sufficiently governmental for postal workers to continue subject to most of the restrictions and disabilities of government employees. They are, to some extent, to have the worst of both worlds.

The provisions of H.R. 11750 on unions and collective bargaining are likewise selectively chosen to combine the worst features of public and private labor laws.

As you know the AFL–CIO does not regard Taft-Hartley as perfect, and while Executive Order 10988 was a great advance over prior handling of federal employee labor relations, we believe that experience under the Order shows the need for certain changes and improvements.

STILL BETTER THAN H.R. 11750

The AFL–CIO has made detailed proposals both for revising Executive Order 10988, and for supplanting it with legislation along the lines of H.R. 12349. However, we regard not only E.O. 10988 but Taft-Hartley as far preferable to H.R. 11750.

The AFL–CIO is thus flatly opposed to the personnel and labor relations proposals of the Administration. Let me spell out why.

Postal employees would lose civil service status, and, after a year, would no longer be able to transfer to other positions within the federal government. (§ 803).

Once the new corporation had established its own procedures, appointments and promotions would be made without regard to the civil service laws, and postal employees could lose the protections of the Lloyd-LaFollette Act against removal or suspension. (§ 801).

We see no reason why these protections of existing law should be taken from postal workers, nor do we believe that they have any relation to the operating problems of the Post Office Department.

INCONSISTENCE REGARDING WORKERS

At the same time, and quite inconsistently, postal workers would continue to be treated as government workers for purposes of the numerous invidious restrictions which are applicable to government employees.

Section 1918 of Title V of the U.S. Code makes it a crime for anyone to hold a government job who "participates in a strike, or asserts the right to strike" against the government. This provision would continue to be applicable to postal employees. (§ 209).

If the Administration has decided that postal employees should no longer be considered government employees, than it should go all the way and grant them the right all private employees have in a free country—the right to strike.

That goes too for the government security and loyalty program, which would, under H.R. 11750, continue to apply to postal employees.

H.R. 11750 likewise continues the application of the Hatch Act to postal workers. We think that the Hatch Act is excessively restrictive even as applied to those having full status as government employees, and see no warrant for applying it to those who are to be stripped of that status.

STRANGE CONTRADICTIONS

H.R. 11750 also continues for postal employees the ban on habitual drunkenness (5 USC § 7352), and the restrictions on the receipt of decorations from a foreign government (5 USC § 7342). These items are not important in themselves, but they illustrate the strange contradiction whereby H.R. 11750 would retain all existing restrictions but eliminate many protections for postal employees.

We come, then, to the vital matters of wages, hours, and working conditions, and of unions and collective bargaining.

Committee Print No. 8, in describing the "Highlights" of H.R. 11750, states, p. 1:

"Instead of Congress fixing wage rates and legislating classifications of employment, postal employees in every part of the country would have the right to bargain collectively for better wages and other benefits and for improved working conditions."

That sounds fine, doesn't it?

The problem comes with the next paragraph, which states:

"Existing law banning strikes by Federal workers would continue. However, the act would provide for binding arbitration in the event of a labor-management dispute which could not be settled by other means."

NEED STRIKE RIGHT TO BARGAIN

There is no real collective bargaining without the right to strike, because it is only the possibility of a strike that gives employees any bargaining power. As the Supreme Court put it:

"This repeated solicitude, i.e. by Congress, for the right to strike is predicated upon the conclusion that a strike when legitimately employed is an economic weapon which in great measure implements and supports the principles of the collective bargaining system." (*NLRB* v. *Erie Resistor Corp.*, 2736. S. 221, 233–234).

We believe that the right to strike merits solicitude, too, because it is an essential foundation of democratic freedom.

In our proposals for revision of Executive Order 10988, we have made clear our belief that, so long as the Congress denies federal employees the right to strike, the very least it should do is provide a terminal point for grievances and contract disagreements through binding arbitration.

But H.R. 11750 does not give the employees even this right to invoke binding arbitration. That right is vested solely in the "Postal Disputes Panel."

Under § 808 (a) it is the Panel and not the employees or the union, that decides whether to submit issues to final and binding arbitration, and the Panel also decides what issues, if any, to submit and is to "frame the language of the issue to be arbitrated."

Alternatively, if the Panel does not take jurisdiction, "the status quo surrounding those particular issues shall be maintained" (§ 808 (d)).

THREE WAYS TO HANDLE WORKERS

As we see it, there are three different ways that the labor relations of postal workers might be handled.

One, and the one which is now used, is for Congress to legislate on wage rates and certain other basic matters, but with other issues left to collective bargaining if the employee choose to form unions and bargain collectively.

We think that this is a satisfactory labor relations system for federal employees, and that postal workers should continue to be federal employees and to be subject to the same system as other federal employees.

We think, for example, that postal wage rates should continue to be uniform throughout the country, as in the case of other federal employees.

We do, however, believe that certain changes and refinements need to be made in the present federal employee labor relations system.

Two years ago, I made detailed proposals for revising Executive Order 10988, to the Presidential Review Committee on Labor-Management Relations in the Federal Service.

Six weeks ago, in a letter to Chairman Dulski, Mr. Biemiller expressed the support of the AFL–CIO for H.R. 12349, which would supplant the Executive Order with permanent legislation. It is worth noting that the labor provisions of H.R. 4 are quite similar to H.R. 12349.

OPPOSE PRIVATE OPERATION

Another possible way of handling the labor relations of postal employees would be to transfer the postal system to private ownership, and to put postal employees under the Taft-Hartley Act. We are opposed to that solution, but it would at least be internally logical.

H.R. 11750 proposes an irrational and unworkable mixture of these two systems.

Some incidents of employment would continue to be regulated by Congress. In addition to those already mentioned, postal employees would, for instance, continue to be covered by the Civil Service retirement program (§ 804).

Other aspects of employment would be determined by collective bargaining, but with the employees stripped of bargaining power, for they could neither appeal to Congress, strike, or invoke compulsory arbitration.

Except as otherwise provided, the Taft-Hartley Act is to apply, though neither its broad framework nor its numerous details were designed for an enterprise such as the postal service.

Taft-Hartley's broad framework is collective bargaining, with the stimulus for agreement provided by the right to strike and to lockout. Unions are denied the strike by H.R. 11750: what of the lockout?

IF TAFT-HARTLEY LAW APPLIES

If the details of the Taft-Hartley are to apply, unions will be free to picket post offices when negotiations break down, and may engage in organizational and recognition picketing, subject to certain restrictions.

They may undertake to negotiate union security clauses and work preservation clauses, but not hot cargo clauses. If a union asks for a wage increase, and the Postal Service pleads inability to pay, it will have to open its books to the union.

Many of these results seem desirable to us, but we rather doubt that they were all intended by the authors of H.R. 11750.

In sum, as regard to the labor provisions, we strongly oppose any change in the present system, which would, like H.R. 11750, drastically undercut the bargaining power of the postal employees and their unions.

To repeat, Mr. Chairman, we hold no brief at all for H.R. 11750. We find its basic premise—abandonment of the essential governmental necessity for delivering the mail—to be repugnant.

We agree the Postal System needs reform—more money, better labor relations, new buildings and facilities and modern technological improvement. All of these can be

accomplished within the present framework of government and we are sure will be. That, we insist, is the way to do the job.

FEEDING AMERICA'S HUNGRY CHILDREN

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. BIAGGI. Mr. Speaker, last week the House passed H.R. 11651, a bill to authorize temporary emergency assistance to provide needy children with nutritious meals. I am proud to have voted for this important measure, and I should like at this time to place on record my reasons for voting for it.

If it were operating at top capacity, the national school lunch program would be one of the most effective means by which hunger in America could be lessened and malnutrition decreased. Schoolchildren are, after all, among those who suffer most when not enough of the right foods are available to them. Schoolchildren are growing and learning; they must have good, nutritious meals to continue that development.

An adequately funded and administered school lunch program would provide needy children with at least one nutritious meal a day and would thus go a long way toward stopping hunger and lessening the dangers of malnutrition.

The school breakfast program, too, could be an effective weapon in the fight against hunger. A nourishing breakfast every morning would enable children, otherwise listless and inattentive because of lack of food, to become bright eyed, wide awake, eager pupils. The benefits from such a situation are evident. In fact, all of our children's food service programs have the potential for bestowing incalculable benefits on the health of our Nation as a whole as well as upon individual children. But, sadly and shockingly, indications are that these programs do not operate as well as they could—and should.

During hearings held last year the House Education and Labor Committee discovered the following dismaying facts about our food service programs for children: Over 4½ million needy children are not receiving free or reduced price lunches, more than 6,600 schools in economically deprived areas do not have food services, almost 3 million disadvantaged children in need of a school breakfast program do not have one, and as many as three-quarters of a million children who come from large families with annual incomes of over $3,000 are estimated to need food services. The diligence of the committee has shown the inadequacy of our children's food service programs as they are presently funded and administered. Action was clearly called for, and H.R. 11651, a bipartisan bill, answered that call.

The measure would amend the National School Lunch Act by adding a provision that would authorize the Department of Agriculture to use $100 million in section 32 funds during fiscal 1970. The funds would be used to improve the nutrition of needy children in schools, day care centers, and other organized activities. This authority is given specifically to provide food services to children in addition to the food service support provided under the National School Lunch Act and the Child Nutrition Act of 1966.

The money provided through H.R. 11651 would go primarily toward reaching those children in schools and other organized activities who are not now benefiting from the Federal food services programs. About $1 billion in section 32 funds has reverted to the Treasury during the last 10 years; this measure would put section 32 funds to use where they are sorely needed.

I feel that this piece of legislation goes a long way toward helping rid the richest land in the world of the intolerable presence of hunger and malnutrition among its children. I derive the greatest satisfaction in knowing that children in my State and all across the Nation will benefit greatly from the action we have taken.

THE BATTLE FOR FLOOD CONTROL

HON. LARRY WINN, JR.

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 29, 1969

Mr. WINN. Mr. Speaker, the battle for flood control is being won in the Kansas-Missouri area. How this is being accomplished is outlined by Mayor Lamar Phillips of Ottawa, Kans., in a recent issue of the Mississippi Valley Association's newsletter which I would like to bring to the attention of my colleagues:

THE BATTLE FOR FLOOD CONTROL

The recent and current severe storms in mid-America serve as a grim reminder of the catastrophic flood of 1951 which resulted in more than a billion dollars damage. Mayor Lamar Phillips of Ottawa, longtime flood control worker and witness of damage from frequent floods on the Marais des Cygnes, has the following observations to make:

"The rivers of our continent, from the standpoint of geology, are ancient. They have been carrying storm run-off to the seas for ages. But, a change is taking place. Our old rivers are becoming new rivers. Or, perhaps it is more accurate to say they are being remodeled into new rivers.

"During recent days, streams of our Missouri River Basin have been called upon to carry more storm run-off than their channels are capable of carrying. An example is the Marais des Cygnes river valley of Eastern Kansas, the stream which becomes the Osage River after crossing the Kansas-Missouri border. Too much rain in too short a time caused this river to overflow its banks in some areas, and, regrettably, too much farm land and crops went under water. Today one reservoir is in operation—Pomona Reservoir in the upper Marais des Cygnes valley, and one local protection project, at Ottawa. In the recent overflows no water came into the city of Ottawa. The Pomona Reservoir level raised 12½ feet above the normal level, impounding 60,620 acre-feet of storm run-off. Eventually all of the projects in the Kansas-Missouri area will be completed.

"What is the task which lies ahead for those of us in Mo-Ark and Mississippi Valley Associations? We must be unselfish, but we must not give up. The battle for flood control is being won, and our contribution to the cause has been the fact that we are not competing with each other."

As of this writing, it is estimated that flood control projects constructed by the Kansas City District of the Corps of Engineers have prevented more than $130 million in flood losses this year. In areas where flood control projects have been recommended in the Kansas City District, but not yet financed for construction, there is an estimated $30 million loss.

NORTHERN KENTUCKY GIVES 100TH SON TO VIETNAM WAR

HON. M. G. (GENE) SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. SNYDER. Mr. Speaker, throughout the history of the United States, the Commonwealth of Kentucky has given its valiant offspring to safeguard America's heritage of liberty. Particularly, has this been true of the upper bluegrass—known as northern Kentucky. On July 23, northern Kentucky gave its 100th son to the war in Vietnam. Phillip Hammons of Covington, Ky., volunteered to fight for his country and paid the ultimate sacrifice in order to defend it. Phillip Hammons has upheld the highest traditions of his family, whose sons have served and are serving their country..

To the Hammons family goes the heartfelt sympathy of thousands of American families who have suffered the same loss and the undying gratitude of those of us for whom he laid down his life. He fought and died in the finest spirit of gallantry of the Marine Corps and of America and he joins the ranks of the other brave fighting men of America and of Kentucky who have given their lives for freedom.

He did not die in vain. He died protecting the liberty of all of us who gratefully remain. It is our duty to see to it that what he died for we will fight for.

The following page 1 article in the Kentucky Post concerning Phillip was written by Sigman Byrd, whose son, Arthur, is counted among the 100 courageous northern Kentuckians who have died in Vietnam:

NORTHERN KENTUCKY GIVES 100TH SON TO VIETNAM WAR

(By Sigman Byrd)

The Upper Bluegrass has given the life of her 100th son to the cause of United States military policy in Southeast Asia.

While astronauts Armstrong, Aldrin and Collins streaked through space toward their bright blue home planet yesterday morning, Mrs. Myrtle Hammons, 2903 Alden court, Covington, received that most heartbreaking of messages.

Her son, Pfc. Phillip Hammons, a 20-year-old Marine rifleman, had been killed in combat on July 23, 10 miles northeast of An Hoa, Quang Nam Province, Republic of Vietnam.

"He sustained missile wounds to the body from a hostile explosive device while on a search-and-clear operation," said the message over the signature of the commandant of the Marine Corps.

Pvt. Hammons was the youngest of 11 children. Four of his five brothers are veterans of the armed forces. Another brother, an Army specialist, is stationed in Vietnam.

Sp. 4 William Hammons, aged 23, will be a member of the honor guard escorting his brother's body home.

Pvt. Phillip Hammons, the slain Marine, is the only one of the 11 children of John and Myrtle Hammons who never saw his father. The elder Hammons died shortly before Phillip was born.

But the father and son who never saw each other in life will lie side by side in death. After services at Allison & Rose Funeral Home in Covington, the fallen hero will be buried beside the grave of John Hammons in Adams Cemetery at Batesville, Ind.

It was in Batesville that John died and Phillip was born 20 years ago.

One of Pvt. Phillip Hammons' five sisters, Katherine (Mrs. Glen) Fugate, of Cincinnati, said she had a strong premonition of her brother's death when she heard a news report Wednesday about the death of 25 U.S. Marines in Vietnam.

"I don't understand it," she said. "As soon as I heard it, I said to myself: Phil's dead. I felt it so strongly that I phoned Juanita (Mrs. Paul Landrum, 415 Bakewell street, Covington, another sister).

"I told Juanita we ought to go and stay with mother, to be with her when the telegram came. And that's what we did."

Mrs. Fugate explained that she and Phillip were closer than most brothers and sisters. "You see," she explained, "my son Mike is 20 years old, too—just two months older than Phil.

"I guess I thought of Phil more like he was my son than my brother."

The mother of the 11, Mrs. Myrtle Hammons, was prostrate with grief Friday.

Mrs. Landrum said her mother had slept poorly Thursday night—despite sedation administered by a physician.

"Mother is bitter about Phil's death," said Mrs. Landrum. "I think she always will be. She says she won't accept Phil's decorations from the government."

Pvt. Phillip Hammons has at least two decorations, a Purple Heart and a marksmanship medal. He earned the markmanship medal in basic training in San Diego.

Phillip Hammons left Holmes High School in July 1968, to enlist in the Marine Corps before graduation.

"He volunteered," said Mrs. Fugate. "He wasn't drafted. He volunteered for combat duty in Vietnam."

"We tried to talk him out of it," said Mrs. Landrum. "We tried so hard to persuade him to join the Navy. But he wanted to fight the Communists."

Two of the six brothers are Navy veterans. They are John and Orville Hammons, both of Cincinnati.

Two others chose the Army. They are Clarence Hammons of Covington, and Pvt. William Hammons, now on the way home with his brother's body.

The other brother, Rolland Hammons, of Covington, is an ex-Marine.

The surviving sisters, besides Mrs. Fugate and Mrs. Landrum, are:

Mrs. Richard Goff, Covington; Mrs. Arthur Stahler, Cincinnati, and Mrs. Louise Dornbush, Covington.

Pvt. Phillip Hammons left the United States for duty in Vietnam in January of this year. His death—Kenton County's 39th in Vietnam—came about a week after his return to duty following a brief rest-and-rehabilitation period in Bangkok.

From Bangkok the Marine hero sent his mother a large and beautiful chest of flatware and a tape recording of a poem written by one of his comrades and recited by himself, Phillip.

Text of the poem follows:

"Take a man and put him alone—
Put him 12,000 miles from home,
Empty his heart of all but blood
And make him live in sweat and mud.
This is the life that I must live;
This is why my soul I give.
You peace-brothers laugh from your easy chairs,
But you don't know what it's like over here.
You have a ball without near trying
While over here your brothers are dying,
You burn your draft cards and protest . . .
Use your drugs and have your fun
And then refuse to raise a gun.
I'll hate you till the day I die . . .
I saw my buddy's arms a bloody . . .
And heard them say: 'This one is dead.'
He had the guts to fight and die.
He paid the price—but
What did he buy?"

At the conclusion of the poem, the voice of the martyred Marine, speaking to his mother for the last time, says in the tape recording:

"But who gives a damn what a Marine gives—except his mother, father, brothers and sisters?"

MUSKIE SPEAKS IN INDIANA

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. HAMILTON. Mr. Speaker, I had the great pleasure of being host to Maine's distinguished Senator, EDMUND S. MUSKIE, in southern Indiana last week.

During his visit in the Ninth Congressional District of Indiana, Senator MUSKIE delivered one of the most enlightened, concise reports on this Nation's priorities that I have heard.

Senator MUSKIE'S visit came in the wake of the Apollo 11 success and that glow of pride which all Americans share in this remarkable achievement. But the Senator's concern is that we take heart from this achievement and set ourselves goals here on earth.

Each of my colleagues will find reading this address a good investment of his time.

I include in the RECORD the entire text of Senator MUSKIE'S excellent speech, given July 25 at the Jeffersonville, Ind., high school fieldhouse:

SENATOR EDMUND S. MUSKIE, INDIANA SPEECH, JULY 25, 1969

During most of the past two weeks, our people have been unified in a way that only great moments of triumph or tragedy seem to produce.

In the affluent suburbs; in the steaming inner cities; in our troubled universities, and in neighborhoods where the schools are inadequate and overcrowded; in mountain and seashore resorts, and in homes where families cannot afford a summer vacation; beside clear lakes, and on the shores of polluted rivers; whether we were white or black, rich or poor, young or old, supporters or critics of the war in Vietnam, Democrats or Republicans, New Left or Old Right—the magnificent adventure of Apollo XI gripped us all.

The image of Neil Armstrong's foot swinging down from the Eagle, and onto the surface of the moon, is a permanent part of our consciousness. No matter where we saw that television screen—in a rec room, or in a tenement—its fantastic image last Sunday night belongs to all of us. Time cannot erase it, nor in any way diminish its power. For a while, it made us one people.

And our unity was based on something deeper than national pride. Armstrong and Aldrin were representing all of us—all mankind—reaching out into the cosmos.

How long will that sense of unity last?

I'm afraid the answer is not long, if you consider the history of other great events that have drawn us together, in exultation or sorrow.

Because sooner or later the television sets go off, and we return to the earth and the heat of summer. To high prices. A weak stock market. To traffic congestion. Rising crime. Cities hard-pressed for funds, and public services deteriorating. The air we breathe dark with chemical waste. Mistrust between the races. Mutiny in the hearts of many young people. The war dragging on.

That, it can be said, is the real world. Our vicarious participation in the moon mission is just that—vicarious—though we did pay for it.

But I want to suggest tonight that at least one aspect of the moon mission is part of our real world, too—or could be.

I don't mean all the technological advances, the by-products, that are supposed to come from space science. I assume they are real. But by themselves, they are not likely to do much to relieve the problems we live with here on earth.

As a matter of fact, the science and technology, the national resources, and even the bravery that went into Apollo 11 could not in themselves have lifted that rocket a foot off the launching pad.

It took something more, something that could put all those elements together and give them coherence and power. It took a unifying goal, understood by all, and the will and determination to reach it.

In the case of the space program, the goal was simple. It was to enable a human being to walk on the moon's surface by the end of this decade. Achieving it was a terrifically complicated business. But the goal was clear and understandable and it inspired and unified our efforts, and we made it.

What if we decided that there were some goals here on earth that were no less important to us, no less urgent?

Now that we have seen that man can operate successfully in the lunar environment, what if we decided to help him operate successfully in the urban environment?

Now that we have shown ghetto children that a dream of sophisticated science may come true, I think it's about time to teach them to read.

Now that we have protected the health of three astronauts hundreds of thousands of miles away, I think we ought to find a way to give all our people good medical care at reasonable cost.

Now that we have built machines that can sustain great journeys in space, I think it's time to solve the problem of transporting people to and from work, without turning the countryside into concrete and the air into carbon and sulphur compounds.

Now that we've seen men cooperate to unite two machines in orbit at terrific speeds around the moon, let's find out how to get white men and black men to cooperate in improving city life.

I recognize that there is a difference between a physical triumph like putting a man on the moon, and a social triumph like putting a poor teenager on his way to a successful and responsible life.

With the one, we've been dealing with brilliant, highly educated men and women. We've had the use of the most advanced scientific equipment. We've been able to measure our

progress exactly. When we've failed, when there was a tragic fire that set us back, we've pressed on, undaunted. We've had the funds that let us call on the vast resources of private industry. And most of all, we've had a simple goal.

But dealing with our human problems is another matter. We've found that we could not simply put together a few ingredients—a little money to improve the schools, a year of Head Start, a job training program, and some good intentions—and heal the lives of people who have known nothing but poverty and deprivation from the beginning. We don't know yet how to measure the effect of most of what we are doing—how much a billion dollars of aid to education can do for school children, for example.

Every failure—every grant to some group that mis-spends it—is the occasion for cries of outrage and calls for stopping the program. We've talked a lot about getting private industry involved, but we haven't found the key—the incentive—to bring that about in sufficient quantity. And most of all, our goals have been very general—and very rhetorical.

I think it's time we delivered some simple goals and some firm target dates for our problems here in America.

Like improving the reading skills of high-school graduates in the ghetto from the ninth grade level to at least the eleventh grade level by 1976.

Like meeting the goal of the National Housing Act—26 million new units—in the next nine years.

Like cleaning every American river of unacceptable pollution by 1976.

Like assuring that no American family goes hungry by 1971.

Like reducing the delays in our courts of criminal jurisdiction by —% within five years.

There are plenty of other goals—in higher education, in mass transportation, in cleaning the air, in reducing infant mortality.

And it is up to the political leadership of this country to set those goals and to provide some target dates for reaching them—dates that are just as demanding as putting a man on the moon in the sixties was, when John Kennedy set it in 1961.

You don't provide that kind of leadership if you back-pedal before every reactionary breeze.

And whatever your Gallup poll rating, you can't lead from a low silhouette. You've got to stand up. You've got to invest some of your political capital in making this a more human and hopeful country. You've got to help your people understand how critical our problems are—and how we can marshall our energies, as we did in the space program, to solve them.

Because the real issue is not who wins in 1970 or 1972. It's what happens to the country in the next four years—whether it regains its old determination, its old optimism and hope, or whether it divides still further into frustrated, despairing factions.

I hope our President has a successful trip in Asia and Eastern Europe. But when he returns—as when Armstrong and Aldrin and Collins returned—he will find an America very much as it was when he left it: In need of political leadership that identifies our problems realistically, and that describes some human goals within our reach.

It may be that this is too much to ask from Republicans. They are better at turning the clock back, or making it stand still, than they are at anticipating what could be in the hours and days to come.

It has been our democratic role to identify national needs, and to set the forces in motion that will meet them. We have done that before. We shall do it again. And between now and 1972, let us press this administration to stand up and lead. Let us—speaking as the majority party representing the people—try to exert more forward pressure than Strom Thurmond can brake.

Let us take heart from the spectacular achievement on the moon, and set ourselves some goals here in America. And let us bring together the resources and the will we need to reach them, and press on, through whatever disappointments and delays, until we do. That is the way, and the only way, by which we can regain the union we knew last weekend. And, despite the glory of Apollo XI, that is what really counts.

STATEMENT OF ANDREW J. BIEMILLER, DIRECTOR, DEPARTMENT OF LEGISLATION, AFL–CIO SUPPORTING U.S. FOREIGN AID PROGRAMS

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, Andrew J. Biemiller is Director of the Department of Legislation of the American Federation of Labor and Congress of Industrial Organizations. His statement follows:

STATEMENT

This statement represents the continuing position of the AFL–CIO in support of our country's program of foreign aid and to express our support for continuation of foreign aid authorization legislation.

The AFL–CIO Executive Council, on February 24, 1969, again stated its fundamental belief in the importance of the U.S. foreign assistance program when it said:

"The security and freedom of our country require a variety of efforts—political, diplomatic, economic, military, cultural and humanitarian. In this realization, Democratic and Republican Administrations alike have recognized the necessity of rallying our nation for generous assistance in various forms, particularly to the developing countries. Without the successes which have been achieved in the pursuit of this course, important areas, now centers of economic progress and advancing social justice, would today be pockets of political chaos and pawns in the hands of aggressors bent on world domination."

The AFL–CIO makes such a statement while being aware of the problems and inadequacies which have appeared in this country's foreign aid program in the past because we recognize that such an effort as this is relatively new in the history of mankind. The problems of poverty and race in our own country and the problems of underdevelopment in many regions of the world had for many years been accepted as inevitable and incapable of essential improvement. Perhaps because of our newly discovered ability to successfully engineer vast changes through the application of economic adjustments in critical areas of the nation's life, we are now confident that we are able to improve the condition of destitute human beings both here and abroad through specific measures. But we are relatively new at applying these solutions both here and abroad and it is apparently necessary that many of the lessons of practical administration of such a progressively innovative program must be learned through experience. The extraordinary successes we have achieved in such programs as foreign assistance must almost inevitably be marked by some failures as we apply new solutions to our changing array of human and industrial problems.

In the final analysis, then, both the humanitarian goals of the American foreign aid program and the costs of that program in terms of sacrifice reflect great credit upon the American people. The continuing presence of those goals, that of preserving world peace, promoting freedom and supplying for economic needs in compliance with social justice, urge us to continue to make the sacrifices this program requires. A decline in our overseas aid would represent not only an abandonment of our recognized responsibilities but the loss of essential means of development to other human beings who have a right to share in the wealth of the earth.

Conscious of the commitment made by our nation at the beginning of the present decade, the Executive Council of the AFL–CIO noted that:

"The U.S. has provided only 0.85% of its national income for overseas economic assistance—a lower proportion than the 0.93% expended on the average by the 16 industrially developed countries which constitute the Development Assistance Committee (DAC). Hence, no one can reasonably maintain that our foreign assistance program has been a drain on our nation's resources and capacities for dealing with its pressing urban and other domestic problems. No doubt, our country can do much more in the realm of development assistance while improving our domestic conditions."

The AFL–CIO again urges therefore, that for reasons "both of national interest and humanitarian concern" and also "for the practical mutuality of its benefits," the Congressional appropriations for the foreign assistance program should equal no less than one percent of our gross national product.

Because the horizons of possibilities have been expanded by the flight of Apollo 11 the whole program of space exploration should make us all increasingly conscious of the fact that we are members of the same human community on this planet, earth. If we are not conscious of the vital needs of our world neighbors, the conditions which beget violence and threaten world peace will continue to exist.

This does not imply that we support the United States Program of foreign assistance solely as an instrument of diplomacy to defer international difficulties. The AFL–CIO support of this type of program has been continuous since we encouraged the adoption of the Marshall Plan because, as trade unionists, we champion the fundamental American belief in the universality of human dignity, with all the responsibilities and rights which this dignity implies and demands; the universal right of man to work and to share justly in the product of his labors; and the right and obligation of every man to participate equally in the political process. Since these motives urge our organization and our government to strive valiantly to correct injustices and to provide for human opportunities within our own nation, then these same imperatives must effect our participation in the international community.

Among the criticisms voiced in opposition to the continuation of this country's development assistance program, much of which is unfair and has no basis in fact, there is one charge that AID has discouraged overseas private investment as a part of an overall development assistance program. The fact of the matter is that private overseas investments have not been in step with the wealth and vigor of the rest of this country's economic and financial profile. This was in spite of improved economic conditions both here and in the developing countries themselves. By comparison overseas investments from other countries such as West Germany, Italy and Japan have increased considerably. Because it is generally acknowledged that foreign private investment in developing countries is both necessary and beneficial as a source of capital, and organizational technological and commercial know-how, AID's

private Resources Development Services has been encouraging private investments in developing countries as a supplement and not a substitute for the government's program. While the AFL–CIO commends this present effort, it has serious reservations about the establishment of a new and parallel agency to foster such private investments since this will inevitably create confusion and conflict and be misunderstood in the developing world.

The AFL–CIO notes with satisfaction that the current bill provides for the continuation of the provisions of Title IX, of the Foreign Assistance Act, which urges that more emphasis be placed on the development and utilization of democratic institutions in the assistance program. This is an area in which labor feels most at home, for Title IX is an approach which emphasizes the determination by the people themselves of what they require.

For many years, the AFL–CIO has been supporting the work of the American Institute for Free Labor Development which has been deeply involved in the development of Title IX type institutions in the Western Hemisphere. Although the primary purpose of the AIFLD is the strengthening of democratic trade unions, it has, through its many social projects programs and educational programs and with the support of democratic trade unions developed various community institutions such as: cooperatives, credit unions, medical brigades, schools and community organizations of the type fostered by Title IX. Incidentally, since 1964 the AFL–CIO has, in Latin America, loaned interest-free or granted more than $470,000 from its own resources for over 200 projects to assist in what is now Title IX type institutional development.

It is important that foreign aid continue to strengthen the free and democratic trade unions in the underdeveloped countries and that it be made available for programs of social and economic impact which will ultimately develop Title IX institutions. Both as a target for development and as a tool of development, the democratic trade union movement in this hemisphere offers outstanding opportunities for progress. We hope this committee will recommend a specific amount of funding for Title IX activities.

The AFL–CIO would like to call to the attention of this committee the work that has been accomplished by such organizations as the African American Labor Center (AALC), the more recent Asian American Free Labor Institute (AAFLI) as well as the American Institute for Free Labor Development (AIFLD) which have been working for the development of free trade unions as adequate representatives of the workers before government, industry and political parties. These three AFL–CIO sponsored institutes have received financial assistance from AID for some of their work in their respective regions.

The effectiveness of the American Institute for Free Labor Development, established in 1960, in its union to union program in Latin America was not only an endorsement of our principle of overseas development, it was an encouragement to the AFL–CIO to undertake similar efforts first in Africa and then in Asia. The African American Labor Center was established in 1965 by the AFL–CIO and started with a vocational training program in Kenya. An American Trade unionist was assigned to the project as a technical advisor. The Institute continues to train Africans under three separate study programs, and, typical of such activities, the number of applicants is always four times the number of unionist enrolled. It is the purpose of an institute such as this to contribute to the growth of the economy of the country or region through the development of one of its more important resources, its human capital, while creating a form of organizational stability in the union to its members.

AALC has not only stimulated African economic development by fostering progressive and responsible trade union growth, it has entered into other areas of human resource development. Last year, for instance in response to the requests of the workers of Ghana, AALC provided special mobile medical facilities to care for workers and their families. At a time when public health is an increasingly more important area of concern to developing countries, AALC coordinated the resources of the workers, the World Medical Relief Service as well as its own to provide the medical assistance necessary in an area coming to grips with industrialization for the first time. AALC is presently operating in 28 countries in Africa and has completed 75 projects. It has established schools in Nigeria, Kenya, Congo, Ethiopia and Dahomey. It has run a number of Pan-African seminars and has brought a number of African labor leaders to the United States to study labor. Its activities in Africa have emphasized technical training (such as training drivers, tailors, motormechanics, and printers), workers education, cooperatives, health clinics and literacy training.

The needs for these labor programs are growing as the importance of labor increases and significance of training and developing human resources is appreciated. We feel that through these basic-type programs we are helping the trade unions to have a greater role in the economic and social development of their countries.

Again, moved by the needs of the workers of Asia and the commitment of the AFL–CIO to international development, another labor program has been established under the Asian American Free Labor Institute (AAFLI).

On January 17, 1968, the Asian-American Free Labor Institute (AAFLI) was incorporated as a non-profit organization by the AFL–CIO under the laws of the State of Delaware. AAFLI was formed for the purpose of promoting the development of free trade unions in Asia and the Near East. As an arm of the AFL–CIO, AAFLI is responsible for carrying out programs and objectives.

In Vietnam, where our program must have a double priority, the AFL–CIO has expended thousands of dollars on the relief of trade unionists and their families affected by the war.

The AAFLI elsewhere in Asia is planning and conducting a long range program designed to assist trade unionists to be more effective in bargaining. Part of the task the Institute has set before itself is the development of a trade union leadership which can assume much of the responsibility of discerning the needs of the workers and guiding their coordinated solutions to those needs. Free trade unionists in the Philippines, for instance, are aware of the resource that AAFLI constitutes as a source of trade union organizations and developmental knowledge.

Since much of the Asian region is agricultural, the Institute has plans to work on rural worker problems, especially in helping them to establish cooperatives. As elsewhere, such cooperatives are important in that they provide a marketing mechanism, which in turn, creates production incentives.

At the invitation of a host country's labor movement, AAFLI undertakes joint programs in the field of education and social development. Such programs will include trade union leadership and administrative training, cooperative organization and administration, press and information seminars, vocational training, and internships or on-the-job training, as well as social projects in the fields of cooperative development, medical clinics, community centers, and related "impact-type" projects.

To the maximum extent possible, AAFLI makes use of the services of host-country and third-country instructors and lecturers, leaving program planning and coordination to the AAFLI staff.

All AAFLI programs are developed and implemented with the coordination and cooperation of the host country unions. The programs are consistently designed as union-to-union activities and operated on a joint basis.

Since the programs are based on the principle of "Self-Help", with the objective that the host country unions eventually take over all aspects, a local contribution to all programs is required, based on the extent of the unions' resources. In the past, this has taken the form of contributions of manpower, such as instructors or administrative personnel, seminar facilities and equipment, student room and board or payment for loss of wages, and the like.

Although comparative studies are made of labor movements and working conditions in the United States and other countries, the focus of all training programs is on study of the conditions that exist in the host country with no attempt made to export the trade union practices or techniques current in the United States or other countries. The objectives of the program is to stimulate and develop the leadership and membership of the host country union toward strengthening the labor movement as a democratic institution, responsive to the needs and welfare of the workers, able to represent their interests, and prepared to contribute to the overall economic development of the country by raising wages, improving working conditions, and improving the standard of living of trade union members and their families.

Since June 1968, AAFLI's program in South Vietnam has trained over 400 persons in trade union leadership and plans to train an additional 2000 persons. 60 interns will be selected from graduates of the advanced leadership courses and will be utilized as instructors for the lower courses. 145 persons have received cooperative training and 31 of them have been selected as interns for a 12-month period, financed by AAFLI, to form cooperatives. 41 persons have been trained in methods of research, preparation and dissemination of trade union periodicals and materials, and 20 of these graduates have been selected as interns to work in the Vietnamese Confederation of Labor's printing shop for a 12-month period. Shortly after the 1968 TET military offensive by the VIET Cong, the AFL–CIO, acting upon an urgent appeal from the President of the CVT, allocated $35,000 for emergency relief to needy union families through AAFLI which is responsible for the relief and impact projects activities of the AFL–CIO in South Vietnam.

The present and potential value of this type of program in Asia is attested by the contracts granted by the Agency for International Development to support this effort. AFL–CIO recommends that AID increase the resources made available for this valuable assistance to the working people of Asia.

In support of this assertion I ask that the annual progress report of these organizations be included in the record as a demonstration of the extent and effectiveness of the work being accomplished. I would like to add to these reports the following information on AIFLD's work on education efforts in Latin America.

Since more than one hundred thousand workers have completed AIFLD sponsored courses, ranging from evening courses designed to convey the basic tenets of democratic trade unionism to full-time residential courses in relatively specialized fields such as Collective Bargaining and Community Development.

The philosophical thrust of AIFLD's efforts in Latin America is positive in its affirmation of the values of free men joining together in institutions such as unions as a means of increasing their influence, both in the private and public sector, in decision-

making which affects their own lives and that of future generations. As a recent independent evaluation study on Colombia and Ecuador stated "courses emphasize the positive aspects of free, independent, democratic trade unionism and present to students with alternative systems. Despite some excusable exhortation, the major concern in both countries is for rational choice and the substitution of reason for emotion."

The steadily increasing level of sophistication combined with the rising expectations of Latin American workers requires increased emphasis on advanced training. This means that the AIFLD is less and less involved in basic membership training as the unions themselves become able to assume greater responsibility for this effort thereby concentrating its limited resources on the kind of specialized training that a growing and dynamic trade union movement needs, if it is to participate fully in national and regional economic and political development. Not only is AIFLD concentrating more and more on advanced specialized training in each country, but concomitantly we are devoting more resources to advanced training here in the United States through our residential training in Front Royal, Virginia and our Labor Economics Program in Georgetown. We currently provide training for some 125 trade unionists annually in Front Royal in courses of 6 to 9 weeks duration dealing with relatively technical subjects such as job evaluation, productivity and wages, and group dynamics. These and other subjects are explored under the leadership of experts in their respective disciplines. During these courses, participants are offered an opportunity to engage in meaningful dialogue with trade union leaders, government officials and representatives of the numerous international agencies headquartered in the United States.

AIFLD experience has demonstrated that this opportunity for the exchange of ideas, information and viewpoints uniquely equips a trade union leader to return to his country with broadened horizons and increased depth of perception and more importantly with a keener awareness of the commonality of mankind's problems and of the resources both human and material which can be brought to bear in the never-ending search for solutions. Through the use of private funds, AIFLD has expanded the physical facilities at its Institute in Front Royal, Virginia, so that approximately ten 6–9 week courses for 20 students can be offered annually provided a sufficient level of funds for operating expenses can be made available.

Finally AIFLD's education effort encompasses certain special programs to cope with a given national problem of vital interest to workers, such as the vocational educational program in Guyana or the regional training program in economic integration in Central America. As with all AIFLD's activities these programs are conducted only at the request of and in cooperation with the trade union movements of the country and/or region in which they take place.

In recognition of the serious dearth of printed material available to worker education programs in Latin America, AIFLD has an on-going textbook publication program. Thus far, three books have been printed and distributed for use in Latin America and eleven others are in various stages of publication. As funds become available, we will be printing and distributing these textbooks together with instructor's manual for use in worker education programs throughout the hemisphere.

AIFLD's record of providing training to more than 110,000 workers throughout Latin America, ranging from the most elementary to the most sophisticated level, during its first seven years is unequalled. During 1970 we will be implementing a comprehensive evaluation system designed to provide a continuing appraisal of our educational efforts which will provide a measure of the effectiveness of educational programs as a guideline to policy and program decision making. This should result in an increased sharpening of focus, improved programming and even greater effectiveness in the use of resources available.

AIFLD has developed a series of programs with Alliance for Progress providing assistance designed to improve social conditions of thousands of Latin American workers. It should be noted that almost 20 million dollars in long term loans have been provided to the unions of Latin America directly from AFL–CIO affiliated unions under the AID investment guarantee program.

As of December 31, 1968, the Social Project Department of AIFLD had demonstrated marked success in a number of areas. In the field of workers housing, over 13,000 units with a total value of $55 million had either been completed, were under construction or were to be constructed under contracts already signed. The only worker owned savings and loan association, ASINCOOP, in Lima, Peru, had made 762 cooperative housing loans for a total of over $5 million and had 11,000 depositors who had saved more than $2.5 million. In the field of small self-help projects, over 220 such projects had been financed by the AFL–CIO/AIFLD Impact Projects Program and over 200 by A.I.D., for a total amount of $800,000 divided more or less equally between grants and interest-free loans. In addition, an A.I.D. financed Regional Revolving Loan Fund was established in July of 1968 for interest-free loans of up to $50,000. Four projects totalling over $110,000 had been approved. In the field of campesino assistance, three campesino service centers in Brazil and one in Colombia had been constructed and were in full operation. In Central America, regional and local rural leadership programs are held on a rugular basis giving four-week classroom courses followed by one week of action in community development projects.

At this time I would like to go into another matter of serious concern to the AFL–CIO regarding the language and provisions of the proposed Foreign Assistance Act.

As you know, Mr. Chairman, there has always been agreement between the American government and the AFL–CIO regarding the need for true trade union participation in economic and social development in order to ensure the success of the overall foreign assistance program. However, the problem of our Government's Foreign Aid agencies in translating the intent of the Congress into action often begins with vagueness of language and of priorities. In the proposal before you, the principles and criteria are all too often stated in general and nonspecific terms. This vagueness can lead to problems of implementation because the intent is not specifically clear. For that reason I would like to discuss some of the specific items that appear in the proposed legislation. The legal and policy basis for efforts in the labor field including the trade union as well as the government and management sectors are provided either explicitly or implicitly throughout the proposed Foreign Aid Act but particularly in Chapters I, II and III, part I of Bill–H.R. 11792. In general we observe that the new bill has used such general language as "institutions" while in the past, there were specific references to free trade unions, cooperatives and voluntary agencies.

Another specific difficulty with H.R. 11792 arises with the provisions of Section 204 (page 9 lines 13 through 18) concerning the Alliance for Progress policies when it states the "loans may be made only for social and economic development projects and programs which are consisitent with the findings and recommendations of the Inter-American Committee for the Alliance for Progress (CIAP) in its annual review of national development activities." This section has been one of the principal limitations of policy action affecting the interest of free trade unions in Latin America since the CIAP committee has not accepted the labor policy recommendations of the Inter-American Labor Ministers Conference which stresses participation of free trade unions in national economic and social planning efforts. On the contrary, CIAP has encouraged wage policies which in effect eliminate the collective bargaining function in many countries. Thus, if these policies follow CIAP recommendations exclusively are inconsistent with the legislation which supports the participation of such private institutions as trade unions in the development process. Further, these wage labor policies have also had a detrimental effect on the priority for trade unions and cooperative social projects under the allocations of Public Law 480—dollar project and program loan resources.

There is no question that these same wage freeze policies represent one of the factors which cause social unrest. We therefore recommend the clarification of the intent of this legislation by the addition of a requirement to make loan criteria consistent also with the Inter-American Labor Ministers Conference recommendations.

In Section 302 of the proposed legislation, which deals with capital and technical assistance in private enterprise development, there is provision for "capital projects" to increase the capacity of public and other facilities essential for private enterprise and loans for the support of "private enterprise activities" and "development or objectives" (page 21 line 6 through 9 in the bill). Again, the proposed legislation does not include any reference to free trade unions and cooperatives as participants in such loan project and capital project assistance.

It may well be that some of the difficulty that AIFLD, AALC, and AAFLI have had in receiving social project assistance in certain areas may be traced to this vagueness of language.

Finally, Mr. Chairman, I would like to call your attention to the statement on the U.S. Foreign Aid Program made by the AFL–CIO Executive Council in February of this year. The statement is an expression of the interest and concern of the American Labor movement for our country's world role and responsibilities. I would like to affix this document as an addendum to this testimony. I particularly call attention the eight issues highlighted by the specific recommendations of the Executive Council. This is an excellent summary of the position of the labor movement on foreign aid and legislation.

We appreciate this opportunity to express our support for the foreign aid program as visualized in H.R. 11792 introduced by Chairman Morgan. Thank you.

STATEMENT BY THE AFL–CIO EXECUTIVE COUNCIL ON STRENGTHENING THE U.S. FOREIGN ASSISTANCE PROGRAM, BAL HARBOUR, FLA., FEBRUARY 24, 1969.

The security and freedom of our country require a variety of efforts—political, diplomatic, economic, military, cultural, and humanitarian. In this realization, Democratic and Republican Administrations alike have recognized the necessity of rallying our nation for generous assistance in various forms, particularly to the developing countries. Without the successes which have been achieved in the pursuit of this course, important areas, now centers of economic progress and advancing social justice, would today be pockets of political chaos and pawns in the hands of aggressors bent on world domination.

Over the years, mistakes have been made and shortcoming manifested in carrying out the nation's vast foreign assistance program.

Certain lessons could be learned only through practical experience. By and large, little time was lost in improving administrative procedures and reducing the chances of misuse of help to a minimum. On the whole, the AID program and its humanitarian endeavors have been a great credit to the American people.

Last year, the U.S. contributed more than any other country to help the developing nations get on their feet. Thus, India, Pakistan, the Philippines and Turkey were enabled to have harvests. Every one of the fifteen nations which received 84% of AID's economic assistance last year can attest to its effectiveness in helping them achieve self-sustaining growth—economic progress, advances in health, education and the building of democratic institutions.

Moreover, in helping others, our country has also helped itself. Last year, 98% of AID's commodity requirements were American-purchased and 91% of its total expenditures were made in the U.S. P.L. 480 appropriations, which are a rather substantial part of the development assistance program, have been a source of significant support for the income of our nation's farmers.

Despite these constructive results, recent years have witnessed considerable criticism and opposition to the continuation of our country's development assistance program and projects. Much of the criticism has no basis in fact and is unfair.

For instance, it has been falsely charged that AID has discouraged private investments in development assistance. The fact of the matter is that, in regard to the developing countries, American private investors have not been in step with the "wealth and vigor" of our country's financial community. In order to improve this picture, AID's Private Resource Development Service has been encouraging and supporting with guarantees a number of private undertakings in the developing countries. Setting up a new, separate and parallel agency to foster such private investments would only lead to confusion and conflict. We must realize that, though private investment can and should play a vital role in the developing countries, it can only be supplemental to and not be a substitute for the government assistance program.

Some have argued that the very success of this assistance program makes its continuation unnecessary and that its mission has been fulfilled. Others, embittered by the failure of our Allies to help us in the Vietnam conflict, have turned to neoisolationism. Still others are demanding that our country reduce drastically its world responsibilities and stop helping others in view of the magnitude and urgency of some of our domestic problems.

Just as America cannot long enjoy peace and freedom in a world ridden with totalitarian dictators bent on global conquest and domination, so our country cannot long remain prosperous in a world steeped in poverty, ignorance, and disease. No one can deny that famine and poverty are still a massive peril in many parts of the world. What is more, by now it should be clear to everyone that poverty is not necessarily due to lack of natural and human resources, but is rather the result of a failure to use adequately and effectively the potential resources at hand. On a world scale, 80% of the natural resources and 90% of the human resources are today untapped. In this situation, our country with its great technological expertise and industrial capacity can render enormous assistance to the expansion of world economic development and human well-being. There is no better road to the elimination of poverty, disease and ignorance which are so assiduously exploited by the Communists in their drive for world power.

The U.S. has provided only 0.85% of its national income for overseas economic assistance—a lower proportion than the 0.93% expended on the average by the sixteen industrially developed countries which constitute the Development Assistance Committee (DAC). Hence, no one can reasonably maintain that our foreign assistance program has been a drain on our nation's resources and capacities for dealing with its pressing urban and other domestic problems. No doubt, our country can do much more in the realm of development assistance while improving our domestic conditions.

We of the AFL–CIO are not particularly concerned with what new name the new Administration might give our nation's development assistance agency. There is no reason to chase novelty for the sake of novelty. Sound improvements can be made only on the basis of experience and without hesitation to take new steps for meeting changed or new situations. However, the Executive Council will oppose vigorously all moves—regardless of their guise—to sap the strength or to alter the basic nature of AID by "restructuring" it in such a way as to deprive it of its vital functions. We hope, in this connection, that President Nixon will utilize the great opportunity he has to exercise energetic initiative and leadership in overcoming the tacit and explicit lack of concern in certain sections of our population for the less developed countries.

Towards enabling our country to fulfill ever more effectively its world role and responsibilities in promoting freedom, peace, and social justice, the AFL–CIO Executive Council urges that:

(1) Regardless of the new name which the overseas development assistance program will have, the organization should pursue the essential purpose and preserve the basic structure of AID so as not to divest it of its vital functions.

(2) The overseas development assistance program should be given greater authority and stability of funding through biennial Congressional appropriations.

(3) The Director of the new organization should be made an Under-Secretary of State for Economic Assistance Cooperation in order to strengthen its authority, enhance its mobility of operations, and reduce the frustrations of bureaucratic red tape.

(4) The new agency's career service should be improved by according its working staff the same status and prerogatives as enjoyed by the Foreign Service personnel of the Department of State.

(5) For reasons "both of national interest and humanitarian concern" and also "for the practical mutuality of its benefits", the Congressional appropriations for the foreign assistance program should equal no less than one percent of our national income.

(6) In line with the aims and spirit of Title IX of the U.S. Foreign Assistance Act it should be so amended as to provide help to democratic institutions and social projects (education, research, cultural exchanges, cooperatives, trade unions, etc.) even after countries become economically viable, that is, self-sustaining with respect to capital assistance on liberal terms.

(7) To insure that the great mass of the people, rather than any privileged minority in the developing countries, are the primary beneficiaries of American assistance, increasing emphasis should be put on expanding the activities of organizations like the AIFLD, AALC, and AAFLI which promote the building of democratic institutions (free trade unions, cooperatives, private local impact projects, etc.)

(8) Military assistance and aid for economic and social development should be separated from each other by legislative enactment.

INDUSTRY DEFENDS THE "COMPLEX"

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. RIVERS. Mr. Speaker you and the Members of the House will recall that on June 12 I spoke on the floor on the subject of the military-industrial complex. It was my purpose at that time to attempt to place in proper context the whole matter of the relationship between our military establishment and our industrial establishment. From comments I have heard since that time I think it quite possible that my efforts were not wasted and that my remarks, at least to some extent, helped in the forming of reasoned judgments with respect to that essential relationship—essential to the Nation's defense—known as the military-industrial complex.

I noted with a greal deal of interest and pleasure that Mr. Roger Lewis, president and board chairman of the General Dynamics Corp., considered this whole matter to be of sufficient moment to grant an interview to a writer for the Christian Science Monitor in order that there could be a full and free discussion of the military-industrial complex from the standpoint of the industrialist engaged in the manufacture of military hardware. In my view this showed a certain amount of courage on the part of Mr. Lewis and I congratulate him for that and for the forthrightness of his statements.

The interview between Mr. Lewis and Mr. Martin Skala of the Christian Science Monitor takes the form of a question and answer discussion.

Mr. Speaker, this question and answer exchange on the military-industrial complex appeared in the Friday, July 11, 1969, Christian Science Monitor, and was prominently featured on the first page of the second section of that outstanding and responsible newspaper. I insert in the RECORD this thoughtful and very helpful exchange as one more step toward a realistic and considered appraisal of an inter-relationship without which this country, simply stated, would be unable to maintain its position of world leadership.

Mr. Lewis has done his country a great service. The article follows:

INDUSTRY DEFENDS THE "COMPLEX"

Is there really such a combination of interests as the so-called "military-industrial complex?"

Yes, there is something that can be called a "military-industrial complex." And I am using the word "complex" in the same sense that President Eisenhower used it in his 1961 farewell talk.

What seems to have been forgotten about President Eisenhower's statement back in 1961 is his reference to the fact that "we can no longer risk emergency improvisation of national defense" and have, therefore, "been compelled to create a permanent armaments industry of vast proportions."

A little later, after referring to the "conjunction of an immense military establishment and a large arms industry . . ." he went on to say that "we recognize the im-

perative need for this development." He was not criticizing its existence—he was cautioning against "the acquisition of unwarranted influence . . . by the military-industrial complex."

Of course, there is always an underlying implication that there is some kind of "improper" relationship between the military and industry. That's really what causes the question to be asked. But any analogy between this country and prewar Germany or Japan simply won't stand up. We do not have a strongly centralized government as they did and, further, there are some 40,000 companies doing defense work.

In addition to this, there are the numerous echelons of authority both within the executive branch and within the Congress that must study and approve procurement policies and actions.

And lastly, the whole procurement operation is done through a free-enterprise system. The competition is more severe, the risks are usually greater, and the profits are lower in the defense business than in commercial practice.

Remember that although the government is a customer, it's also a shopper, and it's determined to get the best product for the least money in the shortest period of time. Both our democratic system of government with all of its checks and balances and the highly competitive free-enterprise system of American business ensure the best and most productive relationship between the military and industry.

Have you seen any evidence that the American political system is being subtly altered by large-scale defense spending?

I have seen no such evidence. But it's a good question to raise, because world conditions being what they are defense gets the most money and the most attention and publicity. This is so because it has the biggest and most important job to do.

America has a history and tradition of concern that the military not be dominant in our political life, and it was with this in mind that our founding fathers separated the powers of the government, provided for civilian control of the military, and ensured freedom of speech and freedom of the press.

It is this very climate within which the free-enterprise system can operate so effectively and contribute so greatly to the preservation of the kind of government we have.

Do you believe, as some critics have alleged, that the large defense-oriented corporations have a "vested stake" in perpetuation of the cold war?

No. I do not believe that defense-oriented organizations like General Dynamics have a vested stake in the perpetuation of the cold war. And even if they did have such an interest, the considerations set out in the answer to the first question would prevent this. The Department of Defense devises national strategy and sets requirements. Industry only responds to these requirements.

Consider, too, the number of defense businesses in existence during and after World War II and how many fewer there are today. The situation is very fluid, with businesses coming into the defense area, shifting over to nondefense business, and even going out of business entirely. The record is pretty clear in this respect.

The executive branch determines policy, defense devises the strategy, Congress provides the money, and industry does its job in a tough, competitive atmosphere.

One prominent economist has suggested that the managerial system is being gradually altered because of stringent Pentagon controls over defense spending. Such as the contractual inclusion of "buy America" clauses, wage and overtime guidelines, etc. Is there any validity to this contention?

No, I don't think there is any such alteration. In my opinion, defense contractors are no different from nondefense companies. Both have the same responsibilities to their shareholders, employees, and customers.

However, defense money is public money, and large amounts are involved. The Defense Department is accountable by law and regulation to the President and the Congress and is subject to their constant inquiry. Because the Defense Department is not a customer in the ordinary sense, adequate control and safeguards over its expenditures are certainly in order.

The need is to achieve a balance between the government's requirements as a special customer and sovereign, and management's fundamental need to "run its business" to meet its contractual commitments in its and the government's interest. This is a constant problem, and both sides need to be alert to rules and regulations that could shackle management and prevent timely and wise decisionmaking. There is a great deal which can be done in this area, and the people in charge in the Pentagon are aware of the problem and are struggling manfully with it.

A point to remember is that even those defense contractors who do most of their business with the government don't lose their autonomy, individuality, independence, or—most importantly—their responsibility to perform just because the government is the customer. In the last analysis, the so-called management limitations of the Department of Defense are only very tight *reporting* systems.

How much of a problem is government red tape?

It depends on the kind of "red tape."

No one questions the Defense Department's need for reports to provide visibility as to the status of performance, expenditures, small business participation, and the like. We understand the need and can adjust to it. But reports that serve no useful purpose, including redundant reports, need to be eliminated, and we find the Defense Department receptive to suggestions for doing away with them.

On the other hand, "red tape" which delays decisionmaking by requiring unnecessary approvals of higher authority or a series of such approvals for matters which should be settled at the contracting level does interfere with the timely and proper performance of contract. To this extent it is a problem.

Why do you think there is so much talk about a "military-industrial" complex?

First, I think the Eisenhower statement has a great deal to do with the wide discussion of a military-industrial complex today.

Second, there is a great deal of money involved—public money—which is spent to satisfy man's most basic interests, his personal safety and his country's security.

Third, our history and tradition of civilian control of our government, coupled with the people's realization that other countries have suffered from military-industrial relationships, underlies much of this discussion.

Also, the recollection of the wars of the last 100 years and strong feelings about the conflict in Vietnam contribute to it.

And, lastly, the current controversy over the Safeguard antiballistic missile system provides the trigger for a higher-pitched dialogue on this subject.

All of this public interest, however, is healthy and is to be welcomed. It's a part of our system.

Based upon your experience in industry, are present Pentagon and congressional controls over military procurement practices adequate to prevent waste or malfeasance?

This is really a question of extent and degree. Big defense programs, just like big private business operations, have the built-in problems of size, complexity, and the fact that people are involved. Controls over military procurement are an old story to the Department of Defense and are founded on vast experience. There is a well-established watchdog relationship involved here and any great deviation from sound procurement practices is virtually impossible.

Also, a reading of the daily press, and certainly a reading of the Congressional Record, gives clear proof that waste and malfeasance are matters under constant scrutiny by the Pentagon, the Congress, the General Accounting Office, and other agencies. I think, too, that any further needed laws or regulations can be insured both by this scrutiny and by the publicity which is always given waste and malfeasance by an inquisitive and remarkably well-informed press.

Should the American people be concerned by the large numbers of ex-high-ranking military officers employed by major defense contractors?

I do not believe so, at least if other companies handle the matter as we do at General Dynamics. We have very few high-ranking military people in terms of our total payroll. We are very careful not to hire a military officer unless he has some special technical or organizational skill which we can use in the company in a way which will avoid any possibility of conflict of interest.

We apply the same criteria in selecting such men as we apply to those we hire from industry or in selecting men for promotion within the company.

On the other hand, I believe it is very important that we have the benefit of the specialized knowledge and experience of certain of these men. It is a question of management—how you use the talent and experience of these exceptionally well-qualified people.

I think that the defense industry would be properly criticized if it didn't use the talents of these trained and competent people. I think, further, it would be unfair to deny a man a job just because he had a military background. This really comes down to a question of proper management.

What percentage of General Dynamics' gross income comes from defense related or government contracting? What programs are involved?

Over the past seven or eight years about 80 percent of our total sales have been to the Department of Defense or NASA and 20 percent to commercial customers. We are primarily designers and developers of large weapons systems, such as combat aircraft, nuclear submarines, surface ships, and strategic and tactical missiles. We also build a variety of communications and data handling equipment for all three services.

We are proud of the fact that our company has played a significant role in the development of the first American satellite, the first supersonic bombers, the first nuclear submarines, and the first intercontinental ballistic missiles to be developed in this or any other country.

Are these profits being made by defense contractors way out of line with comparable profits being made by civilian nondefense firms as some critics have alleged?

Yes, profits are out of line.

Recently, an independent study was produced for the Department of Defense by the Logistics Management Institute [LMI]. The study took 18 months and was based on financial data from 65 defense contractors. The subject is so important—and so misunderstood—that I wish I had the space to cover it completely.

A summarization of the LMI Review states: "Despite policy objectives of the procurement system, defense-industry profitability has been in a steady decline. This is not supposition or argument. It is fact."

From 1958 to 1966 defense business profit declined while commercial business profit increased. The summarization points out: "By 1966, net profit after taxes on total capital investment was 6.9 percent for defense business, 10.8 percent for defense contractors' commercial business, and 12.4 percent

for a representative group of nondefense companies."

It's interesting to note that a $1,000 investment in 1957 in a group of mixed companies would have been worth $4,674 at the end of 1966, while the same investment in the primarily defense group would have grown only to $2,265. This same trend has continued in 1967 and 1968, and I see no evidence on the horizon that it's going to change for the better.

This is an unhealthy and potentially dangerous situation. Industry must keep pace with the rapid advances in modern technology, but the cost of maintaining and modernizing plants and acquiring machine tools and other facilities is steadily going up while profits are just as steadily declining.

At some point declining profits and rising prices must result in obsolescence. Obsolescense means deterioration of our mobilization base and, should need for accelerated production arise, greater costs for weapons systems and a slower production rate.

Allegations persist that General Dynamics in part won the F–111 contract because of political factors. What is the truth?

There were no political factors in the award of the F–111 contract. Actually the story is a simple one. Both the Boeing and General Dynamics proposals were reviewed by an evaluation group in the Pentagon. This consisted of 284 military and civilian experts. The final score in this contest was General Dynamics 175.6 and Boeing 172.1. Then the military source selection board took these two scores and attached appropriate weight to the various elements in order to give more emphasis to those of greater importance. After this second review, General Dynamics was again the winner, 662.4 to 654.2.

The board recommended the Boeing design but Secretary McNamara chose General Dynamics. The whole story of this is told on Pages 1911 and 1912 of the TFX contract investigation hearings. It was a close fight and a hard decision, but General Dynamics did win and won on the basis of the better design. I think a better airplane resulted from this tough competition.

What is the future of a heavily defense-oriented corporation like General Dynamics?

No precise predictions can be made about the future of General Dynamics or other companies heavily engaged in defense business. However, there are a number of points that can be made that might be helpful in establishing a framework for thinking about the future of defense-oriented companies.

First, I think that even if events should permit a smaller defense establishment than we have today, the need for excellence in our hardware and the need for keeping not merely abreast but ahead of the rest of the world still be matters of great importance.

The country must always be in a position to adapt itself to a sudden change in the world climate, must have the capability for rapid buildup, the ability to translate its scientific and industrial base into the best hardware in the shortest time.

It's hard for me to visualize a time in the future when it will be possible for the United States to be without an industry capable of producing weapons systems—very likely systems more complex than we have today. I think it's a real possibility that the industry could be—and some say should be—thinned down as the years go on to a fewer number of companies with the largest part of their effort directed to weapons development and production. But there will always be a proper place in the national-defense picture for capable, efficient, and rather specialized companies.

If circumstances do permit smaller military forces in the future and, therefore, a small volume of defense production, this would mean to me only an even more competitive atmosphere in which General Dynamics would work even harder to maintain a high-win rate in defense contracts.

MARLIN-ROCKWELL WORKERS SALUTE MOON LANDING

HON. JAMES F. HASTINGS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. HASTINGS. Mr. Speaker, man has landed on the moon and those three daring astronauts have returned safely to Houston, marking a happy ending to what must be the greatest adventure in all mankind.

Their courage and skill cannot be praised too highly and taking a special pride in their astounding accomplishment are some 1,600 workers of the Marlin-Rockwell Co. plants in Jamestown and Falconer, N.Y., in my home district. They were a part of that massive work force which teamed up to make the landing possible. Their skill and resourcefulness provided the bearings for the mighty engines of the Saturn V which sent the spacecraft aloft and on its historic journey. And through their parent company, TRW, Inc., which employs 60,000 in 164 locations around the world, they had a hand in at least 9 out of 10 other space projects from providing the lunar module descent engine under subcontract with Grumman Aircraft Engineering Corp., to the development of a seemingly miraculous communications system which so enhanced the Apollo 11 mission.

So that others may share my pride in the part they played in the moon landing, I include the following Jamestown Post-Journal article, which tells in detail of their contributions, in the RECORD:

JAMESTOWN-FALCONER PLANTS SUPPLIED "HARDWARE": MRC WORKERS TAKE PRIDE IN MOON PROJECT'S SUCCESS

Hundreds of workers in a local industrial firm can take personal pride in the successful landing of man on the moon since they had a part in manufacturing important "hardware" that went into Apollo 11 engines.

The Jamestown-Falconer plants of Marlin-Rockwell Corp., employing about 1600, also supplied the bearings that went into the engines of Saturn V which lifted the Command Spacecraft and the Lunar Module and sent them on their way to the moon.

In addition the local firm is a division of TRW Inc. which is not only the first firm to build a spacecraft and to be a participant in nine out of 10 space projects, but it also performed eight major roles in the Apollo lunar landing program, according to word from its offices in Redondo Beach, Calif.

Among these was TRW System Group's Science and Technology Division, under subcontract to Grumman Aircraft Engineering Corp. which supplied the Lunar Module Descent Engine that lowered Astronauts Armstrong and Aldrin softly and safely the last 10 miles to the moon's surface.

By controlling the amount and direction of the engine's thrust, varying from 1,050 to 9,850 pounds during the lunar landing, the astronauts were able to break their descent, hover to select a precise landing site and then slowly descend to where no man has ever trod before.

TRW's Equipment Group under subcontract to McDonnell Douglas Corp. also provided the six 150-pound thrust attitude control engines for Saturn V's S–4B third stage. The rockets, a part of the S–4B auxiliary and propulsion system, are mounted in two clusters of three each and may be fired singly or in groups. On the Apollo 11 mission, the engines maintained roll control during the first J–2 engine burn, provided roll, pitch and yaw control in earth orbit and aligned the S–4B stage in earth orbit prior to the J–2 restart, injecting Apollo 11 into translunar trajectory.

At its Houston Operations adjacent to the NASA Manned Spacecraft Center, TRW's System group provided major assistance to the MSC Mission Planning and Analysis Division in the areas of trajectory design and analysis, orbital maneuvers, flight control computer program development, range safety analysis, operational softwear and mission error analysis.

TRW Systems Group's Space Vehicles Division, under contract to NASA's Goddard Space Flight Center, has produced two Test and Training Satellites placed in low earth orbit to check out the Apollo's worldwide Manned Space Flight Network and train the network's operators.

The 44-pound octahedral satellites are members of TRW's Environmental Research Satellite series. Test and Training Satellite 1 was launched Dec. 13, 1967, and simulated Apollo spacecraft communications during its four and a half month lifetime. The second test and training satellite was orbited Nov. 8, 1968, and has been used to ready the Apollo network for the Apollo 11 mission.

Four pioneer spacecraft in orbit around the sun and 10 Vela Satellites orbiting the earth, monitoring the sun for signs of major solar flares and other radiation powerful enough to harm an astronaut in space or on the moon, are built by TRW Systems Group's Space Vehicles Division. They are providing NASA with sufficient advance warning to delay a launch or alter an orbit, if necessary.

Among other major roles in the moon-landing program, TRW through its Electronic Systems Division has built for Collins Radio Co., the Signal Data Demodulator System which enhances clear voice communications through advanced techniques during the Apollo missions. Installed at 18 worldwide locations and on board Apollo ships as part of the Apollo S-band communications network, the Signal Data Demodulator handles nearly all forms of information from the spacecraft including telemetry data, in addition to voice communications. Should an emergency occur, SDDS will provide communications via a simple telegraph key.

Marlin-Rockwell of Jamestown, the consolidation of three oldest bearing manufacturers in the country, became a division of TRW Inc. in 1964. TRW today employs more than 60,000 persons in 164 locations around the world.

RETIREMENT OF LT. GEN. WILLIAM F. CASSIDY, CHIEF OF U.S. ARMY ENGINEERS

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. BLATNIK. Mr. Speaker, I would like to take this opportunity to express my personal best wishes to Lt. Gen. William F. Cassidy, who today will retire as Chief of the Army Engineers. General Cassidy has truly been one of the finest Chiefs of Engineers in the long history of that splendid organization.

Bill Cassidy has been in positions of leadership for many years and he has served his country well. As the Chief of Engineers, he has been charged with the tremendous responsibility for the worldwide military engineering activities of

the Army, including its involvement in Southeast Asia. However, in addition to a military construction program, the Corps of Engineers is the major water resource development agency in our country. And it is in this role that Bill Cassidy excels.

Under Bill Cassidy's leadership, the Corps of Engineers has contributed greatly to the well-being of this great Nation through the water resource development projects. These projects have created vast opportunities for our fellow Americans to live free from devastating floods, to enjoy the vast expanses of water areas and many miles of shorelines for outdoor recreation, and to participate in the economic advantages which accompany water resource development.

Mr. Speaker, on this day, which marks the end of Bill Cassidy's 38 years of military service which began in 1931 when he was commissioned in the Army Corps of Engineers upon graduation from the U.S. Military Academy, West Point, I wish to express the gratitude which I am sure is held by all who have come into contact with him for his able leadership, counsel, and assistance over the years. Bill Cassidy carries with him in his retirement from the corps our warmest wishes for continued health, happiness, and success in the years to come.

TAX-FREE FOUNDATIONS—AN INSULT TO TAXPAYERS

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. RARICK. Mr. Speaker, the question of tax reform is very much alive at this time, and when we have an opportunity to visit our districts after the middle of the month, we can expect to hear from our constituents on the subject.

A hard look at the gross abuses of tax exemption by some of the foundations is one of the things which our constituents expect of this Congress. There is no way on earth to justify these abuses. Typical of the sort of thing which irritates good Americans beyond words is the gem in tonight's local paper about such charitable contributions as $25 to "aid the blind" by the Wolfson Foundation.

This foundation, with tax-free capital gains of over $340,000—a third of a million dollars—last year, paid out only $10,512 in gifts, grants, and scholarships.

This is the same foundation, Mr. Speaker, which paid Abe Fortas $20,000—and agreed to pay him that same sum every year—to advise the foundation where to distribute its largess. No wonder the American taxpayers are downright angry at such shenanigans.

I include the newspaper clipping:

[From the Washington (D.C.) Daily News, July 31, 1969]

CHARITY BEGINS AT . . .

No wonder foundations are getting a black eye. The Louis Wolfson Foundation of Boston had tax-free capital gains of $348,291 last year. It paid out a grand total of $10,512 in gifts, grants and scholarships. Sample gifts: $25 to "aid the blind"; $48 to Hebrew University; and $50 to the Spadeford Scholarship Foundation. Foundation-watcher Rep. Wright Patman, D-Tex., take note.

GOLD AND THE BALANCE OF PAYMENTS

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. GROSS. Mr. Speaker, I have had the privilege of reading as time permitted certain portions of a recently published book entitled "An Enemy Hath Done This." The author of the book is the Honorable Ezra Taft Benson, former U.S. Secretary of Agriculture in the Eisenhower administration.

I was particularly impressed by a chapter in the book which bears the heading of "Gold and the Balance of Payments." Here Mr. Benson sets forth clearly the manipulations of our monetary system and foreign policies that have brought us now to the brink of disaster.

This is a subject that vitally affects the lives and fortunes of all Americans yet it is a subject which all too few understand. It is in the hope that more of our citizens and taxpayers will read and profit therefrom that I include the following excellent chapter from Mr. Benson's book in the RECORD:

GOLD AND THE BALANCE OF PAYMENTS

"Manifestly nothing is more vital to our supremacy as a nation and to the beneficent purpose of our Government than a sound and stable currency. Its exposure to degradation should at once arouse to activity the most enlightened statesmanship, and the danger of depreciation in the purchasing power of the wages paid to toil should furnish the strongest incentive to prompt and conservative precaution." (President Grover Cleveland, Inaugural Address, March 4, 1893)

An entire volume could be written on the present dilemma we now find surrounding the nation's unfavorable international balance of payments and the dwindling gold supply.[1] The highlights of these problems, however, and the sequence of events that led up to them are here summarized:[2]

1. The root of all evil is money, some say. But *the root of our money evil is government*. The very beginning of our troubles can be traced to the day when the federal government overstepped its proper defensive function and began to manipulate the monetary system to accomplish political objectives.[3] The creation of the Federal Reserve Board made it possible for the first time in America for men arbitrarily to change the value of our money. Previously, that value had been determined solely by the natural interplay of (1) the amount of precious metals held in reserve, (2) the value men freely placed on those precious metals, and (3) the amount of material goods which were available for sale or exchange.

2. One of the first arbitrary and politically motivated interferences with the natural value of money was to peg the price of gold at $35.00 per ounce. At first, this made little difference because it was quite possible for men to mine gold profitably at this price. But as the government moved into a program of deficit spending, the motivation for fixing the price of gold became obvious. The artificial increase of the money supply caused the value of each dollar to decrease in relationship to the total supply of material goods which that dollar could purchase. This relative decrease in purchasing power, of course, is known as inflation. But, if gold were not held by law at a fixed price, then its value would have risen in direct proportion to the artificial increase in paper money, and as long as gold was guaranteed backing behind each dollar, the government wouldn't have been able to benefit one iota from deficit spending. The whole process would have been a bookkeeping operation similar to that of a corporation with assets of $100,000 suddenly doubling its number of stock-shares. Since the assets would increase, the *value* of each share simply would be cut in half. But, if the corporation somehow could force by law all persons to purchase each new share at the same price as the old, then it could realize a tremendous profit through sale of the new issue. This is exactly the kind of fraudulent practice that was and is perpetrated on the American people by forcing the price of gold to remain at $35.00 per ounce.

3. The natural result of this con game was that the mining of gold gradually came to a halt. Actually, the *real* cost of mining, due to technological advances, has decreased, but the cost *in terms of inflation-ridden dollars* has increased to approximately twice the artificially set level.

4. With practically no new gold moving into the Treasury to keep pace with the expanding paper money supply, it was essential for the government manipulators to have the nation go off the gold standard; that is, to remove gold as a guaranteed backing. The dollar was "cut loose" from gold by 75 percent. In other words, for every $1.00 of paper money, only 25 cents worth of gold is now legally required to back it. It is important to note, however, that Americans are not permitted to cash in their dollars for even that token amount. And if gold cannot be obtained in exchange for paper bills, then it is not really "backed" by gold at all. To say that it is, is merely to deceive oneself. The 25 percent so-called backing of gold is merely a bookkeeping ledger account designed to sustain the people's psychological confidence in and acceptance of our money system.[4]

Since there was no way for the federal government to *force* foreign investors to accept American dollars, or international credits based upon American dollars, and since they surely would not do so if there was no gold to back it, the new law applied only to American citizens. That's right, Americans were forced by their government to abandon any claim to gold behind their paper dollars

[1] "All the perplexities, confusions, and distresses in America arise, not from defects in the Constitution or confederation, not from want of honor or virtue, as much as from downright ignorance of the nature of coin, credit, and circulation." (John Adams, *Works* 8: 447)

[2] "If we could first know *where* we are, and *whither* we are tending, we could then better judge *what* to do, and *how* to do it." (Abraham Lincoln, June 16, 1858; *Collected Works* 2: 461)

[3] "Gentlemen, it is the *currency*, the currency of the country,—it is this great subject, so interesting, so vital, to all classes of the community, which has been destined to feel the most violent assaults of executive power. The consequences are around us and upon us. Not unforeseen, not unforetold, here they come, bringing distress for the present, and fear and alarm for the future . . . its object was merely to increase executive power." (Daniel Webster, March 15, 1837; *Works* 1: 362)

[4] "They that can save up essential liberty to obtain a little temporary safety deserve neither liberty nor safety." (Benjamin Franklin, *Familiar Quotations*, p. 226).

but foreign holders of these dollars are still entitled to "cash in" for gold if they wish—and at the full price, too.

5. Sensing that American paper money was now literally "worthless," many people began to put their savings into gold itself. If allowed to continue, this might have led to a parallel monetary system dealing in the private exchange of gold or credits against gold instead of government paper money. So the next step for the government manipulators was to make it illegal for Americans even to own gold. People of other nations may demand and receive gold bullions from Fort Knox for whatever American money they hold, but our own citizens are not permitted even to own an ounce of gold, except in the form of jewelry, art objects, or a few rare collectors' coins.

6. During and since World War II, our leaders in Washington have seen fit to give away to other nations over $130 billion dollars. (*U.S. News and World Report*, August 15, 1966, p. 46) According to *Information Please World Almanac*, this is approximately $25 billion more than the total assessed valuation of all land and personal property in the 50 largest cities of the United States. Much of this money has found its way back to our country, not in the form of purchases for American goods, but in the form of international credits which can at any time be converted into demands for gold.

7. Through a continued policy of giving away money to other countries, through gigantic military expenditures in other lands to supposedly protect them against aggression, through building up foreign industries to where they can compete effectively with our own industries (which not only pay higher labor costs, but also pay the taxes used to build up their foreign competitors), our leaders have finally brought us to the position where we no longer have enough gold left to pay off our solemn promise to foreign holders of U.S. dollars. Out of approximately $13 billion total gold stock, about $9 billion is required by law to back up our domestic money supply, and about $4 billion is left to meet claims of foreigners. But—and mark this well—the claims held by foreigners against this supply are already in excess of $29 billion and rising rapidly! Even counting *all* the gold—including that which supposedly is held as reserve against our domestic money supply—there is more than twice as much claim by foreigners than ability to pay. Internationally, we are bankrupt! (*U.S. News and World Report*, July 12, 1965, p. 39, and October 17, 1966, p. 63)

8. The pending economic crisis that now faces America is painfully obvious. If even a fraction of potential foreign claims against our gold supply were presented to the Treasury, we would have to renege on our promise. We would be forced to repudiate our own currency on the world market. Foreign investors who would be left holding the bag with American dollars would dump them at tremendous discounts in return for more stable currencies or for gold, itself. The American dollar both abroad and at home, would suffer the loss of public confidence. If the government can renege on its international monetary promises, what is to prevent it from doing the same on its domestic promises? How really secure would be government guarantees behind FHA loans, Savings and Loan Insurance, government bonds, or even Social Security?

Even though American citizens would still be forced by law to honor the same pieces of paper as though they were real money, instinctively they would rush and convert their paper currency into tangible material goods which could be used as barter. As in Germany and other nations that have previously traveled this road, the rush to get rid of dollars and acquire tangibles would rapidly accelerate the visible effects of inflation to where it might cost $100 or more for a single loaf of bread. Hoarded silver coins would begin to reappear as a separate monetary system which, since they have *intrinsic value* would remain firm, while printed paper money finally would become worth exactly its proper value—the paper it's printed on! Everyone's savings would be wiped out totally. No one could escape.[5]

One can only imagine what such conditions would do to the stock market and to industry. Uncertainty over the future would cause the consumer to halt all spending except for the barest necessities. Market for such items as TV sets, automobiles, furniture, new homes and entertainment would dry up almost overnight. With no one buying, firms would have to close down and lay off their employees. Unemployment would further aggravate the buying freeze, and the nation would plunge into a depression that would make the 1930's look like prosperity. At least the dollar was sound in those days. In fact, since it was a firm currency, its value actually went *up* as related to the amount of goods which declined through reduced production. Next time around however, the problems of unemployment and low production will be compounded by a monetary system that will be utterly worthless. All the government controls and so-called guarantees in the world will not be able to prevent it, because every one of them is based on the assumption that the people will continue to honor printing press money. But once the government, itself, openly refuses to honor it—as it must if foreign demands for gold continue—then it is likely that the American people will soon follow suit.

This, in a nutshell, is the so-called "Gold Problem." It's no wonder that our leaders who have gotten us into this mess don't talk about it very much, except to show the proper amount of public concern, and to assure us from time to time that they are "watching the situation closely."

The question that is uppermost in the minds of everyone familiar with the foregoing facts is "How can we prevent this from happening?" The honest answer is, "We can't!" Like the drunkard at the end of a weekend spree, there is no way in the world to avoid the inevitable "morning after." We have been feeling the exhilarating effects of inflation and have become numbed to the gradual dissipation of our gold reserves. In our economic stupor, when we manage to think ahead about the coming hangover, we have merely taken another swig from the bottle to reinforce the artificial sensation of prosperity. But each new drink at the cup of inflation, and each new drain on the gold supply of our body strength does not prevent the dreaded hangover, it merely postpones it a little longer and will make it that much worse when it finally comes.

What should we do? *We should get a hold on ourselves, come to our senses, stop adding to our intoxication and face the music!*

I realize this is an extremely unpopular answer. There are those—particularly among the government manipulators who endorse the polices that have brought us to our present unhappy state—who would have us believe that, somehow, if we just do a little *more* manipulating of our money, possibly even set up a world monetary system through the U.N., then we can avoid having to pay the fiddler; or, to be more precise, to pay the bartender. But such proposals are merely more of the same con game against the American people, and would not only fail to solve our economic problems, but could lead us into surrendering our economic independence as a nation to the dictates of a majority block in the U.N. which, conceivably, would be less interested in our recovery than in exploiting our misery.

No, there is no "happy" solution to our problems, but, if left to our own resources, the productive genius that is the product of the free enterprise system, coupled with the initiative and drive of the American people, can successfully lead us through the trying readjustment period that lies ahead, and then on to higher levels of *real* prosperity and security than we have ever known.

While politicians will continue to insist that our economy is not in the slightest danger, lest they be accused of being "negative," or "spreaders of doom," there is a sound and realistic course of action that we can follow to prepare for the coming readjustment period and to lessen the shock. As a nation, we must stop giving away money to foreign nations as though we had it. We should demand repayment of our loans to other countries—especially those, like France, which are making the heaviest demands upon our gold supply. We should cease giving them our gold until they pay their debts to us. We must stop the federal government from deficit spending, and begin immediately to pay off the national debt in a systematic fashion. This, of course, means increasing taxes *or* decreasing the size of government. It is doubtful that the American people can absorb more taxes without further injuring the productive base of our economy, but there is no doubt that government can be reduced without any such risk.

The price of gold must be allowed to seek its own level without artifical government restraint. Americans should be given back their freedom to own gold if they wish. Just as soon as the mining industry is able to respond to the higher price of gold and begins to extract it from the earth once again, it should be exchanged for 100 percent gold-redeemable paper dollars from the Treasury payable upon demand to *anyone* who holds these dollars. Make it known that the federal government eventually will offer the same conversion privilege to holders of the present Federal Reserve Notes just as soon as the acquisition of gold bullion and the repayment of the national debt makes it possible.

So much for the nation. As individuals there is also much that can be done to lessen the shock. *The first and most obvious step is to get out of debt if it is at all humanly possible.* We have lived in an atmosphere of inflation for so long that many people now accept the benefits of permanent debt as a firm law of economics. But if inflation runs its full course and drops over into depression with little if any *real* income for millions of workers, the country may well have to start over with a brand new currency which will be in extremely short supply to pay off those existing debts. Even in times of economic stability it is sound practice to live within one's income and avoid unnecessary debt. Such practice is doubly sound in times like these.

Each of us should make every effort to become economically independent, at least within the family unit. Avoid looking to government for handouts or future security. Again, this is not only good practice in normal times, but especially important today. A government which is unable to pay its own bills can hardly be depended upon to pay yours.

---

[5] "I have already endeavored to warn the country against irredeemable paper; against the paper of banks which do not pay specie for their own notes; against that miserable, abominable, and fraudulent policy, which attempts to give value to any paper, of any bank, one single moment longer than such paper is redeemable on demand in gold and silver. . . . We are in danger of being overwhelmed with irredeemable paper, mere paper, representing not gold nor silver; no, Sir, representing nothing but broken promises, bad faith, bankrupt corporations, cheated creditors, and a ruined people." (Daniel Webster, February 22, 1834; *Works*, 3:541–2)

Finally, when the going gets rough, we mustn't rush to Washington and ask Big Brother to take care of us through price controls, rent controls, guaranteed jobs and wages.[6] *Any government powerful enough to give the people all that they want is also powerful enough to take from the people all that they have.* And it is even possible that some of the government manipulators who have brought us into this economic crisis are hoping that, in panic, we, the American people, literally will plead with them to take our liberties in exchange for the fake promise of "security."[7] As Alexander Hamilton warned almost 200 years ago: "Nothing is more common than for a free people, in times of heat and violence, to gratify momentary passions by letting into the government principles and precedents which afterward prove fatal to themselves." (*Alexander Hamilton and the Founding of the Nation* [The Dial Press], p. 21) Let us heed this warning. Let us prepare ourselves for the trying time ahead, and resolve that, with the grace of God and through our own self-reliance, we shall rebuild a monetary system and a healthy economy which, once again, will become the model for all the world.[8]

GOOD PROGRESS FOR PENNSYLVANIA

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

NEWS RELEASE BY COMMONWEALTH OF PENNSYLVANIA, GOVERNOR'S OFFICE, JULY 29, 1969

Gov. Raymond P. Shafer announced today that more Pennsylvanians were employed during the month of June than at any time in history.

The Governor said an increase of 82,400 jobs over May brought the June employment total to 4,884,900, some 55,900 above the previous high established in June a year ago.

Noting that the current employment total is "almost a half million higher than it was for the same month five years ago," the Governor added:

"This remarkable increase is due largely to the great numbers of new and expanded industries now locating in Pennsylvania because of its favorable industrial tax climate as well as the industrial development program carried on by PIDA."

At the same time, the Governor said the average hourly and weekly earnings for production workers in all manufacturing industries also hit new highs in June for the fifth consecutive month—$128.39, up $1.04 over May.

"This figure is $8.10 higher than it was in June of last year," he added.

"A seasonal gain of 35,500 jobs from mid-May to mid-June sent non-manufacturing employment to 2,796,800—another all-time record.

"In addition, factory employment increased 23,800 to a mid-June total of 1,579,500, or 149,400 higher than it was in Pennsylvania five years ago."

The Governor said an additional 508,600 persons were either working on farms, were self-employed or listed as domestic workers during the month.

Although unemployment increased to 164,000 during the month because of the entry into the labor market of students seeking part or full-time jobs, the unemployment rate for the month stood at 3.2, the lowest for any June on record.

PRICE SUPPORT FOR MILK

HON. DAVID R. OBEY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. OBEY. Mr. Speaker, last week I received a letter from the Office of Secretary of Agriculture Clifford Hardin indicating that the price support for milk will not be raised at the present time.

The letter was in response to one I sent to Secretary Hardin in early July asking that the price support level for manufacturing milk be raised to the full 90 percent of parity.

I was very disappointed by the reply from the Secretary's office, because it indicates to me that the Secretary is not aware of the real possibility which exists in this country for a severe milk shortage.

In my letter to Secretary Hardin, in which I was joined by Congressmen GONZALEZ, KASTENMEIER, and STRATTON, I pointed out that the milk production in May of this year was the smallest May production in 30 years, including a drop in the production in Wisconsin of 2 percent and a drop in Minnesota of 5 percent. Furthermore, as I said at that time:

The downward production of milk, the increase in fluid sales and the culling of herds could put this nation on a collision course which will lead to a severe domestic shortage of milk unless support prices are increased to 90% of parity.

The only way to insure an adequate supply of milk and other dairy products is to assure our farmers that they will receive a fair return for their investments. Increased costs to our dairy farmers has caused the price of manufacturing milk as a percentage of parity to decline from 89.5% in April, 1968, to 83% in April 1969, and this has dropped even further in May and June. Only an increase in the price support level to 90% will indicate to the dairy farmer that it is worth his while to continue his operations in the dairy business, and assure the American consumer of an adequate supply of milk in the future.

The increasing awareness that considerable malnutrition and hunger exist in our country is still another reason for us to make sure that we have an adequate supply of milk. President Nixon's Urban Affairs Council recommended an increase in Federal spending of at least $1 billion in the next four years to attack the problem of hunger and malnutrition. Certainly one of the best ways to increase the nutritional level of our citizens is to increase the amount of dairy foods in their diet, a goal which would be impossible unless the downward production of milk is reversed.

In response to my letter, I received a reply from Mr. Clarence Palmby, Assistant Secretary of Agriculture for international affairs and commodity programs.

In his letter, Assistant Secretary Palmby says:

The key factor now is the declining consumption of fluid whole milk, cream, and butter.

Although he cites figures indicating the per capita consumption of milk has declined, I would like to point out that it was, in part, because the consumption of fluid milk seems to be increasing that I felt it necessary to write to Secretary of Agriculture Hardin in the first place.

In my letter to the Secretary in July, I pointed out that total class I sales for April 1969, in 60 Federal marketing order areas was 1.5 percent above April sales of last year, and producer deliveries used in class I during the first 4 months of 1969 were 2.3 percent above such use during the same period a year ago. The most recent figures released by the USDA indicate that this trend of increased consumption is continuing.

According to the July 1969, issue of "Federal Milk Order Market Statistics," the volume of producer deliveries used in class I in 58 markets increased 2.8 percent from last year, and the volume of producer deliveries used in class I during the first 5 months of 1969 are 2.4 percent above such class I use during the same period in 1968.

Assistant Secretary Palmby also indicated in his letter that with an increase in price supports, the consumption of milk would decrease and CCC purchases would become larger. I contend, Mr. Speaker, that if price supports are not raised soon, we face the possibility of a shortage of milk in the future, and in that case, prices will rise significantly above levels which may occur with a price support increase.

Although the Assistant Secretary's letter said the Department of Agriculture has "been carefully studying developments in the dairy situation, with special attention to prices received by farmers, dairy farm income, and the trends in the number of producer and milk production," unfortunately, he in no way comes to grips with the problem of a constantly decreasing number of dairy farmers and a decline in the production of milk.

Mr. Speaker, there is a feeling among many people that the decline in the num-

---

[6] "When the people are encouraged to turn to government to settle all of their problems for them, the basis for all revolutions is thereby established. For then the people expect the government to provide them with all of the material things they want. And when these things are not forthcoming, they resort to violence to get them. And why not—since the government itself has told them that these responsibilities belong to government rather than to them? I am convinced that a revolution would not be possible if the only relationship between government and the people was to guarantee them their loyalty and security." (Frederic Bastiat, quoted in *American Opinion*, February 1968, p. 22)

[7] "Though liberty is established by law, we must be vigilant, for liberty to enslave us is always present under that very liberty! Our Constitution speaks of the 'general welfare of the people.' Under the phrase all sorts of excesses can be employed by lusting tyrants to make us bondsmen." (Cicero, quoted in *A Pillar of Iron*, p. 512)

[8] "No duty is more imperative on . . . Government, than the duty it owes the people, of furnishing them a sound and uniform currency." (Abraham Lincoln, December 26, 1839; *Collective Works* 1:164)

ber of dairy farmers has abated since the steep declines we suffered in 1966. This is not the case.

In my own State of Wisconsin, 4,338 dairy farmers stopped farming from May 1966, to May 1967. From May 1967, to May 1968, we lost 3,295 dairy farmers and in the past year, from May 1968, to May 1969, an additional 3,298 farmers left dairying.

The dairy farmers in my district are disturbed and discouraged. They want some indication from the U.S. Department of Agriculture that there is a good reason for them to stay in the dairy business. This indication has yet to come from the new administration.

Two weeks ago—4 days after I wrote to the Secretary of Agriculture, and 5 days before Assistant Secretary Palmby's letter was sent to me—the Secretary's own Department reported that June milk production in the United States was down from the preceding year—for the 28th consecutive month.

Although I certainly do not want to sound like an alarmist, a question can legitimately be raised as to how long we can reasonably expect to meet the needs of a growing, and in some cases undernourished, population with these continuous declines in milk production.

During the past few months we have seen milk prices moving up—an inevitable result of supply and demand. In my opinion, this price increase alone is not enough to prompt dairymen to reverse the present downward trend in milk production. It is not enough, because it gives the dairy farmer no long-term assurance that he will continue to get an adequate return for his investment and labor.

As all of us concerned about dairy farming know, one of the significant factors today in dairy planning is the current price of beef. Dairy farmers must decide whether they are better off economically if they raise their herd replacements or sell them off for beef. Some dairy herds are being sold, because dairymen believe they will be money ahead if they sell rather than milk their herds.

And, once this is done, there is no turning back. For, while a herd can be disposed of overnight, it takes 3 years to complete the full biological period from conception of a calf to it becoming a producer of milk.

Dairy farmers, therefore, cannot rely on short-time price changes for their long-range planning. They must have confidence that it will pay them to milk cows in 1970, 1971, and 1972, and beyond.

It is for this basic reason that I have urged Secretary of Agriculture Hardin to increase dairy price supports to the maximum permitted by law. Price support increases would give some assurance that we as a nation are concerned about having an adequate supply of dairy products in the future.

Without this encouragement, and with the present price of beef to lure them out of dairying, dairy farmers are hesitant about expanding or even maintaining present production.

Mr. Speaker, I am including in the RECORD for the benefit of my colleagues, a copy of my letter to Secretary Clifford Hardin, and the reply I received from Assistant Secretary Palmby:

JULY 1, 1969.

Hon. CLIFFORD HARDIN,
Secretary, U.S. Department of Agriculture, Washington, D.C.

DEAR MR. SECRETARY: On April 1st this year you declined to make any change in the price support level for manufacturing milk. At that time you noted that total milk production has been running slightly below a year earlier. You also said that you would "keep developments in production, consumption and price support purchases under continuing review in the months ahead . . ."

Developments in these areas since April convince me that there ought to be an increase as soon as possible in the support price to the full 90% of parity, which would be about 35 cents a hundredweight higher than the present support level of $4.28.

According to the May issue of "Milk Production," published by the USDA, U.S. milk production in May was 11.1 billion pounds, 2% less than a year earlier and *the smallest May production in 30 years.* This included production losses in 4 of the 5 largest milk producing states, including a 2% drop in Wisconsin and a 5% drop in Minnesota, the two largest milk producing states in our nation. Nationally there was a 2.2% drop in production from January to May from a year ago, and in Wisconsin the drop was 3.61%.

Although these figures follow the decline in production which began in 1964, total Class I sales for April 1969 in 60 Federal marketing order areas was 1.5% above April sales of last year. Furthermore, producer deliveries used in Class I during the first 4 months of 1969 were 2.3% above such use during the same period in 1968.

In addition to the downward trend of milk production and the increase in consumption of fluid milk, farmers are being faced with increasing incentives to cull their herds. Beef cattle prices rose 8% during the month ending May 15, as compared to the period last year. And, according to "Dairy Situation," the slaughter value of milk cows was up sharply in the first quarter of 1969.

The downward production of milk, the increase in fluid sales and the culling of herds could put this nation on a collision course which will lead to a severe domestic shortage of milk unless support prices are increased to 90% of parity.

The only way to insure an adequate supply of milk and other dairy products is to assure our farmers that they will receive a fair return for their investments. Increased costs to our dairy farmers has caused the price of manufacturing milk as a percentage of parity to decline from 89.5% in April 1968 to 83% in April 1969, and this has dropped even further in May and June. Only an increase in the price support level to 90% will indicate to the dairy farmer that it is worth his while to continue his operations in the dairy business, and assure the American consumer of an adequate supply of milk in the future.

This is one area also in which the consumer has as much at stake as those in agriculture. If the price support level is not set at a point which will keep farmers in the dairy business, then short supplies will increase consumer prices well above levels that might evolve as a result of an increase in the support price.

The increasing awareness that considerable malnutrition and hunger exist in our country is still another reason for us to make sure that we have an adequate supply of milk. President Nixon's Urban Affairs Council recommended an increase in Federal spending of at least $1 billion in the next 4 years to attack the problem of hunger and malnutrition. Certainly one of the best ways to increase the nutritional level of our citizens is to increase the amount of dairy foods in their diet, a goal which would be impossible unless the downward production of milk is reversed.

For those of us concerned about the future of dairy farming, trends of the past few years are not encouraging. Young men are leaving farms for better paying jobs in urban areas; farmers find it increasingly difficult to obtain the substantial capital investment needed for today's modern and efficient dairy farm; and milk cow numbers continue to decline.

The objectives of our farm programs are to maintain production and stabilize farm income in a fair relation to the other sectors of the economy. We must use the price-support mechanism to encourage those who want to fight these forces which seem to be enhancing the continued decline in the number of persons involved in dairy farming.

In April 1968 the price support for milk closely approached its maximum legal limit of 90%. I urge you to raise our support price to this level again. It will give encouragement to our nation's dairy farmers, and is something which is truly in the national interest.

Sincerely,

DAVID R. OBEY,
Member of Congress.
HENRY B. GONZALEZ,
Member of Congress.
ROBERT KASTENMEIER,
Member of Congress.
SAMUEL STRATTON,
Member of Congress.

DEPARTMENT OF AGRICULTURE,
Washington, D.C., July 16, 1969.

Hon. DAVID R. OBEY,
House of Representatives.

DEAR MR. OBEY: This is in response to your letter of July 1, recommending an increase in the support price for manufacturing milk.

We have been carefully studying developments in the dairy situation, with special attention to prices received by farmers, dairy farm income, and the trends in the number of producers and milk production.

While increasing demand for cheese and skim milk products is a favorable development, the key factor now is the declining consumption of fluid whole milk, cream, and butter. Currently, annual per capita consumption of milk and cream is at a record low of 262 pounds. This rate has declined each year since 1961 when it was 349 pounds.

Recent price increases to producers as a result of market forces are encouraging. The market is allocating productive resources more effectively than with market prices at the support level. Declining production has resulted in higher prices for milk to farmers this year than last year in nearly all areas. The U.S. average price of manufacturing milk in June, adjusted for seasonal fat test, was $4.42 per hundredweight. This was 17 cents above a year ago and 14 cents above the current support and the highest U.S. average price for the month since the present dairy price support program started in 1949.

Commodity Credit Corporation price support purchases are still sizable. From April 1 through June 30 we removed from the market about 90 million pounds of butter, 18 million pounds of cheese, and 118 million pounds of nonfat dry milk. An increase in the support price for manufacturing milk would further discourage consumption of milk and dairy products and result in larger CCC purchases. This we want to avoid if at all possible.

Cash receipts by farmers from sales of milk and cream are showing a favorable upward trend. They have increased substantially in recent years as the price rise has more than offset the decrease in marketings. Total cash receipts in 1969 probably will reach 6.10 billion dollars, compared with 4.21 billion dollars in 1955, 4.76 billion in 1960, and 5.74 billion in 1967.

We will carefully watch further developments in the situation.

Sincerely yours,

CLARENCE D. PALMBY,
Assistant Secretary.

CBW REVIEW: FACT OR FICTION

HON. RICHARD D. McCARTHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. McCARTHY. Mr. Speaker, on June 17, 1969, President Nixon directed that the executive branch undertake a detailed review of chemical and biological warfare, including the U.S. position on arms control and the question of ratification of the 1925 Geneva protocol banning first use of gas and germ warfare. In a letter to me, Mr. Gerard Smith, Director of the Arms Control and Dis-Armament Agency, explained that present and possible alternative policies are to be fully examined.

I welcomed this announcement. This executive branch review marks the first time that chemical and biological warfare policies and practices have been given a comprehensive review at the top level of Government for many years. This review offers the opportunity for the executive branch, Congress, and the people of the United States to reevaluate our approach to these particular forms of warfare. And in my opinion we can fully examine and possibly change a number of inconsistencies between our professed policies and our actual practices.

The Federal departments and agencies involved with chemical and biological warfare are now preparing position papers and analyses of our policies for consideration by the National Security Council. There undoubtedly will be differences of opinion that will have to be resolved by the National Security Council and ultimately President Nixon. The long-established procedure in our Government in reviews of this type is to resolve differences of views within the executive branch before recommending a national policy. In keeping with this practice, most Federal departments are now replying to questions concerning chemical and biological warfare policy by pointing out that the policy is under review. They further point out that it would be inappropriate to comment on these policies until the review is completed.

I was surprised, therefore, to learn that Secretary of Defense Melvin Laird on July 28, 1969, had made a strong statement in support of our present chemical and biological warfare policies. He was quoted as saying that the best way to make sure the United States is not the victim of chemical or biological weapons is for it to have its own such weapons as a deterrent. He is further quoted as saying that his own conclusions were that the United States must continue to develop offensive chemical and biological weapons. And he added:

> We do not have the capability of the Soviet Union in this (gas) area. They have much greater stocks than the United States.

Although Secretary Laird said that he did not want to prejudge the results of the executive branch review, this is precisely what he has done. By publicly stating his opinions at this time, he cannot help but influence those within the Department of Defense as well as other departments who are now working on this review.

As the Secretary of a department his opinions will influence the conclusions arrived at by his subordinates. And it will have the effect of stifling new ideas and new approaches that might be put forward by other agencies. It also places President Nixon in the position of having to refute his Secretary of Defense should he choose to adopt a different policy from that stated by Secretary Laird.

I find this premature statement by Secretary Laird inexcusable. It raises a serious question as to whether the executive branch review of chemical and biological warfare is fact or fiction. Secretary Laird's statement seems to preclude the possibility of serious rethinking of new approaches.

In my opinion, much of the Department of Defense's thinking on chemical and biological warfare is a product of the prenuclear age. It has not undergone the rigorous analysis necessary to move from a pre-World War II and World War I approach to these weapons to one fitting the modern era. This thinking, at least in the Department of Defense, flies in the face of our announced position at the United Nations—that we fully support the principles and objectives of the Geneva protocol banning first use of chemical and biological warfare.

I would hope that Secretary Laird has the good sense to clarify his position. I would like to know whether in fact he has an open mind regarding the present review of our policies in this field. His failure to do so cannot help but call into question the final results of the review.

THE EXPORT CONTROL ACT

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. ASHBROOK. Mr. Speaker, in 1949 Congress enacted the Export Control Act which restricted the export to the Soviet Union of key items of trade which would help implement the aggressive policies of that country. As other nations of Eastern Europe fell under the influence of the Soviet Union, the restrictions of the act were extended to them. For 20 years now this legislation has placed restrictions on a very important weapon of international economic warfare, but presently, for a variety of reasons, attempts are now being made to liberalize commercial arrangements with the Communist countries.

The Export Control Act will expire on August 31 of this year, and in all probability there will be a short extension before that date to continue the act in force. The main vehicle for liberalizing our trade policies with Communist countries is S. 2696, the Export Expansion and Regulation Act, which will soon be considered by the Senate. Among other things, S. 2696 would establish an export expansion commission of 15 members appointed by the President. The majority report on S. 2696 states:

> Special emphasis would be placed by the Commission on promoting trade with the nations of Eastern Europe and the Soviet Union (where U.S. trade is only a fraction of that engaged in by our allies) as well as other countries eligible for trade with the United States but not significantly engaged in such trade.

The report also states:

> The attitude apparent in the language of the Export Control Act is one of open hostility, which is an accurate reflection of the prevailing attitude 20 years ago. The committee believes that it will be helpful in the attempt to reach greater understanding with Russia and the nations of Eastern Europe if the legislation which deals with the regulation of exports accurately reflects current attitudes rather than ones which prevailed 20 years ago.

This, in a nutshell, is the thinking behind S. 2696, and in my estimation it is dangerous and unrealistic. The first anniversary of the occupation of Czechoslovakia by Soviet and other Communist troops is less than a month away, and one wonders how we can "reach greater understanding" by an increase in trade with regimes whose policies are nothing short of international banditry.

In the last Congress over 120 Members of the House, divided almost equally among both parties, cosponsored legislation which would establish a House select committee to review our trade policies, especially with Communist countries. The need for such a reevaluation of our policies in this area are readily apparent. When one considers that Ho Chi Minh could not have carried on his aggression adequately against the people of South Vietnam without the active support of the Soviet Union, it is reasonable to ask just how much different are conditions today between the Communist regimes and the free world than they were 20 years ago. Just ask the American flyers who had to face the withering fire of Soviet antiaircraft guns over North Vietnam. I am sure they would be hard pressed to discern a mellowing of Soviet policies in the direction of world peace.

Senators WALLACE BENNETT and JOHN TOWER submitted minority views in opposition to S. 2696 which present a number of compelling arguments. Their views on this important piece of legislation are worthy of consideration, and for this reason I insert them in the RECORD at this point:

MINORITY VIEWS OF MESSRS. BENNETT AND TOWER

> We agree that legislative authority should be continued to provide for export controls

for reasons of national security, foreign policy, and domestic short supply. However, we support a straight extension of the existing Export Control Act and oppose the bill reported by the majority.

Over the years, the existing legislation has proven to be very effective in protecting the national interests. Time and time again, it has shown its adaptability to changing world conditions. We believe it would be extremely unwise to introduce into this legislation which has as its main purpose providing necessary *control* authority, another completely different and opposite concept of *trade expansion*. Other legislation covering tariffs, export credit, and trade promotion is much more appropriate for dealing with trade expansion. In attempting to have this bill provide for control while also urging trade expansion, what has resulted is a misleading bill from its title throughout most of the new provisions covering export control policies and procedures.

REQUIREMENTS COSTLY AND UNNECESSARY

The bill interposes a number of requirements in the administrative area which we believe to be unnecessary, burdensome, and costly for the Government. These requirements include organizational and procedural changes by the Secretary of Commerce and extensive review of the complete export control list by the Department of Commerce, frequent notification and detailed explanation to the Congress of routine exceptions authorized by the bill, a continuing review of reporting and documentation requirements together with detailed statements to the Congress of action taken and a burdensome requirement that extensive information be provided to exporters throughout the Department's consideration of licensing applications. In addition, the bill establishes a new Presidential Commission on Export Expansion which would, to a considerable extent, duplicate work already being carried on by established organizations and would thereby confuse rather than assist the export expansion program.

The bill requires the President to include a detailed statement of his action, if he restricts exports without making the determination, that comparable goods are not available elsewhere or that the exports would make a significant contribution to the military potential, which would prove detrimental to the national security of the United States. Even though as an exception, the President is granted the authority to restrict in the interest of national security, any commodity or technology as long as he reports such action to the Congress, the effectiveness of those administering the Act is bound to be inhibited by these changes. Exporters and representatives of other governments will read as significant change into the language of the bill and bring additional pressure to bear for reduction in controls on critical items and for approval of questionable export applications.

At best, the bill will be confusing to exporters, cause significant difficulties in administration and stimulate troublesome court challenges. Further, it will give an unwarranted signal to the Soviet Union that we intend to make our advanced industrial goods more readily available now, even though they have demonstrated no real desire for improved relations between East and West. In fact, last year's Czechoslovakian invasion stands as strong evidence against any such interest.

At worst, the bill could result in undue weakening of export controls with attendant risk to our national security.

THREAT TO NATIONAL SECURITY MINIMIZED

The proposal which would replace the present Export Control Act is based on the assertion that factors, which brought about the enactment of the Export Control Act no longer exist. We cannot agree with such an assertion.

It is suggested that we are now living in an era in which the Soviet Union presents a reduced threat to the security of the United States. We find no evidence that such a new era has been ushered in. In fact, we consider the Soviet Union as a much greater threat to the security of the United States than it was when the Export Control Act of 1949 was passed. While the majority denies this, it is interesting to note it admits, that the Soviet economy was undergoing a real struggle to provide the barest necessities because of the ravages of war when the Export Control Act was enacted in 1949, and goes on to claim that the Soviet economy has now become one of the most self-sufficient on earth. We do not feel it necessary to argue over the validity of that claim because of the differences in the consumption patterns and standards of living of various countries. But we fail to see any logic in the majority conclusion, that such an economy provides less of a threat to this Nation, than one which had a real struggle to provide the barest of necessities. We also point to the relative military capabilities of the United States and the Soviet Union in 1949 as compared with the present. Thus, we find the whole basis of the bill reported by the majority to contain a contradiction.

In addition to being contradictory on its face, many of the provisions of the bill contradict each other. The present Export Control Act establishes a forthright policy of restricting exports on the basis of contributions to economic potential or military potential. Its language allows restrictions of exports whenever it is determined by the President that they make a significant contribution to the military or economic potential of a nation or nations, which would prove detrimental to the national security and welfare of the United States. The majority has eliminated the criteria of "economic potential" and retained only the "military potential" criteria, yet it boldly asserts that the President's "authority to control exports is the same as that which is now contained in the Export Control Act." Either they have tried to reduce his powers or flexibility or they haven't, but it can't be both.

ECONOMIC POTENTIAL NOT CONSIDERED THREAT

While apparently deciding that economic potential and military potential are completely separate so far as the national security of the United States is concerned, the majority infers that its proposal underscores the determination of this country to protect its national security from military threat. This item is included in a policy section in the bill, and the majority makes its point saying, "The present law contains no such statement of policy." We find this inference to be unwarranted. The present Export Control Act in its authority section says that the rules and regulations set by the President or his delegated agencies or officials—shall provide for denial of any request or application for authority to export articles, materials, or supplies, including technical data, or any other information from the United States, its territories, and possessions, to any nation, or combination of nations threatening the national security of the United States if the President shall determine that such export makes a significant contribution to the military or economic potential of such nation or nations, which would prove detrimental to the national security and welfare of the United States.

It is beyond us to understand, how the majority feels that it has in any material way strengthened prohibitions against exports, having military potential which would be detrimental to the national security. Particularly is it difficult to understand why the majority makes a point of this in light of the fact that the new "policy section" is a carryover from an earlier bill which did not allow the President to deny exports with significant military applicability unless there was in addition "substantial evidence that the particular exportation is likely to be used for military purposes, and that similar items are not readily available to the importing country from other sources."

POLICY IN BILL IS UNCERTAIN

It is ironic that the proposed bill in section 2 (4) says that the Congress finds that "the uncertainty of Government policy toward certain categories of exports has curtailed the efforts of American business * * *", yet this bill is sure to increase uncertainty. The whole announced purpose of the bill is to encourage the expansion of trade with all countries with which we have diplomatic or trading relations. This is stated in section 3(1)(A), section 3(3), and section 4(a)(1). It is interesting to note, however, that in every case where this "change of policy" is stated, it is always followed by an exception which allows the President to make export determinations on the basis of national security, foreign policy of the United States, or the need to protect the domestic economy. Those are the criteria which are used in the present Export Control Act. Thus the bill appears to encourage the expansion of trade on the one hand, while on the other hand it provides for essentially the same restrictions which presently exist.

In addition to the language included in the bill, the report states that "the Department of Commerce should clearly indicate to American business the change in export control procedures and attitudes reflected by the enactment of the Export Expansion and Regulation Act * * *." The report continues, stating that the Department of Commerce should make "public statements" so that the attention of American business will be focused on the change in policy. We think this puts the Department of Commerce in an awkward and untenable position, since the claimed change in policy which must be brought to the attention of American business is unclear and confused.

It will be difficult for the Department of Commerce to try to explain to American business that on the one hand the bill holds out the policy of equal treatment for all countries, yet section 3(5) of the bill states that it is the policy of the United States to use its economic resources of trade potential to further foreign policy objectives. We maintain that this latter policy is the one under which the United States has been operating for many years and in effect nullifies the "equal treatment change." The form without substance becomes even more apparent when it is known that the President of the United States, the one who holds the authority, opposes a change in policy at this time. Administration spokesmen have made it very clear that the President seeks a more appropriate time for liberalizing trade with the Communist countries. Yet the Congress, if it should pass this bill, would give, in the language of the majority report, "an overt indication of the change of policy or attitude of this country * * *." We believe that the President should have the latitude to relate liberalization in the trade area to broader foreign policy considerations. This bill, in our view, is an attempt to preempt the President's judgment on timing of liberalization, while still holding him responsible to determine specific export policy.

FEW EXPORT REQUESTS DENIED

The committee report indicates that the nations of Eastern Europe and the Soviet Union are currently trading with our Western Allies to a much greater degree than they are with the United States "because of the unilateral restrictive policies of the United States." This is far too simplistic to be accurate. The items under export control represent only a small fraction of the goods gen-

erally exchanged in international trade. Western Europe does much more business with Eastern Europe than we do primarily because of geographical proximity and traditional trade patterns. The great bulk of this trade is in products which our companies are also free to export, if they can obtain orders.

The Department of Commerce testified that less than 2 percent of the export license applications received for Eastern Europe are denied. Supporters of this bill claim that is true because American exporters just don't try to export to Eastern Europe or the Soviet Union in items on the control list in any degree because they know that they will be turned down. Any controls may have a deterrent effect on efforts to export, but we question the suggestion that exporters know they will be turned down. We do this because in the last quarterly report dealing with export control, we find that approvals were given for exports to East European countries and the Soviet Union for such items as harvesting machines, tractors, electronic digital computers, metalworking machinery, metal treating and metal powder molding machines, rubber processing and rubber products manufacturing machines and parts, nuclear radiation detecting and measuring instruments, synthetic rubber, metal cutting milling machines, gear cutting machines, well-drilling machinery, metal processing and heat treating furnaces, telecommunications apparatus, and many other similar exports. With approvals on such a broad group of industrial products, not to mention the many agricultural and less sophisticated product approvals, how would an exporter come to the conclusion that his application would automatically be turned down?

We are particularly disturbed by repeated statements by the bill's proponents that its intent is to increase trade in "peaceful goods." Yet most of the industry witnesses represented companies with highly advanced technological products such as electronic control equipment, computers, and machine tools. Enactment of this bill following our hearings could well lead to a conclusion that the intent of Congress is to consider the bulk of our advanced technological products as "peaceful goods" to be freed for unrestricted sale to Eastern Europe. The result could be serious mutual misunderstandings among business, foreign governments, and those in charge of administering export controls.

TRADE POTENTIAL SMALL

The majority also discusses the dwindling of our trade surplus in the past few years and infers that relaxing of our export controls to Eastern Europe may measurably improve that situation. We are extremely concerned over the virtual elimination of our trade surplus which only 5 years ago was over $7 billion. We would like to point out, however, that this dwindling is not the result of the operation of our Export Control Act, but results from basic economic factors which are conveniently disregarded in the majority report.

Actually most knowledgeable estimates indicate that trade with Eastern Europe, even under most favorable conditions, can grow only modestly, and is unlikely in the foreseeable future to reach as much as 1 percent of our total exports.

East-West trade must be a two-way street. Because Eastern Europe has limited convertible currency, it must sell us about as much as it buys. However, Eastern Europe has few products which we need, and thus there is a limited basis for significant continuing two-way trade. The Soviet Union and Eastern Europe today are greatly interested in our advanced products and technology, many of which have both civilian and military significance, to expand their industrial capacity. Many of these transactions become one-shot deals with little or no follow-on sales prospects.

INCONSISTENCY ON CONFIDENTIALITY

We find a further contradiction in the committee's action on the proposed bill. Section 7(c) provides that "no department, agency, or official exercising any functions under this act shall publish or disclose information obtained hereunder which is deemed confidential or with reference to which a request for confidential treatment is made by the person furnishing such information, unless the head of such department or agency determines that the withholding thereof is contrary to the national interest." Section 9 of the bill requires the agencies, departments, and officials responsible for implementing the rules and regulations authorized under this act to inform exporters of consideration which may cause a denial of license request so long as the information does not jeopardize the national security and effective administration of this act. The Department of Commerce, in its attempt to clarify the bill, recommended that a provision be included in this new section providing for confidentiality of business information. The majority turned down that request. We now have one section, section 7, requiring confidentiality, while the other section does not provide for confidential treatment of business information. We find this inconsistency by the majority unexplainable.

PENALTIES WEAKENED

The penalties for violating the act have been changed from those presently contained in the Export Control Act. Despite the fact that the present penalties have been used primarily as a deterrent, the committee decided to do away with a possible 1-year jail sentence for a violation unless it could be proved that the violator did so knowingly. During our hearings and discussions of the committee, there was no indication that the present penalty provisions had been misused or abused. We find it interesting, therefore, that the committee uses as a justification for the change that it is "concerned over the constitutional question of a severe jail sentence and fine for unknowing violations." We are unaware of any prior concern on a constitutional basis of the present provision authorizing up to 1-year imprisonment for a violation, and this has been part of the act for 20 years.

INCONSISTENCY IN TREATMENT OF COUNTRIES

It seems to us that the proponents of the bill should either decide whether they want to have equal treatment between Communist and non-Communist countries except for specific Presidential determinations or whether they want some differentiation retained as in the present Export Control Act. Section 3(3) of the bill states that "It is the policy of the United States that any export controls found necessary should be applied uniformly to all nations with which the United States engages in trade * * *" If, indeed, it is the intent of the majority to have equal treatment between Communist and non-Communist nations, why do they retain unequal penalty provisions? Much harsher penalties are authorized in the event of exports contrary to the act with knowledge that such export will be used for the benefit of any Communist-dominated nation. The committee report properly states that this subsection is identical to one now contained in the Export Control Act. What it doesn't say is that the Export Control Act differentiates between Communist and non-Communist nations, whereas this bill makes no such differentiation and in no other place in the bill is the term "Communist-dominated nation" used.

ADMINISTRATION SUPPORTS PROPER EXPORTS

During our hearings, representatives of the Department of Commerce explained their desire to assist American business with its exports. That is one of the major purposes of the Department of Commerce, so such an attitude was not expected. They explained their attempts to reduce the number of items for which licenses are required as well as their efforts to decrease to a minimum the paper work required by the business community. We have no reason to disbelieve their statements. In fact, we have every reason to believe that despite the very short period that the Department has been under the new administration, much has been done to improve its operations. We have been assured that for years it has been the Department's policy (limited only by budgetary restrictions) to maintain continual review of items requiring export licenses—adding to or deleting from the list whenever conditions warranted. We have confidence that the present administration intends to implement that policy and think they should be given an opportunity to prove themselves.

PRESENT ACT IS BETTER APPROACH

The committee hearings and in particular the information provided by the administration have demonstrated that no sharp reduction in regulatory authority is warranted. The existing Export Control Act has been shown to have ample flexibility to accomplish everything that could be accomplished through this new proposal. The Export Expansion and Regulation Act of 1969 as proposed in S. 1940 has been modified to substantially restore the authority it at first had sought to weaken. We now have a bill which retains parts of the original proposal, parts of the present Export Control Act, and some provisions which are inconsistent with both. Proponents of the bill apparently feel that significant changes have been made from the present Export Control Act, but the actual substance of these is far less than would appear. It must be recognized that the bill would be interpreted as a liberalization signal if nothing else. There is no evidence of the Soviet Union's readiness to move toward closer relations with the West which would warrant overriding the President's judgment that this is not the time to signal a change in relations with a new export control policy.

We, therefore, urge a straight extension of the Export Control Act of 1949 and recommend that the Senate defeat this proposal.

REPRESENTATIVE REID IS ONE OF THE FAIREST

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. DERWINSKI. Mr. Speaker, I was especially pleased to note that a publication in my district carried an article discussing one of our most respected colleagues, the Honorable CHARLOTTE T. REID. The article which follows appeared in the Sunday, July 27, edition of the Homewood-Flossmoor Star:

REPRESENTATIVE REID IS ONE OF THE FAIREST

(By Bert Mills)

WASHINGTON, D.C.—Ladies are no longer a novelty in Congress, but it is still an unusual feat for a woman to succeed in the largely male world of politics. Only 11 out 535 members of the 91st Congress are of the fair sex.

One of the fairest of the Congressional ladies is Representative Charlotte T. Reid (R., Ill.), now serving her fourth term in the House. A trim and youthful 55, Mrs. Reid is in her third career and became a politician by accident.

As a girl she was a professional singer, known to millions of radio listeners as

Annette King. She was a featured vocalist on NBC and Don McNeill's Breakfast Club, for three years back in the '30's. Married to an attorney in 1938, they raised four children, all grown now. Mrs. Reid's two sons are both Viet Nam veterans.

Although interested in government and active in civil affairs in her home town, Aurora, Charlotte Reid became a political candidate as a result of a personal tragedy. Her husband died suddenly after winning the Republican nomination for Congress in 1962. GOP leaders persuaded the widow to carry on his campaign.

She did and was elected. Having since been re-elected three times by increasing margins, she is approaching veteran status and her seat is regarded as "safe." She has received more than 70 per cent of the vote in her last two elections.

One of the most important House committees is the appropriations committee, which originates all legislation to provide funds for governmental activities. Seats in this select company are eagerly sought, but after only four years in Congress Mrs. Reid was elected by her Republican colleagues to that body.

The appropriations committee has such a heavy workload that its members are restricted from serving on other legislative committees. Thus Mrs. Reid has surrendered seats on the interior and public works committee on which she had previously served. While on interior in 1965, she inspected the Trust Territory in the Pacific, and continued at her own expense to Viet Nam—the first congresswoman to visit that battlefield.

Mrs. Reid has been in the national spotlight upon occasion. She was a speaker at both the 1964 and 1968 Republican national conventions, as many TV viewers will recall. Richard Nixon named her to serve on his key issues committee during last year's campaign.

Mrs. Reid was also in the news this summer when she and three other Republican ladies from the House called on President Nixon to urge him to name more women to key government posts. That White House conversation lasted one and one-half hours and brought a Presidential pledge to appoint ladies to the highest openings, perhaps even to the Supreme court.

Mrs. Reid tends to her committee work and to the government needs of her constituents. She makes infrequent speeches on the House floor. Her current specialties are funds for foreign operations and the Labor and Health, Education and Welfare departments. She serves on those two subcommittees, and spends many hours at committee meetings.

At the luncheon table in the Republican Capitol Hill club near her office, she is known by most of those present. As a middle-of-the-road Republican, she has friends in both the conservative and liberal bloc. She is a Nixon booster and thinks the President has made a fine start.

She lives in an apartment in a tall building on the Virginia side of the Potomac river, featuring a stunning view of Washington and all that surrounds it. At a party, she has been known to accept an invitation to sing. Although she no longer has time to practice, she can still hit the high notes.

MASS TRANSPORTATION

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. BIAGGI. Mr. Speaker, our cities can wait no longer for the formulation of a rational urban transportation policy which will bring Federal assistance for mass transportation into parity with assistance to highway construction.

We know the need. Adequate mass transportation is a prerequisite for a healthy central business district. The central business district, in turn, is essential to the support of city revenue through real estate and other taxes. Yet problems mount.

In my own district in Bronx County, N.Y., a multiple dwelling apartment complex known as Co-op City is under construction for middle-class families. It is a really fine housing complex, but the residents who have already taken possession of apartment units are struggling with a very difficult problem. They have no urban mass transit facilities within a reasonable distance of the complex.

I am sure that residents of so many other cities share this same problem. In this advanced era of space exploration and technology, it is difficult to understand why urban mass transit facilities have not been developed to the fullest extent for the benefit of millions of Americans.

It is estimated that our Nation will experience a population increase of 100 million within the next few decades. It is all too evident, therefore, that we can no longer ignore the problems created by inadequate transportation facilities.

In view of this critical situation, a number of bills have been introduced during this session designed to correct the shocking inequity in Federal funding.

During recent hearings on these bills held by the Subcommittee on Housing and Urban Affairs of the Senate Committee on Banking and Currency, further evidence was amassed which again reiterated the need for adequate mass transportation in our cities and emphasized the fact that this will not be achieved without adequate Federal funding.

I would like to draw special attention to several important provisions of these bills. Funding would depend primarily on the automobile excise tax, a tax which currently stands at 7 percent, but which is scheduled to be phased down. These bills would maintain the tax at 7 percent to support a mass transportation trust fund. The use of the auto tax to accumulate funds for mass transportation is justified and needs no explanation if transportation is seen as it really is—one system consisting of various modes of transportation. I hardly need emphasize that the automobile user is not the natural opponent of mass transportation, but rather one of its main beneficiaries.

These bills provide for 90 percent Federal funding for mass transportation. This will bring funding in this area into parity with highway funding and eliminate the distortion to local planning which results from an uneven Federal subsidy. The bills would also permit advance acquisition of urban land in order to facilitate rational comprehensive planning.

Provision is also made for Federal relocation assistance to families and businesses affected, comparable to that now offered under the Federal highway program.

Of particular importance to my constituency is the elimination of the current 12½-percent limitation of grants and loans to any one State. This provision is unfair to large urban States which may have more than 12½ percent of the urban transportation problems.

I support trust fund funding for mass transportation to provide the opportunity for rational long-run planning by cities. Unfortunately, the annual authorization and appropriation of funds has not provided that sure basis for planning, as a review of appropriations under the Housing and Urban Development Act of 1968 makes evident.

In the United States, urban disruption is evident. It is plain that we must use every resource at our command to solve the urban transportation problem.

THIEVERY OF CREDIT CARDS FROM THE MAILS

HON. JAMES M. HANLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. HANLEY. Mr. Speaker, in recent months, a dangerous trend in criminal activities has taken place causing a loss of untold millions of dollars. It involves the organized and wholesale thievery of credit cards from the U.S. mails. Within the last few days alone, grand juries in New York and Chicago have indicted over 40 persons in connection with these illicit operations.

There are two basic ways of halting this sort of activity, Mr. Speaker. The first involves increased surveillance on the part of the Post Office Department which is an administrative function. The second, and the issue to which I ask my colleagues to address their attention today, is a banning of unsolicited credit card deliveries from the mails. I am today introducing legislation which hopefully will effect this latter policy.

Because of the spiraling increase in the number of unsolicited credit cards sent through the mails, because of the inordinate temptations to pilfer them and because of widespread criminal attempts and successes at pilfering them, it is incumbent on the Congress to act promptly on this vital matter.

Briefly, Mr. Speaker, my bill will require anyone desirous of sending a credit card or similar device through the mails to send it as a registered item to a specific addressee, to mark clearly on the envelope that it is a credit card or similar device and to assume the cost for return delivery should the addressee refuse to accept the envelope.

The need for this legislation was clearly expressed by Brooklyn District Attorney Eugene Gold in an article appearing in yesterday's Wall Street Journal and in a press release issued by the Postmaster General last evening. I want to include the article from the Wall Street Journal and the press release at this point in the RECORD:

[From the Wall Street Journal, July 30, 1969]

TWENTY-THREE CHARGED IN NEW YORK WITH USE OF STOLEN CREDIT CARDS

NEW YORK.—A Brooklyn grand jury indicted 17 men and six women on charges of using stolen credit cards, a crime Eugene Gold, Brooklyn's district attorney, said was encouraged by "helter-skelter, indiscriminate" distribution of these cards.

The individuals indicted were accused of using 20 stolen Mastercharge credit cards to bilk First National City Bank, the issuer, of $175,000 during the past six months. They were charged with forgery, petty larceny and possession of forged instruments. Three men and three women have been taken into custody and the district attorney's office said the others were being rounded up.

Mr. Gold described the group as members of an organized credit card ring and identified Salvatore Cavallaro, 36 years old, as the ring leader. Mr. Gold said the credit cards had been stolen by five Post Office employees who were arrested earlier this month on Federal charges.

Members of the ring used the cards, Mr. Gold said, to charge "every kind of thing you could think of," and then sold some of the goods while keeping other items for their personal use.

In announcing the indictments, the district attorney attacked "the helter-skelter, indiscriminate distribution of credit cards" by banks and other businesses. He said such distribution encouraged crime by making it possible for unauthorized users to acquire cards and forge signatures on them.

This kind of crime, Mr. Gold said, "runs into hundreds of millions of dollars," and this cost "is passed on to the buying public." Mr. Gold said Federal-state legislation is needed to prohibit business from sending cards to persons who haven't asked for them.

A spokesman for First National City said the cards used by those indicted had been solicited. However, First National City and other New York banks have in recent months sent out thousands of unsolicited cards. The cards were sent to persons who have done business with a bank or who have an account there.

POST OFFICE DEPARTMENT PRESS RELEASE

Postmaster General Winton M. Blount announced that Postal Inspectors began an arrest roundup today of 30 persons in the Chicago area on charges of mail fraud. The group was indicted by a Federal Grand Jury on July 29, 1969, for allegedly conducting a widespread scheme to illegally use credit cards issued by five major Chicago banks.

In making the announcement, the Postmaster General said the indictments and arrests marked the first prosecutive phase of a continuing 2½-year investigation by a force of Postal Inspectors and the staff of United States Attorney Thomas A. Foran.

During the latter part of 1966, the banks—all members of the Mid-West Bank Card System—issued MBC Credit Cards to its depositors and others and entered into agreements with local merchants for the acceptance of the cards as payment for goods and services. Under the agreement, participating merchants were to forward the sales slips to the appropriate banks for reimbursements and the banks would then bill the cardholders on a monthly basis.

The indictment, however, accuses the defendants—including 16 retail store merchants, three gasoline station operators and a Chicago postal employee—of preparing false sales slips and mailing them to the banks for payment. The scheme reportedly resulted in the loss of millions of dollars to the banks before Postal Inspectors and local police, working closely with bank officials, were able to bring the fraud under control. Chief Postal Inspector Cotter stressed as invaluable the assistance rendered by Chicago banks in the lengthy investigation.

Investigations of alleged credit card frauds by Postal Inspectors have increased over 700 percent in the past four years. Chief Cotter said during this period a total of 223 persons have been convicted on charges of credit card fraud and 265 others are awaiting trial.

MINNESOTA ACCOUNTANTS: DIVORCE BANKS FROM ACCOUNTING SERVICES

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. MATSUNAGA. Mr. Speaker, in April of this year, I appeared before the House Committee on Banking and Currency to present testimony in connection with the hearings on H.R. 6778, a bill to amend the Bank Holding Company Act. In my testimony I urged the committee to amend the omnibus measure to prohibit banks from engaging in professional accounting services, as provided in my bill, H.R. 272.

I am pleased to report that support for this proposed amendment has been steadily mounting, as evidenced by the recent endorsement of H.R. 272 by the Minnesota Association of Public Accountants. At its annual meeting last month, the association voted unanimously to endorse my bill.

In view of the impending House action on H.R. 6778, I believe my colleagues would find the information contained in the resolution both pertinent and informative. It is therefore submitted for inclusion in the CONGRESSIONAL RECORD:

Whereas increasing numbers of banks throughout this country are advertising and offering to perform accounting services for the public; and

Whereas this trend is not in the best interests of the business community, the public or the public accounting profession; and

Whereas it appears that this problem can be effectively solved only by Congress enacting legislation; and

Whereas a bill to prohibit banks from performing professional accounting services has been introduced in the United States House of Representatives as H.R. 272 by Representative Spark M. Matsunaga of Hawaii, and

Whereas the Matsunaga bill deserves the enthusiastic support and backing, not only by all members of Congress, but by every individual member of the public accounting profession and accounting organizations all across our country; and

Whereas Chairman Wright Patman of the House Banking and Currency Committee allowed consideration of H.R. 272 in conjunction with hearings on H.R. 6778, a bill to regulate one-bank holding companies; and

Whereas, the House Banking and Currency Committee has both bills under consideration at the present time;

Now therefore be it resolved that the Minnesota Association of Public Accountants does hereby express endorsement of H.R. 272 and H.R. 6778 by this Resolution; and

Be it further resolved that a copy of this Resolution be forwarded to the Senators and Representatives from this state in the United States Congress; and

Be it further resolved that a copy of this Resolution be spread upon the minutes of this meeting and be made a permanent part of the records thereof.

A TIRED AMERICAN

HON. TIM LEE CARTER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. CARTER. Mr. Speaker, many of our good citizens think that the press, television, and radio convey the true feelings of the majority of our people. It is my belief that this is incorrect.

Many of our people feel as this former Army officer and veteran of the Vietnamese war feels. I include in the RECORD his letter for your perusal:

SHENANDOAH LIFE INSURANCE CO.,
Roanoke, Va., July 28, 1969.

Congressman TIM LEE CARTER,
Longworth Office Building,
Washington, D.C.

DEAR CONGRESSMAN CARTER: The waves of un-Americanism radiating from the TV networks evening newsprograms have finally gotten to me. As my Congressman from the 5th District, and personal friend, you represent my only voice in Washington.

Dr. Carter, I am a tired American, tired of being considered "Square" because I stand up when the flag passes in review. I'm tired of having the world panhandlers stone our emissaries when they visit their countries. I am sick and tired of the bearded beatniks who say they have the right to determine what laws of the land they are willing to obey. I am also tired of the fat, insulated liberals on Capitol Hill who sit on their mountains of inherited money and blandly uphold the actions of this lunatic fringe who menace our streets and campuses.

I am fed up and ashamed of the long haired protesters who claim they represent the "new tomorrow" of America. I am also tired of the Congressmen who uphold the actions of these sallow-faced cowards whose only claim to fame is their ability to run down the old-fashioned virtues of honesty, integrity and morality. I am a tired American—who is extremely tired of supporting families with my tax dollars who have not known any source of income other than government give-away program for three generations. I am a tired American—who is fed up with that civil rights group that is showing propaganda films on college campuses from coast to coast with Che and Ho Chi Minh as their star performers.

I am weary of the bearded, unkempt bums who prefer protest marches and sit-ins to regular jobs. I am tired of slack-jawed clergymen who have made a career out of supporting self-righteous integration causes, yet send their own children to private schools.

I am a tired American who had to work nights, weekends and summers in order to earn a college degree, and I resent those who profess to hate capitalism, but are always at the head of the line demanding their share of the good life.

Congressman Carter, I am really tired of those elected officials who are willing to compromise on anything, but will make a firm commitment to nothing.

We live in the greatest nation in the world, dedicated to the principles of freedom and justice for all—all mankind. My fight is with those officials who would sacrifice my personal freedoms to appease the wailings of a few loud-mouthed radicals.

As my elected official, please convey my thoughts to your fellow Congressmen.

With warm regards,

JACK HIBBARD.

CAPTIVE NATIONS WEEK

HON. DANIEL E. BUTTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. BUTTON. Mr. Speaker, it was with great interest that I noted the passage of Captive Nations Week, which has been observed each year since 1957. Congress first recognized the plight of these nations when it passed Senate Joint Resolution 3, and the President issues a proclamation every year, focusing attention on the downtrodden peoples of Eastern Europe.

But it is not the state of the nations themselves that we deplore, so much as the form of human bondage which they represent. Bodies of people, calling themselves Rumanians, Latvians, Czechoslovakians—yet the freedom and self-determination of these peoples are overshadowed by the dire threat of force. Soviet policy is thrust upon them, and it is dangerous not to conform.

The "inalienable" rights of free speech, free press, and freedom of movement are curtailed for those peoples, nations in one sense, yet exiles in another, who are striving to lead lives of their own behind the Iron Curtain. The American tradition—indeed, the tradition common to free nations from the time of Locke to Gandhi to the present—is violated by the subjugation of the "captive nations."

Mr. Speaker, fortunately, the Iron Curtain is not impermeable. It is susceptible to rust, to corrosion. Particularly in today's world, people cannot help but reach out to others and communicate, regardless of the pressures put upon them. Such communication may take the direct forms of religion or Radio Free Europe; or it may be indirect, in the larger sense, such as the empathy which sparked the proclamation of Captive Nations Week. Man is by nature sympathetic, and desirous of freedom. So long as these two factors remain constant, which they have since the beginning of history, hope will persist. The Iron Curtain will dissolve.

One of the great ironies of today's world is that old nations, once free to determine their own courses of development, are held in abeyance, while new nations have been emerging in relatively prolific numbers throughout the past decade. The powers of America, England, and France have come to the realization that it is wrong to force their culture or forms of government—democratic, or no—upon other peoples, even if it would be "for their own betterment." Thus, colonialism, even "new colonialism," has become archaic to a great extent. The important principles to abide by are that such peoples can determine their own government, and that such rights as are enumerated in our first amendment to the Constitution are not intimidated. An African nation, for instance, who chooses a socialistic form of government, is recognized by other free nations, regardless of their own form of government. The key word is "choose"; that nations—defined in terms of people—are free to choose the form of government which seems most workable and desirous in reference to their peculiar situation.

It is incredible that "captive nations" should exist in the political climate described above—one of tolerance, which stresses the freedom of self-determination. The repression of free speech and action is indeed an eyesore in today's world. It is an awareness of this repression, and a continuing hope that the free world will not allow such a situation to persist indefinitely, that prompts me to recognize the significance of Captive Nations Week.

WHAT IS MAN'S FUTURE IN SPACE?

HON. HASTINGS KEITH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. KEITH. Mr. Speaker, in the aftermath of the Apollo flight, hundreds of thousands of words have been written in its praise. I doubt that there is a newspaper in the Nation that did not address itself to this remarkable achievement. Many, however, went beyond the moon landing in their editorializing, and speculated on the future of this historic quest of mankind's into the unknown of space.

And many concluded, as I have, that future space flights must be joint efforts, international in scope, both for the benefit of this country and the rest of the world. Some have suggested the U.N. as a medium; others have suggested binational agreements. But an encouraging number are united on the premise that space cannot be one nation's province—and should not be even if we could afford to "go it alone."

It is both appropriate and symbolic of the broadness of this opinion that the New York Times, a national newspaper; the Boston Globe, a regional one; and the Quincy Patriot-Ledger, a city newspaper from my district—all reached similar conclusion on the desirability of international cooperation in space.

This uniformity of opinion is a rare thing for such different newspapers, and serves to strengthen my belief that I am representing a much larger body of opinion than that of my district alone when I filed a resolution last week calling on the President to formally invite other nations to join our space program.

I, therefore, call the attention of my colleagues and the Nation to these three editorials. I feel they represent well the feelings of the American people on this matter.

The editorials follow:

[From the Boston (Mass.) Globe]

WHAT NEXT? AND BY WHOM?

With their splashdown in the Pacific Thursday, new luster will be added to the names of Neil Armstrong, Edwin Aldrin and Michael Collins, already writ as large and bright as any in history. Then what? And by whom?

It is unthinkable that man should quit now. Nor will he. The imagination that enabled him to bounce like a laughing child on the satellite of the small planet which he so recently and with such vanity believed to be the center of the universe will not let him rest until he has plunged deeper and deeper into the unknown that surrounds him.

He will climb the space mountains because they are there. He will go on, in the words of the French political economist, Jean Monnet, because "he can no longer think in limited terms." Or because, as microbiologist Rene Dubois sees it, "the human spirit derives boundless power from a poetical faith in what it can do." Or, perhaps better still, for the reasons given by the Jesuit theologian, Walter Burghardt:

"It is part of man's task, his Godgiven destiny, to master the universe, to uncover its secrets, to make it serve man, to make him more human, to bring him closer to his fellow man."

Human, in its best sense, man is not. He is one of the most destructive and avaricious of earth's animals, over all of whom he was created to reign, unable and often unwilling even to feed all of his own kind, habitually fouling his own environment. But human beyond dispute he must learn to be, for otherwise his days on his beautiful Earth most surely will be numbered.

His situation cannot be so bad as historian and urbanologist Lewis Mumford sees it:

"The Moon landing is a symbolic act of war and the astronauts' slogan . . . proclaiming that it is for the benefit of mankind is on a level with the Air Force's monstrous hyprocrisy, 'Our Profession Is Peace.' "

Yet, denying Mr. Mumford's denouncement, we cannot afford to preen ourselves, either, merely because three virtual supermen have accomplished near miracles. Getting off the Moon and docking with the mother space ship was perhaps even more wondrous, and certainly more frightening to the rest of us earthlings, than landing on it.

Just the same, there is no denying that the Moon triumph, for all the boundless accolades that are its proper due, does indeed coincide, not only with utterly senseless rivalries of governments, whose peoples hunger for peace. It also coincides, right here in the United States, with racial, class, economic and other totally avoidable woes suggesting the possibility of social deterioration for which there is no excuse in a society capable of our technological miracles.

Space exploration should and will go on. But it should be a project of a united rather than a divided mankind. It is ridiculous for nations to vie for little pieces of it, racing for this corner of it or that in the name of national prestige, risking national bankruptcy, further rivalry and continuing domestic turmoil in the process.

The Moon project has cost the United States approximately $24 billion. The Russians probably have spent as much or more. It is argued that the technical spinoff of their individual triumphs are too valuable for rival economies to share. But it surely may be answered that the spinoff of learning to work together in the vastness of space would be invaluable on Earth. Space exploration is an ideal instrument for unifying mankind. It could be turned to no more noble purpose.

[From the New York Times]

THE SURGE INTO SPACE

In time, there will be a new generation that will take manned flight to the moon as much for granted as college students today take airplane travel and television. By this weekend, the wonder and the jubilation at the historic feat of Apollo 11 are still reverberating around the world, evoking in men of every land and every clime a sense of awe at what they had seen, mingled with gratification that they were alive at this historic moment in the history of the human race.

If there had been any doubts that mankind in general and the United States in particular would persevere in space exploration, they have been removed by the spectacular success of the lunar voyage of Armstrong, Aldrin and Collins. But important questions remain as to what shall be done and in what order the wide variety of challenges and opportunities of space exploration shall be approached. Priorities in space research are essential because neither the United States nor all the world's nations together are rich enough to do simultaneously everything that might be done in this still-new dimension of human achievement. Even a brief recital of the most obvious possibilities is enough to indicate what difficult decisions lie ahead.

In the volume of space near earth it would be useful to establish one or more permanent stations for scientific study of the heavens—through telescopes beyond the obscuring atmosphere of this planet—and of the earth itself, many aspects of which can best be examined from orbit. The earliest opportunities for commercial exploitation of space are likely to raise in this zone, where communications satellites have already blazed the path. Development of reusable space shuttles would cut costs and speed the economic development of the region near earth.

The moon itself requires far more extensive exploration than is envisioned in the presently projected limited series of Apollo flights. Sooner or later, this exploration as well as the exploitation of the moon for scientific and other peaceful purposes will require establishment of permanent settlements on earth's satellite. What might be called the domestication of the moon will take decades, even centuries. The full difficulties of the task will not be clear until more is known about the resources of that body, particularly whether water and other essentials for life can be found there.

Exploration of the other planets of the solar system is still in its infancy, but offers enormous challenges and possibilities. Hundreds of unmanned, instrumented rockets—like those that have already made the initial reconnaissances of Mars and Venus—will have to be sent out in the years and decades ahead, reaching finally even to distant Pluto.

Any effort to send men to Mars this century, as Vice President Agnew has suggested, will be enormously expensive and far more difficult than anything on mankind's present space agenda. A decision to attempt this—if one is made—should be taken only after extensive analysis and debate, instead of being promulgated hastily in the euphoria induced by the colossal feat of the American astronauts.

In 1493 Pope Alexander VI issued a decree dividing between Spain and Portugal the "new world" Columbus had discovered. No similar document is needed now because, fortunately, the Space Treaty provides international agreement that no celestial body is subject to national appropriation. But what is needed is action and organization to make space exploration truly international so that the resources of many countries, not only the two most powerful nations, are drawn into the effort. And there must be an international division of labor that will assure maximum coverage of all the tasks ahead while avoiding the expensive waste of needless duplication and rivalry which marred the trek to the moon.

Precisely because it was Americans who first landed on the moon, President Nixon could well take the lead in inviting the United Nations into the picture as the organizing force for man's coming surge into space.

[From the Quincy (Mass.) Patriot Ledger, July 29, 1969]

AFTER APOLLO

What next in space?

In the moonglow of Apollo 11, the possibilities seem limitless. Yet, against the potentials of space exploration must be weighed the United States' limited resources and human needs here on earth. Our space program must go on, but the critical questions are the direction, the speed, and the level of these activities.

Future targets of the American space program are currently being studied by a White House "space task group" headed by Vice President Spiro Agnew and including Dr. Thomas O. Paine, NASA administrator; Air Force Secretary Robert Seamans and Presidential Science Adviser Lee Dubridge. The report of this group, setting forth proposed space objectives for the next 15 years, is scheduled to be delivered to President Nixon in September.

The goal of the 1960s was precise: send a man to the moon and back safely before the end of the decade. This target now has been met, the pledge has been fulfilled and U.S. pre-eminence in space well established.

At this time, there is no need for "crash" programs in space requiring massive funds. NASA's budget, once over $5 billion, has since leveled off at about $4 billion—which Dr. Paine observes is only 5 percent of our defense budget and only 10 percent of what we spend on women's dresses.

Instead of large-scale financing, NASA's budget for the coming years should be steady and predictable—perhaps in the $3 to $4 billion range—with funds committed in advance by Congress for several years to enable sensible planning.

The United States should also seek greater expansion of cooperative international space programs. Already, there are several international space projects in operation—in such areas as meteorological and communications satellites, for example—and in many cases international cooperation is not only desirable, but imperative.

Space exploration should not become the province of a few wealthy, scientifically-advanced nations. It should belong to all civilization, ideally with the talents and the resources of many nations being pooled to expand man's knowledge and to share in its benefits.

Hopefully, instead of competition in space between the United States and Russia, there will develop cooperation in exploring man's new environment, including joint manned space flight ventures. The United Nations can provide the institutional umbrella for such cooperative programs.

Certainly a long-range program should be planetary landings—on Mars, then on other planets. But from the moon to Mars is a mighty jump, even though scientists are ultimately confident it can be achieved.

For the shorter term, our efforts should be directed toward mastering our spatial environment between earth and the moon. NASA's plans for a series of followup moon landings, for the development of orbital laboratories, a large space station and "space shuttles"—a reusable rocket system—are realistic and important projects.

FOLLOWTHROUGH NEEDED ON MARITIME RESEARCH AND DEVELOPMENT

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. ROONEY of New York. Mr. Speaker, our national seapower is a topic of great concern to many of us here. One of the aspects of seapower is, of course, research and development, and the following article written by my friend of many years, Capt. Hewlett R. Bishop, spells out some of the problems we must face in this area. I have known Captain Bishop since I first came to the Congress. He retired a few years ago from the position of Atlantic Coast Director of the Maritime Administration after serving 15 Administrators over a 19-year span. He is now the executive vice president of the National Cargo Bureau, Inc., and is, therefore, a man to be listened to when he addresses himself to the problems of the U.S. merchant marine. I urge my colleagues to read Captain Bishop's article.

Under the permission heretofore unanimously granted me I include Captain Bishop's article with these remarks:

[From the Journal of Commerce, Nov. 14, 1968]

ENGINEERING RESEARCH FOLLOW-THROUGH NEEDED

(By Capt. H. R. Bishop)

R&D have been the magic letters in Government and Business circles for the past several years. The word has been, "budget it in R&D and you're home free." In the maritime field government has done a lot but, I think, only half way because after the Research and some Development, usually to prove to the ones working on the project it's feasible, they drop it. There has not been enough follow through. Then some time later someone else, usually in another part of the world, capitalizes on our R&D.

A few "for instances" that come to mind:

The United States Shipping Board, in the late 20's and 30's, had a ship upgrading program—WW I ships were reconverted (Congress could not see any necessity to build when all those good(?) ships were in lay-up). Three such ships were the "Triumph," "Courageous" and "Defiance." I was aboard the latter in Hong Kong. She had, as did the other two, bridge control that worked. The main engines were a flop, so they forgot about the successful bridge control. The U.S.S.B. also converted a fleet of ships to direct diesel. These produced many headaches and had many bugs, BUT they led to a successful diesel building program in World War II. The United States merchant marine industry wasn't interested after the war, so they were sold foreign and served efficiently and made money for their new owners for many years in competing merchant marines.

U.S. RESEARCH ADAPTED

Thirty years later a foreign nation came out with a much heralded automated diesel with a reduced crew complement and bridge control. They were visited by the top government merchant marine officials in this country who never realized the crew complement was the same as the United States diesels of U.S.S.B. vintage and the bridge control was no more efficient. Now everyone has accepted the results to which United States R&D contributed, except the United States.

Hydrofoils are another more current example. Marad and industry (engine manufacturers, aluminum and aircraft, among others) cooperated to design and develop the worlds first seagoing hydrofoil. It was named for the deceased Chief of the R&D of Marad who conceived it. Despite the errors, which included the decision not to fit her for useful service (a decision made for budgetary reasons), the "Denison" was a success. But her timing was off when the program was ready for a major Governmental decision. It was one of the many times Marad was changing administrators, and the agency was being dictated to, and hamstrung, by the Department of Commerce, which had little interest and no knowledge of maritime affairs. So, they decided to do nothing—a rather common maritime practice—and the brand new, successful craft was sent to the nearest reserve fleet to await developments. She made the headlines again, this time unfavorably, for she ran ashore. Few knew why, her control house (pilot house) design had been greatly influenced by aircraft people, she had no vision astern. She ran up on a mudbank in a river where the channel ranges were astern. What an inglorious finish for a successful research project. Just last month I read an article which referred to the "Denison" as an early NAVY project. It's obvious we not only do not follow through—we forget.

A SHIP PROJECT CITED

Nuclear ships is perhaps our most well-known research project. The "Savannah" was so long building, during which time we escorted representatives of foreign countries (friendly or otherwise) through her, with access to her plans, that some of her features, including the control room and the bridge control, were adopted and in use on foreign ships even before the "Savannah" put to sea. Here is a perfect example of a successful research project, despite Governmental bickering between agencies, that now no one knows how (or if they do, has not the courage to say so) to carry on and take advantage of it.

These are only highlights—there are many more of the same—of the failure to follow through and take full advantage of R&D. We all know it has to take time, but projects should not just sit and wait for someone else to take the advantage of them. Decisions and action are needed. Perhaps it should be RDD&A, for Research, Development, Decision and Action.

Just in case there is any misunderstanding, I am all for R&D. In fact, the National Cargo Bureau, with whom I am associated, has been working on such a program in cooperation with the United States Coast Guard. Through the State Department our joint efforts have expanded to the International Maritime Consultant Organization and has resulted in an interesting project. The joint industry and government participation has been able to get over many of the rough spots with National Cargo Bureau research funds paying the way, instead of having to wait for Government money. Ideas and manpower have been furnished, without cost, by both industry and the United States Coast Guard.

GRAIN STILL TROUBLESOME

The goal is the safe carriage of bulk grain. It seems strange that a commodity that was probably the first to be transported on board ship should still be making problems, but it is.

Bulk grain regulations were first issued by local authorities. In this country they were first established by the New York Board of Marine Underwriters and later put into regulations by the United States Coast Guard. The first international agreements for grain were contained in Chapter Six of the Safety of Life at Sea Convention of 1948. The current is Chapter Six of SOLAS 1960, which became effective in 1965. Even before this doubts were expressed as to the effectiveness of the regulations, which had been adopted in the belief that grain could be trimmed completely, filling compartments up to the deckhead, and that grain settled two (2) per cent on the passage. To control the latter, feeders were required in the belief that grain would flow into the void spaces caused by the settling.

Through the facilities of IMCO a program of studying the settlement of grain in feeders and hatches were devised. This resulted in participation of Masters of the performance of over four hundred (400) grain ships loaded in worldwide ports, and proved that there was no settlement in good weather and much settlement in bad weather. The question was obvious, if no settlement in good, where was the grain going in bad weather. It increased the doubt in the effectiveness of the regulations.

This resulted in the decision for us to launch our R&D program. This has involved extensive sea tests and studies to which American ship owners have contributed the use of their ships. The American Bureau of Shipping also was consulted and nothing was done that would alter a ship's class. The project culminated in three series of shore based tests on a scale model of a cargo ship's grain compartment, fitted alternately with every approved and newly conceived contrivance for carriage of grain. Ideas and manpower were contributed by the Coast Guard and National Cargo Bureau. Reports of the first tests were made to a United States panel of marine experts and, through them, to the Sub-committee of Bulk Cargoes and Sub-Division and Stability in IMCO. This resulted in further tests, with ideas and suggestions being made by all of the forementioned bodies. In the final series, the United Kingdom and Canada participated. In the meantime, other nations carried out companion experiments and tests. All in all, sixteen nations have participated in this work and all have made some contribution.

We now know that grain cannot be trimmed up entirely to the deckhead, that the two (2) percent settlement does not occur, and that feeders do not feed. Therefore, the concepts of which the present SOLOS 1960 bulk grain regulations are based are erroneous and that some of the conditions of loading permitted are dangerous. This has been reported to the Maritime Safety Committee and the Sub-committee of Bulk Cargoes has been directed to prepare amendments to Chapter Six with the Sub-committee of Sub-division and Stability preparing the stability criteria.

We have been spurred on in this work being ever aware that too many seamen (now at least 125) have lost their lives on ships loaded with bulk grain since the present international regulations were adopted. Unfortunately, several of the ships just disapproved—the latest of these in October of this year.

NEW RULES FORMULATED

Based on these experiments, studies and tests which have involved thousands of man hours and hundreds of ships, as well as shore based equipment, the Sub-Committee on Bulk Cargoes has in draft a new Chapter Six, which should be finalized at its January, 1969 meeting in London. The stability criteria should also be finalized by the Sub-Committee of Sub-Division and Stability at their January, 1969 meeting. If both are approved, they will be sent to the Maritime Safety Committee for action at its February, 1969 meeting.

Approval there would send it to the Assembly for action in the fall of 1969. If any of the four fail to approve, it will be set back at least two years. You can be assured that the United States will not rest on its oars and will work for its approval. We have already taken interim corrective action on our own ships. The new rules, if approved, will consider each ship on its individual characteristics. This is where the Naval Architects will have to assist in preparing ships data for the use of the Master and loading authorities. Incidentally, the rules will not only be safer, but in most cases more economical for the shipowner.

A lot of work and words about old commodities and their problems, but we mustn't neglect the new ones. Last year I wrote in this issue about the importance of container ships being designed to protect the cargo. Much work has been, and is being done, on this problem.

CONTAINERS PRESENT PROBLEM

The greatest damage to cargo stowed in containers is occurring for two principal reasons—improper packing and stowage of the cargo in the containers and damage to containers carried on deck. The latter is one that naval architects can still contribute a great deal to reducing.

Ships are being built with greater freeboards, some are being weather routed, and some have higher forecastle heads to protect the cargo. A few have their bridges forward for the same reason (a combination of the two would be ideal, and you may see it soon). The use of a structure to support other than the bottom tier on deck so that the entire load will not be lost and raising the height of the bottom tier to permit the force of the seas to break under it are two other improvements in use. Stabilizers are also being installed. These, and many other changes, are all to the good.

More still has to be done to protect the sides of the container from boarding seas. It only takes one to jeopardize the entire deck load and perhaps the ship. Last year I mentioned this problem and stated that many years ago seamen on small ships stretched lines on deck to break up the sea and prevent its full force breaking on the hatches; also, that during World War II the suggestion was made that wire nets be rigged outboard to break up the sea. (We took another approach and strengthened the outboard sides of the cases.) It seems that the breaking of the force of the sea needs more serious attention on the container ship.

Once more going back to the sea for ideas—years ago we used to hear of storm oil to smooth the sea. It worked. Several times, in my experience when we couldn't get forward to turn the valves, we used a can of lubricating oil, pouring a pin-sized stream into a toilet midship on the weather side, the valve being secured in an open position. I've seen a gallon of lubricating oil protect a cargo on the after-deck a whole night, and it didn't cause a mess either.

Perhaps in these days of new oil products, someone can come up with an inexpensive oil that could be ejected in a stream of water, under pressure, in several locations (ships are now bigger and faster) on each side of the ship, to be used in heavy weather when and where required. If it left any residue, it would be no worse than that picked up by the containers on the open road.

I believe there is still room for improvement and Naval architects are the ones who are in a position to come up with the solution.

MOON-NIGHT

HON. ROBERT O. TIERNAN

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. TIERNAN. Mr. Speaker, all Americans and citizens of the world were thrilled at the recent success of the

Apollo 11 mission. The courage and expertise that were evidenced by our three astronauts, Neil Armstrong, Edwin Aldrin, and Michael Collins, was a tribute not only to man's technology, but also to the testimony of President Kennedy, who 8 years ago committed this country to a manned lunar landing by the end of this decade.

Among the many tributes that have flowed into my office is a poem composed by one of my constituents, Mrs. Irene Viau of Warwick, R.I. I feel that this poem would be of interest to my colleagues and urge their attention to it, as follows:

MOON-NIGHT

(By Irene Viau)

Moon-night moon light night of wonder
You hold me in your spell.
Moon-night while in my deep slumber
Loves dream only, you foretell.

Moon-night and the stars in array
Heaven made the plan one day
Now you cast your magic spell
On Neil, Edwin and Michael.

You were a gracious host
The gems they left, they loved the most.
Old Glory now stands high
The world is thrilled and so am I.

ROGERS AGAIN URGES MEANINGFUL TAX REFORM

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. ROGERS of Florida. Mr. Speaker, recent actions regarding extension of the surtax and consideration of tax reform legislation indicate the depth and pervasiveness of these issues with the American people.

I have supported an extension of the surtax because I believe it is the fiscally responsible position to take in light of our extensive commitment in Vietnam and the devastating effects of inflation at home which, if not controlled, will take 5 or 6 cents more out of every dollar before the end of the year.

Yet, I did not support the surtax without a strong belief that the Congress should promptly consider meaningful tax reform legislation, and particularly that the House Committee on Ways and Means would afford this body an opportunity to do so before the August recess.

Time is short now before that recess is upon us, and the burden upon the low- and middle-income taxpayer of this Nation has been heavy, and deserving of relief. I have repeatedly, through legislation and remarks on the floor of this body, called for meaningful reform, and I now again call upon the House Committee on Ways and Means, and upon the distinguished chairman of that committee to afford the House an opportunity to consider tax reforms.

Specifically, I have introduced legislation to increase the personal exemption from $600 to $1,200 because I believe the present amount is only token relief in view of the spiraling cost of living we experience today. Raising a family is not possible on $600 per person per year and I hope and expect at least a substantial increase in this exemption if reform is to be meaningful.

Moreover, I have called for a reassessment of the provisions governing the head-of-household deductions, and I would like to see a reduction in the rates. At the present time, at the middle-income level of $6,000 to $8,000, there is little difference between the rate paid by a taxpayer who is the head of a household and one who is single, yet the expenses of the head of a household, such as a widow with children, are much greater in most instances. At the $6,000 level, the single taxpayer pays only $70 more in taxes than the head of the household under present rates. I believe the rates applicable to the head of the household should be more in line with those available to joint returns.

Too, I have introduced legislation to permit those over 65 years of age to deduct all medical expenses. This would restore the provisions in the law that were in effect until January 1, 1967. I do not feel that the present law which permits deductions only if medical expenses exceed 3 percent of income is realistic in light of the present cost of living, and I would hope the Ways and Means Committee will consider this proposal.

In conclusion, I believe that the strong support being given to closing many of the tax loopholes that exist with respect to charitable trusts, the oil-depletion allowance and others will do more toward helping the overwhelming majority of lower- and middle-income taxpayers who share most of the burden and too often have been taken for granted because they are honest and do pay their taxes.

RETIREMENT OF LT. GEN. WILLIAM F. CASSIDY, CHIEF OF U.S. ARMY ENGINEERS

HON. WM. JENNINGS BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. DORN. Mr. Speaker, today a great soldier leaves the Army. Lt. Gen. William F. Cassidy, the Chief of Army Engineers and one of the finest gentlemen in the Federal service, will step down from that distinguished position after many years of faithful service to his Nation.

General Cassidy was appointed Chief of Engineers in July 1965, after holding the most important and prestigious assignments which the U.S. Army Corps of Engineers has to offer. These positions included division engineer, South Pacific Division, senior logistics adviser to the Republic of Korea, and Deputy Chief of Engineers, all of which broadened and qualified him for the most important role of Chief of Engineers. In this position he has distinguissed himself as, without a doubt, one of the greatest in a long line of great Chiefs of Engineers.

General Cassidy leaves a glowing record of accomplishments, a top-flight engineering and construction agency, and a career which is an example for all to emulate.

As a member of the Public Works Committee, I am personally proud to have worked with General Cassidy over the years and to have this opportunity to extend my personal wishes for continued success in the future.

VIETNAM, CRIME TOP DELLENBACK POLL

HON. JOHN DELLENBACK

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. DELLENBACK. Mr. Speaker, Oregon's Fourth Congressional District gives top priority to the war in Vietnam as an area of national concern, according to the results of my third annual constituent questionnaire. While this is not surprising, I did find it both surprising and interesting that the district ranks crime second in a list of 20 problem areas. This indicates that even in a district where there is relatively little crime in the streets, racial turmoil, and campus disorder, people recognize the need to place a high national priority on fighting crime.

The more than 22,000 persons who responded to my request for their views also reported that they strongly favor direct popular election of the President and Vice President and the elimination of all restrictions on wage earning for a beneficiary drawing social security benefits. They are in approximate balance, pro and con, as to the President's recommendations for an anti-ballistic-missile system and on the proposal to place the Armed Forces on an all-volunteer basis. They are opposed to lowering the voting age to 18.

The questions and the responses follow:

Do you favor

[In percent]

1. The direct popular election of the President and Vice President?

Yes	85.1
No	9.5
No opinion	5.6

2. Placing the Armed Force on an all-volunteer basis?

Yes	45.0
No	45.5
No opinion	9.5

3. The President's recommendations concerning an anti-ballistic-missile system?

Yes	40.8
No	40.6
No opinion	18.6

4. Lowering the voting age to 18?

Yes	65.0
No	29.8
No opinion	5.2

5. Eliminating all restrictions on wage earning for a beneficiary drawing social security benefits?

Yes	60.5
No	31.5
No opinion	8.0

In my questionnaire I also listed 20 issues and asked my constituents to number in order the six they considered the highest priority areas of national concern. Just as I asked residents of the Fourth District to make priority ratings, I ranked the answers, giving more weight, for example, to an item marked "1" than to one marked "6."

Following is a complete ranking of the 20 areas:

1. Vietnam.
2. Crime.
3. Inflation.
4. Tax Reform.
5. Tax Reduction.
6. Student Unrest.
7. Poverty.
8. Pollution
9. Race relations.
10. Defense budget.
11. ABM.
12. Education.
13. Social Security.
14. Draft Reform.
15. Electoral Reform.
16. Conservation.
17. Agriculture.
18. Housing.
19. Space Exploration.
20. 18-year-old vote.

Mr. Speaker, I also include the text of the bill I introduced amending the Military Selective Service Act of 1967:

H.R. —

A bill to amend the Military Selective Service Act of 1967 in order to provide for a more equitable system of selecting persons for induction into the Armed Forces under such Act

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Selective Service Amendments Act of 1969".

SEC. Section 5(a)(2) of the Military Selective Service Act of 1967 (50 App. U.S.C. 455 (a)(2) is hereby repealed.

SEC. 3. Section 6(h)(1) of the Military Selective Service Act of 1967 (50 App. U.S.C. 456(h)(1) is amended—

(a) by amending the fifth sentence to read as follows: "Any person who is in a deferred status under the provisions of subsection (i) of this section after attaining the nineteenth anniversary of the date of his birth, or who requests and is granted a student deferment under this paragraph, or who is otherwise deferred or exempted under the provisions of this section, shall, upon the termination of such deferred or exempt status, and if qualified, be liable for induction as a registrant within the prime age group irrespective of his actual age, unless he is otherwise deferred or exempted."

(b) by adding the following new sentence: "When such prime age group is designated by the President, any person who has attained the nineteenth anniversary of the date of his birth but not yet the twenty-sixth such anniversary who is not in a deferred or exempt status shall, if qualified, be liable for induction as a registrant within the prime age group."

SEC. 4. Section 16(a) of the Military Selective Service Act of 1967 (50 App. U.S.C. 466 (a)) is amended by adding the following proviso at the end thereof: *Provided,* That, in establishing categories of selection and in the selection of registrants within categories, the words 'age group or groups' may be construed to mean persons born between designated dates."

A COORDINATED NATIONAL AIRPORT AND AIRWAYS PLAN

HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. DON H. CLAUSEN. Mr. Speaker, this morning, I testified before the Interstate and Foreign Commerce Committee in support of legislation designed to build an airport and airway system consistent with jet age needs and objectives.

In view of the broad interest in the subject, by my colleagues, and aviation interests throughout the Nation, I take this means of bringing the content of my testimony to their attention.

I sincerely hope my recommendations will be helpful to all Members as they consider and evaluate the various aviation proposals before the Interstate and Foreign Commerce Committee.

My testimony follows:

SUPPORT OF H.R. 9325

Mr. Chairman, I sincerely appreciate this unique opportunity to testify today in support of H.R. 9325 to promote a coordinated national plan of integrated airport and airway systems in this country.

As I appear before this committee today, I'm tempted to say in a loud and clear voice, "Hallelujah, this is the judgment day." I've been waiting for a long time—looking forward to the day when a meaningful program, for building the finest coordinated, integrated and balanced airports and airways system, would be considered and advanced by the Congress of the United States.

In order to clarify what I mean by an airport system, I will briefly outline what I see will be required for the current and future interests of our air transportation users.

1. *Metropolitan areas* must move toward the adoption of the integrated airport system concept (HUB commercial or regional airports with satellite reliever and STOL based on air traffic engineering recommendations). This will permit more air access to the community rather than restrict the flights into the over-congested and too limited airports now serving our major cities.

2. *Intra-state* airport systems and programs must be established with special consideration given to helping small communities provide air access and some form of Federal, state or local government tax incentive or relief for private airports serving a public use. (Part of the state or local government matching share might be in the form of relief granted by local political subdivisions for privately owned airports—at least the runway, taxiway and parking ramp areas which are generally not direct revenue producers. Strong language in the committee report might serve to motivate the states to implement this recommendation.)

3. An *inter-state* system of airports.

4. *Inter-continental* or international system of airports capable of handling the SST and Jumbo Jet-type aircraft.

5. An *inter-metropolitan* area STOL transportation system of airports for communities less than 500 miles apart.

6. *Heliports.*

Two years ago, Mr. Chairman, I was privileged to address the House under special order on the subject of "the growing crisis of the lack of airports." At that time, I stated my conviction that the United States was facing an airport crisis of crippling proportions. In the two short years since I made that statement, the crisis has become even more acute, reaching a peak last July and August when congestion in the metropolitan area airports, airways and approach control facilities of the nation almost paralyzed the air transportation system. This situation, in my judgment, will continue to deteriorate unless the Federal government, the state and local governments, general aviation, commercial aviation, airline passengers, and air shippers act now to improve the system. The time has passed when we can defer action to await "further study of the problem," in hope of a few "painless," easy solutions.

OUTLINE OF A COORDINATED NATIONAL PLAN OF INTEGRATED AIRPORT AND AIRWAYS SYSTEM

Two basic requirements are needed—consideration and recommendation for adoption of a national airport system plan and a recommended method of financing this plan.

With the large costs involved, coordination between all levels of government in our Federal system must be maximized and unnecessary duplication of facilities must be minimized.

With land values escalating and available airport sites diminishing, particularly in the metropolitan urban areas, the problem of guaranteeing aviation access for general and business aviation type aircraft is crucial and a solution must be found immediately.

The problems of air safety and air space planning cannot be resolved or even considered until such time as the airport and heliport sites are specifically located on the ground.

As a member of the Roads Subcommittee of the House, I can tell you the United States of America has an enviable position of leadership in the world for having developed one of the finest road systems known to man—why not start today by committing ourselves to work toward developing the finest and safest airport system in the world.

With the congestion on the ground and in the air increasing, it becomes mandatory that we maximize the coordination between surface and air transportation program recommendations.

For many years, I have advocated locating air strips contiguous to highways. Lands for these strips should be acquired at the same time lands are acquired for highway purposes. All that is required is coordinated planning and financing.

Quite frankly, it might be helpful to have the Roads Subcommittee and the Aeronautics and Transportation Subcommittee meet in joint session for the purpose of considering these possibilities.

In any event, the history of our road construction program, which built the Interstate Highway System and has assisted the States in building their primary and secondary road systems, may well serve as a basic guide for programing an airport system. With the rapidly changing world situation, I have concluded in my own thinking that the U.S. airport needs of the immediate future will require:

1. A system of international airports to accommodate airborne traffic flying the world's airways, strategically planned and located in select sites throughout the United States.

2. An interstate system of airports for handling interstate flights.

3. Each State and county should develop an intrastate system of airports for aircraft flying principally between cities within a given State.

4. Every metropolitan area should develop an integrated system of airports designed to guarantee expeditious access and maximum safety for general aviation, commercial, military, and rotary-wing type aircraft.

5. Every incorporated community in America should have at least one airport with plans for expansion and adding airports.

Obviously, many of the airports will serve dual and possibly triple purposes until increased traffic would necessarily restrict them

to a single purpose. As examples, in the Washington-Baltimore area, Dulles and Friendship now serve international, interstate, and intrastate air traffic requirements. Washington National serves principally the interstate and intrastate categories.

WITHIN THE NATION'S AIR TRAFFIC CONTROL-AIRPORT SYSTEM

1. Create and develop general aviation airports that will be suitably located in metropolitan areas that will provide all required airport facilities, including communications and terminal VOR's, to attract a maximum volume of general aviation activities away from air carrier airports so as to achieve maximum airspace and airport capacity at air carrier airports. Such reliever airports to adequately serve general aviation should have:

Convenient ground transportation to business areas;

Convenient transportation to air carrier airports;

Adequate navigational and landing aids, et cetera; and

Adequate passenger and crew facilities and services.

2. Encourage the Federal Aviation Administration to establish Federal regulations which will require that all aircraft operating within the terminal air space at major airports meet uniform standards for instrumentation, communications and navigational equipment. This objective is necessary to achieve optimum compatibility with the air traffic system and efficient utilization of all airport facilities created as an integral part of the national air transportation network.

3. Encourage the full development and utilization of reliever general aviation airports and other facilities that have been developed and financed for specific use by different segments of aviation.

4. Encourage and assist the Federal Aviation Administration to develop adequate air traffic control procedures for V/STOL aircraft which will permit maximum advantage to be taken of the unique characteristics of both V/STOL and fixed wing aircraft with a minimum of mutual interference. The greatly expanded use of V/STOL can provide substantial relief and alternatives for the growing problem of public ground access to airports.

5. Encourage the Federal Aviation Administration and the Civil Aeronautics Board to study the increasing volume of air taxi type operations at air carrier hub airports. Such operations should complement air carrier services at major airports without disrupting airline service.

6. Require Federal Aviation Administration to change criteria for placing towers, instrument landing systems, high intensity approach lights, radar surveillance and approach facilities, on smaller community airports outside of high density areas. With adequate facilities, many communities would then be in a position to attract industry for industrial airpark developments, provide relief from high density traffic areas, establish a constructive trend toward decentralization of business and government, and provide more stable and balanced economic development in the entire country.

7. Encourage wider use of helicopter service. Link the major air carrier airports together through the establishment of helicopter shuttles.

8. Escalate plans for developing surface transportation—improved access roads, monorails, and so forth—systems to serve airports of area. Coordinated planning and development of air and surface transportation systems is mandatory.

In order to better illustrate and define the suggested integrated airport system, I herewith submit a plan that could be applicable to the Washington, D.C., metropolitan area and other similar expanding urban areas of the country. Properly implemented, this plan could serve as a model for adoption elsewhere. This being the Nation's Capital, we should provide the example for others to follow:

METROPOLITAN AREA INTEGRATED AIRPORT PLAN

Introduction

One of the most critical problems facing the growth of the National Air Transportation System is the need for responsible overall planning in metropolitan areas.

It therefore appears appropriate for the Administration to develop and adopt an air transportation integrated airport philosophy to meet the growing demands of the public.

The following plan, already proven successful in application, will serve as the basis for developing this philosophy.

Objectives and purposes of an airport integrated system

To serve the public interests; promote air navigation and transportation; develop and increase air commerce; promote efficient, safe and economical handling of air commerce; to develop facilities for all segments of aviation. (General Aviation and Scheduled Air Carriers Aviation).

Systems requirements

The development of an efficient, economical and safe integrated system of airports conveniently located in and around a metropolitan area should consider as essential three basic assumptions:

1. Create an independent metropolitan airport authority by state legislation, with a clearly defined geographic area of jurisdiction. This authority, to be effective, must have the responsibility for all activities related to the planning, development, operation, maintenance and use of the system of airports. Further, the responsibilities must extend beyond the airport boundaries as critical considerations lie in the preservation and protection of the entire airspace over-lying the area of jurisdiction. Control over the construction of tall towers and other high structures is essential to maintain air traffic capacity of the system along with the need for adequate clear zones and buffer areas. The authority must anticipate the requirements for and make acquisition of sufficient land for these purposes.

It is noted that this basic plan does not oppose private ownership of airports within the jurisdictional boundaries, but rather, encourages such within the integrated airport systems concept.

2. Accessibility to the airport by the public will directly determine the extent to which people will use air transportation. Each airport within the integrated-airport system, therefore, should be no further than 30 minutes from the potential user by a convenient highway system. Future airport development should consider high speed freeways and access roads already in use along with those under construction or planned.

3. Aircraft with widely differing performance characteristics and runway load bearing requirements should be segregated. The capital and operating expenses required to provide facilities, at each airport, for such a broad range of aircraft is economically unrealistic. However, small aircraft should not be regulated off of publicly owned and operated large airports. By providing readily accessible facilities for General Aviation aircraft at satellite airports, General Aviation can be enticed to the smaller airports and in doing so, preserve the large air carrier type airports for expansion in air carrier operations. The value of scheduled air transportation has long been recognized, however, the impact of the General Aviation segment of the air transportation industry upon the metropolitan economy has never been fully understood or appreciated by the general public. As General Aviation continues to grow and serve as an ever increasing tool to business and industry, it is evident that the economy of metropolitan areas will be materially influenced by the availability of General Aviation airports.

Requirements for action

Legislative action at the state level may be required to provide a fully independent airport authority. Such legislation may also provide the foundation at the local level for public support and reduced costly rivalry by uniting the total metropolitan area within a single plan for economic growth. Legislation may further provide the framework for needed financial cooperation at the three government levels: federal, state and local.

The development stage of this legislation is the appropriate place for a thorough examination of both the current and forecast air transportation needs for the metropolitan area. Further, it is the proper time for numerous public hearings that will assure the maximum display of public participation in the development of the integrated airports system.

The result of the legislation should be a plan of operation that will identify the airports and their role within the metropolitan integrated airport system.

System operation

The layout of the individual airports should, in consideration of long range needs, provide for expansion. An example of this can be found in planning runway configuration. Two parallel runways into the prevailing wind will provide the greatest return for each dollar spent in both the area of greater utilization as well as land purchased for clear zones and buffer areas. Additionally, provisions should be made for at least one cross-wind runway.

Clear zones and buffer areas must be considered at the very beginning in order to permit the installations of all weather landing systems and to minimize noise problems.

The geographical location of each airport must be such that it does not conflict with the flow of traffic of any other field in the metropolitan area.

The problem associated with flights over populated areas and the intrusion of aeronautical hazards into the lower airspace cannot be solved by simply moving airports further from population centers. In order to attain the maximum capacity for air traffic, aircraft must be separated vertically as well as horizontally. With the authority to preserve and protect the lower altitudes, this integrated airport will provide space for a greater flow of VFR traffic without interfering with aircraft operating under positive control.

The ultimate goal of this plan should be the condition in which the only limiting factor for the volume of traffic is the capacity of each airport ground handling and servicing abilities.

Economics

The economic considerations in the development of the plan described herein are borne out by the experience gained in one metropolitan area over a period of 25 years. It has been recorded in metropolitan areas that over 90 percent of their aviation budget has been spent at airports maintained for aircraft having performance characteristics and runway loads bearing requirements equal or similar to those in scheduled air transportation. These aircraft comprise 25 percent or less of the total aircraft movements. On the other hand, 75 percent of the total aircraft movements (General Aviation) are accommodated at those facilities where less than 10 percent of the total capital investment has been made.

Conclusions

1. A good statute clearly setting forth the objectives and providing complete independence for the airport authority from the cross currents of local pressures, with general

agreement and support of an integrated airport system.

2. The safety of operation in the accommodation of air transportation in a metropolitan area dictates the separation of the smaller General Aviation aircraft from the larger, high performance aircraft used by the scheduled air carriers. This separation should not be attained by regulations.

3. In order to attain the maximum capacity for air traffic in a metropolitan area, aircraft must be separated horizontally as well as vertically. With the protecting of the lower altitude for VFR flights this greater volume of air traffic can be safely accommodated without positive IFR control. The integrated system of airports strategically located throughout the metropolitan area further permits the safe dispersing of air traffic throughout the entire metropolitan area.

4. The ultimate success of a metropolitan integrated airport complex is dependent upon the preservation of the lower altitudes for air traffic.

5. The problems inherent with the flight of aircraft over populated areas are not solved by moving of airports farther from the population center. Accessibility to the airport and thus the airplane directly determines the extent to which people will use air transportation. Convenience and accessibility can most logically be accomplished by a system of airports readily available to the populated area they serve, and accessible over high speed highways.

6. The separation of General Aviation aircraft from the scheduled air carrier aircraft is dictated by economics of airport development and operation. The relative capital and operating costs of providing facilities at scheduled air carrier airports is so great as to make it economically unfeasible to provide for the large volume of General Aviation aircraft on scheduled air carrier airports.

7. The value of scheduled air transportation is readily recognized, however, the impact of General Aviation upon the economy of a metropolitan area has never been fully understood or appreciated by the majority of the citizenry. As General Aviation aircraft will continue to serve as an increasingly vital tool to business and industry, it follows that the economy of metropolitan areas will be materially influenced by the availability of General Aviation airports to accommodate such air traffic.

Recommendation

The National Air Transportation philosophy should recognize that a need exists to develop an integrated system of airports in the metropolitan areas which will serve all users and yet preserve the capacity of the major airports for those who have the need for its specialized services.

AN EFFECTIVE AIRPORT TRUST FUND

In order to bring about the most orderly planning and implementation of the above system recommendation, I believe it is absolutely essential to adopt the Airport Trust Fund approach to revenue accumulation and apportionment.

Once adopted, the highway access routes to and from the airports can be better coordinated with the established Highway Trust Fund.

In order for this Nation to achieve the maximum in economic growth, the best environment for future living and totally balanced transportation system, a balanced method of finance must be advanced. Therefore, I strongly urge the adoption of three basic Trust Funds:

1. Highways and Roads.
2. Airport and Airways.
3. Urban Area Transportation Systems.

With the forthcoming Jumbo Jets, the surface transportation systems and routings are inadequate to handle the contemplated passenger traffic. Therefore, highways, bus and mass transit systems must be planned and constructed to accommodate the passenger flow generated by this type of aircraft.

COORDINATION AND BALANCE

I earnestly feel the public and private transportation engineering organizations of this Nation can come forth with the finest coordinated and balanced transportation system in the world if we, in the Congress, provide them with the financial vehicle (3 Trust Funds) to carry it forward.

The committee will have a monumental task in sifting through the thousands of words of testimony and then coming forth with the best possible recommendation for authorization.

THE ROLE OF THE CONGRESS

Fundamentally, there are two basic questions to be resolved by the Congress through legislation:

1. Authorizing the best possible airport and airways system to be built and developed over the next 10 years.

2. Adopting the most equitable finance formula required to fund this system.

Inasmuch as this committee has the prime system authorizing responsibility, I think it behooves all of us to concentrate on what we believe will ultimately provide us with the safest and most efficiently operated airport and airway system available or attainable—consistent with prudent fiscal recommendations.

Mr. Pickle of Texas and I have joined in introducing H.R. 9325, which is designed "to provide additional Federal assistance in connection with the construction, alteration, and improvement of air carrier and general purpose airports, air terminals, and related facilities to promote a coordinated national plan of integrated airport and airway systems."

WHAT DOES H.R. 9325 PROVIDE?

The key provisions of the Bill are:

1. The recognition that we can and must expand and improve the airport and airways system and that the civil user should not be required to provide all of the funds required, but rather, that revenues obtained from the general taxpayer will continue to be utilized.

2. A provision requiring the Secretary of Transportation to conduct a study to determine the allocation of costs of the airport and airways system, and identify these costs that are applicable to the Federal Government and the value to be assigned to the general public benefit.

3. Probably the most important aspect of the Bill is the establishment of the Airport and Airways Trust Fund, which will provide the necessary funds for the development of the system.

4. Granting the Secretary of Transportation authority to guarantee any lender against any loss on loans to finance any public airport development project.

5. The designation, by each state, of a state agency or official to be responsible for public airport systems planning.

6. Provisions for grants to the states to carry out a comprehensive state aviation program that, in the opinion of the Secretary of Transportation, is not inconsistent with the development of a national air-transportation system.

7. Authorizing the Secretary to make grants from the Trust Fund to sponsors of public airports, and—

8. Amendment of the Federal Airport Act to provide the necessary funds for the development of airports whose primary purposes are to serve general aviation and relieve congestion at those airports that have high density traffic serving other segments of aviation.

While neither Mr. Pickle nor I believe the Bill to be perfect in all respects, we do believe it provides an excellent, workable base upon which the committee can build. The Administration's proposal is similar in nature and objectives and I therefore believe the committee would be well advised to include the best of both of these legislative proposals in your final committee bill.

THE MOUNTING VOLUME OF AIR TRAFFIC

Transportation is the "backbone" of our Nation's economy and air transportation is becoming the "backbone of our common carrier transportation system". In 1950, only one out of ten intercity common carrier passengers traveled by air. As of today, however, seven out of ten use air travel. The preference for air travel has been clearly established and the volume of airline traffic is now greater than that of rail and bus combined.

Air transportation problems and forecasts of ascending volumes of traffic do not diminish with the passage of time. Up to now, we have accommodated growth problems within the existing system, but we have reached the point where the airways and airports of the nation are no longer sufficiently elastic to absorb the ever-increasing demands now being made on them.

Quite clearly, the problems of civil aviation today are the result of its successes—not its failures. The essential problem, as I view it, is not in sustaining success, but in achieving coordination and balance. The extent of aviation service to the public has far exceeded, in my judgment, the public support of aviation and the results are now beginning to show, not only in congested airports but in the profit and loss columns of the operators and in the economy of communities where air transportation is a vital factor.

It is noteworthy, I feel, that the airlines reported a 42% decline in earnings last year despite a 16% increase in passengers and cargo. Operating revenues were up 13% but operating costs increased more than 18%. A large share of the operating cost increase, nearly one hundred million dollars, is attributable to inadequacies in our air traffic control and airport systems.

THE PROBLEM OF CONGESTION

The effect of delays and congestion on the economy of New York City is already evident. Last year's congestion and problems in that city, due to inadequacies in the airport/airways system, are estimated to have cost more than two hundred million dollars and unless these problems are corrected, the loss is estimated to reach approximately six hundred million by 1980. Air transportation is one of the basic attributes which have made New York City a mecca for commerce, which distinction may quickly disappear if its airport requirements are not met. And there are other signs. The stock market is considering leaving Wall Street. The garment industry is seeking to locate elsewhere. Other manufacturing industries are seeking locations away from New York. At one point, 18 major companies accounting for over 11,500 on-the-spot jobs had actually decided to move or were actively looking for new locations away from the city of New York—primarily because of over-crowded and congested conditions.

This same situation exists in many other cities, large and small, in the Nation. Clearly evident is the importance of the role of the airport and air transportation in the economy of the community each serves.

Just since the time of my statement two years ago, referred to above, the number of airline passengers has increased by almost 40 percent. This growth is good to be sure. Indeed, it is essential to our burgeoning economy and our security requirements, but if this growth is to continue, the resultant problems and challenges must be met. The urgency is great and the time for action is now.

FUTURE GROWTH FACTORS

While the past growth in aviation has been fantastic, the future is expected to be even

more spectacular. During the next ten years, passenger traffic on schedule airlines is expected to triple—general and business aviation will quadruple. Most of us are familiar with the crowding at our airports and with the delays in the air that are occurring now; imagine, if you will, handling three times as many aircraft on the ground and in the air.

At present, the number of intercity passengers using air transportation is about equally divided between the airlines, and business and private airplanes. The airlines are receiving approximately one new jet aircraft per day and the 115,000 general aviation airplanes of today are expected to increase to over 200,000 in the next ten years. More than twenty thousand corporations own and operate more than forty thousand business airplanes today and this is expected to increase by two and one-half times in the next ten years. Aircraft are also increasing in number of passengers carried along with the number of aircraft being delivered. All of this means more planes, more people, more problems—but I am convinced we can, and must rise to the challenge.

If we are to meet this challenge, there must be a tremendous increase in our developmental effort for the airways/airport system. At the present time, airport construction is seriously lagging. This is due largely to the inadequate incentives provided by financial assistance through the federal aid airport program in the recent past. Considering the lead time of 7 to 10 years required to plan and build a new air carrier airport, it is obvious that we are already several years behind schedule and the situation is certainly going to get worse before it gets better. The development of the airways and air traffic control system is also lagging dangerously. Although a plan was developed by the FAA for the automation of the air traffic control system in 1961, it is a fact that the first operational unit is still under construction and not yet commissioned at Jacksonville, Florida. Only one terminal area traffic control facility has been constructed and this primarily for test purposes. Therefore, I believe we must provide legislation that will accelerate the development of our airport/airways system as well as plan now for the system requirements of the post-1980 period.

DECENTRALIZATION AND REVITALIZATION THROUGH AVIATION

Another growth problem facing this nation, and *not unrelated* to the growth problems of transportation, is urbanization. At present, more than 70 percent of our total population resides on only 1 percent of the land area. If this rate of urban migration continues, by 1980, it is estimated that 80 percent will reside on 1 percent of the land and by the year 2000, 90 percent. The problem generated by this combined migratory and growth trend are of such magnitude that they have raised the very serious question of whether or not they are capable of solution. Even if they are capable of technical solutions, it is questionable whether the financial requirements can be met.

Mounting problems in every aspect of urban life crowd the pages of our newspapers daily and highlight the growing paradox of space age accomplishments and urbanization paralysis. While our major metropolitan centers of this country have grown too overcrowded, grossly over centralized and totally unmanageable, the rural economies and the rural communities in this country are in desperate need of revitalization and diversification. And where has this over-crowding been felt most? Right in the heart of the central city—the very focal point of social dissatisfaction and unrest in America today. For, it is here that the majority of the untrained, unskilled, and unemployed people from the rural areas end up. And these are the same people who seldom, if ever, make it to the suburbs. Lacking the funds to return to the place they left, it is these people who find themselves trapped and who are, in the final analysis, paying the price of life in the big city. Drawn there in search of a better life, countless thousands of migrating Americans too often find only disappointment and the sad realization that they would be better off where they came from. Too often, their only recourse is to swell the ranks of the unemployed and the legions on welfare. The thought of once-productive citizens transformed into wards of the State—is indicative of this migratory trend which has brought with it social and economic decay.

You may well ask, at this point, what is the relationship between the urban and rural crisis and airport/airways legislation?

The availability of an airport is absolutely essential today if any community expects to attract industry. This does not necessarily mean an air carrier airport, but rather a facility which is adequate for the kind of airplanes operated at the present time by more than 20,000 U.S. business concerns.

Transportation technology today has completely eliminated the necessity for locating plants near waterways, close to raw materials or processing plants, or near large concentrations of distribution points for goods. Implementation of the foregoing concept is the purpose of section 204(d) of the bill which my colleague, Mr. Pickle, and I have introduced, and which calls for the Secretary of Transportation, in administration of this program, to give priority consideration for an airport development project which improves air access to the area or is essential to the economic and social development of such an area.

We can bring about "rural revitalization" by redirecting the emphasis of Federal programs so as to provide incentives for industry to establish manufacturing facilities in smaller communities and thereby create job opportunities at the point where urban migration originated. There is, I believe, sufficient expansion of industry presently forecast to create a reverse migration if the new plants contemplated are located in smaller rural communities and not the major metropolitan areas.

Studies by the U.S. Chamber of Commerce have shown that the establishment of a plant requiring 100 employees results in over 150 additional jobs in the same area or a total of 250 new jobs. Brookings Institute made studies many years ago which show that a dollar of new money brought into a community is respent 20 times in the economic cycle of that community. The resultant payrolls of new plants in small communities enlarges the local tax base to provide the revenues for construction of other public facilities such as streets, schools, recreational facilities, etc.

It now seems clear that, if we are to continue to move ahead, we must reverse and redirect the imbalance in our population distribution and to do so requires a balanced, coordinated and integrated transportation system that will promote and enhance economic growth in small communities.

In addition, we must have programs supported by user charges which provide for urban transportation systems, intra-state air and highway systems, interstate and intercontinental air systems.

The legislation Mr. Pickle and I have proposed provides a program which will bring about the development of intercontinental, interstate and intra-state systems of airports on an equitable basis. It also provides for the development of airways systems and, in the near future, for the entire cost of operating the airways system. This bill also provides for planning grants to assist in developing plans so essential to the timely, balanced and integrated comprehensive air transportation systems.

Not only is this legislation designed to meet the needs of large cities but also to assist in the revitalization of our smaller communities and ease the pressures resulting from the "urbanization avalanche" going on now.

Our bill also provides for a share of the revenues derived from the user charges to be returned to the 50 states for administration of aviation programs, air transportation system planning and airport development within the state based on local priorities aside from Federal interests. The objective, of course, is greater involvement of the states in air transportation system planning and development as is the case of our Federal highway program.

This legislation further establishes a trust fund for airport/airways development and the manner in which this fund shall be utilized. We have not included user charges or taxation provisions which are matters within the purview of the Ways and Means Committee. In this regard I respect the sagacity of this committee to determine the most appropriate and equitable system of taxation to meet the requirements of this legislation.

BALANCE IS THE KEY

Therefore, as I see it, we should be concentrating heavily on a comprehensive legislative "package" that will, in the final analysis, give us the best system of airports possible using a distribution formula that recognizes not just our present population distribution—but where our population can and most likely will be located in the future.

In my judgment, this is one of the most fundamental and paramount considerations that must be incorporated into planning of a comprehensive airport and airways system.

All things considered, Mr. Chairman, I believe the keyword in putting such a "package" together is "balance". Because, from this legislation, there must emerge:

1. A balanced finance formula.
2. A balanced airport/airways system.
3. A balanced national transportation system.
4. A more balanced population pattern.

BASIC AIRPORT AND AIRWAYS FUNDING CONSIDERATIONS

Philosophically, there is no doubt that considerable monies must be obtained for the continuation and expansion of the airways and airports to accommodate the rapidly expanding transportation needs of the country. It is no longer possible, in my judgment, to place this burden solely on the general taxpayer. User funds should be directed toward the development of a comprehensive airport system, while general funds should be utilized for airways and air systems development.

It has already been established by presidential directive that the user will pay for special services rendered by the Federal Government, and there just is no question that the general public does benefit appreciably from aviation. Therefore, it is not unreasonable to assume that a portion of the costs for expanding and continuing the airport/airway system should be borne from general funds. What portion this should be is highly debatable and, as I have previously stated, a matter for the House Ways and Means Committee to decide.

Keeping in mind the contemplated new era of Federal, state and local cooperation, I feel that the greatest portion of revenues collected for airport planning, development and actual building of airports should be directed to state agencies for application and project completion, and that the major role of the Federal Government should be the development of guidelines that would be used by the states themselves for airport development.

I feel quite strongly about the fact that, somewhere in the Bill, emphasis must be placed on the preservation of the privately

owned airport that is open for public use. During the past few years we have witnessed many existing private airports fall under the pressure of local taxes or increased land values causing the ownership to sell for other than aviation purposes. A method of relief to these owners could come about through tax advantages or by direct purchase by local or state governments to assure the airport continues to operate as an airport.

While it is true that H.R. 9325 differs both with the Administration Bill and with other similar bills which have been presented for consideration, especially in regards to air carrier fuel charges, I am perfectly willing to leave this problem to the House Committee on Ways and Means. Quite frankly, I am more interested in seeing that these revenues are expended in a way that these concepts and ideas which I have outlined herein, can be generally supported and eventually implemented.

RESEARCH AND DEVELOPMENT A MUST

Whenever large sums of money are to be expended over a long period of time, we certainly need sufficient, on-going research and development to enable the industry to provide the latest "state of the art" equipment and systems that will be absolutely essential in providing an effective and forward-looking airport and airways system with the latest and best equipment and facilities available or attainable. This seems to me to be a must!

I also believe that a greater share of these funds should be channelled into planning functions. Here again, this should also be a state and local function, with Federal coordination so that each state's master plan fits into and dovetails the national systems program.

And lastly, in this regard, I feel that greater allocation considerations be given to the states, because such a program as I envision and have advanced here today, would entail much larger and more competent state organizations and, certainly, additional funds would be required to support it and using a distribution formula based on geographical area and population criteria that I have outlined elsewhere in these remarks.

In conclusion, Mr. Chairman, I submit that we, in the Congress, must attack the airport crisis in a manner that will meet the challenges facing us and avoid all constraints that might well inhibit the safety of the skies and the full economic growth potential of this Nation.

Again, I want to thank the Chairman and the members of this Committee for this opportunity to outline my views, suggestions, and recommendations on a matter of utmost urgency.

CAN'T WE EVER LEARN?

HON. JOHN YOUNG

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. YOUNG. Mr. Speaker, the Ways and Means Committee last Friday issued a press release announcing tentative decisions on tax reform made by the committee since July 11, 1969. Included among those decisions were several which would adversely affect the petroleum industry.

Perhaps the most significant was the reduction of the percentage depletion rate on oil and gas wells from 27½ to 20 percent. Other items in the package were the decision to treat carved out production payments—including A–B–C transactions—as loans and to deny percentage depletion on foreign oil and gas wells. In addition, certain changes were made in the application of the foreign tax credit which have the effect of reducing the benefit of such credit. In fact, the change made with respect to companies on the overall limitation was specifically directed toward the oil and gas industry.

The net effect of the committee's recommended tax changes in the natural resources area would be to greatly increase the tax burden of the petroleum industry at a time when the industry's need for exploration and development is the greatest.

In 1968 the United States consumed 50 percent more oil than the domestic petroleum added to its proved reserves and this represented the ninth consecutive year in which reserve additions of crude oil and other petroleum liquids were below the level of consumption. Under ideal conditions new reserves added each year should exceed consumption. This is not absolutely essential since to some measure the Nation's domestic reserves can be augmented by oil imported from foreign sources. However, in view of the conditions prevailing throughout the globe, it is imperative that this Nation not become too dependent on foreign oil and remain largely self-sufficient in this regard. Between now and 1980 the domestic petroleum industry must find and develop 87 billion barrels of oil—70 for consumption and 17 for inventory, to assure its self-sufficiency.

This can be done only by the expenditure of huge sums of capital currently estimated at $116 billion. This sum is more than twice as much as the industry has been spending in recent years. Historically, the industry has obtained its capital as follows: 45 percent from net earnings, 45 percent from capital recovery, and 10 percent from capital markets. The committee's action in recommending tax law changes which would appreciably reduce the industry's net earnings and capital recovery, would force the industry into the capital market with no assurance that the funds would be available. Absent the funds for exploration and development, the domestic petroleum producing industry would slowly wither on the vine and the United States would ultimately become largely dependent on imported oil. No rational person would want this situation to develop.

There is, however, one practical alternate source of capital—an increase in net income which could only be accomplished by an increase in gross revenue, which in turn would necessitate higher prices for petroleum products. Thus, in the final analysis, a cut in the depletion allowance would result in what would be equivalent to a tax increase on consumers, just one more item contributing to the inflationary spiral.

The Chase Manhattan Bank in its monthly review of the petroleum situation released July 31, 1969, analyzes the situation the industry is in today with respect to demand, supply, and capital requirements, and points out unequivocally that any reduction in the depletion allowance must be replaced by some other source of capital if it is to survive.

I would like at this time to insert in the RECORD the commentary contained in the Chase Manhattan Review dated July 31, 1969, and suggest that the Members consider carefully the results of a reduction of the depletion allowance and the other key incentives for the oil and gas industry.

The commentary follows:

CAN'T WE EVER LEARN?

Last year the United States consumed 50 percent more oil than the domestic petroleum industry added to its proved reserves. It was not the first time the industry has been unable to keep pace with the nation's growing needs. Indeed, 1968 was the ninth consecutive year in which reserve additions of crude oil and other petroleum liquids were below the level of consumption. For the entire nine year period, the new reserves represented little more than four-fifths of the accumulated consumption in that time.

Ideally, the new reserves added each year should not only match consumption but should exceed it. Proved reserves are in the nature of underground inventories. And, as such, they should expand in reasonable proportion to the growth of market demand—if the market's needs are to be fully and continuously accommodated. If that goal had been achieved over the past nine years, the petroleum industry would have had to find 1.4 barrels of proved reserves for each barrel consumed instead of the 0.8 barrel it actually did find. In other words, it should have discovered a total of 51 billion barrels in the nine year period—two-thirds more than the 30 billion actually found.

It is not absolutely essential, of course, that the ideal situation be achieved. To a degree, the nation's domestic reserves can be supplemented with oil imported from foreign sources. And the United States now relies upon imports for nearly one-fourth of its needs. But the nation would incur a very grave risk indeed if it became heavily dependent upon outside sources. As the record forcefully demonstrates, reason does not prevail throughout the world. And there is no real assurance that oil from abroad would be continuously and fully available. The economy of the United States is much too dependent upon oil to tolerate an inadequate supply. And in the unfortunate event of another international war the nation's position would be perilous if it had to rely upon a high proportion of imported oil. Prudence and common sense, therefore, require that the nation remain largely self-sufficient.

But it won't be for much longer, if the trend of the past nine years continues. By 1980, the annual consumption of oil products in the United States is expected to reach 19 million barrels per day—nearly 50 percent more than the 13 million a day consumed in 1968. Between 1968 and 1980, the accumulated consumption is expected to amount to 70 billion barrels. If the United States is to maintain a minimum safe inventory of proved reserves and not become more dependent upon outside sources than it now is—obviously a desirable goal from the standpoint of the nation's well-being—the domestic petroleum industry will need to find and develop a total of 87 billion barrels between 1968 and 1980. Against that requirement, the recently reported discoveries in Alaska do not loom large—and we should be mindful that they are not yet in the category of proved reserves.

To find such a tremendous amount of oil will require an equally enormous capital expenditure. For the past two decades there has been a consistent relationship between the amount of money spent in the search for oil and natural gas and the proved reserves actually found. And if this relationship con-

tinues, the petroleum industry will need to spend approximately 116 billion dollars to find and develop 87 billion barrels of oil. That would necessitate an average outlay of 9.7 billion dollars a year between 1968 and 1980—well over twice as much as the industry has been spending in recent years.

In the past nine years—the period during which domestic reserve additions were less than consumption—the petroleum industry spent as much as 40 billion dollars trying to find and develop new sources of petroleum in the United States. By any standard, that was a huge financial effort. But, obviously, it was not enough. To have found sufficient oil to match market needs and maintain a satisfactory level of proved reserves, a capital expenditure of about 68 billion dollars would have been required—70 percent more than was actually spent. Why—if there was a need—did the industry fail to spend that much? The answer hinges primarily upon two factors: (1) the incentive to spend, and (2) the ability to spend.

Insofar as the search for oil and natural gas in the United States is concerned, the petroleum industry may be divided into two basic groups—the major companies and the independent producers. For a decade following World War II, both groups spent nearly identical amounts of money. And they both increased their levels of spending year after year, keeping pace with market expansion. By the mid-fifties, each group was spending approximately 2.5 billion dollars a year—more than three times as much as they were a decade earlier. But since that time, their pattern of capital spending has changed to a marked degree. The major companies have sharply curtailed the rate of growth of their expenditures. And the independent producers have progressively reduced their annual outlay. Currently, the independents are spending only half as much as they were a dozen years ago.

These developments provide clear evidence of damage to the incentive to spend. Obviously, if the rate of return on their investment had been more attractive relative to other investment opportunities, both groups would have spent more than they did in their search for additional domestic reserves of oil and natural gas.

But neither group had financial resources sufficient to support a fully adequate expenditure. The petroleum industry is far more capital intensive than most others. And the scope of its activities creates vast capital needs. It is also an industry whose operations involve a substantially higher degree of risk than most others. And, for that reason, it has had to generate most of the funds for its capital and other financial requirements from its operations. Historically, about 45 percent of the money needed has been derived from net earnings, another 45 percent from the various provisions for capital recovery, and only 10 percent from the capital markets. But in recent years the industry has been unable to generate enough from operations and has had to depend much more heavily upon borrowed capital. Currently, its use of borrowed funds is well over twice as large as the historical proportion. Had the industry chosen to spend all the money required to maintain a satisfactory level of proved reserves over the past nine years, it would have been forced to borrow far more than it actually did. And we must be mindful, of course, that all borrowed capital eventually must be repaid with funds generated from operations.

Clearly, the availability of sufficient petroleum from domestic sources is vital to the welfare of the United States. And, obviously, if the petroleum industry is to satisfy the nation's needs and also maintain a safe margin of proved reserves, it must have enough capital to perform that function, it must also have sufficient incentive to use its capital for that purpose. In the face of these demonstrated needs, it would be logical to think that nothing would be done to prevent the industry from accomplishing its essential purpose. Yet, incredibly as it may seem, obstacles are indeed placed in the industry's way.

For the last decade and a half, the industry's generation of capital funds has been severely limited by governmental regulation of the price of natural gas. Carried on without sufficient regard for economic and competitive circumstances, the regulation forces the industry to accept a price for gas that is much too low. Since various oil products must compete in the market with the low priced gas, their prices are indirectly affected also by the regulation. These circumstances limited both the generation of capital and the incentive to invest the funds that actually were available. Significantly, the cutback of capital spending devoted to the search for new oil and gas reserves was initiated shortly after the imposition of the price control. And, as a result, the nation is now faced with a shortage of both oil and natural gas. How, we might wonder, could anyone ever have believed the United States could continue to have adequate supplies of oil and natural gas, if the petroleum industry were denied sufficient funds to search for them? Yet, that denial has persisted, despite repeated warnings of the consequences.

And there exists today a situation that demonstrates further how poorly the lesson has been learned. As noted earlier, the petroleum industry derives a large proportion of its capital funds from the various provisions for capital recovery. Together, amortization, depreciation, depletion, etc. rank equally with net income as a source of capital. Until recently, they satisfied as much as 45 percent of the industry's over-all financial needs. All private industries, of course, have provisions for capital recovery—otherwise, they could not survive. But they all do not have the same provisions. A factory or a piece of machinery can be depreciated over its lifetime. And when they are worn out, they can be replaced. But when oil and natural gas have been extracted from the earth and consumed they cannot be replaced—new sources must be found instead. And that can be an exceedingly costly and risky undertaking. The record abundantly demonstrates that vast sums of money can be spent without any oil or gas being found. Since, in fact, the production of oil and gas represents a depletion of its capital assets, the petroleum industry is permitted by law to recover a portion of this capital by means of a depletion allowance.

This procedure, however, has been subjected to increasing attack. And there are mounting demands that the allowance be reduced or eliminated. Some of the attacks obviously are politically motivated. But there is also criticism that reflects a lack of understanding of the true role played by the depletion allowance. There is a failure to recognize that the allowance applies only to revenue generated by the industry's successful producing properties—and the benefits derived do not offset the large sums spent on the search for petroleum that proves unsuccessful. Most often, the allowance is labeled by its critics as a tax loophole—conveying the impression that the money thus obtained is utilized for some nonessential purpose. But regardless of what its detractors choose to call it, the depletion allowance is today what it always has been—a source of capital. And if that source is reduced or eliminated, it must be replaced by another.

There is only one practical alternate source. If, for example, the industry's generation of capital funds were reduced 10 percent by a change in the depletion allowance, net income would have to be increased by an equal amount. And that could be achieved only with an increase in gross revenue—which, of course, would necessitate higher prices for petroleum products. Thus, a cut in the depletion allowance would, for all practical purposes, be the equivalent of a tax increase to consumers. And, as such, it would carry all the inflationary force of any other rise in their costs.

Clearly, a reduction in the depletion allowance—or any of the other provisions for capital recovery—would not be in the best interests of the United States. The nation's dependence upon petroleum, its tremendous needs, the vast amount of capital required by the petroleum industry to satisfy those needs, the industry's decreasing ability to generate enough capital and mounting dependence upon borrowed funds, and the developing shortage of both oil and natural gas are all reasons why such an action would be ill advised. Rather than inhibit the generation of capital and thereby discourage its use, the interests of the United States would be far better served by positive actions designed to achieve the opposite results. If we are to have enough oil and gas, we have to pay enough for them—there simply is no other way. Why is that elementary fact so difficult to understand?

THE DEATH OF ALL CHILDREN

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From Esquire magazine, Sept. 1969]

THE DEATH OF ALL CHILDREN—A FOOTNOTE TO THE ABM CONTROVERSY

(By Ernest J. Sternglass, professor of radiation physics, University of Pittsburgh)

Hopefully it is not too late to ask the members of Congress in their deliberations over the Administration's proposed Anti-Ballistic Missile system to pause and reflect on the nature and urgency of the matter they have been debating.

In view of new evidence on the totally unexpected action of strontium 90 on human reproductive cells, it is apparent that Congress has not yet considered what may well be the most important factor affecting its decision to proceed or not to proceed with the first steps toward the A.B.M. shield. The fact is this: a full-scale A.B.M. system, protecting the United States against a Soviet first strike, could, if successful, cause the extinction of the human race. (Indeed, the scientific evidence indicates that *already* at least one of three children, who died before their first birthdays in America in the 1960's, may have died as a result of peacetime nuclear testing). Such is the conclusion indicated by new information on the unanticipated genetic effect of strontium 90, presented at a recent meeting of the Health Physics Society.

Proponents of the A.B.M. system argue that it is necessary to prevent the destruction of our deterrent forces by a massive first strike of Russian SS–9 missiles carrying thousands of multiple warheads. But the threat of such an attack loses all credibility against our present knowledge that the vast amounts of long-lived strontium 90 necessarily released into the world's rapidly circulating atmosphere could lead to the death of all Russian infants born in the next generation, thus ending the existence of the Russian people, together with that of all mankind.

The unanticipated genetic effect of strontium 90 has become evident from an increase in the incidence of infant mortality along the path of the fallout cloud from the

first atomic test in New Mexico in 1945, and from a detailed correlation of state-by-state infant mortality excesses with yearly changes of strontium 90 levels in milk.

The computer-calculated change in infant mortality was found to have reached close to one excess death in the U.S. per one hundred live births due to the release of only 200 megatons of fission energy by 1963. This indicates that a release of some 20,000 megatons anywhere in the world, needed in offensive warheads for an effective first strike or in the thousands of defensive A.B.M. warheads required to insure interception, could lead to essentially no infants surviving to produce another generation.

The specter of fallout has of course loomed before in the national anxiety over nuclear explosions. But the result of these studies comprises the first documented, long-range analysis showing direct quantitative correlations between strontium 90 and infant mortality. (They will be published later this year as recorded in the Proceedings of the 9th annual Hanford Biology Symposium.)

The physicists who exploded the first atomic bomb at Alamogordo had expected radioactive materials of some kind and assumed that they would fall to earth downwind as far as fifty miles away. Accordingly, the test site had been located in an isolated area of southern New Mexico. When a subsequent series of tests was held in 1951, six years later, the scientists moved to the isolation of desert country in southern Nevada. By now, however, and without the knowledge of the scientific community, the death rate of children *in states* downwind from Alamogordo had begun to rise.

The infant mortality rates in the United States have been carefully collected for many years. From 1935 to 1950, the rate shows a steady decline and mathematical models allow the rate to be extended to show, on the basis of previous experience, what the infant mortality rate for any time, consistent with the immediate past, ought to be. But while elsewhere (with one exception) in the U.S. the rate continued downward as expected; in the states downwind of Alamogordo it did not. There was no change in the infant death rate in 1946—the year after the Trinity test—but by 1950 the rate in Texas, Arkansas, Louisiana, Mississippi, Alabama, Georgia, and both Carolinas deviated upward from the normal expectancy. Increases in excess infant mortality of some twenty to thirty percent occurred some thousand to fifteen hundred miles away in Arkansas, Louisiana, and Alabama, where mortality rates were between 3 and 4.5 per hundred live births. Thus, as observed by our research group at the University of Pittsburgh, the Alamogordo blast appears to have been followed by the death, before reaching age one, of roughly one of one hundred children in the area downwind. No detectable increase in mortality rates relative to the computer-determined 1940–45 base line was observed in Florida, south of the path of the fallout cloud, or in the states to the north; and the mortality excesses became progressively less severe with increasing distance eastward, in a manner now understood to be characteristic of the activity along the path of a fallout cloud. Though the increase in infant mortality in these states was taking place during the years 1946–1950, it does not appear to have been associated with the Alamogordo fallout before our studies beginning in October, 1968.

Meanwhile, the study of radiation effects proceeded elsewhere in the scientific community. It became known in the early 1950's that radioactive strontium was concentrated in cow's milk and transmitted, along with the calcium to which it bears a close chemical resemblance, to the rapidly growing bones of the fetus and the subsequent infant. Still, the radiation from strontium 90, though long-lasting, was relatively small in degree; and it was a matter of record, from studies of young women employed in painting luminous watch dials, that very large amounts of radiation over long periods of time are required to produce bone cancer or leukemia in adults. Besides, the survivors of Hiroshima and Nagasaki and their offspring were carefully observed, without discovering any very serious long-term effects of radiation. A small number of leukemia cases turned up, and a very few detectable abnormalities among their children, but compared with the rest of Japan the difference was slight. The measurable effects of fallout, at the time, did not seem so ominous after all. So atmospheric nuclear weapons testing proceeded in Nevada until 1958, and continued in the Pacific until 1963 under the pressure of the Cold War. No obvious or clear-cut incidents of serious harm to anyone were reported outside the immediate area of testing.

Still, there was concern among radiobiologists and geneticists over the possibility of radiation effects on the highly sensitive human reproductive cells, rapidly dividing and developing to form the human embryo during the first few weeks and months of gestation. Evidence from animal experiments, as well as from the observation of pregnant women who had been exposed to X-rays, suggested that ova and embryo might be from twenty to fifty times more sensitive to the development of leukemia than the mature adult. If so, the potential danger of even relatively small amounts of radiation would be greatly magnified.

The evidence implicating X-rays in childhood leukemia had been discovered—quite unexpectedly—by Dr. Alice Stewart of Oxford University, in the course of a survey designed to uncover the causes of a disturbing rise in childhood leukemia among the children of England and Wales during the 1950's. Her study, published in 1958, showed that mothers who had received a series of three to five abdominal X-rays in the course of a pelvic examination gave birth to children who were almost twice as likely to die of leukemia or other cancers than the children of mothers who had not been X-rayed during pregnancy. Subsequent studies showed that only about six percent of all childhood leukemia is related to X-rays, but Dr. Stewart's research remains significant, since before then no serious effects of ordinary diagnostic X-rays had ever been demonstrated, especially since a single abdominal X-ray gives the fetus a radiation dose not much larger than what each of us receives in the course of some three to five years from cosmic rays and the natural radiation in the rocks around us.

It is true that leukemia and childhood cancer are relatively rare. Only about one child in one thousand is affected. Nevertheless, since leukemia and other cancers are the second greatest cause of death among children between five and fourteen (ranking only after accidents), Dr. Stewart's findings were regarded by physicians as startling, and efforts were made to check them. Perhaps the most definitive such examination was done by Dr. Brian MacMahon at the Harvard School of Public Health. Using a study population of close to 800,000 children born in large New England hospitals, where careful records of X-rays given to mothers were available, Dr. MacMahon confirmed Dr. Stewart's findings. He observed only about a forty percent increase in the cancer rate among exposed children, probably because of improvements in X-ray technology that allowed lower exposures.

Meanwhile, in April, 1953, a sizable amount of nuclear debris from a test explosion in Nevada was wafted downwind some two thousand miles to the east and, thirty-six hours later, deposited by a rainstorm over the Albany-Troy region of New York State. Dr. Ralph Lapp, one of the first scientists to be concerned with the hazards of peacetime nuclear testing, drew attention to this heavy local fallout. Subsequent examination of the childhood leukemia pattern in this area showed that leukemia doubled over a period of some eight years after the fallout—and then decreased. Here, for the first time, was a documented case in which fallout appeared to produce serious effects at a rate consistent with what was expected from the study of children exposed to prenatal X-rays.

Further examination of the leukemia rate for the entire State of New York revealed a pattern of increase and decrease following the sequence of individual test series in Nevada between 1951 and 1958, with a characteristic time delay of about five years after each detonation. The rise and fall were particularly marked in the age group from five to fourteen years, the group most indicative of radiation-produced cases.

More disturbing yet, the evidence showed that the arrival of the fallout was followed by a halt in the normal decline of the rate of stillbirths. For the previous fifteen years, from 1935 to 1950, the stillbirth rate had shown a regular and progressive decline. Within a year after testing began in Nevada in 1951, the rate began to deviate upward. Between 1957 and 1963 the fetal death rate, instead of steadily declining as it had from 1935 to 1950, leveled off completely at around twenty-three per thousand live births. In 1964, the fetal death rate rose to 27.3 per thousand, the first such leap since records had been kept in New York State. In 1965 and 1966, it declined slightly, as a gradual reduction of fallout in milk and food took place throughout the U.S. In contrast to New York, the fetal death rate for California—upwind of the Nevada test site, and therefore not affected by it—continued its steady decline, in line with the 1935-1950 figures from which New York so sharply deviated. Still, the rate of decrease began to slow down in California also—two to three years after the onset of hydrogen bomb tests in the Pacific in 1954.

The implications of the fetal death rate could be considered much more serious for society than the incidence of childhood leukemia, since there are more than ten times as many fetal deaths reported than cases of childhood leukemia. Moreover, for every fetal death reported, an estimated five or six are not reported, yielding perhaps fifty or sixty fetal deaths for each case of leukemia. Consequently, the search for further evidence continued. More fallout seemed to be followed by more fetal deaths, but no precise statistical correlation had been drawn. Since the amount of strontium 90 deposited in the soil is easily measurable, the cumulative deposit of strontium 90 was plotted against the *excess* of fetal mortality over what the mortality *should* have been if the 1935–1950 decline had persisted. The finding: except for the first few years of testing in Nevada, when short-lived isotopes rather than the long-lived strontium 90 were dominant, the fetal death rate in New York followed the same general pattern as the accumulated strontium 90 on the ground. Both curves showed the same decrease in rate of climb coincident with the temporary halt of nuclear testing from 1958 to 1961; both show a sharp rise beginning with the large Soviet test series in 1961. Two years after the test band in 1963, both the fetal death rate and the radioactivity in the environment once again began to decline.

A similar pattern in the fetal death rate exists in the data for the United States as a whole for all periods of gestation up to nine months. Again, there is a steady rate of decline until the Fifties, a leveling off in 1951–52, and an actual rise in 1954, corresponding to the onset of the Pacific H-bomb tests; and a second rise in 1961, corresponding to the Soviet test series.

But perhaps the most disturbing evidence of all indicates that the rates of infant mortality in the United States and all over the world seem to have been affected by nuclear testing. The infant mortality rate is far more accurately known than the fetal death rate, since the death of a baby unlike a miscarriage or an abortion, rarely escapes notice in the advanced countries. Like fetal deaths, infant mortality had shown a steady decline in the period 1935–1950; but beginning with the Nevada tests in 1951 and continuing until just after the test ban in 1963, the rate suddenly leveled off in the U.S. This leveling off did not occur in such other advanced countries as Sweden, Holland and Norway, or in Southern Hemisphere countries like Chile and New Zealand, until late in the 1950's when hydrogen-bomb tests in the South Pacific and Siberia began to produce worldwide fallout on a much increased scale. Only after the major portion of the most violently radioactive material from the 1961–62 tests had disappeared did U.S. infant mortality begin to decline again in 1965, at a rate close to the previous 1935–1950 decline.

The most serious effects appeared in the age group from one month to one year. Here, the rate of deaths per one thousand live births should have been, according to the 1935–1950 figures, about 2.7. Instead, the observed number was 5.4 per thousand, twice what is should have been and twice what it actually was in Sweden, where the rate had steadily declined to 2.6 per thousand.

Not only was there a drastic change in overall infant mortality for the U.S. as compared to the rest of the advanced countries, but there were also disturbing patterns of change within the U.S. For example, the infant mortality rate started to level off sharply in the Eastern, Midwestern and Southern states within two years after the onset of atomic testing in Nevada in 1951, while it continued steadily downward in the dry Western states. But this is exactly the known pattern of accumulated radioactive strontium on the ground and in the diet, since strontium is most heavily deposited in states of high annual rainfall, especially in those to the east of Nevada.

Serious difficulties remained, however, in establishing a casual connection between nuclear testing and these drastic changes in fetal and infant mortality. First, why should fallout, and in particular strontium 90, cause fetal and infant deaths, since it goes to the bones and should therefore cause, if anything, bone cancer and leukemia many years later? Second, there was no observed direct quantitative relation between different levels of strontium 90 in the body and mortality rates at any given age. Therefore it was difficult to see how the very small amounts of radiation resulting from peacetime testing could possibly have been the cause of the deviations in fetal death and infant mortality, especially since no significant genetic effects had been observed among the children of the Hiroshima and Nagasaki survivors.

The causation puzzle now appears to be solved. In 1963, K. G. Luning and his coworkers in Sweden published their discovery that small amounts of strontium 90, injected into male mice three or four weeks prior to mating, produced an increase in fetal deaths among their offspring. No such increase appeared when corresponding amounts of chemically different radioactive cesium 137 were injected. More recently, evidence presented at an International Symposium on the Radiation Biology of the Fetal and Juvenile Mammal in May, 1969, has demonstrated severe chromosome damage, fetal deaths and congenital malformations in the offspring of female mice injected with strontium 90 before and during pregnancy. Similar effects have now been observed for very small quantities of tritium, produced by both A-bombs and relatively "clean" hydrogen weapons.

In the light of these studies, the absence of genetic effects in Hiroshima is understandable. In Hiroshima and Nagasaki, the bombs were detonated, not on the ground as in New Mexico, but at such an altitude that there was essentially no fallout in these two cities proper. The radiation exposure there resulted almost exclusively from the brief flash of X-rays, neutrons and gamma rays at the instant of explosion. Consequently no special effects related to strontium 90 appeared in the children of the survivors; but the rate of cancer deaths among children up to fourteen years in Japan as a whole jumped by more than two hundred percent between 1949 and 1951, four to six years after the bombs, when the fallout had had a chance to produce its effects throughout the southern parts of Japan—exactly the same delay observed after the fallout from Nevada arrived in Albany-Troy.

But the problem remains of demonstrating a direct connection between the levels of strontium 90 in human fetuses and infants, on the one hand, and observed changes in fetal and infant mortality, on the other. Such a direct connection seems to emerge from the so-called "baby-tooth survey" carried out by the Dental School of Washington University in St. Louis, supported by the U.S. Public Health Service : nd directed by Dr. H. L. Rosenthal. Using the data from tooth-buds and mandibular bones of aborted fetuses and from baby teeth collected in the greater St. Louis area. Dr. Rosenthal's study showed that the concentration of strontium 90 in the teeth followed closely the measured concentrations in bone and milk. Measurement of the strontium 90 content of milk anywhere in the world permits a calculation of the concentration in the bones of infants and fetuses developing in the same areas. We have found a direct correlation between the yearly changes of strontium 90 contained in the teeth (and therefore the bones and bodies) of the developing human fetus and infant, and the changing excess mortality rates, going up and down together as atmospheric tests began in 1951 and stopped in 1963.

From our examinations of the infant mortality changes from a computer-fitted base line for 1935–1960, for various states in which the Public Health Service reported monthly values of the strontium 90 concentrations in the milk since 1957, there emerges a close correspondence between average strontium 90 levels and infant mortality changes. Whenever the strontium 90 rose to high values over a four-year period, as in Georgia, a large, parallel, year-by-year rise in infant mortality also took place; while in areas where there was little stronium 90 in the milk, as in Texas, the infant mortality remained at a correspondingly lower value. Other states such as Illinois, Missouri, New York and Utah also show a rise, peaking in the same 1962–1965 period levels between these extreme cases, each according to their local annual rainfall and strontium 90 concentrations in their milk.

For the United States as a whole, we found a detailed correspondence between and among: 1) the excess infant mortality relative to the 1935–1950 base line; 2) the total strontium 90 produced by nuclear weapons; 3) the strontium 90 thus produced actually reaching the ground; and 4) the four-year average concentration in U.S. milk from 1955, the year after the first large H-bomb tests; and 1965, the year when strontium 90 concentrations began to level off and started to decline once again.

At the peak of this excess infant mortality, it was the District of Columbia that showed the largest excess in 1966—157 percent, compared with an average excess of 72 percent for the U.S. as a whole. The low value was found in dry New Mexico, minus-eleven percent—actually below the 1935–50 base line.

To appreciate the magnitude of these effects, it must be recognized that in the 1950's about 2.5 to 3.4 infants out of every hundred born in the U.S. died before reaching the age of one year. The average excess infant mortality, therefore, represents close to one child out of one hundred born, or one of every 2.5 to 3.0 that died during the first year of life.

Since about four million children were born annually during this period, close to 40,000 infants one year old or less died in excess of normal expectations each year, totaling some 375,000 by the mid-Sixties and continuing at about 34,000 per year since the end of atmosphere testing by the U.S. and the U.S.S.R.

It is no wonder, then, that infant mortality has been a major concern of our Public Health Service since this trend was first pointed out in 1960 by Dr. M. Moriyama of the National Center for Health Statistics.

However, as Dr. Moriyama and his associates observed during an international conference devoted entirely to infant mortality in 1965, none of the factors so far considered—medical care, population movement, new drugs, pesticides, smoking or epidemics of infectious disease—suffices to explain the observed facts.

That the recent excesses in infant mortality cannot readily be explained by medical and socioeconomic factors normally influencing mortality trends may be seen from an examination of the death rate in the various states following the Alamogordo blast. At the University of Pittsburgh, we have plotted the percentile infant mortality excesses or decrements relative to the computer-determined 1940–1945 base line for the first and fifth years after Alamogordo. In 1946, one year after the detonation, there was no sign of any excess infant mortality in the states downwind from New Mexico; but by 1950 a clear change toward excess infant mortality appeared in the states over which the fallout cloud had drifted, and only in those states. Furthermore, the excess mortalities are seen to be distributed in such a pattern as might be expected from nuclear fallout originating in New Mexico, since the effects are lowest in the dry area of western Texas, and largest in the areas of heavy rainfall first encountered by the cloud, namely Arkansas, Louisiana, Mississippi and Alabama, declining steadily thereafter toward the Atlantic.

The only other area that showed a clear excess infant mortality greater than ten percent as compared to the 1940–1945 period was found to be North Dakota. There, subsequent measurements of strontium 90 in the milk, carried out by the Health and Safety Laboratories of the Atomic Energy Commission, revealed the highest concentrations anywhere in the U.S. for which data is available prior to 1960. The causes of this "hot spot" are not yet fully understood, but they are quite possibly connected with known accidental discharges of radioactivity from the Hanford plant of the Manhattan Project, directly to the west, in the early years of its operation, where the fissionable plutonium for most of the nuclear weapons was produced beginning in 1944.

Since no excess infant mortality was registered along the path of the New Mexico fallout cloud in the first year after the detonation, the deaths occurring downwind in later years could not have resulted from the direct effects of external radiation from fallout on the developing embryo. It becomes clear then that we are dealing with an effect on the reproductive cells of the parents, or a so-called genetic effect.

The evidence available so far therefore suggests that radioactive strontium appears to be a far more serious hazard to man through its long-lasting action on the genetic material of the mammalian cell than had been expected on the basis of its well-known

tendency to be incorporated into bone. The resultant effect appears to express itself most noticeably in excess fetal and infant mortality rates among the children born two or more years after a nuclear explosion. Presumably such factors as lowered birth weight and reduced ability to resist ordinary infectious diseases are involved, accounting for the greatest increase in infant mortality in the U.S. as compared to the advanced countries of Western Europe since the early 1950's. Children who receive adequate medical care are more likely to survive these factors than those who do not.

What does all this imply for the debate over the deployment of new nuclear weapons systems, such as the A.B.M. or the M.I.R.V. (Multiple Independent Reentry Vehicle), carrying many nuclear warheads in a single missile? To appreciate the probable genetic effects of a large nuclear war, we can consider first the effect of small tactical-size nuclear weapons comparable to the 20 kiloton bombs detonated over Hiroshima, Nagasaki, and in the desert of Alamogordo. Since increases of some 20 to 30 percent excess infant mortality were observed from a thousand to fifteen hundred miles downwind in Arkansas, Alabama and Louisiana, where mortality rates were between 3 and 4.5 per hundred live births, the detonation of a single, small tactical-size nuclear weapon on the ground in the western United States appears to have led to one out of one hundred children born subsequently dying before reaching the age of one year. Therefore, the detonation of a hundred or so weapons of this size, amounting to the equivalent of only two megatons in the form of small warheads, would be expected to lead to essentially *no* children surviving to maturity in the states directly downwind.

But according to former Defense Secretary Clark Clifford, speaking at a N.A.T.O. conference in the Fall of 1968, we have close to eight thousand tactical nuclear weapons in the kiloton range ready to be released in order to protect our European allies from a ground attack by Russia. Thus, we would probably achieve the protection of Western Europe at the cost of the biological end of these nations through the death of the children of the survivors, together with the likely death of most children subsequently born to the people of Eastern Europe, Russia and China as the radioactive clouds drift eastward around the world until they reach the United States. Thus, the use of the biologically most destructive small nuclear weapons in tactical warfare now appears to be at least as self-defeating as the release of large quantities of nerve gas, killing indiscriminately soldiers and civilians, friends and enemies alike.

But, what about the use of large megaton warheads in a massive first strike or in A.B.M. missiles detonated high up in the stratosphere or outer space, as proposed for the Spartan missile that is to provide us with an impenetrable shield against a first strike attack by large Chinese or Russian missiles in the 1970's?

According to the figures on infant mortality in the United States, based on the testing of large hydrogen weapons in the Pacific and Siberia, both in the atmosphere and outer space, close to one out of every one hundred children born are likely to have died as the result of only about 200 megatons worth of fission products into the world's atmosphere, under conditions which were especially designed to minimize the possible effects on health.

According to the testimony of Defense Secretary Melvin Laird in the Spring of 1969, the U.S.S.R. will have the capability of launching some 500 SS–9 missiles, each capable of carrying 25 megatons worth of bombs in the form of many multiple warheads, or a total of some 1500 to 2500 warheads. Together with comparable numbers launched by smaller missiles, the total megatonnage would therefore be of the order of 10 to 20,000 megatons needed in a first strike that attempts to destroy most of our thousands of missiles and bombers at the same time.

Thus, the threat of a first strike by Russia loses all credibility since, in order to have any chance at all of preventing devastating retaliation, it would necessarily have to release so much radioactivity into the circulating atmosphere that it would lead to the death of most Russian infants born in the next generation, ending the existence of the Russian people together with that of all mankind.

Since it takes at least three to five Anti-Ballistic Missiles launched to insure a high probability of interception, the U.S. must be prepared to launch some 5000 to 15,000 A.B.M.'s in order to provide a meaningful "shield" against such a massive attack.

We know that each Spartan missile must contain a warhead of at least 2 megatons to produce a sufficiently intense X-ray pulse to achieve interception, so that the use of this system to protect our own missiles and cities would require the detonation of some 10,000 to 30,000 megatons into the stratosphere, not counting any radioactivity from the Russian warheads, from our own counterstrike, or from the Russian A.B.M. missiles.

Thus, even if anti-missile systems were to work with ideal perfection on both sides, preserving every home, every school, and every factory from destruction, the release of long-lived radioactive materials would produce more than a hundred times as much radioactive poison as during all the years of peacetime testing. Based on the excess mortality observed during the period of testing, this would most likely be sufficient to insure that few if any children anywhere in the world would grow to maturity to give rise to another generation.

Nor will it make much difference how high above the atmosphere the bombs are detonated, because the strontium 90 takes twenty-eight years to decay to half of its initial activity, long enough for most of it to return to earth well before another generation of children is born. And even if a perfectly "clean" weapon containing no fissionable material at all could ever be developed, the carbon 14 it produces would get into the genetic material controlling the life processes of all living cells, and it takes 5770 years before half of its radioactivity is exhausted.

The implications of the warning mankind has received from the death of its infants during nuclear testing are therefore clear:

Nuclear war, with or without anti-missiles or elaborate shelters, is no longer "thinkable" due to a fatal flaw in the assumptions of all our military war-gamers, namely the unexpectedly severe biological sensitivity of the mammalian reproductive system to genetically important by-products of nuclear weapons, which must now be regarded not merely as vastly destructive explosive and incendiary devices, but as the most powerful biological poison weapons that man has yet invented.

REPORT OF DELOS SEVEN

HON. JAMES H. SCHEUER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. SCHEUER. Mr. Speaker, earlier this month, at the very time three extraordinary Americans were opening up a new page in history by planting mankind's first foot on the moon, 39 citizens of the world were meeting for a week in Greece to devise ways in which mankind could achieve his full potential and true destiny here on earth.

Under the gifted and talented leadership of Constantine Doxiadis, world-famous Greek architect and planner, representatives from Greece, England, Scotland, Brazil, India, France, Nigeria, and the United States conferred on the subject, "Society and Human Settlements: Policies for the Future."

I was privileged to join a very distinguished American contingent consisting of former Undersecretary of HUD Robert C. Wood, former Secretary of the Interior Stewart L. Udall, John W. Riley, vice president, The Equitable Life Assurance Society of the United States, Edwin O. George, president, The Detroit Edison Co., W. McNeil Lowry, The Ford Foundation, Whitney Young, president, National Urban League, Martin Meyerson, president, State University of New York at Buffalo, James A. Perkins, president, Cornell University, Harland Hatcher, formerly president, University of Michigan, Prof. R. Buckminister Fuller, Southern Illinois University, Margaret Mead, curator of ethnology, American Museum of Natural History, among others.

The deliberations produced a thoughtful consensus on achieving better urban systems, facilities, and services and above all a change in worldwide priorities to make these enlightened recommendations a living reality for urban people around the globe.

The thoughtful and creative final report of the conference, and a complete list of the conferees, follow:

REPORT OF DELOS SYMPOSIUM—1969

1. As long ago as the Declaration of Delos One in 1963, we stated:

"The City throughout history, has been the cradle of human civilization and progress. Today, live every other human institution, it is profoundly involved in the deepest and widest revolution ever to overtake mankind."

2. This revolution has broadened and intensified in the intervening years. The unfulfilled expectations of men and women have now become legitimate demands and therefore heighten the need to show visible progress towards their resolution.

THE AGE OF URGENCY: THE NEED TO REORDER PRIORITIES

3. This year, 1969, we realize more acutely that there is a mounting and accelerating impatience in the world, a demand that the major evils be remedied. Now, or, where this is patently impossible, that at least credible steps be taken towards their solution. We recognize particularly that steps must be taken at once, to ensure world order and prevent nuclear disaster, to meet the population explosion, to halt the contamination of air, water and land, to provide food, housing and basic amenities for the billions—5 by the lowest and *most* optimistic count—who will have to be fed and housed by the turn of the century.

4. Today there is a world-wide crisis of urbanization. Most of the inhabitants of the planet are either housed in rural hovels or in the super slums of great cities. The migration to urban areas is a global phenomenon. Population increases as well as many other forces produce new problems faster than they are being solved. There is not only a world-wide crisis of urbanization but there is also a basic distortion of values in society's failure to allocate resources for the improvement of human settlements, the upgrading of the total environment, the strengthening,

protection and education of the young and the equalization and enlargement of individual opportunity.

5. This distortion of basic investment priorities is being dramatized by a value revolution that is the primary preoccupation—and the contribution—of the younger generation, who assert that many of our present institutions, political processes and goals are obsolete and that we have the resources and the technical knowledge to achieve the goals we profess.

6. The recent successes of the space programs of the U.S. and the USSR highlight how high our capacity is for organization, assembly of resources, and application of technical skill, and how woefully low our use of this capacity for the general betterment of mankind. We believe that concentrated programs of this sort should be organized to solve the pressing problems of world order, urbanization, population policies, housing, food supply, education and health, equality and justice, and the interpretations in action of science and technology in the political process.

7. But at the same time it is necessary to deal realistically with those events that are already so much *en train* that there is no short term possibility of altering them—the enormous urban aggregations that already exist; the great numbers of hungry children who are already born, and the contamination of air and bodies of water that has already occurred. How to maintain a balance between establishing immediate provision for those who must be housed and serviced within our present possibilities, whether in Detroit or in Calcutta, and keeping our imagination free and beginning to unfreeze our institutions—this is one problem. How to short cut the kind of integration previously envisaged by a multi-disciplinary approach—which is too slow to meet the sense of urgency of the times—is a second problem which can be met by treating our subject matter as a whole, rather than attempting to fit together its fragmented practitioners. If we treat the living ecology of the planet as a seamless web, within which breaks are disastrous we can plan for the way in which man's construction of an artificial environment can complement and improve the natural environment of this planet. Exploration within the solar system and the use of near space for satellites and rapid transportation exemplify the disciplined use of technology which has been absent in man's exploitive use of the earth itself. Within this living cosmological system, we should no longer seek to maximize isolated effects, one at the expense of another, but seek to optimize and integrate the factors involved for the benefit of man.

8. To this end, we recommend international crash development programs to discover and produce inexpensive and effective new methods of regulating population increase. These should assure that free choice is available to all individuals and all groups to assure the maintenance of personal dignity and ethnic diversity throughout the world. There are other equally important areas of research and development such as biological nitrogen fixation and nonconventional sources of food, e.g. since cell protein or protein from oil derivatives and other sources.

9. With this framework we can look for many variations in the forms of human settlements. We can seek flexible adaptations to the needs of different kinds of national temperaments, to different age groups, to different cultures, to the stages of technical and agricultural development of different countries, and for possibilities of multiple choice and equal access to opportunities. But we recognize also that the human environment is now the entire earth. While the infant presents us with the greatest hope of constructive intervention and protection of human life, small children will be reared from birth in an increasingly planetary environment where news comes in by satellite. In fact, television and radio are crucial for the future in the formation of attitudes on this inter-communicating planet. The importance of mass media increases the importance of providing the best care for infants, and the protection of the infant's total environment as well as that of the immediate family, because it is there that our chance for effective intervention is greatest. At the same time we cannot wait for infants still unborn to change the nature of our society; we must work with members of the four generations now alive, all of whom are capable of change.

THE CRUCIAL ROLE OF POLITICS

10. Our present political processes no longer involve individuals and communities in terms of their deepest interests in the affairs of their small communities, regions, cities, nations and emerging world-wide organizations. We need new attitudes and new political institutions which will permit individuals and small groups to be responsible, initiating, and appropriately involved at every level of the decision making process, while at the same time making full use of the resources of modern science and technology. To mobilize the will of men to act on behalf of the well being of mankind each individual must be able to act with human dignity and to feel assured that his action is effective. Unlike our predecessors, who have labored through the centuries through scarcity and lack of means, we have the resources, we have the technology, we have the means, but we must establish the conditions, that will release the human will to act.

11. In this seventh annual Delos symposion we have dealt particularly with the potentialities of cooperation between economic enterprises and government and the academic professions. We have also dealt with ways of meeting immediate urgent situations within our commitment to long term objectives for the benefit of mankind.

12. The policies connected with human settlements and all of those whose decisions, and practices are related to them, recognize that it is our purpose to construct settlements in which all men, women and children, regardless of previous class, colour or origin in different parts of the earth may reach their fullest individual potential within a setting designed for the common good. In the past, planning has been too separate from politics, political decisionmaking, economic enterprises, social science and technology.

THE NEW OPPORTUNITIES

13. Only by cooperation among all of these, by a focus on the whole system under consideration, from rural villages to urbanized regions and the entire planet, can this separation be overcome. As the point at which the individual can be most efficiently and inexpensively prepared to exercise his fullest potential is by prenatal and immediately post-natal attention, society should give priority to care at this point in the life cycle; but we must recognize that change is possible at every age and that to change any system we must provide for changes of attitude in individuals of all ages. The educational system is a crucial component of the changes that we desire since only through changes in attitudes and development of the will to act can changes be inaugurated and maintained. The fate of the university, as a central institution—an agora—or a dispersal of its functions throughout the entire community, is in question. The solution lies in the relationship between education, increase in knowledge, storage and retrieval of knowledge, and academic life and other sectors of the community.

14. The present state of modern science and technology frees us from some of the determining factors in the past, like location of heavy fuels, need for concentrations of labor, or lack of transportation or communication. It is possible to realize many forms of community and the arts associated with them: to cherish the small face to face community in which the child is not isolated in a nuclear family; to build communities for different levels of rewards and satisfactions and to establish types of high level intercommunication.

15. But we must recognize the realities with which we must at present deal: the huge population that must be fed while we prepare better sources of food and better methods of contraception; the dangers of nuclear warfare and the expenditures on armaments while we prepare better forms of worldwide order and conflict-solving methods; the many decisions which will be made tomorrow, by builders, planners and governments which will further bind the future into which we are moving. But we must also recognize that, as part of a planetary-living ecological system, we are now able to make a complementary man-made system within which the aims of a better life for man become increasingly within our reach.

16. Many of our institutions are now inappropriate and unresponsive. Political processes are breaking down, causing different groups to use extra-institutional forms to express protest. While such collapses have occurred before in history, the increase in scale—to worldwide dimensions—makes a crucial difference. We must decide whether to maintain, defend, transform or destroy (or permit to drop out) some or many of the major institutions which now characterize society. In doing so, we must not confine ourselves only to the institutions of modern industrialized society but we must also take into account the culturally diversified institutions of family and community in different parts of the world. These, too, may have to be changed in such a way that each people can individualize their lives while taking advantage of science and technology to improve them. At the present time, types of political communities, characteristic of earliest isolated village level of human settlements, coexist with cosmopolitan worldwide networks of common interests or special skills.

17. In order to accomplish the objectives which we are able to state, and for which the technology is now available, it is important to involve planning with the academic, economic enterprise and political processes at every level. Furthermore a sense of responsibility and participation must be established at the grassroots, in the smallest community; and linked with each higher level in such a way that individuals are involved, all the way to the top, in decisionmaking regarding the allocation of resources, and choices between different courses of action. There must be provision for feed-back and initiative between all levels of the system, and it must be recognized that the wider the area covered by a decision the more important it is to involve technical experts in interpreting the action to be taken.

18. We should recognize that genuine conflict will arise between individuals and small groups and the wider good, and we must face it frankly in the political arena. The events which have occurred, like the reduction of some portions of mankind to slavery, exploitation, poverty, and second class citizenship, have not been inevitable, but have been the result of definite decisions taken in the past. To improve the condition of the disadvantaged around the world requires definite acts of will, and political implementation of that will. If we describe man as feeling, thinking and acting, we may say that all these three aspects must be involved within the political decision-making process; but that, at present, feeling is the most involved and acting the least. We need to con-

sider that inertia and indifference are produced by lack of communication and sympathy, and that involvement is produced by good communication and adequate political systems.

STEPS TO BE TAKEN

19. Our present forms of political democracy are inadequate by themselves for our present needs, capacities and goals. The method of representation—one trip to the ballot box, "you vote and we will do the rest"—must be altered or supplemented by forms of continuing political participation of an entirely different sort. We need representation not only of geographical units but also of group interest units of many sorts. We must also recognize that with the development of urbanization, the poor, the miserable, the disadvantaged, increase in proportion, and tend to be more geographically segregated. Reconciliations must be found between the values of dispersal within the wider population, on the one hand, and of political power on the other. We must also recognize that we need bi-modal planning for the protection of special milieux necessary for ethnic choice and for special forms of artistic creativity.

20. It is necessary to have a framework of theory within which to place the problems of micro groups. The more complex the system, given today's technology, the greater the possibilities for individual choice, for quality of human contacts and for multiple group relationships.

RESISTANCES TO CHANGE

21. All over the world, under conditions of rapid change, new social classes are formed that are highly vulnerable to the fear of loss of their recently attained status. Such groups—the new middle class in the U.S., new urban elites in some emerging countries, etc.—tend to be deeply hostile to any change which involves loss of their recently attained privileges. They are also responsive to externally set styles, such as inclusiveness or to the use of resources for social goals. The involvement of the most privileged and best educated in the cause of the poor and disadvantaged is complementary.

22. Political responsibility and involvement can result from an effective communication of the costs of lack of responsibility and lack of commitment of resources. For example in the U.S. investments in an infant's health may save tenfold their cost of adolescent rehabilitation or one hundred fold in treatment of a criminal later. Around the world unless larger resources are allocated to housing, education, health, welfare, waste disposal, police and parks and to domestic amenities for working mothers, the situation of our urban settlements will continue to deteriorate. On the other hand, any city or region or nation which takes all of these matters into account should have a very rapid pay-off. The managers of economic enterprises can also come to realize the loss of intellectual resources attendant on outmigration, or the loss in trained manpower, or in consumption capacity, attendant on inadequate local education.

23. We need to estimate the consequences of different kinds of action within a given direction of change. Great waves of change contain wavelets of different scale. Institutions must be goal-seeking not goal-setting. We must recognize that in many areas of the world, one man's gain is no longer another man's loss, but that in other areas there is genuine scarcity, and the need for very harsh priority-setting is essential. And it is necessary, in all cases, to balance minimum desirable goals against minimum possibilities of attainment. Where change is introduced simultaneously, as in the introduction of new agricultural techniques into the old village system in India, or where all generations are permitted to participate in change, many difficulties can be overcome and the new technologies can be combined with the older cultural identity. As peoples enter the wider technological system at different periods in technical development, it is not necessary for each country to traverse the same steps, but higher technology can be used to take short cuts to development.

At the same time, it is necessary to keep in mind that long term trends of development have tended to be very similar, in spite of the fact that curves of development are not smooth, and vary greatly over short time periods.

24. The desperate urgency of our present situation requires immediate action, and we have enough knowledge to move forward far more effectively here and now. This intensive short term action will buy mankind the time in which to pursue the basic research needed to cope with the long-run problems of man in society.

25. Unsolved problems of great urgency included: How the political process is to be actually involved? What is the role of political parties? Can large political parties accomplish the desired ends, or would smaller parties do better? How is scientific know-how to be communicated to politicians, legislators or administrators, in time? Who, within the governmental apparatus, is to receive communications from science that are external to the governmental process? Where is the center of decision-making to lie, to whom is it to be accountable, and in what forms? Finally the whole question of the way human interactions determine the shape of human institutions and how the process of institutional change can be shaped purposefully.

26. These questions we cannot now answer with confidence. But this we know: if man is to have the life he wants and deserves, and that his resources would permit him to enjoy, he must join together with others at every level determined to shape their joint future.

LIST OF DELIANS—DELOS SEVEN

Robert A. Aldrich (USA), Director, Health Resources Study Center, University of Washington; William Benton (USA), Chairman and Publisher, Encyclopedia Britannica; Willard Brown (USA), President, University Circle Research Center, Cleveland, Ohio.

Carlos Chagas (Brazil), Ambassador to UNESCO, Paris; Karl W. Deutsch (USA), Professor of Government, Harvard University; C. A. Doxiadis (Greece), President, Athens Technological Organization.

Spyros Doxiadis (Greece), Chairman, Institute of Child Health, Athens, Director, Aghia Sophia Children's Hospital, Athens; R. Buckminster Fuller (USA), University Professor of Generalized Design Science Exploration, Southern Illinois University; Edwin O. George (USA), President, The Detroit Edison Company.

Jean Gottmann (France), Professor of Geography both at Oxford University, England, and at the Ecole Pratique des Hautes Etudes, France; Roger Gregoire (France), Conseiller d'Etat; Harland Hatcher (USA), formerly President, University of Michigan, Ann Arbor.

Suzanne Keller (Mrs. Huber) USA, Professor of Sociology, Princeton University, New Jersey; T. Adeoye Lambo (Nigeria), Professor of Psychiatry, Neurology & Neurosurgery, Ibadan University; Lord Llewelyn-Davies (UK), Professor of Architecture, University College, London.

Reginald S. Lourie (USA), Professor of Pediatric Psychiatry, George Washington University; W. McNeil Lowry (USA), Vice-President, Division of Humanities and the Arts, The Ford Foundation; Carl Maston (USA), Architect, Fellow American Institute of Architects, Los Angeles, Calif.

Sir Robert Matthew (UK), Professor of Architecture, Edinburgh University; Margaret Mead (USA), Curator of Ethnology, American Museum of Natural History; Robert Merton (USA), Chairman, Sociology Department, Columbia University.

Martin Meyerson (USA), President, State University of New York at Buffalo; Robert B. Mitchell (USA), Director, Center for Urban Research & Experiment, University of Pennsylvania; Jérôme Monod (France), Délégué à l'Aménagement du Territoire et à l'Action Régionale, Paris.

Hasan Ozbekhan (USA), Executive (Planning and International Development), Worldwide Information Systems, Inc.; James A. Perkins (USA), President, Cornell University; John Platt (USA), Research Biophysicist and Associate Director, Mental Health Research Institute, University of Michigan.

John W. Riley (USA), Vice President, The Equitable Life Assurance Society of the United States; E. A. G. Robinson (UK), Professor Emeritus of Economics, Cambridge University, England; W. W. Rostow (USA), Professor of Economic History, the University of Texas at Austin.

Vikram Sarabhai (India), Chairman, Atomic Energy Commmission of India, Secretary, Government of India; James H. Scheuer (USA), Member of US House of Representatives for the 21st Congressional District, Bronx, New York; Marietta Tree (USA), Director, United Nations Association.

Constantin A. Trypanis (Greece), Professor of Classics, University of Chicago; Jean-Paul Trystram (France), Professor à la Faculté des Lettres et Sciences Humaines de Lille, and Chargé de Mission à la Délégation à l'Aménagement du Territoire et à l'Action Régionale, Paris.

Stewart L. Udall (USA), Chairman of the Board, The Overview Group; C. H. Waddington (UK), Professor of Animal Genetics, Edinburgh University.

Robert Wood (USA), Head, Dept. of Political Science, M.I.T., Director, Joint Center for Urban Studies of M.I.T. and Harvard, Chairman, Urban Coordinating Group, M.I.T.; Whitney Young (USA), President, National Urban League.

STATEMENT ON THE ASTRONAUTS

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. MARSH. Mr. Speaker, on the eve of the Apollo 11 flight, that well-known American commentator, Eric Sevareid, made, I think, a highly perceptive statement on the three astronauts who took part in this historic mission. Because of its insights, I wanted to bring to the attention of other Members of the House who may not have heard Mr. Sevareid's observations, the statement which he made on the CBS evening news with Mr. Walter Cronkite on July 15, 1969.

The statement follows:

STATEMENT BY ERIC SEVAREID

The modern sciences of rocketry, radar and computerization came together in remarkable coincidence to make Apollo 11 possible. But the feat is wholly human, all flesh and blood. Every gadget represents a thought and a hand. There's no such thing as a technical success or failure, only human.

It is the three men who fly tomorrow who are mysterious, not their equipment. The three are almost exactly the same age, height and weight. They vary in aspects of temperament, but there, too, they share a common denominator. They are a hybrid species. All three are symbolic of the organization man, the cooperator, but each remains in this corps a loner, inner-directed, as were Lind-

berg and John Glenn, individualists who will function as cogs in a vast human machine.

Lindberg, Glenn, now in all probability Armstrong, these three will stand as the supreme American heroes of the age. All three happen to have been boys in small, midwestern towns. Perhaps there is something in the mystique, the folk image, of the small American town and its formative influences. They have security, they have leisure to prowl and to dream. Innocence existed; sophisticated tensions did not press upon them. Intellectuals of literary bent seem disappointed that their speech does not match the eloquence of their feat. But it is the silent artists, like Armstrong, Aldrin and Collins, the men who see beauty in the machinery and its functions, who do the thing.

Artists they are, because they are perfectionists seeking the outer limits of their strength and their talents. Were they men of words, were their minds occupied with poetic imagery or philosophical abstractions as they fly, they would surely fail.

They are the men of Apollo 11 by the luck of the draw, but Armstrong will put the first foot down upon the moon by somebody's deliberate decision. And it is a logical suspicion that he is the chosen one not only by reason of his undoubted competence and civilian status, but also by reason of his personality and appearance.

If the mission succeeds, this man will become the symbolic American to the world. He fits the stereotype, the folk image of the all-American boy, the kid next door. He has all his hair, he has frank blue eyes, his smile is a slightly shy half-grin. And he has the inner strength to bear his country's pride to the rest of the world, strength he will need, not only for his country but for himself and for his family. His life and theirs will never be the same again.

NARCOTICS AND DANGEROUS DRUGS

HON. JOHN V. TUNNEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 31, 1969

Mr. TUNNEY. Mr. Speaker, for the last several months I have viewed with growing alarm the lack of effective action being taken to stem the flow of narcotics and dangerous drugs being smuggled into the United States from Mexico.

By June, when no signs of improvement were visible on the horizon, I undertook my own factfinding tour of the border at San Ysidro, Calif. What I saw there in a few short hours convinced me of the need for a congressional hearing to obtain additional evidence upon which to base effective legislation.

At my initiation, four California colleagues joined me in conducting such a hearing in San Diego just 3 weeks ago. Not altogether surprisingly, the testimony we obtained confirmed our worst fears.

Drug smuggling is rapidly becoming a major scandal of national proportions. Despite the best efforts of a sadly undermanned Customs staff, narcotics, and dangerous drugs are flowing across the border in increasing quantity like sand through a sieve.

Arrests at the border for attempted smuggling—which border officials readily admit only skims the surface—have increased 14 times since 1960. More than 35 tons of marihuana were seized last year—an increase of over 20 percent just in the past 6 years. Some five million five-grain units of amphetmaines and barbiturates were seized in 1968 alone.

Inspectors are forced to cope with a crushing volume of people crossing the border daily. Yet, the number of inspectors and border station operations have remained basically unchanged for the last 5 years. As a result, only 1 percent of the vehicles entering the United States are ever searched, and the decision to conduct a search often must be made on little more than an inspector's intuition.

In the past few weeks, Mr. Speaker, I have introduced two specific bills to strike directly at the core of this illegal drug traffic. One bill would increase by 50 percent the number of border inspectors in California, where most of the smuggling is concentrated. The other bill directs the responsible Federal agencies to investigate the means by which to cut off the flow of dangerous drugs manufactured in this country and smuggled back and forth into Mexico and the United States.

Today, I am introducing a third bill to ultimately arm the border inspector with more than his intuition as a weapon against the smugglers. This new bill directs the Secretary of the Treasury to embark on the research and development of modern devices and techniques to detect concealed narcotics and dangerous drugs.

I was astounded to learn at our San Diego hearing, Mr. Speaker, that the Bureau of Customs presently conducts not one bit of research and development to improve its surveillance techniques and equipment. The sum total of its efforts revolves around checking a few devices of amateur inventors—reviewing military research to find new gadgets that could be converted—or waiting to see what is produced on the commercial market that might be adaptable.

In view of the smuggling problem, this paucity of ongoing research and development is downright ludicrous. The executive branch spends billions on military research and development projects. Yet, the Customs agency—whose surveillance of goods crossing our borders was among the first authorizations of Congress clear back to 1789—conducts no research and development toward winning its war on drug smuggling.

Our Federal agents are being overwhelmed at the border by the increasing volume of vehicular and pedestrian traffic. Though more manpower is urgently needed now to catch up with the present crisis, the time will come in the not too distant future when increased workloads cannot be met simply by adding more and more people in the absence of concerted efforts to use personnel more wisely.

The agents, themselves, literally plead for new techniques and new devices to perform their jobs more effectively and efficiently. It is high time we gave them something more than horse-and-buggy tactics. Reliance upon intuition provides a thin line of defense. We have got to bring our modern technology into the battle.

I urge all my colleagues to join me in supporting this legislation. The time for action is now; prolonging the procrastination will perpetuate the smuggling.

HOUSE OF REPRESENTATIVES—*Friday, August 1, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Where two or three are gathered together in My name, there am I in the midst of them.—Matthew 18: 20.

O God and Father of us all, at this noontide hour we pray that Thou wilt touch our spirits and transform our souls by Thy grace that we may have strength for the day, courage with each hour, and peace in every moment.

Kindle within us the fire of Thy spirit and warm our hearts with the power of Thy presence that in the time of trouble we may be equal to every experience, ready for every responsibility, and adequate for every task.

Grant that we may see Thy way more clearly and be given wisdom to work with Thee in making the world a better place in which Thy children can live together in abundant happiness, in abounding harmony, and in abiding hope.

In the Master's name, we pray. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate agrees to the amendment of the House to a joint resolution of the Senate of the following title:

S.J. Res. 85. Joint resolution to provide for the designation of the period from August 26, 1969, through September 1, 1969, as "National Archery Week."

PROVIDING FOR AGREEING TO THE SENATE AMENDMENTS TO H.R. 9951

Mr. COLMER, from the Committee on Rules, reported the following privileged resolution (H. Res. 509) (Rept. No. 91–412), which was referred to the House Calendar and ordered to be printed:

H. RES. 509

Resolved, That immediately upon the adoption of this resolution the bill (H.R.

9951) to provide for the collection of the Federal unemployment tax in quarterly installments during each taxable year; to make status of employer depend on employment during preceding as well as current taxable year; to exclude from the computation of the excess the balance in the employment security administration account as of the close of fiscal years 1970 through 1972; to raise the limitation on the amount authorized to be made available for expenditure out of the employment security administration account by the amounts so excluded; and for other purposes, with the Senate amendment thereto, be, and the same hereby is, taken from the Speaker's table, to the end that the Senate amendment be, and the same is hereby agreed to.

THE TAX REFORM ACT OF 1969

Mr. MILLS. Mr. Speaker, I ask unanimous consent that the text of H.R. 13270, the Tax Reform Act of 1969, be printed in the body of the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

Mr. GROSS. Mr. Speaker, reserving the right to object, I wish the gentleman would state for my benefit, as well as the benefit of other Members of the House, the procedure that is to be followed in the consideration of the tax matter; whether continuance of the surtax is to be treated as a separate matter, with a separate vote on the tax reform bill. I am at some loss to understand clearly the procedure.

Mr. MILLS. If the majority leader will bear with me, it is my understanding that this resolution from the Rules Committee just filed by the chairman will be considered by the House on Monday next—August 4.

That is, the Senate amendment involving the 10-percent surcharge which will be considered on Monday, August 4.

Then I have asked permission of the chairman of the Rules Committee to appear before the Rules Committee along with the gentleman from Wisconsin (Mr. BYRNES) in behalf of the rule on the tax reform bill on Tuesday of next week—August 5. And if that is done, and if our request for a rule is granted, it is my understanding also from the majority leader that the bill will be scheduled for consideration on Wednesday and Thursday—August 6 and 7. It will take 2 days, I am sure, of debate, but it will be my expectation and intention that we would vote on the bill before adjournment on Thursday, August 7.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I am glad to yield to the majority leader.

Mr. ALBERT. Mr. Speaker, I know the gentleman will agree with me that the distinguished chairman of the Ways and Means Committee is performing a service for the House in getting this matter ready for Members at an early stage, and I am sure the gentleman deserves commendation.

Mr. GROSS. Although I do not support the surtax, it is also a service to the Nation as well as Members of the House, I am sure the gentleman would agree, to reach a decision in this matter.

That does mean that we will have a separate vote on continuation of the surtax?

Mr. MILLS. Mr. Speaker, if the gentleman will yield further, I want to make it eminently clear to my friend, the gentleman from Iowa, that the 10-percent surtax that the Senate voted for 6 months is to be considered on Monday. That is for 6 months.

There is contained in the reform bill everything else that was in the bill that passed the House on June 30—the 5-percent surtax for the last 6 months, the repeal of the 7-percent investment tax credit, the extension of the excise taxes, and all the other matters that were in that bill. We want them in this bill in order that the Senate cannot prevent us from having a conference on those matters by not taking action on the remainder of the bill that we passed on June 30.

Mr. GROSS. Mr. Speaker, I thank the gentleman for his explanation.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

Mr. COLMER. Mr. Speaker, further reserving the right to object, if I may, I would like to commend the able and distinguished gentleman from Arkansas, the chairman of the Ways and Means Committee, for the objective sought here, and the parliamentary situation which he proposes to follow, so that we do not permit the other body to further erode the powers of this body by writing legislation on revenue matters, which is specifically reserved to this, the populous representative body of the Congress, as elected by the people.

At the same time, Mr. Speaker, I am going to want to talk with my friend, the gentleman from Arkansas, a little later on, privately about the procedure on this rule that involves so many things under this so-called reform bill. It is a very far-reaching matter, and it is something that the Members should have knowledge of before they are called upon to vote. I want to follow that up with my friend later.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

H.R. 13270

A bill to reform the income tax laws

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE, ETC.

(a) SHORT TITLE.—This Act may be cited as the "Tax Reform Act of 1969".

(b) TABLE OF CONTENTS.—

TITLE I—TAX EXEMPT ORGANIZATIONS

SUBTITLE A—PRIVATE FOUNDATIONS

Sec. 101. Private foundations.

SUBTITLE B—OTHER TAX EXEMPT ORGANIZATIONS

Sec. 121. Tax on unrelated business income.

TITLE II—INDIVIDUAL DEDUCTIONS

SUBTITLE A—CHARITABLE CONTRIBUTIONS

Sec. 201. Charitable contributions.

SUBTITLE B—FARM LOSSES, ETC.

Sec. 211. Gain from disposition of property used in farming where farm losses offset nonfarm income.

Sec. 212. Livestock.

Sec. 213. Hobby losses.

SUBTITLE C—INTEREST

Sec. 221. Interest.

SUBTITLE D—MOVING EXPENSES

Sec. 231. Moving expenses.

TITLE III—OTHER ADJUSTMENTS PRIMARILY AFFECTING INDIVIDUALS

SUBTITLE A—LIMIT ON TAX PREFERENCES AND ALLOCATION OF DEDUCTIONS

Sec. 301. Limit on tax preferences for individuals, estates, and trusts.

Sec. 302. Allocation of deductions.

SUBTITLE B—INCOME AVERAGING

Sec. 311. Income averaging.

SUBTITLE C—RESTRICTED PROPERTY

Sec. 321. Restricted property.

SUBTITLE D—OTHER DEFERRED COMPENSATION

Sec. 331. Deferred compensation.

SUBTITLE E—ACCUMULATION TRUSTS, MULTIPLE TRUSTS, ETC.

Sec. 341. Treatment of excess distributions by trusts.

Sec. 342. Trust income for benefit of a spouse.

TITLE IV—ADJUSTMENTS PRIMARILY AFFECTING CORPORATIONS

SUBTITLE A—MULTIPLE CORPORATIONS

Sec. 401. Multiple corporations.

SUBTITLE B—DEBT-FINANCED CORPORATE ACQUISITIONS AND RELATED PROBLEMS

Sec. 411. Interest on indebtedness incurred by corporations to acquire stock or assets of another corporation.

Sec. 412. Installment method.

Sec. 413. Bonds and other evidences of indebtedness.

Sec. 414. Limitation on deduction of bond premium upon repurchase.

SUBTITLE C—STOCK DIVIDENDS

Sec. 421. Stock dividends.

SUBTITLE D—FOREIGN TAX CREDIT

Sec. 431. Foreign tax credit reduction in case of foreign losses.

Sec. 432. Separate limitation on foreign tax credit with respect to foreign mineral income.

SUBTITLE E—FINANCIAL INSTITUTIONS

Sec. 441. Reserve for losses on loans; net operating loss carrybacks.

Sec. 442. Mutual savings banks, etc.

Sec. 443. Treatment of bonds, etc., held by financial institutions.

Sec. 444. Foreign deposits in United States banks.

SUBTITLE F—DEPRECIATION ALLOWED REGULATED INDUSTRIES; EARNINGS AND PROFITS ADJUSTMENT FOR DEPRECIATION

Sec. 451. Public utility property.

Sec. 452. Effect on earnings and profits.

SUBTITLE G—ALTERNATIVE CAPITAL GAIN RATE FOR CORPORATIONS

Sec. 461. Increase in rate.

TITLE V—ADJUSTMENTS AFFECTING INDIVIDUALS AND CORPORATIONS

SUBTITLE A—NATURAL RESOURCES

Sec. 501. Natural resources.

SUBTITLE B—CAPITAL GAINS AND LOSSES

Sec. 511. Repeal of alternative capital gains tax for individuals.

Sec. 512. Capital losses of individuals.

Sec. 513. Letters, memorandums, etc.

Sec. 514. Holding period of capital assets.

Sec. 515. Total distributions from qualified pension, etc., plans.

Sec. 516. Other changes in capital gains treatment.

SUBTITLE C—REAL ESTATE DEPRECIATION
Sec. 521. Depreciation of real estate.
SUBTITLE D—COOPERATIVES
Sec. 531. Cooperatives.
SUBTITLE E—SUBCHAPTER S CORPORATIONS
Sec. 541. Qualified pension, etc., plans of small business corporations.
TITLE VI—STATE AND LOCAL OBLIGATIONS
Sec. 601. Interest on certain governmental obligations.
Sec. 602. United States to pay fixed percentage of interest yield on taxable issues.
TITLE VII—EXTENSION OF TAX SURCHARGE AND EXCISE TAXES; TERMINATION OF INVESTMENT CREDIT
Sec. 701. Extension of tax surcharge at 5 percent rate for first half of 1970.
Sec. 702. Continuation of excise taxes on communications services and on automobiles.
Sec. 703. Termination of investment credit.
Sec. 704. Amortization of pollution control facilities.
Sec. 705. Depreciation of certain railroad rolling stock.
TITLE VIII—ADJUSTMENT OF TAX BURDEN FOR INDIVIDUALS
Sec. 801. Low income allowance; increase in standard deduction.
Sec. 802. Fifty-percent maximum rate on earned income.
Sec. 803. Intermediate tax rates; and surviving spouse treatment.
Sec. 804. Tax rates.
Sec. 805. Collection of income tax at source on wages.

(c) AMENDMENT OF 1954 CODE.—Except as otherwise expressly provided, whenever in this Act an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or other provision, the reference shall be considered to be made to a section or other provision of the Internal Revenue Code of 1954.

TITLE I—TAX EXEMPT ORGANIZATIONS

SUBTITLE A—PRIVATE FOUNDATIONS

SEC. 101. PRIVATE FOUNDATIONS

(a) IN GENERAL.—Subchapter F of chapter 1 (relating to exempt organizations) is amended by redesignating parts II, III, and IV as parts II, IV, and V, respectively, and by inserting after part I the following new part:

"PART II—PRIVATE FOUNDATIONS

"Sec. 506. Tax on private foundation investment income.
"Sec. 507. Tax on termination of private foundation status.
"Sec. 508. Special rules with respect to section 501(c)(3) organizations.
"Sec. 509. Private foundation defined.

"SEC. 506. TAX ON PRIVATE FOUNDATION INVESTMENT INCOME.

"(a) IMPOSITION OF TAX.—There is hereby imposed for each taxable year on the net investment income of every private foundation (as defined in section 509) a tax equal to 7½ percent of such income.

"(b) NET INVESTMENT INCOME DEFINED.—

"(1) IN GENERAL.—For purposes of subsection (a), the net investment income is the amount by which (A) the gross investment income and the net capital gain, exceed (B) the deductions allowed by paragraph (3) and the net capital loss.

"(2) GROSS INVESTMENT INCOME.—For purposes of paragraph (1), the term 'gross investment income' means the gross amount of income from interest, dividends, rents, and royalties, but not including any such income to the extent included in computing the tax imposed by section 511.

"(3) DEDUCTIONS.—For purposes of paragraph (1), there shall be allowed as a deduction all the ordinary and necessary expenses paid or incurred for the production or collection of gross investment income or for the management, conservation, or maintenance of property held for the production of such income.

"(4) CAPITAL GAINS AND LOSSES.—For purposes of paragraph (1), in determining net capital gain or loss—

"(A) The basis of property held by the private foundation on December 31, 1969, and continuously thereafter to the date of its disposition shall be deemed to be not less than the fair market value of such property on December 31, 1969.

"(B) There shall be taken into account only the sale or other disposition of property used for the production of interest, dividends, rents, and royalties, and property used for the production of income included in computing the tax imposed by section 511 (except to the extent gain or loss from the sale or other disposition of such property is taken into account for purposes of such tax).

"SEC. 507. TAX ON TERMINATION OF PRIVATE FOUNDATION STATUS.

"(a) GENERAL RULE.—There is hereby imposed on each organization which is referred to in subsection (d) or (e) of section 508 a tax equal to the lower of—

"(1) the amount which the private foundation substantiates by adequate records or other corroborating evidence as the aggregate tax benefit resulting from the section 501(c)(3) status of such foundation, or

"(2) the value of the net assets of such foundation.

"(b) AGGREGATE TAX BENEFIT.—

"(1) IN GENERAL.—For purposes of subsection (a), the aggregate tax benefit resulting from the section 501(c)(3) status of any private foundation is the sum of—

"(A) the aggregate increases in tax under chapters 1, 11, and 12 (or the corresponding provisions of prior law) which would have been imposed with respect to all substantial contributors to the foundation if deductions for all contributions made by such contributors to the foundation after February 28, 1913, had been disallowed, and

"(B) the aggregate increases in tax under chapter 1 (or the corresponding provisions of prior law) which would have been imposed with respect to the income of the private foundation for taxable years beginning after December 31, 1912, if (i) it had not been exempt from tax under section 501(a) (or the corresponding provisions of prior law), and (ii) in the case of a trust, deductions under section 642 (c) (or the corresponding provisions of prior law) had been limited to 20 percent of the taxable income of the trust (computed without the benefit of section 642 (c) but with the benefit of section 170(b)(1)(B)), and

"(C) interest on the increases in tax determined under subparagraphs (A) and (B) from the first date on which each such increase would have been due and payable to the date on which the private foundation ceases to be a section 501(c)(3) organization.

"(2) SUBSTANTIAL CONTRIBUTOR.—For purposes of paragraph (1), the term 'substantial contributor' means—

"(A) any person who (by himself or with his spouse) contributed more than $5,000 to the private foundation in any one calendar year (or bequeathed more than $5,000 to the private foundation), and

"(B) any person who (by himself or with his spouse) contributed or bequeathed the greatest amount to the foundation in any one calendar year.

In the case of a trust, such term also includes the creator of such trust.

"(3) REGULATIONS.—For purposes of this section, the determination as to whether and to what extent there would have been any increase in tax shall be made in accordance with regulations prescribed by the Secretary or his delegate.

"(c) VALUE OF ASSETS.—For purposes of subsection (a), the value of the net assets shall be determined at whichever time such value is higher: (1) the first day on which action is taken by the private foundation which culminates in its ceasing to be a section 501(c)(3) organization, or (2) the day on which it ceases to be a section 501(c)(3) organization.

"(d) LIABILITY IN CASE OF TRANSFERS OF ASSETS FROM PRIVATE FOUNDATION.—For purposes of determining liability for the tax imposed by subsection (a) in the case of assets transferred by the private foundation such tax shall be deemed to have been imposed on the first day on which action is taken by the private foundation which culminates in its ceasing to be a section 501(c)(3) organization.

"(e) ABATEMENT OF TAXES.—The Secretary or his delegate may abate the unpaid portion of the assessment of any tax imposed by subsection (a), or any liability in respect thereof, if the private foundation—

"(1) has operated as a section 501(c)(3) organization which meets the requirements of paragraph (1), (2), or (3) of section 509 (a) for a continuous period of at least 60 calendar months beginning after December 31, 1969, or

"(2) distributes all of its net assets to one or more organizations specified in section 170(b)(1)(B) each of which has been in existence and met the requirements of section 170(b)(1)(B) for a continuous period of at least 60 calendar months.

"(f) DISALLOWANCE OF CERTAIN CHARITABLE, ETC., DEDUCTIONS.—

"(1) GIFT OR BEQUEST TO PRIVATE FOUNDATION OR SECTION 4947 TRUST.—No gift or bequest made to an organization described in section 509(a) or a trust described in section 4947(a), which is liable for the tax imposed by subsection (a) or section 4947(b)(1), shall be allowed as a deduction under section 170, 545(b)(2), 642(c), 2055, 2106(a)(2), or 2522, if such gift or bequest is made—

"(A) by any person after notification is made under subsection (d) or (e) of section 508 or under section 4947(b)(1), or

"(B) by a substantial contributor (as defined in subsection (b)(2)) in his taxable year which includes the first day on which action is taken by such organization or trust which culminates in the imposition of tax under subsection (a) or section 4047(b)(1) and any subsequent taxable year.

"(2) EXCEPTION.—Paragraph (1) shall not apply if the tax imposed by subsection (a) or section 4947(b)(1) is abated by the Secretary or his delegate under subsection (e) or section 4947(b)(5).

"SEC. 508. SPECIAL RULES WITH RESPECT TO SECTION 501(c)(3) ORGANIZATIONS.

"(a) NEW ORGANIZATIONS MUST NOTIFY SECRETARY THAT THEY ARE APPLYING FOR RECOGNITION OF SECTION 501(c)(3) STATUS.—An organization organized after May 26, 1969, shall not be treated as an organization described in section 501(c)(3) which is exempt from taxation under section 501(a) unless it has notified the Secretary or his delegate, at such time and in such manner as the Secretary or his delegate may by regulations prescribe, that it is applying for recognition of such status.

"(b) PRESUMPTION THAT ORGANIZATIONS ARE PRIVATE FOUNDATIONS.—Any organization (including an organization in existence on May 26, 1969) which is described in section 501(c)(3) and which does not notify the Secretary or his delegate, at such time and in such manner as the Secretary or his delegate may by regulations prescribe, that it is not a private foundation shall be presumed to be a private foundation.

"(c) EXCEPTIONS.—The Secretary or his delegate may by regulations exempt (to the extent and subject to such conditions as may be prescribed in such regulations) from the provisions of subsection (a) or (b) or both—

"(1) churches (or conventions or associations of churches);

"(2) educational organizations which normally maintain a regular faculty and curriculum and normally have a regularly enrolled body of pupils or students in attendance at the place where their educational activities are regularly carried on; and

"(3) any other class of organizations where the Secretary or his delegate determines that full compliance with the provisions of subsections (a) and (b) is not necessary to the efficient administration of the provisions of this title relating to private foundations.

"(d) VOLUNTARY TERMINATION OF STATUS AS PRIVATE FOUNDATION.—Any private foundation may terminate its status as such by notifying the Secretary or his delegate (at such time and in such manner as the Secretary or his delegate may by regulations prescribe) of its plan to accomplish such termination and by complying with subsection (a) or (e) of section 507 (relating to tax on termination of private foundation status).

"(e) REQUIREMENT OF TERMINATION.—If—

"(1) the Secretary or his delegate notifies any organization that he is invoking this subsection with respect to such organization, and

"(2) with respect to such organization, there have been either willful repeated acts (or failures to act), or a willful and flagrant act (or failure to act), giving rise to liability for tax under chapter 42,

then such organization shall be liable for the tax imposed by section 507. In the case of any organization which has complied with subsection (a) or (e) of section 507, the status of such organization as a private foundation shall be terminated.

"(f) FUTURE STATUS OF ORGANIZATION.—In the case of any organization which has complied with subsection (a) or (e) of section 507 by reason of subsection (d) or (e) of this section, for purposes of the provisions of this title relating to private foundations for all periods beginning after it has completed compliance with section 507 such organization shall be treated as a newly created organization.

"(g) GOVERNING INSTRUMENTS.—

"(1) GENERAL RULE.—A private foundation shall not be treated as an organization described in section 501(c)(3) which is exempt from taxation under section 501(a) unless its governing instrument includes provisions the effects of which are—

"(A) to require its income for each taxable year to be distributed at such time and in such manner as not to subject the foundation to tax under section 4942, and

"(B) to prohibit the foundation from engaging in any act of self-dealing (as defined in section 4941(d)), from retaining any excess business holdings (as defined in section 4943(c)), from making any speculative investments in such manner as to subject the foundation to tax under section 4944, and from making any taxable expenditures (as defined in section 4945(b)).

"(2) SPECIAL RULES FOR EXISTING FOUNDATIONS.—In the case of any organization organized before January 1, 1970—

"(A) it shall not cease to be treated as an organization described in section 501(c)(3) because of a failure to comply with paragraph (1), and

"(B) paragraph (1) shall apply only to taxable years beginning after December 31, 1971; except that if it is impossible to reform the governing instrument (by amendment, judicial proceeding, or otherwise) by December 31, 1971, to meet the requirements of paragraph (1), paragraph (1) shall not apply until it is possible to meet such requirements.

"SEC. 509. PRIVATE FOUNDATION DEFINED.

"(a) GENERAL RULE.—For purposes of this title, the term 'private foundation' means an organization described in section 501(c)(3) other than—

"(1) an organization described in section 170(b)(1)(B);

"(2) an organization which—

"(A) normally receives more than one-third of its support in each taxable year from any combination of—

"(i) gifts, grants, contributions, or membership fees, or

"(ii) gross receipts from admissions, sales of merchandise, performance of services, or furnishing of facilities, in an activity which is not an unrelated trade or business (within the meaning of section 513), not including such receipts from any person in any taxable year which are in excess of 1 percent of the organization's support in such taxable year, from any person other than a disqualified person (as defined in section 4946) with respect to the organization, or from any organization described in section 170(b)(1)(B), and

"(B) normally receives not more than one-third of its support in each taxable year from gross investment income (as defined in section 506(b)(2));

"(3) an organization which—

"(A) is organized, and at all times thereafter is operated, exclusively for the benefit of, to perform the functions of, or to carry out the purposes of one or more organizations described in paragraph (1) or (2),

"(B) is operated, supervised, or controlled by one or more organizations, or in connection with one organization, described in paragraph (1) or (2), and

"(C) is not controlled directly or indirectly by one or more disqualified persons (as defined in section 4946) other than foundation managers and other than one or more organizations described in paragraph (1) or (2); and

"(4) an organization which is organized and operated exclusively for testing for public safety.

"(b) CONTINUATION OF PRIVATE FOUNDATION STATUS.—If an organization is a private foundation (within the meaning of subsection (a)) for its last taxable year ending before May 27, 1969, such organization shall, for purposes of this title, be treated as a private foundation for each succeeding taxable year unless its status as such is terminated under section 508."

(b) AMENDMENT OF SUBTITLE D.—Subtitle D (relating to miscellaneous excise taxes) is amended by adding at the end thereof the following new chapter:

"CHAPTER 42.—PRIVATE FOUNDATION

"Sec. 4941. Taxes on self-dealing.
"Sec. 4942. Taxes on failure to distribute income.
"Sec. 4943. Taxes on excess business holdings.
"Sec. 4944. Investments which jeopardize charitable purpose.
"Sec. 4945. Taxes on taxable expenditures.
"Sec. 4946. Definitions and special rules.
"Sec. 4947. Application of taxes to certain nonexempt trusts.

"SEC. 4941. TAXES ON SELF-DEALING.

"(a) INITIAL TAXES.—

"(1) ON SELF-DEALER.—There is hereby imposed a tax on each act of self-dealing between a disqualified person and a private foundation. The rate of tax shall be equal to 5 percent of the amount involved with respect to the act of self-dealing for each year (or part thereof) in the taxable period. The tax imposed by this paragraph shall be paid by any disqualified person who participates in the act of self-dealing. In the case of a government official (as defined in section 4946(c)), a tax shall be imposed by this paragraph only if such disqualified person participates in the act of self-dealing knowing that it is such an act.

"(2) ON FOUNDATION MANAGER.—In any case in which a tax is imposed by paragraph (1), there is hereby imposed on the participation of any foundation manager in an act of self-dealing between a disqualified person and a private foundation, knowing that it is such an act, a tax equal to 2½ percent of the amount involved with respect to the act of self-dealing for each year (or part thereof) in the taxable period. The tax imposed by this paragraph shall be paid by any foundation manager who participated in the act of self-dealing.

"(b) ADDITIONAL TAXES.—

"(1) ON SELF-DEALER.—In any case in which an initial tax is imposed by subsection (a)(1) on an act of self-dealing by a disqualified person with a private foundation and the act is not corrected within the correction period, there is hereby imposed a tax equal to 200 percent of the amount involved. The tax imposed by this paragraph shall be paid by any disqualified person who participated in the act of self-dealing.

"(2) ON FOUNDATION MANAGER.—In any case in which an additional tax is imposed by paragraph (1), if a foundation manager refused to agree to any part of the correction, there is hereby imposed a tax equal to 50 percent of the amount involved. The tax imposed by this paragraph shall be paid by any foundation manager who refused to agree to part or all of the correction.

"(c) SPECIAL RULES.—For purposes of subsections (a) and (b)—

"(1) JOINT AND SEVERAL LIABILITY.—If more than one person is liable under any paragraph of subsection (a) or (b) with respect to one act of self-dealing, all such persons shall be jointly and severally liable under such paragraph with respect to such act.

"(2) $10,000 LIMIT FOR MANAGEMENT.—With respect to any one act of self-dealing, the maximum amount of the tax imposed by subsection (a)(2) shall not exceed $10,000, and the maximum amount of the tax imposed by subsection (b)(2) shall not exceed $10,000.

"(d) SELF-DEALING.—

"(1) IN GENERAL.—For purposes of this section, the term 'self-dealing' means any direct or indirect—

"(A) sale or exchange, or leasing, of property between a private foundation and a disqualified person;

"(B) lending of money or other extension of credit between a private foundation and a disqualified person;

"(C) furnishing of goods, services, or facilities between a private foundation and a disqualified person;

"(D) payment of compensation (or payment or reimbursement of expenses) by the private foundation to a disqualified person;

"(E) transfer to, or use by, a disqualified person of the income or assets of the private foundation; and

"(F) agreement by the private foundation to make any payment of money or other property to a government official (as defined in section 4946(c)), other than an agreement to employ such individual for any period after the termination of his government service if such individual is terminating his government service within a 90-day period.

"(2) SPECIAL RULES.—For purposes of paragraph (1)—

"(A) the transfer of real or personal property by a disqualified person to the private foundation shall be treated as a sale or exchange if the property is subject to a mortgage or similar lien which the foundation assumes or if it is subject to a mortgage or similar lien which a disqualified person placed on the property within the 10-year period ending on the date of the transfer;

"(B) the lending of money by a disqualified person to a private foundation shall not be an act of self-dealing if the loan is without interest or other charge and if the proceeds of the loan are used exclusively for purposes specified in section 501(c)(3);

"(C) the furnishing of goods, services, or facilities by a disqualified person to a pri-

vate foundation shall not be an act of self-dealing if the furnishing is without charge and if the goods, services, or facilities so furnished are used exclusively for purposes specified in section 501(c)(3);

"(D) the furnishing of goods, services, or facilities by a private foundation to a disqualified person shall not be an act of self-dealing if such furnishing is made on a basis no more preferential than that on which such goods, services, or facilities are made available to the general public;

"(E) except in the case of a government official (as defined in section 4946(c)), the payment of compensation (and the payment or reimbursement of expenses) by a private foundation to a disqualified person for personal services which are reasonable and necessary to carrying out the exempt purpose of the private foundation shall not be an act of self-dealing if the compensation (or payment or reimbursement) is not excessive;

"(F) any transaction between a private foundation and a corporation which is a disqualified person (as defined in section 4946), pursuant to any liquidation, merger, redemption, recapitalization, or other corporate adjustment or reorganization, shall not be an act of self-dealing if all of the securities of the same class as that held by the foundation are subject to the same terms and such terms provide for receipt by the foundation of no less than fair market value; and

"(G) only in the case of a government official (as defined in section 4946(c)), paragraph (1) shall not apply to—

"(i) prizes and awards which are subject to the provisions of section 74(b), if the recipients of such prizes and awards are selected from the general public,

"(ii) scholarships and fellowship grants which are subject to the provisions of section 117(a) and are to be used for study at an educational institution described in section 170(b)(1)(B)(ii),

"(iii) any annuity or other payment (forming part of a stock-bonus pension, or profit-sharing plan) by a trust which is a qualified trust under section 401,

"(v) any annuity or other payment under a plan which meets the requirements of section 404(a)(2),

"(v) any contribution or gift (other than a contribution or gift of money) to, or services or facilities made available to, any such individual, if the aggregate value of such contributions, gifts, services, and facilities to, or made available to, such individual during any calendar year does not exceed $25.

"(vi) any payment made under chapter 32 of title 5, United States Code, or

"(vii) traveling expenses (including amounts expended for meals and lodging) for travel from any point in the United States to another point in the United States, not to exceed 125 percent of the maximum amounts authorized to be paid by the United States for like travel.

"(e) OTHER DEFINITIONS.—For purposes of this section—

"(1) TAXABLE PERIOD.—The term 'taxable period' means, with respect to any act of self-dealing, the period beginning with the date on which the act of self-dealing occurs and ending on whichever of the following is the earlier: (A) the date of mailing of a notice of deficiency with respect to the tax imposed by subsection (a)(1) under section 6212, or (B) the date on which correction of the act of self-dealing is completed.

"(2) AMOUNT INVOLVED.—The term 'amount involved' means, with respect to any act of self-dealing, the greater of the amount of money and the fair market value of the other property given or the amount of money and the fair market value of the other property received; except that, in the case of services described in subsection (d)(2)(E), the amount involved shall be only the excess compensation. For purposes of the preceding sentence, the fair market value—

"(A) in the case of the taxes imposed by subsection (a), shall be determined as of the date on which the act of self-dealing occurs; and

"(B) in the case of the taxes imposed by subsection (b), shall be the highest fair market value during the correction period.

"(3) CORRECTION.—The terms 'correction' and 'correct' mean, with respect to any act of self-dealing, undoing the transaction to the extent possible, but in any case placing the private foundation in a financial position not worse than that in which it would be if the disqualified person were dealing under the highest fiduciary standards.

"(4) CORRECTION PERIOD.—The term 'correction period' means, with respect to any act of self-dealing, the period beginning with the date on which the act of self-dealing occurs and ending 90 days after the date of mailing of a notice of deficiency with respect to the tax imposed by subsection (b)(1) under section 6212, extended by—

"(A) any period in which a deficiency cannot be assessed under section 6213(a), and

"(B) any other period which the Secretary or his delegate determines will be conducive to bringing about correction of the act of self-dealing.

"SEC. 4942. TAXES ON FAILURE TO DISTRIBUTE INCOME.

"(a) INITIAL TAX.—There is hereby imposed on the undistributed income of a private foundation for any taxable year, which has not been distributed before the first day of the second (or any succeeding) taxable year following such taxable year (if such first day falls within the taxable period), a tax equal to 15 percent of the amount of such income remaining undistributed at the beginning of such second (or succeeding) taxable year. This section shall not apply to a private foundation which is an operating foundation (as defined in subsection (j)(3)) for the taxable year.

"(b) ADDITIONAL TAX.—In any case in which an initial tax is imposed under subsection (a) on the undistributed income of a private foundation for any taxable year, if any portion of such income remains undistributed at the close of the correction period, there is hereby imposed a tax equal to 100 percent of the amount remaining undistributed at such time.

"(c) UNDISTRIBUTED INCOME.—For purpose of this section, the term 'undistributed income' means, with respect to any private foundation for any taxable year as of any time, the amount by which—

"(1) the distributable amount for such taxable year, exceeds

"(2) the qualifying distributions made before such time out of such distributable amount.

"(d) DISTRIBUTABLE AMOUNT.—For purpose of this section, the term 'distributable amount' means, with respect to any foundation for any taxable year, whichever of the following amounts is the higher: (1) the minimum investment return, or (2) the adjusted net income.

"(e) MINIMUM INVESTMENT RETURN.—

"(1) IN GENERAL.—For purposes of subsection (d), the minimum investment return for any private foundation for any taxable year is the amount determined by multiplying—

"(A) the aggregate fair market value of all assets of the foundation other than those being used (or held for use) directly in carrying out the foundation's exempt purpose reduced by acquisition indebtedness (as defined in section 514(c)(1)) with respect to such property, by

"(B) the applicable percentage for such year, as determined under paragraph (3).

"(2) VALUATION.—For purposes of paragraph (1)(A), the fair market value of securities for which market quotations are readily available shall be determined on a monthly basis. For all other assets, the fair market value shall be determined at such times and in such manner as the Secretary or his delegate shall by regulations prescribe.

"(3) APPLICABLE PERCENTAGE.—For purposes of paragraph (1)(B), the applicable percentage for taxable years beginning in 1970 is 5 percent. The applicable percentage for any taxable year beginning after 1970 shall be determined and proclaimed by the Secretary or his delegate and shall bear a relationship to 5 percent which the Secretary or his delegate determines to be comparable to the relationship which the money rates and investment yields for the calendar year immediately preceding the beginning of the taxable year bear to the money rates and investment yields for the calendar year 1969.

"(f) ADJUSTED NET INCOME.—

"(1) DEFINED.—For purposes of subsection (d), the term 'adjusted net income' means the excess (if any) of—

"(A) the gross income for the taxable year (determined with the modifications provided by paragraph (2)), over

"(B) the sum of—

"(i) the deductions (determined with the modifications provided by paragraph (3)) which would be allowed to a corporation subject to the tax imposed by section 11 for the taxable year, plus

"(ii) the amount of the tax imposed by section 511 for such year, plus

"(iii) the amount of the tax imposed by section 506 for such year.

"(2) INCOME MODIFICATIONS.—The modifications referred to in paragraph (1)(A) are as follows:

"(A) section 103 (relating to interest on certain governmental obligations) shall not apply, and

"(B) capital gains and losses from the sale or other disposition of property shall be taken into account only in an amount equal to any net short-term capital gain for the taxable year.

"(3) DEDUCTION MODIFICATIONS.—The modifications referred to in paragraph (1)(B)(i) are as follows:

"(A) no deduction shall be allowed other than all the ordinary and necessary expenses paid or incurred for the production or collection of gross income or for the management, conservation, or maintenance of property held for the production of such income, and

"(B) section 265 (relating to expenses and interest relating to tax-exempt interest) shall not apply.

"(4) TRANSITIONAL RULE.—For purposes of paragraph (2)(B), the basis of property held by the private foundation on December 31, 1969, and continuously thereafter to the date of its disposition shall be deemed to be not less than the fair market value of such property on December 31, 1969.

"(g) QUALIFYING DISTRIBUTIONS DEFINED.—

"(1) IN GENERAL.—For purposes of this section, the term 'qualifying distribution' means—

"(A) any amount paid out to accomplish one or more purposes described in section 170(c)(2)(B), other than any contribution to (i) an organization controlled (directly or indirectly) by one or more disqualified persons (as defined in section 4946) with respect to the foundation, (ii) a private foundation which is not an operating foundation (as defined in subsection (j)(3)), or (iii) an organization which would be a private foundation if it were a domestic organization, or

"(B) any amount paid out to acquire an asset used (or held for use) directly in carrying out one or more purposes described in section 170(c)(2)(B).

"(2) CERTAIN SET-ASIDES.—Subject to such terms and conditions as may be prescribed by the Secretary or his delegate, an amount set aside for a specific project which comes within one or more purposes described in section 170(c)(2)(B) may be treated as a quali-

fying distribution, but only if, at the time of the set-aside, the private foundation establishes to the satisfaction of the Secretary or his delegate that—

"(A) the amount will be paid out for the specific project within 5 years, and

"(B) the project is one which can be better accomplished by such set-aside than by immediate paying out of funds.

For good cause shown, the period for paying out the amount set aside may be extended by the Secretary or his delegate.

"(h) TREATMENT OF QUALIFYING DISTRIBUTIONS.—

"(1) IN GENERAL.—Except as provided in paragraph (2), any qualifying distribution made during a taxable year shall be treated as made—

"(A) first out of the undistributed income of the immediately preceding taxable year (if the private foundation was subject to the tax imposed by this section for such preceding taxable year) to the extent thereof.

"(B) second out of the undistributed income for the taxable year to the extent thereof, and

"(C) then out of corpus.

For purposes of this paragraph, distributions shall be taken into account in the order of time in which made.

"(2) CORRECTION OF DEFICIENT DISTRIBUTIONS FOR PRIOR TAXABLE YEARS, ETC.—In the case of any qualifying distribution which (under paragraph (1)) is not treated as made out of the undistributed income of the immediately preceding taxable year, the taxpayer may elect to treat any portion of such distribution as made out of the undistributed income of a designated prior taxable year or out of corpus. The election shall be made by the taxpayer at such time and in such manner as the Secretary or his delegate shall by regulations prescribe.

"(i) ADJUSTMENT OF DISTRIBUTABLE AMOUNT WHERE DISTRIBUTIONS DURING PRECEDING 5-YEAR PERIOD HAVE EXCEEDED INCOME.—If, for the 5 taxable years immediately preceding the taxable year—

"(1) the aggregate qualifying distributions treated (under subsection (h)) as made out of the undistributed income for such preceding taxable years or as made out of corpus (except to the extent section 170(e)(3)(B) applies) during such preceding taxable years, exceed

"(2) the distributable amounts for such preceding taxable years.

then, for purposes of this section (other than subsection (h)) the distributable amount for the taxable year shall be reduced by an amount equal to such excess.

"(j) OTHER DEFINITIONS.—For purposes of this section—

"(1) TAXABLE PERIOD.—The term 'taxable period' means, with respect to the undistributed income for any taxable year, the period beginning with the taxable year and ending on the date of mailing of a notice of deficiency with respect to the tax imposed by subsection (a) under section 6212.

"(2) CORRECTION PERIOD.—The term 'correction period' means, with respect to any foundation for any taxable year, the period beginning with the taxable year and ending 90 days after the date of mailing of a notice of deficiency (with respect to the tax imposed by subsection (b)) under section 6212, extended by—

"(A) any period in which a deficiency cannot be assessed under section 6213(a), and

"(B) any other period which the Secretary or his delegate determines is reasonable and necessary to permit a distribution of undistributed income under this section.

"(3) OPERATING FOUNDATION.—For purposes of this section, the term 'operating foundation' means any organization—

"(A) substantially all of the income of which is expended directly for the active conduct of the activities constituting the purpose or function for which it is organized and operated, and

"(B)(i) substantially more than half of the assets of which are devoted directly to such activities or devoted to functionally related activities described in section 4943(d)(4) or both, or

"(ii) substantially all of the support (other than gross investment income as defined in section 506(b)(2)) of which is normally received from 5 or more exempt organizations which are not described in section 4946(a)(1)(H) with respect to each other or the recipient foundation, or from the general public, and not more than 25 percent of the support of which is normally received from any one such exempt organization.

"SEC. 4943. TAXES ON EXCESS BUSINESS HOLDINGS

"(a) INITIAL TAX.—

"(1) IMPOSITION.—There is hereby imposed on the excess business holdings of any private foundation in a business enterprise during any calendar year which ends during the taxable period a tax equal to 5 percent of the value of such excess holdings.

"(2) SPECIAL RULES.—The tax imposed by paragraph (1)—

"(A) shall be imposed on the last day of the calendar year, but

"(B) with respect to the private foundation's holdings in any business enterprise, shall be determined as of that day during the year when the foundation's excess holdings in such enterprise were the greatest.

"(b) ADDITIONAL TAX.—In any case in which an initial tax is imposed under subsection (a) with respect to the holdings of a private foundation in any business enterprise, if, at the close of the correction period with respect to such holdings the foundation still has excess business holdings in such enterprise, there is hereby imposed a tax equal to 200 percent of such excess business holdings.

"(c) EXCESS BUSINESS HOLDINGS.—For purposes of this section—

"(1) IN GENERAL.—The term 'excess business holdings' means, with respect to the holdings of any private foundation in any business enterprise, the amount of stock or other interest in the enterprise which the foundation would have to dispose of to a person other than a disqualified person in order for the remaining holdings of the foundation in such enterprise to be permitted holdings.

"(2) PERMITTED HOLDINGS IN A CORPORATION.—

"(A) IN GENERAL. The permitted holdings of any private foundation in an incorporated business enterprise are—

"(i) 20 percent of the voting stock, reduced by

"(ii) the percentage of the voting stock owned by all disqualified persons.

In any case in which all disqualified persons together do not own more than 20 percent of the voting stock of an incorporated business enterprise, nonvoting stock held by the private foundation shall also be treated as permitted holdings.

"(B) 35 PERCENT RULE WHERE THIRD PERSON HAS EFFECTIVE CONTROL OF ENTERPRISE.—If—

"(i) the private foundation and all disqualified persons together do not own more than 35 percent of the voting stock of an incorporated business enterprise, and

"(ii) it is established to the satisfaction of the Secretary or his delegate that effective control of the corporation is in one or more persons who are not disqualified persons with respect to the foundation.

then subparagraph (A) shall be applied by substituting 35 percent for 20 percent.

"(C) 2 PERCENT DE MINIMIS RULE.—A private foundation shall not be treated as having excess business holdings in any corporation in which it (together with all other private foundations which are described in section 4946(a)(1)(H)) owns not more than 2 percent of the voting stock and not more than 2 percent in value of all outstanding shares of all classes of stock.

"(3) PERMITTED HOLDINGS IN PARTNERSHIPS, ETC.—The permitted holdings of a private foundation in any business enterprise which is not incorporated shall be determined under regulations prescribed by the Secretary or his delegate. Such regulations shall be consistent in principle with paragraph (2), except that—

"(A) in the case of a partnership or joint venture, 'profits interest' shall be substituted for 'voting stock', and 'capital interest' shall be substituted for 'nonvoting stock',

"(B) in the case of a proprietorship, there shall be no permitted holdings, and

"(C) in any other case, 'beneficial interest' shall be substituted for 'voting stock'.

"(4) 10-YEAR PERIOD TO DISPOSE OF PRESENT HOLDINGS.—

"(A) In applying this section, any interest in a business enterprise which a private foundation holds on May 26, 1969, if the private foundation on such date has excess business holdings, shall (while held by the foundation) be treated as held by a disqualified person (rather than by the private foundation) during the 10-year period beginning on such date.

"(B) Subparagraph (A) shall cease to apply with respect to such business holdings unless, at the close of the 2-year period beginning on May 26, 1969, the private foundation has disposed of at least one-tenth of such excess business holdings in such enterprise to a person other than a disqualified person. The preceding sentence shall not apply if—

"(i) such disposition would create severe hardship for the foundation or such business enterprise (including a severe depressive effect on the value of any interest in such enterprise), and

"(ii) it is established to the satisfaction of the Secretary or his delegate that, during the retention of such one-tenth interest, control of such interest will be exercised by persons other than the foundation, or disqualified persons (as defined in section 4946) with respect thereto, or a plan has been adpoted to assure that the value of any interest in such enterprise will not be jeopardized.

"(C) Subparagraph (A) shall cease to apply with respect to such business holdings unless, at the close of the 5-year period beginning on May 26, 1969—

"(i) the private foundation has disposed of at least one-third of such excess business holdings in such enterprise to a person other than a disqualified person, and

"(ii) the private foundation and all disqualified persons have less than a 50 percent voting stock interest (or less than a 50 percent profit interest in the case of any unincorporated enterprise) in such business enterprise.

"(D) Any period prescribed in subparagraph (A), (B), or (C) for the disposition of excess business holdings shall be suspended during the pendency of any judicial proceeding by the private foundation which is necessary to reform its governing instrument to allow disposition of such holdings.

"(5) 10-YEAR PERIOD TO DISPOSE OF HOLDINGS ACQUIRED BY WILL.—Paragraph (4) shall apply to any interest in a business enterprise which a private foundation acquires under the terms of a will executed on or before July 28, 1969, which are in effect on such date and at all times thereafter, except that 'the date of acquisition by will' shall be substituted for 'May 26, 1969' wherever it appears in paragraph (4).

"(6) 5-YEAR PERIOD TO DISPOSE OF GIFTS, BEQUESTS, ETC.—Except as provided in paragraph (5), if, after May 26, 1969, there is a change in the holdings in a business enterprise (other than by purchase by the private foundation or by a disqualified person) which causes the private foundation to have—

"(A) excess business holdings in such enterprise, the interest of the foundation in such enterprise (immediately after such change) shall (while held by the foundation be treated as held by a disqualified person (rather than by the foundation) during the 5-year period beginning on the date of such change in holdings; or

"(B) an increase in excess business holdings in such enterprise (determined without regard to subparagraph (A)), subparagraph (A) shall apply, except that the excess holdings immediately preceding the increase therein shall not be treated, solely because of such increase, as held by a disqualified person (rather than by the foundation).

"(d) DEFINITIONS; SPECIAL RULES.—For purposes of this section—

"(1) BUSINESS HOLDINGS.—In computing the holdings of a private foundation, or a disqualified person (as defined in section 4946) with respect thereto, in any business enterprise, any stock or other interest owned, directly or indirectly, by or for a corporation, partnership, estate, or trust shall be considered as being owned proportionately by or for its shareholders, partners, or beneficiaries.

"(2) TAXABLE PERIOD.—The term 'taxable period' means, with respect to any excess business holdings of a private foundation in a business enterprise, the period beginning on the first day on which there are such excess holdings and ending on the date of mailing of a notice of deficiency with respect to the tax imposed by subsection (a) under section 6212 in respect of such holdings.

"(3) CORRECTION PERIOD.—The term 'correction period' means, with respect to excess business holdings of a private foundation in a business enterprise, the period ending 90 days after the date of mailing of a notice of deficiency (with respect to the tax imposed by subsection (b)) under section 6212, extended by—

"(A) any period in which a deficiency cannot be assessed under section 6213(a), and

"(B) any other period which the Secretary or his delegate determines is reasonable and necessary to permit orderly disposition of such excess business holdings.

"(4) FUNCTIONALLY RELATED BUSINESS.—The term 'business enterprise' does not include a trade or business—

"(A) which is not an unrelated trade or business as defined in section 513, or

"(B) which is carried on within a larger aggregate of similar activities or within a larger complex of other endeavors which is related (aside from the need of such organization for income or funds or the use it makes of the profits derived) to the exempt purposes of the organization.

"SEC. 4944. INVESTMENTS WHICH JEOPARDIZE CHARITABLE PURPOSE.

"(a) TAX ON THE PRIVATE FOUNDATION.—If a private foundation invests any amount in such a manner as to jeopardize the carrying out of any of its exempt purposes, there is hereby imposed on the making of such investment a tax equal to 100 percent of the amount so invested. The tax imposed by this subsection shall be paid by the private foundation.

"(b) TAX ON THE MANAGEMENT.—In any case in which a tax is imposed under subsection (a), there is hereby imposed on any foundation manager who participates in the making of such investment knowing that it is jeopardizing the carrying out of any of the foundation's exempt purposes, a tax equal to 50 percent of the amount so invested. Where, under the preceding sentence, more than one foundation manager is liable for a tax with respect to the same investment, the liability of such managers for tax under this subsection shall be joint and several.

"SEC. 4945. TAXES ON TAXABLE EXPENDITURES.

"(a) GENERAL RULE.—

"(1) TAX ON THE PRIVATE FOUNDATION.—There is hereby imposed on each taxable expenditure a tax equal to 100 percent of the amount thereof. The tax imposed by this paragraph shall be paid by the private foundation.

"(2) TAX ON FOUNDATION MANAGER.—There is hereby imposed on any foundation manager who agrees to the making of an expenditure, knowing that it is a taxable expenditure, a tax equal to 50 percent of the amount thereof. Where, under the preceding sentence, more than one foundation manager is liable for a tax with respect to the same expenditure, the liability of such managers for tax under this paragraph shall be joint and several.

"(b) TAXABLE EXPENDITURE.—For purposes of this section, the term 'taxable expenditure' means any amount paid or incurred by a private foundation—

"(1) to carry out propaganda, or otherwise attempt to influence legislation,

"(2) to influence the outcome of any public election (including voter registration drives carried on by or for such foundation),

"(3) as a grant to an individual for travel, study, or other similar purposes by such individual, unless such grant satisfies the requirements of subsection (e),

"(4) as a grant to another organization (other than an organization described in paragraph (1), (2), or (3) of section 509(a)), unless the private foundation exercises expenditure responsibility with respect to such grants in accordance with subsection (f), or

"(5) for any purpose other than for a purpose specified in section 501(c)(3).

"(c) CERTAIN ACTIVITIES EXPRESSLY INCLUDED WITHIN SUBSECTION (b)(1).—For purposes of subsection (b)(1), the term 'taxable expenditures' includes (but is not limited to)—

"(1) any attempt to influence legislation through an attempt to affect the opinion of the general public or any segment thereof, and

"(2) any attempt to influence legislation through private communication with any member or employee of a legislative body, or with any other person who may participate in the formulation of the legislation, other than through making available the results of nonpartisan analysis or research. Paragraph (2) of this subsection shall not apply to any amount paid or incurred in connection with an appearance before, or communication to, any legislative body with respect to a possible decision of such body which might affect the existence of the private foundation, its powers and duties, its tax-exempt status, or the deduction of contributions to such foundation.

"(d) NONPARTISAN ACTIVITIES CARRIED ON BY CERTAIN ORGANIZATIONS.—Subsection (b)(2) shall not apply to any amount paid or incurred by an organization—

"(1) which is exempt from taxation under section 501(c)(3),

"(2) the principal activity of which is nonpartisan political activity in 5 or more States,

"(3) substantially all of the income of which is expended directly for the active conduct of the activities constituting the purpose or function for which it is organized and operated.

"(4) substantially all of the support (other than gross investment income as defined in section 506(b)(2)) of which is normally received from 5 or more exempt organizations which are not described in section 4946(a)(1)(H) with respect to each other or the recipient foundation, or from the general public, and not more than 25 percent of the support of which is normally received from any one such exempt organization, and

"(5) contributions to which for voter registration drives are not subject to conditions that they may be used only in specified States, possessions of the United States, or political subdivisions or other areas of any of the foregoing, or the District of Columbia. Subsection (b)(4) shall not apply to any grant to an organization which meets the requirements of the preceding sentence.

"(e) INDIVIDUAL GRANTS.—Subsection (b)(3) shall not apply to an individual grant awarded on an objective and nondiscriminatory basis pursuant to a procedure approved in advance by the Secretary or his delegate, if it is demonstrated to the satisfaction of the Secretary or his delegate that it constitutes a scholarship or fellowship grant at an educational institution described in section 170(b)(1)(B)(ii) or that the purpose of the grant is to achieve a specific objective, produce a report or other similar product, or improve or enhance a literary, artistic, musical, scientific, or other similar capacity, skill, or talent.

"(f) EXPENDITURE RESPONSIBILITY.—The expenditure responsibility referred to in subsection (b)(4) means that the private foundation is fully responsible—

"(1) to see that the grant is spent solely for the purpose for which made,

"(2) to obtain full and complete reports from the grantee on how the funds are spent, and to verify the accuracy of such reports, and

"(3) to make full and detailed reports with respect to such expenditures to the Secretary or his delegate.

"SEC. 4946. DEFINITIONS AND SPECIAL RULES.

"(a) DISQUALIFIED PERSONS.—

"(1) IN GENERAL.—For purposes of this chapter, the term 'disqualified person' means, with respect to a private foundation, a person who is—

"(A) a substantial contributor to the foundation,

"(B) a foundation manager (within the meaning of subsection (b)(1)),

"(C) an individual who—

"(i) owns more than 20 percent of the total combined voting power of a corporation, or

"(ii) is a general partner in a partnership, or

"(iii) holds more than 20 percent of the beneficial interest of a trust or unincorporated enterprise,

which is a substantial contributor to the foundation,

"(D) a member of the family (within the meaning of section 341(d)) of any person described in subparagraph (A), (B), or (C),

"(E) a corporation of which persons described in subparagraph (A), (B), (C), or (D) own more than 35 percent of the total combined voting power,

"(F) a partnership in which persons described in subparagraph (A), (B), (C), or (D) own more than 35 percent of the profits interest,

"(G) a trust or estate in which persons described in subparagraph (A), (B), (C), or (D) hold more than 35 percent of the beneficial interest,

(H) only for purposes of section 4943, a private foundation—

"(i) which is effectively controlled (directly or indirectly) by the same person or persons who control the private foundation in question, or

"(ii) substantially all of the contributions to which were made (directly or indirectly) by the same person or persons described in subparagraph (A), (B), or (C), or members of their families (within the meaning of subparagraph (D)), who made (directly or indirectly) substantially all of the contribu-

tions to the private foundation in question, and

"(I) only for purposes of section 4941, a government official (as defined in subsection (c)).

"(2) SUBSTANTIAL CONTRIBUTORS.—For purposes of paragraph (1), the terms 'substantial contributor' means a person who is described in section 507(b)(2).

"(3) STOCKHOLDERS.—For purposes of paragraphs (1)(C)(i) and (1)(E), there shall be taken into account indirect stockholdings which would be taken into account under section 267(c).

"(b) FOUNDATION MANAGER.—For purposes of this chapter, the term 'foundation manager' means, with respect to any private foundation—

"(1) an officer, director, or trustee of a foundation (or an individual having powers or responsibilities similar to those of officers, directors, or trustees of a foundation), and

"(2) with respect to any act (or failure to act), the employees of the foundation having authority or responsibility with respect to such act (or failure to act).

"(c) GOVERNMENT OFFICIAL.—For purposes of subsection (a)(1)(I) and section 4941, the term 'government official' means, with respect to an act of self-dealing described in section 4941, an individual who, at the time of such act, holds any of the following offices or positions (other than as a 'special Government employee', as defined in section 202 (a) of title 18, United States Code):

"(1) an elective public office in the executive or legislative branch of the Government of the United States,

"(2) an office in the executive or judicial branch of the Government of the United States, appointment to which was made by the President,

"(3) a position in the executive, legislative, or judicial branch of the Government of the United States—

"(A) which is listed in schedule C of rule VI of the Civil Service Rules, or

"(B) the compensation for which is equal to or greater than the lowest rate of compensation prescribed for GS–16 of the General Schedule under section 5332 of title 5, United States Code,

"(4) a position under the House of Representatives or the Senate of the United States held by an individual receiving gross compensation at an annual rate of $15,000 or more,

"(5) an elective or appointive public office in the executive, legislative, or judicial branch of the Government of a State, possession of the United States, or political subdivision or other area of any of the foregoing, or of the District of Columbia, held by an individual receiving gross compensation at an annual rate of $15,000 or more, or

"(6) a position as personal or executive assistant or secretary of any of the foregoing.

"SEC. 4947. APPLICATION OF TAXES TO CERTAIN NONEXEMPT TRUSTS.

"(a) APPLICATION OF TAX.—

"(1) IN GENERAL.—The taxes imposed by section 506 (relating to tax on private foundation investment income) and this chapter shall apply to any trust which is not exempt from tax under section 501(a), all of the unexpired interests of which are devoted to one or more of the purposes described in section 170(c)(2)(B), and for which a deduction was allowable under section 170, 545(b)(2), 642(c), 2055, 2106(a)(2), or 2522.

"(2) LIMITATION TO CHARITABLE PORTION.—In the case of a trust which is not exempt from tax under section 501(a), not all of the unexpired interests of which are devoted to one or more of the purposes described in section 170(c)(2)(B), and which has amounts in trust for which a deduction was allowable under section 170, 545(b)(2), 642(c), 2055, 2106(a)(2), or 2522, the taxes imposed by section 4941 (relating to taxes on self-dealing), section 4943 (relating to taxes on excess business holdings), section 4944 (relating to investments which jeopardize charitable purpose), and section 4945 (relating to taxes on taxable expenditures) shall apply as if such trust were a private foundation. This subsection shall not apply with respect to—

"(A) any amounts payable under the terms of such trust to income beneficiaries, unless section 170(b)(1)(H) applies, or

"(B) any amounts in trust for which a deduction was not allowable under section 170, 545(b)(2), 642(c), 2055, 2106(a)(2), or 2522, if such amounts are segregated from amounts for which such deduction was allowable.

"(3) For purposes of subsection (a)(2)(B), a trust with respect to which amounts are segregated shall separately account for the various income, deduction, and other items properly attributable to each of such segregated amounts.

"(b) ADDITIONAL TAX.—

"(1) AMOUNT OF TAX.—There is hereby imposed upon a trust described in subsection (a) which is notified by the Secretary or his delegate that he is invoking this subsection as to it, and with respect to which there have been either willful repeated acts (or failures to act), or a willful and flagrant act (or failure to act), giving rise to liability for tax under this chapter, a tax equal to the lower of—

"(A) the amount which such trust substantiates by adequate records or other corroborating evidence as the aggregate tax benefit described in paragraph (2), or

"(B) the value of the net assets of such trust (limited by the value of assets segregated for charity in accordance with subsection (a)(2)(B)).

"(2) AGGREGATE TAX BENEFIT.—For purposes of subsection (b)(1), the aggregate tax benefit is the sum of—

"(A) the aggregate increases in tax under chapters 1, 11, and 12 (or the corresponding provisions of prior law) which would have been imposed with respect to all substantial contributors (as defined in section 507(b)(2)) to the trust if deductions for all contributions made by such contributors to the trust after February 28, 1913, had been disallowed, and

"(B) the aggregate increases in tax under chapter 1 (or the corresponding provisions of prior law) which would have been imposed with respect to the income of the trust for taxable years beginning after December 31, 1912, if deductions under section 642(c) (or the corresponding provisions of prior law) had been limited to 20 percent of the taxable income of the trust (computed without the benefit of section 642(c) but with the benefit of section 170(b)(1)(B)), and

"(C) interest on the increases in tax determined under subparagraphs (A) and (B) from the first date on which each such increase would have been due and payable to the date on which the trust pays the tax imposed by this subsection.

"(3) SPECIAL RULE.—For purposes of paragraph (2), the value of the net assets shall be determined at whichever time such value is higher:

"(A) the first day on which action is taken by the trust which culminates in the imposition of tax under this subsection, or

"(B) the day on which the tax prescribed by this subsection is imposed.

"(4) LIABILITY IN CASE OF TRANSFERS OF ASSETS FROM TRUSTS.—For purposes of determining liability for the tax imposed by this subsection in the case of assets transferred by the trust, such tax shall be deemed to have been imposed on the first day on which action is taken by the trust which culminates in the imposition of tax under this subsection.

"(5) ABATEMENT OF TAX WHERE ASSETS ARE DISTRIBUTED TO PUBLIC CHARITIES.—The Secretary or his delegate may abate the unpaid portion of the assessment of any tax imposed by this subsection, or any liability with respect thereto, if the trust distributes all of its net assets (limited by the value of assets segregated for charity in accordance with subsection (a)(2)(B)) to one or more organizations specified in section 170(b)(1)(B) each of which has been in existence and met the requirements of section 170(b)(1)(B) for a continuous period of at least 60 calendar months.

"(c) SPECIAL RULE.—For purposes of this section, 'nonexempt trust' shall be substituted for 'private foundation' in sections 506, 507(b)(2), 4941, 4942, 4943, 4944, 4945, and 4946.

"(d) REGULATIONS.—The Secretary or his delegate shall prescribe such regulations as may be necessary to carry out the purposes of this section."

(c) ASSESSABLE PENALTIES FOR REPEATED, OR WILLFUL AND FLAGRANT, ACTS UNDER CHAPTER 42.—Subchapter B of chapter 68 (relating to assessable penalties) is amended by adding at the end thereof the following new section:

"SEC. 6684. REPEATED LIABILITY FOR TAX UNDER CHAPTER 42.

"If any person becomes liable for tax under any section of chapter 42 (relating to private foundations) by reason of any act or failure to act which is not due to reasonable cause and either—

"(1) such person has theretofore been liable for tax under such chapter, or

"(2) such act or failure to act is both willful and flagrant,

then such person shall be liable for a penalty equal to the amount of such tax."

(d) INFORMATION RETURNS OF EXEMPT ORGANIZATIONS.—

(1) IN GENERAL.—Section 6033(a) (relating to information returns by exempt organizations) is amended to read as follows:

"(a) ORGANIZATIONS REQUIRED TO FILE.—

"(1) IN GENERAL.—Every organization exempt from taxation under section 501(a) shall file an annual return, stating specifically the items of gross income, receipts, and disbursements, and such other information for the purpose of carrying out the internal revenue laws as the Secretary or his delegate may by forms or regulations prescribe, and shall keep such records, render under oath such statements, make such other returns, and comply with such rules and regulations as the Secretary or his delegate may from time to time prescribe; except that, in the discretion of the Secretary or his delegate, any organization described in section 401(a) may be relieved from stating in its return any information which is reported in returns filed by the employer which established such organization.

"(2) EXCEPTIONS FROM FILING.—The Secretary or his delegate may relieve any organization required under paragraph (1) to file an information return from filing such a return where he determines that such filing is not necessary to the efficient administration of the internal revenue laws."

(2) ADDITIONAL INFORMATION.—Section 6033(b) (relating to certain organizations described in section 501(c)(3)) is amended—

(A) by striking out in paragraph (3) "out of income",

(B) by striking out paragraphs (4), (5), (6), and (8), and by redesignating paragraph (7) as paragraph (4), and

(C) by adding after paragraph (4) (as redesignated) the following new paragraphs:

"(5) the total of the contributions and gifts received by it during the year, and the names and addresses of all substantial contributors,

"(6) the names and addresses of its foundation managers (within the meaning of section 4946(b)(1)) and highly compensated employees, and

"(7) the compensation and other payments made during the year to each individual described in paragraph (6)."

(3) PENALTY FOR LATE FILING OF CERTAIN INFORMATION RETURNS.—Section 6652 (relating to failure to file certain information returns) is amended by relettering subsection (d) as subsection (e) and inserting immediately after subsection (c) the following new subsection:

"(d) RETURNS BY EXEMPT ORGANIZATIONS AND BY CERTAIN TRUSTS.—

"(1) PENALTY ON ORGANIZATION OR TRUST.—In the case of a failure to file a return required under section 6033 (relating to returns by exempt organizations) and section 6034 (relating to returns by certain trusts) on the date and in the manner prescribed therefor (determined with regard to any extension of time for filing), unless it is shown that such failure is due to reasonable cause, there shall be paid (on notice and demand by the Secretary or his delegate and in the same manner as tax) by the exempt organization or trust failing so to file, $10 for each day during which such failure continues, but the total amount imposed hereunder on any organization for failure to file any return shall not exceed $5,000.

"(2) PENALTY ON MANAGERS.—The Secretary or his delegate may make written demand upon an organization failing to file under paragraph (1) specifying therein a reasonable future date by which such filing shall be made, and if such filing is not made on or before such date, and unless it is shown that failure so to file is due to reasonable cause, there shall be paid (on notice and demand by the Secretary or his delegate and in the same manner as tax) by the person failing so to file, in addition to the penalty prescribed in paragraph (1), a penalty of $10 for each day after the expiration of the time specified in the written demand during which such failure continues, but the total amount imposed hereunder on all persons for such failure to file shall not exceed $5,000. If more than one person is liable under this paragraph for a failure to file, all such persons shall be jointly and severally liable with respect to such failure. The term 'person' as used herein means any officer, director, trustee, employee, member, or other individual who is under a duty to perform the act in respect of which the violation occurs."

(e) PUBLICITY OF INFORMATION REQUIRED BY CERTAIN EXEMPT ORGANIZATIONS.—Section 6104 (relating to publicity of information required from certain exempt organizations and certain trusts) is amended by inserting immediately after subsection (b), the following new subsection:

"(c) PUBLICATION TO STATE OFFCIALS.—

"(1) GENERAL RULE.—In the case of any orangization which is exempt from taxation under section 501a), or has applied for recognition of exemption under such section on or after May 26, 1969, the Secretary or his delegate at such times and in such manner as he may by regulations prescribe shall—

"(A) notify the appropriate State officer of a refusal to recognize exemption or the operation of such organization in a manner which does not meet, or no longer meets, the requirements of its exemption.

"(B) notify the appropriate State officer of the mailing of a notice of deficiency of tax under section 507 or chapter 42, and

"(C) at the request of such appropriate State officer, make available for inspection and copying such returns, filed statements, records, reports, and other information, relating to a determination under subparagraph (A) or (B) as are relevant to any determination under State law.

"(2) APPROPRIATE STATE OFFICER.—For purposes of this section, the term 'appropriate State officer' means the State attorney general, Sate tax officer, or any other State official charged with overseeing charitable organizations."

(f) PETITION TO TAX COURT; DEFICIENCY PROCEDURES MADE APPLICABLE.—

(1) Section 6211(a) (definition of a deficiency) is amended—

(A) by striking out "and gift taxes" and inserting in lieu thereof "gift, and excise taxes,",

(B) by striking out "subtitles A and B," and inserting in lieu thereof "subtitles A and B, and chapter 42,", and

(C) by striking out "subtitles A or B" and inserting in lieu thereof "subtitle A or B or chapter 42".

(2) Section 6212(c)(1) (relating to further deficiency letters restricted) is amended by striking out "or" before "of estate tax" and by inserting after "the same decedent," the following: "or of chapter 42 tax with respect to any act (or failure to act) to which such petition relates,".

(3) Section 6213 (relating to restrictions applicable to deficiencies; petition to Tax Court) is amended by relettering subsection (e) as subsection (f) and inserting immediately after subsection (d) the following new subsection:

"(e) SUSPENSION OF FILING PERIOD FOR CERTAIN CHAPTER 42 TAXES.—The running of the time prescribed by subsection (a), for filing a petition in the Tax Court with respect to the taxes imposed by section 4941 (relating to taxes on self-dealing), 4942 (relating to taxes on failure to distribute income), or 4943 (relating to taxes on excess business holdings) shall be suspended for any period during which the Secretary or his delegate has extended the time allowed for making correction under section 4941(e)(4), 4942(j)(2), or 4943(d)(3)."

(g) LIMITATIONS ON ASSESSMENT AND COLLECTION.—

(1) Section 6501 is amended by adding at the end thereof the following new subsection:

"(n) SPECIAL RULE FOR CHAPTER 42 TAXES.—For purposes of any tax imposed by chapter 42 (other than section 4942), the return referred to in this section shall be the return filed by the private foundation for the year in which the act (or failure to act) giving rise to liability for such tax occurred. For purposes of section 4942 (relating to taxes on failure to distribute income), such return is the return filed by the private foundation for the taxable year in which a distribution of undistributed income under section 4942 is required to be made."

(2) Section 6501(c) is amended by adding the following new paragraph at the end thereof:

"(7) TERMINATION OF PRIVATE FOUNDATION STATUS.—In the case of a tax on termination of private foundation status under section 507, such tax may be assessed, or a proceeding in court for the collection of such tax may be begun without assessment, at any time."

(3) Section 6503 (relating to suspension of running of period of limitation) is amended by relettering subsection (h) as subsection (i) and inserting immediately after subsecton (g) the following new subsection:

"(h) SUSPENSION PENDING CORRECTION.—The running of the period of limitations provided in sections 6501 and 6502 on the making of assessments or the collection by levy or a proceeding in court in respect of any tax imposed by chapter 42 or section 507 shall be suspended for any period during which the Secretary or his delegate has extended the time for making correction under section 4941(e)(4), 4942(j)(2), or 4943(d)(3)."

(h) LIMITATIONS ON CREDITS OR REFUNDS.—Section 6511 (relating to limitations on credits or refunds) is amended by relettering subsection (f) as subsection (g) and inserting immediately after subsection (e) the following new subsection:

"(f) SPECIAL RULE FOR CHAPTER 42 TAXES.—For purposes of any tax imposed by chapter 42, the return referred to in subsection (a) shall be the return specified in section 6501(n)."

(i) CIVIL ACTION FOR REFUND.—Section 7422 (relating to civil actions for refund) is amended by relettering subsection (g) as subsection (h) and by inserting immediately after subsection (f) the following new subsection:

"(g) SPECIAL RULES FOR CERTAIN EXCISE TAXES IMPOSED BY CHAPTER 42.—

"(1) RIGHT TO BRING ACTIONS.—With respect to any act (or failure to act) giving rise to liability under section 4941, 4942, or 4943, payment of the full amount of tax imposed under section 4941(a) (relating to initial taxes on self-dealing), section 4942(a) (relating to initial tax on failure to distribute income), section 4943(a) (relating to initial tax on excess business holdings), section 4941(b) (relating to additional taxes on self-dealing), section 4942(b) (relating to additional tax on failure to distribute income), or section 4943(b) (relating to additional tax on excess business holdings) shall constitute sufficient payment in order to maintain an action under this section with respect to such act.

"(2) LIMITATION ON SUIT FOR REFUND.—No suit may be maintained under this section for the credit or refund of any tax imposed under section 4941, 4942, or 4943 with respect to any act (or failure to act) giving rise to liability for tax under such sections, unless no other suit has been maintained for credit or refund, and no petition has been filed in the Tax Court with respect to a deficiency of tax, for any other tax imposed under such sections with respect to such act (or failure to act).

"(3) FINAL DETERMINATION OF ISSUES.—For purposes of this section, any suit for the credit or refund of any tax imposed under section 4941, 4942, or 4943 with respect to any act (or failure to act) giving rise to liability for tax under such sections, shall constitute a suit to determine all questions with respect to any other tax imposed with respect to such act (or failure to act) under such sections, and failure by the parties to such suit to bring any such question before the Court shall constitute a bar to such question."

(j) TECHNICAL, CONFORMING, AND CLERICAL AMENDMENTS.—

(1) Section 101(b)(2)(B)(iii) (relating to nonforfeitable rights) is amended by striking out "section 503(b)(1), (2), or (3)" and inserting in lieu thereof "section 170(b)(1)(B)(ii) or (iii) or which is a religious organization (other than a trust)".

(2) Section 170(c)(2)(B) (relating to the definition of charitable contributions) is amended by inserting after "animals" the phrase ", or for the providing of hospital care".

(3) Section 170(c)(4) (relating to contributions to fraternal societies) is amended by inserting after "animals" the phrase ", or for the providing of hospital care".

(4) Section 170(i)(1) (relating to disallowance of deductions in certain cases) (as redesignated) is amended by striking out "section 503(e)" and inserting in lieu thereof "section 507(f)".

(5) Section 501(a) (relating to exemption from taxation) is amended by striking out "502, 503, or 504" and inserting in lieu thereof "502 or 503".

(6) Section 501 (b) (relating to tax on unrelated business income) is amended to read as follows:

"(b) TAX ON UNRELATED BUSINESS INCOME AND CERTAIN OTHER ACTIVITIES.—An organi-

zation exempt from taxation under subsection (a) shall be subject to tax to the extent provided in parts II and III of this subchapter, but (notwithstanding parts II and III of this subchapter) shall be considered an organization exempt from income taxes for the purpose of any law which refers to organizations exempt from income taxes."

(7) Section 501(c)(3) (relating to the definition of exempt organizations) is amended by inserting after "animals" the phrase ", or for the providing of hospital care,".

(8) Section 501(c)(16) (relating to list of exempt organizations) is amended by striking out "part III" and inserting in lieu thereof "part IV".

(9) Section 501(e) (relating to cooperative hospital service organizations) is amended by striking out in the last sentence thereof "section 503(b)(5)." and inserting in lieu thereof "section 170(b)(1)(B)(iii).".

(10) Section 503(a)(1) (relating to general rule) is amended to read as follows:

"(1) GENERAL RULE.—

"(A) An organization described in section 501(c)(17) shall not be exempt from taxation under section 501(a) if it has engaged in a prohibited transaction after December 31, 1959.

"(B) An organization described in section 401(a) shall not be exempt from taxation under section 501(a) if it has engaged in a prohibited transaction after March 1, 1954."

(11) Section 503(a)(2) (relating to taxable years affected by denial of exemption) is amended by striking out "section 501(c)(3) or (17)" and inserting in lieu thereof "section 501(c)(17)".

(12) Section 503(d) (relating to future status of organizations denied exemption) is amended by striking out "section 501(c)(3) or (17)" and inserting in lieu thereof "section 501(c)(17)".

(13) Section 503(g) (relating to special rule for loans) is amended by striking out "subsection (c)(1)," and inserting in lieu thereof "subsection (b)(1),".

(14) Section 503(h) (relating to special rules relating to lending by section 401(a) and section 501(c)(17) trusts to certain persons) is amended—

(A) by striking out in the title thereof "SPECIAL RULES RELATING TO LENDING BY SECTION 401(a) AND SECTION 501(C)(17) TRUSTS TO CERTAIN PERSONS.—", and inserting in lieu thereof "SPECIAL RULES.—",

(B) by striking out "subsection (c)(1)," and inserting in lieu thereof "subsection (b)(1),",

(C) by striking out "acquired by a trust described in section 401(a) or section 501(c)(17)", and

(D) by striking out in paragraph (3) "subsection (c)" and inserting in lieu thereof "subsection (b)".

(15) Section 503(i) (relating to loans with respect to which employers are prohibited from pledging certain assets) is amended—

(A) by striking out "Subsection (c)(1)" and inserting in lieu thereof "Subsection (b)(1)", and

(B) by striking out "subsection (h)" and inserting in lieu thereof "subsection (e)".

(16) Section 503(j)(1) (relating to prohibited transactions) is amended by striking out "subsection (c)" and inserting in lieu thereof "subsection (b)".

(17) Section 503 (relating to requirements of exemption) is amended by striking out subsections (b), (e), and (f) and by redesignating subsections (c), (d), (g), (h), (i), and (j) (as amended) as subsections (b), (c), (d), (e), (f), and (g), respectively.

(18) Section 504 (relating to denial of exemption) is repealed.

(19) Section 542(a)(2) (relating to stock ownership requirement) is amended—

(A) by striking out in the second sentence "503(b)" and inserting in lieu thereof "section 401(a), 501(c)(17), or 509(a)", and

(B) by amending the third sentence to read as follows: "The preceding sentence shall not apply in the case of an organization or trust organized or created before July 1, 1950, if at all times on or after July 1, 1950, and before the close of the taxable year such organization or trust has owned all of the common stock and at least 80 percent of the total number of shares of all other classes of stock of the corporation."

(20) Section 663(a)(2) (relating to charitable, etc., distributions) is amended by striking out "section 681" and inserting in lieu thereof "sections 681 and 507(f)".

(21) Section 681 (b) and (c) (relating to operations of trusts and accumulated income) is repealed.

(22) Section 681(d) (relating to cross reference) is redesignated as subsection (b), and as so redesignated is amended by striking out "section 503(e)" and inserting in lieu thereof "section 507(f)".

(23) Section 2039(c)(3) (relating to exemption of annuities under certain trusts and plans) is amended by striking out "section 503(b)(1), (2), or (3)," and inserting in lieu thereof "section 170(b)(1)(B)(ii) or (vi), or which is a religious organization (other than a trust),".

(24) Section 2055(a) (relating to general rule for transfers for public, charitable, and religious uses) is amended by—

(A) inserting in paragraph (2) after "animals" the phrase ", or for the providing of hospital care", and

(B) inserting in paragraph (3) after "animals" the phrase ", or for the providing of hospital care".

(25) Section 2106(a)(2)(A) (relating to general rule for transfer for public charitable, and religious uses) is amended by—

(A) inserting in clause (ii) after "animals" the phrase ", or for the providing of hospital care", and

(B) inserting in clause (iii) after "animals" the phrase ", or for the providing of hospital care".

(26) Section 2517(a)(3) (relating to general rule for certain annuities under qualified plans) is amended by striking out "section 503(b)(1), (2), or (3)," and inserting in lieu thereof "section 170(b)(1)(B)(ii) or (vi), or which is a religious organization (other than a trust),".

(27) Section 2522 (relating to charitable and similar gifts) is amended by:

(A) inserting in subsection (a)(2) after "animals" the phrase ", or for the providing of hospital care",

(B) inserting in subsection (a)(3) after "animals" the phrase ", or for the providing of hospital care",

(C) inserting in subsection (b)(2) after "animals" the phrase ", or for the providing of hospital care",

(D) inserting in subsection (b)(3) after "animals" the phrase ", or for the providing of hospital care", and

(E) inserting in subsection (b)(4) after "animals" the phrase ", or for the providing of hospital care".

(28) Section 4057(b) (relating to the definition of nonprofit educational organization) is amended by striking out "section 503(b)(2)" and inserting in lieu thereof "section 170(b)(1)(B)(ii)".

(29) Section 4221(d)(5) (relating to the definition of nonprofit educational organization) is amended by striking out "section 503(b)(2)" and inserting in lieu thereof "section 170(b)(1)(B)(ii)".

(30) Section 4253(h) (relating to nonprofit hospitals) is amended by striking out "section 503(b)(5)" and inserting in lieu thereof "section 170(b)(1)(B)(iii)".

(31) Section 4294(b) (relating to the definition of nonprofit educational organization) is amended by striking out "section 503(b)(2)" and inserting in lieu thereof "section 170(b)(1)(B)(ii)".

(32) Section 5214(a)(3)(A) (relating to purposes for withdrawal of distilled spirits from bonded premises free of tax or without payment of tax) is amended by striking out "section 503(b)(2)" and inserting in lieu thereof "section 170(b)(1)(B)(ii)".

(33) Section 6033(b)(7) (relating to certain balance sheet items on returns by exempt organizations) is amended by striking out "and".

(34) Section 6034 (relating to returns by certain trusts) is amended by striking out all of such section before paragraph (1) of subsection (a) and inserting in lieu thereof the following:

"SEC. 6034. RETURNS BY TRUSTS DESCRIBED IN SECTION 4947(a) OR CLAIMING CHARITABLE DEDUCTIONS UNDER SECTION 642(c).

"(a) GENERAL RULE.—Every trust described in section 4947(a) or claiming a charitable, etc., deduction under section 642(c) for the taxable year shall furnish such information with respect to such taxable year as the Secretary or his delegate may by forms or regulations prescribe as necessary to carry out the provisions of the internal revenue laws, including—".

(35) Section 6034(a)(1) (relating to returns by certain trusts) is amended by striking out "(showing seperately the amount of such deduction which was paid out and the amount which was permanently set aside for charitable, etc., purposes during such year)".

(36) Section 6104(b) (relating to inspection of annual information returns) is amended by striking out "sections 6033(b) and 6034," and inserting in lieu thereof "sections 6033 and 6034,".

(37) Section 6161(b) (relating to the amount determined as a deficiency when granting an extension of time) is amended—

(A) by striking out in paragraph (1) "chapter 1 or 12," and inserting in lieu thereof "chapter 1, 12, or 42,", and

(B) by striking out "chapter 1," the last time it appears and inserting in lieu thereof "chapter 1 or 42,".

(38) Section 6201(d) (relating to deficiency proceedings) is amended by striking out "and gift taxes", and inserting in lieu thereof "gift, and chapter 42 taxes".

(39) Section 6211(b)(2) (relating to the term "rebate") is amended by striking out "subtitles A or B" and inserting in lieu thereof "subtitle A or B or chapter 42".

(40) Section 6212(a) (relating to notice of deficiency) is amended by striking out "subtitles A or B" and inserting in lieu thereof "subtitle A or B or chapter 42".

(41) Section 6212(b)(1) (relating to address for notice of deficiency) is amended—

(A) by striking out in the title thereof "AND GIFT TAXES" and inserting in lieu thereof "AND GIFT TAXES AND TAXES IMPOSED BY CHAPTER 42",

(B) by striking out "subtitle A or chapter 12," and inserting in lieu thereof "subtitle A, chapter 12, or chapter 42,", and

(C) by inserting "chapter 42," after "chapter 12," the last place it appears.

(42) Section 6213(a) (relating to restrictions applicable to deficiencies; petition to Tax Court) is amended by inserting "or chapter 42" after "subtitle A or B".

(43) Section 6214 (relating to determinations by the Tax Court) is amended by relettering subsection (c) as subsection (d) and by inserting after subsection (b) the following new subsection:

"(c) TAXES IMPOSED BY SECTION 507 OR CHAPTER 42.—The Tax Court, in redetermining a deficiency of any tax imposed by section 507 or chapter 42 for any period, act, or failure to act, shall consider such facts with relation to the taxes under chapter 42

for other periods, acts, or failures to act as may be necessary correctly to redetermine the amount of such deficiency, but in so doing shall have no jurisdiction to determine whether or not any other tax has been overpaid or underpaid."

(44) Section 6214(d) (as relettered) is amended by inserting ", chapter 42," after "chapter".

(45) Section 6344(a)(1) (relating to certain cross references) is amended by inserting "and taxes imposed by chapter 42," after "gift taxes".

(46) Section 6503(a)(1) (relating to issuance of statutory notice of deficiency) is amended by striking out "and gift taxes" and inserting in lieu thereof "gift, and chapter 42 taxes".

(47) Section 6512(a) (relating to effect of petition of Tax Court) is amended—

(A) by striking out "and gift taxes" and inserting in lieu thereof "gift, and chapter 42 taxes", and

(B) by striking out "or of estate tax in respect of the taxable estate of the same decedent," and inserting in lieu thereof "of estate tax in respect of the taxable estate of the same decedent, or of tax imposed by chapter 42 with respect to any act (or failure to act) to which such petition relates,".

(48) Section 6512(b)(1) (relating to jurisdiction to determine overpayment determined by Tax Court) is amended by striking out "or of estate tax in respect of the taxable estate of the same decedent," and inserting in lieu thereof "of estate tax in respect of the taxable estate of the same decedent, or of tax imposed by chapter 42 with respect to any act (or failure to act) to which such petition relates,".

(49) Section 6601(d) (relating to suspension of interest in certain cases) is amended—

(A) by striking out in the title thereof "AND GIFT TAX CASES." and inserting in lieu thereof "GIFT, AND CHAPTER 42 TAX CASES.", and

(B) by striking out "and gift taxes" and inserting in lieu thereof "gift, and chapter 42 taxes".

(50) Section 6653(c)(1) (relating to definition of overpayment) is amended—

(A) by striking out in the title thereof "AND GIFT TAXES." and inserting in lieu thereof "GIFT, AND CHAPTER 42 TAXES.", and

(B) by striking out "and gift taxes" the last time it appears and inserting in lieu thereof "gift, and chapter 42 taxes".

(51) Section 6659(b) (relating to procedure for assessing certain additions to tax) is amended by striking out "and gift taxes" and inserting in lieu thereof "gift, and chapter 42 taxes".

(52) Section 6676(b) (relating to deficiency procedures not to apply) is amended by striking out "and gift taxes" and inserting in lieu thereof "gift, and chapter 42 taxes".

(53) Section 6677(b) (relating to deficiency procedures not to apply) is amended by striking out "and gift taxes" and inserting in lieu thereof "gift, and chapter 42 taxes".

(54) Section 6679(b) (relating to deficiency procedures not to apply) is amended by striking out "and gift taxes" and inserting in lieu thereof "gift, and chapter 42 taxes".

(55) Section 6682(b) (relating to deficiency procedures not to apply) is amended by striking out "and gift taxes" and inserting in lieu thereof "gift, and chapter 42 taxes".

(56) Section 7422(e) (relating to stay of proceeding in civil actions for refund) is amended by striking out "or gift tax" the first time it appears and inserting in lieu thereof "gift tax, or tax imposed by chapter 42".

(57) The table of parts for subchapter F of chapter 1 is amended to read as follows:

"SUBCHAPTER F—EXEMPT ORGANIZATIONS

"Part I. General rule.
"Part II. Private foundations.
"Part III. Taxation of business income of certain exempt organizations.
"Part IV. Farmers' cooperatives.
"Part V. Shipowners' protection and indemnity associations."

(58) The table of chapters for subtitle D is amended by adding at the end thereof the following new item:

"Chapter 42. Private foundations."

(59) The table of sections for subchapter B of chapter 68 is amended by adding at the end thereof the following new item:

"Sec. 6684. Repeated liability for tax under chapter 42."

(k) EFFECTIVE DATES.—

(1) IN GENERAL.—Except as otherwise provided in this subsection, the amendments made by this section shall apply for taxable years beginning after December 31, 1969.

(2) SECTION 4941.—Section 4941 shall not apply to—

(A) any transaction between a private foundation and a corporation which is a disqualified person (as defined in section 4946), pursuant to the terms of securities of such corporation in existence at the time acquired by the foundation, if such securities were acquired by the foundation before May 27, 1969;

(B) the sale of property which is owned by a private foundation on May 26, 1969, to a disqualified person, if such foundation is required to dispose of such property in order not to be liable for tax under section 4943 (relating to taxes on excess business holdings), and it receives in return an amount which equals or exceeds the fair market value of such property; and

(C) the use of property in which a private foundation and a disqualified person have a joint or common interest, if the interests of both in such property were acquired before May 27, 1969.

(3) SECTION 4942.—In the case of organizations organized before May 27, 1969, section 4942 shall—

(A) for taxable years beginning before January 1, 1972, apply without regard to the minimum investment return provision (as defined in section 4942(e) as added by this Act); and

(B) not apply to an organization to the extent its income is required to be accumulated pursuant to the mandatory terms (as in effect on May 27, 1969, and at all times thereafter) of an instrument executed before May 27, 1969, with respect to the transfer of income producing property to such organization, except that section 4942 shall apply to such organization if the organization would have been denied exemption if section 504(a) had not been repealed by this Act, or would have had its deductions under section 642(c) limited if section 681(c) had not been repealed by this Act. In applying the preceding sentence, in addition to the limitations contained in section 504(a) or 681(c) before its repeal, section 504(a)(1) or 681(c)(1) shall be treated as not applying to income attributable to property transferred to an organization before January 1, 1951, if the transfer was irrevocable on such date and if such income is required to be accumulated pursuant to the mandatory terms (as in effect on such date and at all times thereafter) of an instrument relating to such transfer executed before such date.

With respect to taxable years beginning after December 31, 1971, subparagraph (B) shall apply only with respect to taxable years for which it is impossible for such organization to reform its governing instrument (by amendment, judicial proceeding, or otherwise) to meet the requirements of section 508(g)(1)(A).

(4) SECTION 4943.—Subject to the provision of paragraph (5), section 4943 shall not apply— with respect to—

(A) an organization created by an inter vivos trust which was irrevocable on December 31, 1939, and which, together with all disqualified persons (as defined in section 4946) with respect thereto, owned on July 28, 1969, not more than 55 percent of the stock of a corporation, the common stock of which was traded on a public stock exchange at all times after 1960, or

(B) an organization incorporated before December 31, 1944, which owns stock in a business enterprise 95 percent of the gross income of which (for the 10-year period ending on December 31, 1969) was derived from dividends, interest, royalties, income in the nature of royalties, and capital gains, and which, for each taxable year beginning after December 31, 1969, makes qualifying distributions (within the meaning of section 4942(g)(1) and (2)) of substantially more than half of its income for educational purposes described in section 170(c)(2)(B).

For purposes of subparagraph (B), income in the nature of royalties means income of a corporation derived from the sale of any product under a contract between such corporation and a buyer of such product designating such buyer as the corporation's exclusive customer of such product within a specified geographical area, or from charges or costs passed on to such customer at cost, if such corporation does not manufacture, produce, physically receive, or deliver or maintain inventories in such product, and income of a corporation received in settlement of a dispute concerning, or in lieu of the exercise of, its right to sell a product within a specified geographical area.

(5) SPECIAL RULE.—An organization is within the meaning of paragraph (4) only if—

(A) at least 80 percent of its net income in each of the last 4 taxable years ending on or before December 31, 1969, is derived from the stock in a business enterprise described in subparagraph (A) or (B) of paragraph (4),

(B) no donor to such organization of the stock in a business enterprise described in subparagraph (B) or (B) of paragraph (4), or a member of his family (as defined in section 341(d)), is a foundation manager (as defined in section 4946(b)) with respect thereto or a member of the board of directors or other managing body of such business enterprise on July 28, 1969, and

(C) it does not purchase any stock or other interest in such business enterprise after July 28, 1969, and it does not acquire any stock or other interest in any other business enterprise which would constitute excess business holdings if the organization were subject to the provisions of section 4943.

(6) SECTION 4947.—Section 4947(a)(2) shall not apply with respect to amounts transferred in trust before May 27, 1969.

SUBTITLE B—OTHER TAX EXEMPT ORGANIZATIONS

SEC. 121. TAX ON UNRELATED BUSINESS INCOME.

(a) ORGANIZATIONS SUBJECT TO TAX.—

(1) CORPORATE RATES.—Section 511(a)(2)(A) (relating to certain organizations subject to tax on unrelated business income at corporate rates) is amended to read as follows:

"(A) ORGANIZATIONS DESCRIBED IN SECTIONS 401(a) AND 501(c).—The taxes imposed by paragraph (1) shall apply in the case of any organization (other than a trust described in subsection (b) or an organization described in section 501(c)(1)) which is exempt, except as provided in this part or part II (relating to private foundations), from taxation under this subtitle by reason of section 501 (a)."

(2) INDIVIDUAL RATES.—Section 511(b)(2) (relating to charitable, etc., trusts subject to tax on unrelated business income) is amended to read as follows:

"(2) CHARITABLE, ETC., TRUSTS SUBJECT TO TAX.—The tax imposed by paragraph (1) shall apply in the case of any trust which is exempt, except as provided in this part or part II (relating to private foundations), from taxation under this subtitle by reason

of section 501(a) and which, if it were not for such exemption, would be subject to subchapter J (sec. 641 and following, relating to estates, trusts, beneficiaries, and decedents)."

(b) DEFINITION OF UNRELATED BUSINESS TAXABLE INCOME.—

(1) IN GENERAL.—Section 512(a) (relating to definition of unrelated business taxable income) is amended to read as follows:

"(a) DEFINITION.—For purposes of this title—

(1) GENERAL RULE.—Except as otherwise provided in this subsection, the term 'unrelated business taxable income' means the gross income derived by any organization from any unrelated trade or business (as defined in section 513) regularly carried on by it, less the deductions allowed by this chapter which are directly connected with the carrying on of such trade or business, both computed with the modifications provided in subsection (b).

"(2) SPECIAL RULE FOR FOREIGN ORGANIZATIONS.—In the case of an organization described in section 511 which is a foreign organization, the unrelated business taxable income shall be—

"(A) its unrelated business taxable income which is derived from sources within the United States and which is not effectively connected with the conduct of a trade or business within the United States, plus

"(B) its unrelated business taxable income which is effectively connected with the conduct of a trade or business within the United States.

"(3) SPECIAL RULES APPLICABLE TO ORGANIZATIONS DESCRIBED IN SECTION 501(c) (7), (8), (9), OR (10).—

"(A) GENERAL RULE.—In the case of an organization described in section 501(c) (7), (8), (9), or (10), the term 'unrelated business taxable income' means the gross income (excluding any exempt function income), less the deductions allowed by this chapter which are directly connected with the production of the gross income (excluding exempt function income), both computed with the modifications provided in paragraphs (6), (10), (11) and (12) of subsection (b).

"(B) EXEMPT FUNCTION INCOME.—For purposes of subparagraph (A), the term 'exempt function income' means the gross income from dues, fees, charges, or similar amounts paid by members of the organization as consideration for providing such members or their guests goods, facilities, or services in furtherance of the purposes constituting the basis for the exemption of the organization to which such income is paid. In the case of an organization described in section 501(c) (8), (9), or (10), the term 'exempt function income' also includes all income (other than an amount equal to the gross income derived from any unrelated trade or business regularly carried on by such organization computed as if the organization were subject to paragraph (1)), which is permanently committed—

"(i) for a purpose specified in section 170(c)(4), or

"(ii) to providing for the payment of life, sick, accident, or other benefits under section 501(c)(8)(B), (9), or (10).

If during the taxable year, an amount which is attributable to income so permanently committed is used for a purpose other than that described in clause (i) or (ii), such amount shall be included, under subparagraph (A), in unrelated business taxable income for the taxable year.

"(C) APPLICABILITY TO CERTAIN CORPORATIONS DESCRIBED IN SECTION 501(c)(2).—In the case of a corporation described in section 501(c)(2), the income of which is payable to an organization described in section 501 (c) (7), (8), (9), or (10), the rules of subparagraphs (A) and (B) shall apply as if such corporation were the organization to which the income were payable, and in computing exempt function income amounts paid by the organization to which such corporation's income is payable as well as by members of such organization shall be taken into account."

(2) MODIFICATIONS.—

(A) DEBT-FINANCED PROPERTY.—Section 512(b)(4) (relating to modifications with respect to business leases) is amended to read as follows:

"(4) Notwithstanding paragraph (1), (2), (3), or (5), in the case of debt-financed property (as defined in section 514) there shall be included, as an item of gross income derived from an unrelated trade or business, the amount ascertained under section 514(a)(1), and there shall be allowed, as deduction, the amount ascertained under section 514(a)(2)."

(B) LIMIT ON SPECIFIC DEDUCTION.—Section 512(b)(12) (relating to allowance of specific deduction) is amended to read as follows:

"(12) Except for purposes of computing the net operating loss under section 172 and paragraph (6), there shall be allowed a specific deduction of $1,000."

(C) SPECIAL RULES FOR CERTAIN ORGANIZATIONS.—Section 512(b) (relating to modifications in determining unrelated business taxable income) is further amended by adding at the end thereof the following:

"(15) Notwithstanding paragraph (1), (2), or (3), amounts of interests, annuities, royalties, and rents derived from an organization of which the organization deriving such amounts has control (as defined in section 368(c)) shall be included as an item of gross income (whether or not the activity from which such amounts are derived represents a trade or business or is regularly carried on), and there shall be allowed all deductions directly connected with such amounts.

"(16) Except as provided in paragraph (4), in the case of a church, or convention or association of churches, for taxable years beginning before January 1, 1976, there shall be excluded all gross income derived from a trade or business and all deductions directly connected with the carrying on of such trade or business if such trade or business was carried on by such organization or its predecessor before May 27, 1969."

(D) TECHNICAL AMENDMENT.—Section 512(b) (relating to exceptions, additions, and limitations in determining unrelated business taxable income) is amended by striking out so much thereof as precedes paragraph (1) and inserting in lieu thereof the following:

"(b) MODIFICATIONS.—The modifications referred to in subsection (a) are the following:"

(3) RELATED AMENDMENT.—

(A) Part IX of subchapter B of chapter 1 (relating to items not deductible) is amended by adding at the end thereof the following:

"SEC. 278. DEDUCTIONS INCURRED BY CERTAIN MEMBERSHIP ORGANIZATIONS IN TRANSACTIONS WITH MEMBERS.

"(a) GENERAL RULE.—In the case of a social club or other membership organization which is operated primarily to furnish services or goods to members and which is not exempt from taxation, deductions for the taxable year in furnishing services, insurance, goods, or other items of value to members shall be allowed only to the extent of income derived during such year from members or transactions with members.

"(b) EXCEPTIONS.—Subsection (a) shall not apply to any organization which for the taxable year is subject to taxation under subchapter H or L."

(B) The table of sections for part IX of subchapter B of chapter 1 is amended by adding at the end thereof the following:

"Sec. 278. Deductions incurred by certain membership organizations in transactions with members."

(4) LOCAL EMPLOYEE ASSOCIATION.—Section 513(a)(2) (relating to exception to definition of unrelated trade or business) is amended by striking out employees; or" and inserting in lieu thereof the following: "employees, or, in the case of a local association of employees described in section 501(c)(4), organized before May 27, 1969, is the selling by the organization of items normally sold through vending machines, through food dispensing facilities, or by snack bars, for the convenience of its members at their usual places of employment; or".

(5) VOLUNTARY EMPLOYEES' BENEFICIARY ASSOCIATIONS.—Section 501(c)(9) (relating to certain voluntary employees' beneficiary associations) is amended to read as follows:

"(9) Voluntary employees' beneficiary association providing for the payment of life, sick, accident, or other benefits to the members of such association or their dependents, if no part of their net earnings insures (other than through such payments) to the benefit of any private shareholder or individual."

(c) ACTIVITIES INCLUDED AS UNRELATED TRADE OR BUSINESS.—Section 513 (relating to unrelated trade or business) is amended by striking out subsection (c) and inserting in lieu thereof the following new subsection:

"(c) ADVERTISING, ETC., ACTIVITIES.—For purposes of this section, the term 'trade or business' includes any activity which is carried on for the production of income from the sale of goods or the performance of services. For purposes of the preceding sentence, an activity does not lose identity as a trade or business merely because it is carried on within a larger aggregate of similar activities or within a larger complex of other endeavors which may, or may not, be related to the exempt purposes of the organization."

(d) UNRELATED DEBT-FINANCED INCOME.—

(1) IN GENERAL.—Section 514 (relating to business leases) is amended by striking out so much thereof as precedes subsection (b) and inserting in lieu thereof the following:

"SEC. 514. UNRELATED DEBT-FINANCED INCOME.

"(a) UNRELATED DEBT-FINANCED INCOME AND DEDUCTIONS.—In computing under section 512 the unrelated business taxable income for any taxable year—

"(1) PERCENTAGE OF INCOME TAKEN INTO ACCOUNT.—There shall be included with respect to each debt-financed property as an item of gross income derived from an unrelated trade or business an amount which is the same percentage (but not in excess of 100 percent) of the total gross income derived during the taxable year from or on account of such property as (A) the average acquisition indebtedness (as defined in subsection (c)(7)) for the taxable year with respect to the property is of (B) the average amount (determined under regulations prescribed by the Secretary or his delegate) of the adjusted basis of such property during the period it is held by the organization during such taxable year.

"(2) PERCENTAGE OF DEDUCTIONS TAKEN INTO ACCOUNT.—There shall be allowed with respect to each debt-financed property, as a deduction to be taken into account in computing unrelated debt-financed income, an amount determined by applying (except as provided in the last sentence of this subsection) the percentage derived under paragraph (1) to the sum determined under paragraph (3). The percentage derived under this paragraph shall not be applied with respect to the deduction of any capital loss resulting from the carryover under section 1212 of unused losses in prior taxable years.

"(3) DEDUCTIONS ALLOWABLE.—The sum referred to in paragraph (2) is the sum of the deductions under this chapter which are directly connected with the debt-financed property or the income therefrom, except that if the debt-financed property is of a character which is subject to the allowance for depreciation provided in section 167, the allowance shall be computed only by use of the straight-line method.

"(b) DEFINITION OF DEBT-FINANCED PROPERTY.—

"(1) IN GENERAL.—The term 'debt-financed

property' means any property which is held to produce income and with respect to which there is an acquisition indebtedness (as defined in subsection (c)) at any time during the taxable year (or, if the property was disposed of during the taxable year, with respect to which there was an acquisition indebtedness at any time during the 12-month period ending with the date of such disposition), except that such term does not include—

"(A) any property all the use of which is related (aside from the need of the organization for income or funds) to the exercise of performance by such organization of its charitable, educational, or other purpose or function constituting the basis for its exemption under section 501 (or, in the case of an organization described in section 511(a)(2)(B), to the exercise or performance of any purpose or function designated in section 501(c)(3));

"(B) except in the case of income excluded under section 512(b)(5), any property all the income from which is taken into account in computing the gross income of any unrelated trade or business;

"(C) any property all the income from which is excluded by reason of the provisions of paragraph (7), (8), or (9) of section 512(b) in computing the gross income of any unrelated trade or business; or

"(D) any property all the use of which is in any trade or business described in paragraph (1), (2), or (3) of section 513(a).

"(2) SPECIAL RULES WHEN LAND IS ACQUIRED FOR EXEMPT USE WITHIN 10 YEARS.—

"(A) NEIGHBORHOOD LAND.—If an organization acquires real property for the principal purpose of using the land (commencing within 10 years of the time of acquisition) in the manner described in paragraph (1)(A) and at the time of acquisition the property is in the neighborhood of other property owned by the organization which is used in such manner, the real property acquired for such future use shall not be treated as debt-financed property so long as the organization does not abandon its intent to so use the land within the 10-year period. The preceding sentence shall not apply for any period after the expiration of the 10-year period, and shall apply after the first 5 years of the 10-year period only if the organization establishes to the satisfaction of the Secretary or his delegate that it is reasonably certain that the land will be used in the described manner before the expiration of the 10-year period.

"(B) OTHER CASES.—If the first sentence of subparagraph (A) is inapplicable only because—

"(i) the acquired land is not in the neighborhood referred to in subparagraph (A), or

"(ii) the organization (for the period after the first 5 years of the 10-year period) is unable to establish to the satisfaction of the Secretary or his delegate that it is reasonably certain that the land will be used in the manner described in paragraph (1)(A) before the expiration of the 10-year period,

but the land is converted to such use by the organization within the 10-year period, the real property (subject to the provisions of subparagraph (D)) shall not be treated as debt-financed property for any period before such conversion. For purposes of this subparagraph, land shall not be treated as used in the manner described in paragraph (1)(A) by reason of the use made of any structure which was on the land when acquired by the organization.

"(C) LIMITATIONS.—Subparagraphs (A) and (B)—

"(i) shall apply with respect to any structure on the land when acquired by the organization, or to the land occupied by the structure, only if (and so long as) the intended future use of the land in the manner described in paragraph (1)(A) requires that the structure be demolished or removed in order to use the land in such manner;

"(ii) shall not apply to structures erected on the land after the acquisition of the land; and

"(iii) shall not apply to property subject to a lease which is a business lease as (defined in subsection (f)).

"(D) REFUND OF TAXES WHEN SUBPARAGRAPH (B) APPLIES.—If an organization for any taxable year has not used land in the manner to satisfy the actual use condition of subparagraph (B) before the time prescribed by law (including extensions thereof) for filing the return for such taxable year, the tax for such year shall be computed without regard to the application of subparagraph (B), but if and when such use condition is satisfied, the provisions of subparagraph (B) shall then be applied to such taxable year. If the actual use condition of subparagraph (B) is satisfied for any taxable year after such time for filing the return, and if credit or refund of any overpayment for the taxable year resulting from the satisfaction of such use condition is prevented at the close of the taxable year in which the use condition is satisfied, by the operation of any law or rule of law (other than chapter 74, relating to closing agreements and compromises), credit or refund of such overpayment may nevertheless be allowed or made if claim therefor is filed before the expiration of 1 year after the close of the taxable year in which the use condition is satisfied. Interest on any overpayment for a taxable year resulting from the application of subparagraph (B) after the actual use condition is satisfied shall be allowed and paid at the rate of 4 percent per annum in lieu of 6 percent per annum.

"(E) SPECIAL RULE FOR CHURCHES.—In applying this paragraph to a church or convention or association of churches, in lieu of the 10-year period referred to in subparagraphs (A) and (B) a 15-year period shall be applied, and subparagraphs (A) and (B)(ii) shall apply whether or not the acquired land meets the neighborhood test.

"(c) ACQUISITION INDEBTEDNESS.—

"(1) GENERAL RULE.—The term 'acquisition indebtedness' means, with respect to any debt-financed property, the unpaid amount of—

"(A) the indebtedness incurred by the organization in acquiring or improving such property;

"(B) the indebtedness incurred before the acquisition or improvement of such property if such indebtedness would not have been incurred but for such acquisition or improvement; and

"(C) the indebtedness incurred after the acquisition or improvement of such property if such indebtedness would not have been incurred but for such acquisition or improvement and the incurrence of such indebtedness was reasonably foreseeable at the time of such acquisition or improvement, except that in the case of any taxable year beginning before January 1, 1972, any indebtedness incurred before June 28, 1966, shall not be taken into account. In the case of an organization (other than a church or convention or association of churches) such indebtedness incurred before June 28, 1966, shall be taken into account if such indebtedness constitutes business lease indebtedness (as defined in subsection (g)).

"(2) PROPERTY ACQUIRED SUBJECT TO MORTGAGE, ETC.—

"(A) GENERAL RULE.—Where property (no matter how acquired) is acquired subject to a mortgage or other similar lien, the amount of the indebtedness secured by such mortgage or lien shall be considered as an indebtedness of the organization incurred in acquiring such property even though the organization did not assume or agree to pay such indebtedness.

"(B) EXCEPTIONS.—Where property subject to a mortgage is acquired by an organization by bequest or devise, the indebtedness secured by the mortgage shall not be treated as acquisition indebtedness during a period of 10 years following the date of the acquisition. If an organization acquires property by gift subject to a mortgage which was placed on the property more than 5 years before the gift, which property was held by the donor more than 5 years before the gift, the indebtedness secured by such mortgage shall not be treated as acquisition indebtedness during a period of 10 years following the date of such gift. This subparagraph shall not apply if the organization, in order to acquire the equity in the property by bequest, devise, or gift, assumes and agrees to pay the indebtedness secured by the mortgage, or if the organization makes any payment for the equity in the property owned by the decedent or the donor.

"(3) EXTENSION OF OBLIGATIONS.—An extension, renewal, or refinancing of an obligation evidencing a preexisting indebtedness shall not be treated, for the purpose of this section, as the creation of a new indebtedness.

"(4) INDEBTEDNESS INCURRED IN PERFORMING EXEMPT PURPOSE.—The term 'acquisition indebtedness' does not include indebtedness the incurrence of which is inherent in the performance or exercise of the purpose or function constituting the basis of the organization's exemption, such as the indebtedness incurred by a credit union (exempt from tax under section 501(c)(14)) in accepting deposits from its members.

"(5) ANNUITIES.—The term 'acquistion indebtedness' does not include an obligation to pay an annuity which—

"(A) is the sole consideration (other than a mortgage to which paragraph (2)(B) applies) issued in exchange for property if, at the time of the exchange, the value of the annuity is less than 90 percent of the value of the property received in the exchange,

"(B) is payable over the life of one individual in being at the time the annuity is issued, or over the lives of two individuals in being at such time, and

"(C) is payable under a contract which—

"(i) does not guarantee a minimum amount of payments or specify a maximum amount of payments, and

"(ii) does not provide for any adjustment of the amount of the annuity payments by reference to the income received from the transferred property or any other property.

"(6) CERTAIN FEDERAL FINANCING.—The term 'acquisition indebtedness' does not include an obligation, to the extent that it is insured by the Federal Housing Administration, to finance the purchase, rehabilitation, or construction of housing for low and moderate income persons.

"(7) AVERAGE ACQUISITION INDEBTEDNESS.—The term 'average acquisition indebtedness' for any taxable year with respect to a debt-financed property means the average amount determined under regulations prescribed by the Secretary or his delegate, of the acquisition indebtedness during the period the property is held by the organization during the taxable year, except that for the purpose of computing the percentage of any gain or loss to be taken into account on a sale or other disposition of debt-financed property, such term means the highest amount of the acquisition indebtedness with respect to such property during the 12-month period ending with the date of the sale or other disposition.

"(d) BASIS OF DEBT-FINANCED PROPERTY ACQUIRED IN CORPORATE LIQUIDATION.—If the property was acquired in a complete or partial liquidation of a corporation in exchange for its stock, the basis of the property, for the purposes of this subtitle, shall be the same as it would be in the hands of the transferor corporation, increased by the amount of gain recognized to the transferor corporation upon such distribution and by the amount of any gain to the organization which was included, an account of such distribution, in its unrelated debt-financed income.

"(e) ALLOCATION RULES.—Where debt-fi-

nanced property is held for purposes described in subsection (b)(1)(A), (B), (C), or (D) as well as for other purposes, proper allocation shall be made with respect to basis, indebtedness, and income and deductions. The allocations and exclusions required by this section shall be made in accordance with regulations prescribed by the Secretary or his delegate to the extent proper to carry out the purposes of this section."

(2) RELATED AMENDMENTS.—

(A) Section 48(a)(4) (relating to definition of section 38 property) is amended by adding at the end thereof the following new sentence: "If the property is debt-financed property (as defined in section 514(c)) the basis or cost of such property for purposes of computing qualified investment under section 46(c) shall include only that percentage of the basis or cost which is the same percentage as is used under section 514(b), for the year the property is placed in service, in computing the amount of gross income to be taken into account during such taxable year with respect to such property."

(B) The second sentence of section 681(a) (relating to limitation on charitable deduction of taxable trusts) is amended by striking out the words "certain leases" and inserting in lieu thereof "certain property acquired with borrowed funds".

(C) Section 1443 (relating to withholding of tax on payments to foreign tax-exempt organizations) is amended by striking out "rents" and inserting in lieu thereof "income".

(3) TECHNICAL AND CONFORMING AMENDMENTS.—

(A) Subsections (b), (c), and (d) of section 514 (relating to business leases) are relettered as subsections (f), (g), and (h), respectively.

(B) New subsection (f)(1) (old subsection (b)(1), relating to general rule for definition of business lease) is amended by striking out "subsection (c)" and inserting in lieu thereof "subsection (g)".

(C) The table of sections for part III of subchapter F of chapter 1 (as redesignated by section 101(a) of this Act) is amended by striking out

"Sec. 514. Business leases."

and inserting in lieu thereof the following:

"Sec. 514. Unrelated debt-financed income."

(e) RETURNS.—

(1) IN GENERAL.—Subpart B of part III of subchapter A of chapter 61 is amended by adding at the end thereof the following new section:

"SEC. 6050. RETURNS RELATING TO CERTAIN TRANSFERS TO EXEMPT ORGANIZATIONS.

"(a) GENERAL RULE.—On or before the 90th day after the transfer of income producing property, the transferor shall make a return in compliance with the provisions of subsection (b) if the transferee is known by the transferor to be an organization referred to in section 511 (a) or (b) and the property (without regard to any lien) has a fair market value in excess of $50,000.

"(b) FORM AND CONTENTS OF RETURNS.—The return required by subsection (a) shall be in such form and shall set forth, in respect of the transfer, such information as the Secretary or his delegate prescribes by regulations as necessary for carrying out the provisions of the income tax laws."

(2) TECHNICAL AMENDMENT.—The table of sections for subpart B of part III of subchapter A of chapter 61 is amended by adding at the end thereof the following:

"Sec. 6050. Returns relating to certain transfers to exempt organizations."

(f) RESTRICTION ON EXAMINATION OF CHURCHES.—Section 7605 (relating to time and place of examination) is amended by adding at the end thereof the following new subsection:

"(c) RESTRICTION ON EXAMINATION OF CHURCHES.—No examination of the books of account of a church or convention or association of churches shall be made to determine whether such organization may be engaged in the carrying on of an unrelated trade or business or may be otherwise engaged in activities which may be subject to tax under part III of subchapter F of chapter 1 of this title (sec. 511 and following, relating to taxation of business income of exempt organizations) unless the Secretary or his delegate (such officer being no lower than a principal internal revenue officer for an internal revenue region) believes that such organization may be so engaged and so notifies the organization in advance of the examination."

(g) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 1969.

TITLE II—INDIVIDUAL DEDUCTIONS

SUBTITLE A—CHARITABLE CONTRIBUTIONS

SEC. 201. CHARITABLE CONTRIBUTIONS.

(a) LIMITATIONS.—

(1) INDIVIDUALS.—Section 170(b)(1) (relating to limitations on individuals) is amended to read as follows:

"(1) INDIVIDUALS.—

"(A) GENERAL RULE.—In the case of an individual, the deduction provided in subsection (a) shall be limited as provided in the succeeding subparagraphs of this paragraph.

"(B) SPECIAL RULE.—Any charitable contribution to—

"(i) a church or a convention or association of churches.

"(ii) an educational organization which normally maintains a regular faculty and curriculum and normally has a regularly enrolled body of pupils or students in attendance at the place where its educational activities are regularly carried on.

"(iii) an organization the principal purposes or functions of which are the providing of medical or hospital care or medical education or medical research, if the organization is a hospital, or if the organization is a medical research organization directly engaged in the continuous active conduct of medical research in conjunction with a hospital, and during the calendar year in which the contribution is made such organization is committed to spend such contributions for such research before January 1 of the fifth calendar year which begins after the date such contribution is made.

"(iv) an organization which normally receives a substantial part of its support (exclusive of income received in the exercise or performance by such organization of its charitable, educational, or other purpose or function constituting the basis for its exemption under section 501(a)) from the United States or any State or political subdivision thereof or from direct or indirect contributions from the general public, and which is organized and operated exclusively to receive, hold, invest, and administer property and to make expenditures to or for the benefit of a college or university which is an organization referred to in clause (ii) of this subparagraph and which is an agency or instrumentality of a State or political subdivision thereof, of which is owned or operated by a State or political subdivision thereof or by an agency or instrumentality of one or more States or political subdivisions,

"(v) a governmental unit referred to in subsection (c)(1), or

"(vi) an organization referred to in subsection (c)(2) which normally receives a substantial part of its support (exclusive of income received in the exercise or performance by such organization of its charitable, educational, or other purpose or function constituting the basis for its exemption under section 501(a)) from a governmental unit referred to in subsection (c)(1) or from direct or indirect contributions from the general public,

shall be allowed to the extent that the aggregate of such contributions does not exceed 30 percent of the taxpayer's contribution base.

"(C) GENERAL LIMITATION.—The total deductions under subsection (a) for any taxable year shall not exceed 20 percent of the taxpayer's contribution base. For purposes of this subparagraph, the deduction under subsection (a) shall be computed without regard to any deduction allowed under subparagraph (B) but shall take into account any charitable contributions described in subparagraph (B) which are in excess of the amount allowable as a deduction under subparagraph (B).

"(D) UNLIMITED DEDUCTION FOR CERTAIN INDIVIDUALS.—The limitation in subparagraph (C) shall not apply in the case of an individual for a taxable year beginning before January 1, 1975, if in such taxable year and in 8 of the 10 preceding taxable years, the amount of the charitable contributions, plus the amount of income tax (determined without regard to chapter 2, relating to tax on self-employment income) paid during such year in respect of such year or preceding taxable years, exceeds the transitional deduction percentage (determined under subparagraph (F)) of the taxpayer's taxable income for such year, computed without regard to—

"(i) this section.

"(ii) section 151 (allowance of deductions for personal exemption), and

"(iii) any net operating loss carryback to the taxable year under section 172.

In lieu of the amount of income tax paid during any such year, there may be substituted for that year the amount of income tax paid in respect of such year, provided that any amount so included in the year in respect of which payment was made shall not be included in any other year.

"(E) PARTIAL REDUCTION OF UNLIMITED DEDUCTION.—In the case of an individual, if the limitations in subparagraph (C) do not apply because of the application of subparagraph (D), the amount otherwise allowable as a deduction under subsection (a) shall be reduced by the amount by which the taxpayer's taxable income computed without regard to this subparagraph is less than the transitional income percentage (determined under subparagraph (G)) of the taxpayer's adjusted gross income. However, in no case shall a taxpayer's deduction under this section be reduced below the amount allowable as a deduction under this section without the applicability of subparagraph (D).

"(F) TRANSITIONAL DEDUCTION PERCENTAGE.—For purposes of applying subparagraph (D), the term 'transitional deduction percentage' means—

"(i) in the case of a taxable year beginning before 1970, 90 percent, and

"(ii) in the case of a taxable year beginning in—

1970	80 percent
1971	74 percent
1972	68 percent
1973	62 percent
1974	56 percent.

"(G) TRANSITIONAL INCOME PERCENTAGE.—For purposes of applying subparagraph (E), the term 'transitional income percentage' means, in the case of a taxable year beginning in—

1970	20 percent
1971	26 percent
1972	32 percent
1973	38 percent
1974	44 percent.

"(H) DENIAL OF DEDUCTION IN CASE OF CERTAIN TRANSFERS IN TRUST.—No deduction shall be allowed under this section for the value of any interest in income from property transferred after April 22, 1969, to a trust unless—

"(i) the interest is in the form of a guaranteed annuity or the trust instrument specifies that the interest shall receive a fixed percentage yearly of the fair market value of the trust property (determined yearly) and the grantor is treated as the owner of such interest for purposes of applying section 671, or

"(ii) a deduction would be allowed under this section for the donor's entire interest in such property.

If the donor ceases to be treated as the owner of such an interest for purposes of applying section 671, at the time the donor ceases to be so treated, the donor shall for purposes of this chapter be considered as having received an amount of income equal to the amount of any deduction he received under this section for the contribution reduced by the discounted value of all amounts of income earned by the trust and taxable to him before the time at which he ceases to be treated as the owner of the interest. Such amounts of income shall be discounted to the date of the contribution. The Secretary or his delegate shall prescribe such regulations as may be necessary to carry out the purposes of this subparagraph.

"(I) DENIAL OF DEDUCTION IN CASE OF PAYMENTS BY CERTAIN TRUSTS.—In any case where a deduction is allowed under this section for the value of an interest in income from property transferred after April 22, 1969, to a trust, no deduction shall be allowed under this section to the grantor or any other person for the amount of any contribution made by the trust with respect to such income interest.

"(J) SPECIAL LIMITATIONS ON CONTRIBUTIONS OF APPRECIATED PROPERTY.—

"(i) In the case of appreciated property to which subsection (e) does not apply, the total deduction for contributions of such property under subsection (a) for any taxable year shall not exceed 30 percent of the taxpayer's contribution base. For purposes of the percentage limitations in subparagraphs (B) and (C), such contributions shall be allowable as a deduction only to the extent that the amount of such contributions plus any other contributions under such subparagraphs does not exceed such limitations.

"(ii) For purposes of paragraph (5), if the amount of charitable contributions described in subparagraph (B) which consists of appreciated property (to which clause (i) applies) exceeds 30 percent of the taxpayer's contribution base for a contribution year, the excess shall be carried over the same as any other amount carried over under paragraph (5) whether or not the taxpayer's charitable contributions described in subparagraph (B) exceed 50 percent of his contribution base. The amount of any carryover under paragraph (5) of property to which clause (i) applies shall be added to contributions of appreciated property in future contribution years for purposes of determining the 30-percent limitation in clause (i) for a future year and computing any further carryover under paragraph (5).

"(iii) For purposes of this subparagraph, the term 'appreciated property' means property which has a fair market value (at the time of the contribution) which exceeds the taxpayer's adjusted basis in such property.

"(iv) The Secretary or his delegate shall prescribe such regulations as may be necessary to carry out the purposes of this subparagraph."

(2) CARRYOVERS.—Section 170(b)(5) (relating to carryover of certain excess contributions by individuals) is amended by striking out that portion of subparagraph (A) which precedes clause (ii) and inserting in lieu thereof the following:

"(A) In the case of an individual, if the amount of charitable contributions described in paragraph (1)(B) payment of which is made within a taxable year (hereinafter in this paragraph referred to as the 'contribution year') beginning before January 1, 1970, exceeds 30 percent of the taxpayer's adjusted gross income for such year (computed without regard to any net operating loss carryback to such year under section 172), or within a contribution year beginning after December 31, 1969, exceeds 50 percent of the taxpayer's contribution base for such year, such excess shall be treated as a charitable contribution described in paragraph (1)(B) paid in each of the 5 succeeding taxable years in order of time, but, with respect to any such succeeding taxable year, only to the extent of the lesser of the two following amounts:

"(i) for taxable years beginning before January 1, 1970, the amount by which 30 percent of the taxpayer's adjusted gross income for such succeeding taxable year (computed without regard to any net operating loss carryback to such succeeding taxable year under section 172), or for taxable years beginning after December 31, 1969, the amount by which 50 percent of the taxpayer's contribution base for such succeeding taxable year, exceeds the sum of the charitable contributions described in paragraph (1)(B) payment of which is made by the taxpayer within such succeeding taxable year (determined without regard to this subparagraph) and the charitable contributions described in paragraph (1)(B) payment of which was made in taxable years (beginning after December 31, 1963) before the contribution year which are treated under this subparagraph as having been paid in such succeeding taxable year; or"

(3) FURTHER LIMITATIONS.—Section 170(b) (relating to limitation on amount of deduction for charitable contributions) is amended by adding at the end thereof the following new paragraphs:

"(6) CONTRIBUTION BASE DEFINED.—For purposes of this section, the term 'contribution base' means adjusted gross income (computed without regard to any net operating loss carryback to the taxable year under section 172) increased by the allowable tax preferences as determined under section 277(c)(2).

"(7) DISALLOWANCE OF DEDUCTION IN CERTAIN CASES.—No deduction shall be allowed under this section—

"(A) for a contribution to or for the use of an organization described in section 501(c)(3) (relating to exempt organizations) unless the organization—

"(i) is exempted from the requirements of section 508 (a) and (b) (relating to special rules with respect to section 501(c)(3) organizations) pursuant to subsection (c) thereof, or

"(ii) complies with section 508 (a), (b), and (g), or

"(B) for a transfer in trust (other than one to which the provisions of subparagraph (A) of this paragraph apply) unless the governing instrument of the trust includes provisions, the effects of which are to prohibit the trust from—

"(i) engaging in any act of self-dealing (as defined in section 4941(d)),

"(ii) retaining any excess business holdings (as defined in section 4943(c)),

"(iii) making any speculative investments in such manner as to subject the trust to tax under section 4944, and

"(iv) making any taxable expenditures (as defined in section 4945(b)).

"(8) DENIAL OF DEDUCTION IN CASE OF CONTRIBUTION OF PARTIAL INTEREST IN PROPERTY.—In a case where a taxpayer makes a charitable contribution of less than his entire interest in property to, and not in trust for, an organization described in subsection (c), a deduction shall be allowed under this section only to the extent that the value of the interest contributed would be allowed as a deduction under this section if such interest had been transferred in trust. For purposes of this paragraph, the charitable contribution by a taxpayer of the right to use property shall be treated as a charitable contribution of less than the taxpayer's entire interest in such property."

(4) CONFORMING AMENDMENTS.—

(A) Subsections (b)(5)(A) (ii) and (g) of section 170 are each amended by striking out "170(b)(1)(A)" each place it appears and inserting in lieu thereof "170(b)(1)(B)".

(B) Section 170(g)(1) is amended by striking out "subsection (b)(1)(C)" each place it appears and inserting in lieu thereof "subsection (b)(1)(D)".

(C) Sections 512(b)(11), 545(b)(2), and 556(b)(2) are each amended by striking out "170(b)(1)(A) and (B)" each place it appears and inserting in lieu thereof "170(b)(1)(B) and (C)".

(b) POLITICAL ACTIVITIES.—Section 170(c)(2)(D) (relating to definition of charitable contributions) is amended to read as follows:

"(D) no substantial part of the activities of which is carrying on propaganda, or otherwise attempting, to influence legislation, and which does not participate in, or intervene in (including the publishing or distributing of statements), any political campaign on behalf of any candidate for public office."

(c) CHARITABLE CONTRIBUTIONS OF APPRECIATED PROPERTY.—

(1) IN GENERAL.—Section 170(e) (relating to special rule for charitable contributions of certain property) is amended to read as follows:

"(e) CONTRIBUTIONS OF APPRECIATED PROPERTY.—

"(1) GENERAL RULE.—In the case of a charitable contribution of property to which paragraph (2) applies or a charitable contribution of any property directly or indirectly to or for the use of an organization to which paragraph (3) applies, if (at the time of the contribution) the fair market value of the property exceeds the taxpayer's adjusted basis (for purposes of determining gain) in the property, the taxpayer shall elect (at such time and in such manner as the Secretary or his delegate by regulations prescribes) to treat either:

"(A) the fair market value of the property, or

"(B) such adjusted basis of the property, as the amount of the charitable contribution to be taken into account under subsection (a).

"(2) CERTAIN APPRECIATED PROPERTY.—Paragraph (1) shall apply to charitable contributions of—

"(A) property any portion of the gain on which, if the property were sold for its fair market value at the time of the contribution, would have constituted or been treated as a gain other than a gain from the sale or exchange of a capital asset held for more than 12 months,

"(B) tangible personal property, and

"(C) a future interest in property.

For purposes of the preceding sentence, a fixture which is intended to be severed from real property shall be treated as tangible personal property.

"(3) CERTAIN ORGANIZATIONS.—Paragraph (1) shall apply to charitable contributions to a private foundation (as defined in section 509(a)) unless—

"(A) it is an operating foundation (as defined in section 4942(j)(3)), or

"(B) not later than the close of the organization's first year after its taxable year

in which such contributions are received, such organization makes a qualifying distribution (as defined in section 4942(g)) which is treated (in accordance with section 4942(h)) as a distribution out of corpus in an amount equal to 100 percent of all such contributions.

Subparagraph (B) shall not apply to a contribution to an organization described in subparagraph (B) unless the taxpayer obtains adequate records or sufficient evidence from the organization showing that the organization made the distributions as required therein.

"(4) ALLOCATION OF BASIS.—In the case of a charitable contribution of less than the taxpayer's entire interest in the property contributed, the taxpayer's adjusted basis in such property shall be allocated between the interest contributed and any interest not contributed in accordance with regulations prescribed by the Secretary or his delegate.

"(5) CROSS REFERENCE.—

"For treatment of gain in a case where the taxpayer elects to treat the fair market value of property as the amount to be taken into account, see section 83."

(2) GIFTS TREATED AS SALE.—Part II of subchapter B of chapter 1 of such Code (relating to items specifically included in gross income) is amended by adding at the end thereof the following new section:

"SEC. 83. CERTAIN GIFTS TO CHARITY TREATED AS SALES OF PROPERTY.

"(a) COMPUTATION AND RECOGNITION OF GAIN.—If a taxpayer—

"(1) has made a charitable contribution of property, and

"(2) has elected to treat the fair market value of the property as the amount of the charitable contribution pursuant to section 170(e),

the contribution shall be treated for purposes of this subtitle as a sale (at the time of the contribution) of the property to the donee for an amount equal to the fair market value of such property, and the gain on such sale shall be recognized.

"(b) LIMITATION.—In the case of a charitable contribution to an organization to which section 170(e)(1) does not apply of property—

"(1) which is described in section 170(e)(2)(A), and

"(2) to which subparagraphs (B) and (C) of section 170(e)(2) do not apply,

only that portion of the gain which would not be treated as gain from the sale of a capital asset held for more than 12 months shall be recognized.

"(c) ADJUSTMENTS TO BASIS.—The basis of the property acquired by gift to which this section applies shall be the donor's adjusted basis (for purposes of determining gain) increased by the amount of any gain recognized by the donor on the contribution under this section."

(3) CLERICAL AMENDMENT.—The table of sections for part II of subchapter B of chapter 1 is amended by adding at the end thereof the following item:

"Sec. 83. Certain gifts to charity treated as sales of property."

(d) BARGAIN SALES TO CHARITABLE ORGANIZATIONS.—Section 1011 (relating to adjusted basis for determining gain or loss) is amended—

(1) by striking out "The" at the beginning and inserting in lieu thereof:

"(a) GENERAL RULE.—The", and

(2) by adding at the end thereof the following new subsection:

"(b) BARGAIN SALE TO A CHARITABLE ORGANIZATION.—If a deduction is allowable under section 170 (relating to charitable contributions) by reason of a sale, then the adjusted basis for determining the gain from such sale shall be that portion of the adjusted basis which bears the same ratio to the adjusted basis as the amount realized bears to the fair market value of the property."

(e) SPLIT-INTEREST TRUSTS.—Section 170 is amended by redesignating subsections (h) and (i) as subsections (i) and (j), respectively, and by inserting after subsection (g) the following new subsection:

"(h) LIMITATION ON CONTRIBUTIONS OF REMAINDER INTEREST IN PROPERTY PLACED IN TRUST.—

"(1) GENERAL RULE.—In the case of property transferred in trust, no deduction shall be allowed under this section for the value of a contribution of a remainder interest unless the trust is a charitable remainder annuity trust or charitable remainder unitrust described in section 664(d).

"(2) EXCEPTION.—This subsection shall not apply in a case where the value of all interests in property transferred in trust are deductible under subsection (a)."

(f) CHARITABLE CONTRIBUTIONS BY ESTATES AND TRUSTS.—

(1) IN GENERAL.—Subsection (c) of section 642 (relating to deduction for amounts paid or permanently set aside for a charitable purpose) is amended to read as follows:

"(c) DEDUCTION FOR AMOUNTS PAID FOR A CHARITABLE PURPOSE.—In the case of an estate or trust (other than a trust meeting the specifications of subpart B) there shall be allowed as a deduction in computing its taxable income (in lieu of the deductions allowed by section 170(a), relating to deduction for charitable, etc., contributions and gifts) any amount of the gross income, without limitation, which pursuant to the terms of the governing instrument is, during the taxable year, paid for a purpose specified in section 170(c). If a charitable contribution is paid after the close of such taxable year and on or before the last day of the year following the close of such taxable year, then the trustee or administrator may elect to treat such contribution as paid during such taxable year. The election shall be made at such time and in such manner as the Secretary or his delegate by regulations prescribe. To the extent that the amount otherwise allowable as a deduction under this paragraph consists of gain from the sale or exchange of capital assets held for more than 12 months, proper adjustment shall be made for any deduction allowable to the estate or trust under section 1202 (relating to deduction for excess of capital gains over capital losses). In the case of a trust, the deduction allowed by this subsection shall be subject to section 681 (relating to unrelated business income) and section 507(f) (relating to prohibited transactions)."

(2) CONFORMING AMENDMENTS.—

(A) Section 643(a) (relating to definition of distributable net income) is amended:

(i) by striking out ", permanently set aside, or to be used" in the first sentence of paragraph (3); and

(ii) by striking out ", permanently set aside, or to be used" in that portion which follows paragraph (7) thereof.

(B) Section 651(a)(2) (relating to deduction for trusts distributing current income only) is amended by striking out ", permanently set aside, or used".

(C) Section 663(a)(2) (relating to special rules applicable to sections 661 and 662) is amended by striking out "or permanently set aside or otherwise qualifying for the deduction" and inserting "as" in leu thereof.

(g) TWO-YEAR CHARITABLE TRUSTS.—Section 673(b) (relating to trusts where the income is payable to a charitable beneficiary for at least a two-year period) is repealed.

(h) DISALLOWANCE OF ESTATE AND GIFT TAX DEDUCTIONS IN CERTAIN CASES.—

(1) ESTATES OF CITIZENS OR RESIDENTS.—Subsection (e) of section 2055 (relating to disallowance of charitable deductions in certain cases) is amended to read as follows:

"(e) DISALLOWANCE OF DEDUCTIONS IN CERTAIN CASES.—

"(1) No deduction shall be allowed under this section—

"(A) for a transfer to or for the use of an organization described in section 501(c)(3) (relating to exempt organizations) unless the organization—

"(i) is exempted from the requirements of section 508(a) and (b) pursuant to subsection (c) thereof, or

"(ii) complies with section 508 (a), (b), and (g); or

"(B) for a transfer in trust (other than one to which the provisions of subparagraph (A) of this paragraph apply) unless the governing instrument of the trust includes provisions, the effects of which are to prohibit the trust from—

"(i) engaging in any act of self-dealing (as defined in section 4941(d)),

"(ii) retaining any excess business holdings (as defined in section 4943(c)),

"(iii) making any speculative investments in such manner as to subject the trust to tax under section 4944, and

"(iv) making any taxable expenditures (as defined in section 4945(b)).

"(2) Where an interest in property passes or has passed from the decedent to a person, or for a use, described in subsection (a), and an interest in the same property passes or has passed (for less than an adequate and full consideration in money or money's worth) from the decedent to a person, or for a use, not described in subsection (a), no deduction shall be allowed under this section for the interest which passes or has passed to the person, or for the use, described in subsection (a) unless the interest is in the form of a remainder interest in a trust which is a charitable remainder annuity trust or a charitable remainder unitrust described in section 664(d)."

(2) ESTATES OF NONRESIDENTS NOT CITIZENS.—Subparagraph (E) of section 2106(a)(2) (relating to disallowance of deductions in certain cases) is amended to read as follows:

"(E) DISALLOWANCE OF DEDUCTIONS IN CERTAIN CASES.—The provisions of section 2055(e) also shall be applied in the determination of the amount allowable as a deduction under this paragraph."

(3) GIFT TAX.—Subsection (c) of section 2522 (relating to disallowance of charitable deductions in certain cases) is amended to read as follows:

"(c) DISALLOWANCE OF DEDUCTIONS IN CERTAIN CASES.—

"(1) No deduction shall be allowed under this section—

"(A) for a transfer to or for the use of an organization described in section 501(c)(3) (relating to exempt organizations) unless the organization—

"(i) is exempted from the requirements of section 508 (a) and (b) pursuant to subsection (c) thereof, or

"(ii) complies with section 508 (a), (b), and (g); or

"(B) for a transfer in trust (other than one to which the provisions of subparagraph (A) of this paragraph apply), unless the governing instrument of the trust includes provisions the effects of which are to prohibit the trust from—

"(i) engaging in any act of self-dealing (as defined in section 4941(d)),

"(ii) retaining any excess business holdings (as defined in section 4943(c)),

"(iii) making any speculative investments in such manner as to subject the trust to tax under section 4944, and

"(iv) making any taxable expenditures (as defined in section 4945(b)).

"(2)(A) Where a donor transfers an interest in property to a person, or for a use, described in subsection (a) or (b) and an interest in the same property is transferred or has been transferred (for less than an adequate and full consideration in money or money's worth) from the donor to a person,

or for a use, not described in subsection (a) or (b), the deduction allowed under this section for the interest which is, or has been transferred to the person, or for the use, described in subsection (a) or (b) shall not be greater than the amount allowed to the donor as a deduction under section 170 in respect of such interest, determined without regard to the percentage limitation in subsection (b) thereof. For purposes of this subparagraph, where the donor has elected the alternative set forth in subparagraph (B) of section 170(e)(1) (relating to electing valuation of gifts of appreciated property), the deduction allowed under section 170 shall be deemed to be the deduction that would have been allowed had the alternative set forth in subparagraph (A) been elected.

"(B) Where any readjustment under section 170(b)(1)(H) is made in the donor's income, at the time the readjustment is made the donor shall, for purposes of this chapter, be considered as making a gift (which is not a gift of a present interest in property and for which no deduction shall be allowed under this section) of property in an amount equal to the amount required to be included in income as a result of the readjustment, except that if the alternative set forth in subparagraph (B) of section 170(e)(1) had been elected, the amount of such gift shall be considered to be in an amount equal to the amount which would have been required to be included in income as a result of the readjustment if the alternative set forth in subparagraph (A) of such section had been elected.

(i) CHARITABLE REMAINDER TRUSTS.—

(1) Subpart C of part I of subchapter J of chapter 1 (relating to estates and trusts which may accumulate income or which distribute corpus) is amended by adding at the end thereof the following new section:

"SEC. 664. CHARITABLE REMAINDER TRUSTS.

"(a) GENERAL RULE.—Notwithstanding any other provision of this subchapter, the provisions of this section shall, in accordance with regulations prescribed by the Secretary or his delegate, apply in the case of a charitable remainder annuity trust and a charitable remainder unitrust.

"(b) CHARACTER OF DISTRIBUTIONS.—Amounts distributed by a charitable remainder annuity trust or by a charitable remainder unitrust shall be considered as having the following characteristics in the hands of the beneficiary to whom is paid the annuity described in subsection (d)(1)(A) or the payment described in subsection (d)(2)(A):

"(1) First, as amounts of income includible in gross income to the extent of such income of the trust for the year and such undistributed income of the trust for prior years;

"(2) Second, as a capital gain to the extent of the capital gain of the trust for the year and the undistributed capital gain of the trust for prior years;

"(3) Third, as other income to the extent of such income of the trust for the year and such undistributed income of the trust for prior years; and

"(4) Fourth, as a distribution of trust corpus. For purposes of this section the trust shall determine the amount of its undistributed capital gain on a cumulative net basis.

"(c) EXEMPTION OF TRUST FROM TAXATION.—A charitable remainder annuity trust and a charitable remainder unitrust shall not be subject to any tax imposed by this subtitle.

"(d) DEFINITIONS.—

"(1) CHARITABLE REMAINDER ANNUITY TRUST.—A charitable remainder annuity trust is a trust—

"(A) From which a sum certain is to be paid, not less often than annually, to a person who is not a person or organization described in section 170 (c), for a term of years or for the life of the person, and

"(B) Following the termination of the annuity described in subparagraph (A) the remainder interest in the trust is to be transferred to, or for the use of, an organization described in section 170(c) or is to be retained by the trust for such a use.

"(2) CHARITABLE REMAINDER UNITRUST.—A charitable remainder unitrust is a trust—

"(A) From which a fixed percentage of the net fair market value of its assets, valued annually, is to be paid, not less often than annually, to a person who is not a person or organization described in section 170(c), for a term of years or for the life of the person, and

"(B) Following the termination of the interest described in subparagraph (A) the remainder interest in the trust is to be transferred to, or for the use of, an organization described in section 170(c) or is to be retained by the trust for such a use."

(2) The table of sections for subpart C of part I of subchapter J of chapter 1 (relating to estates and trusts which may accumulate income or which distribute corpus) is amended by adding at the end thereof

"Sec. 664.Charitable remainder trusts."

(j) EFFECTIVE DATES.—

(1) The amendments made by subsection (a) shall apply to contributions paid in taxable years beginning after December 31, 1969, with the following exceptions:

(A) the amendments made in sections 170(b)(1)(H) and (I) shall apply with respect to transfers in trust and contributions made after April 22, 1969, and

(B) the amendment made in section 170(b)(8) shall apply to contributions made after April 22, 1969.

(2) The amendment made by subsection (b) shall apply to contributions which are paid (or treated as paid under section 170(a)(2)) after December 31, 1969.

(3) The amendments made by subsection (c) shall apply with respect to contributions which are paid (or treated as paid under section 170(a)(2)) after December 31, 1969.

(4) The amendments made by subsection (d) shall apply to sales made after May 26, 1969.

(5) The amendments made by subsections (e) and (g) shall apply to transfers in trust made after April 22, 1969.

(6) The amendment made by subsection (f) shall apply to amounts paid, permanently set aside, or to be used for a charitable purpose after the date of enactment of this Act.

(7)(A) The amendments made by paragraphs (1) and (2) of subsection (h) shall apply in the case of decedents dying after the date of enactment of this Act.

(B) The amendment made by paragraph (3) of subsection (h) shall apply to gifts made after April 22, 1969.

(8) The amendment made by subsection (i) shall apply to transfers in trust made after the date of enactment of this Act.

SUBTITLE B—FARM LOSSES, ETC.

SEC. 211. GAIN FROM DISPOSITIONS OF PROPERTY USED IN FARMING WHERE FARM LOSSES OFFSET NONFARM INCOME.

(a) IN GENERAL.—Part IV of subchapter P of chapter 1 (relating to special rules for determining capital gains and losses) is amended by adding at the end thereof the following new section:

"SEC. 1251. GAIN FROM DISPOSITION OF PROPERTY USED IN FARMING WHERE FARM LOSSES OFFSET NONFARM INCOME.

"(a) CIRCUMSTANCES UNDER WHICH SECTION APPLIES.—This section shall apply with respect to any taxable year only if—

"(1) there is a farm net loss for the taxable year, or

"(2) there is a balance in the excess deductions account as of the close of the taxable year after applying subsection (b)(3)(A).

"(b) EXCESS DEDUCTIONS ACCOUNT.—

"(1) REQUIREMENT.—Each taxpayer subject to this section shall, for purposes of this section, establish and maintain an excess deductions account.

"(2) ADDITIONS TO ACCOUNT.—

"(A) GENERAL RULE.—There shall be added to the excess deductions account for each taxable year an amount equal to the farm net loss.

"(B) EXCEPTION FOR INDIVIDUALS.—In the case of an individual, subparagraph (A) shall not apply for a taxable year—

"(i) unless his nonfarm adjusted gross income for such year exceeds $50,000, and

"(ii) only to the extent his farm net loss exceeds $25,000.

"(C) MARRIED INDIVIDUALS.—In the case of a husband or wife who files a separate return, the amount specified in subparagraph (B)(i) shall be $25,000 in lieu of $50,000, and in subparagraph (B)(ii) shall be $12,500 in lieu of $25,000. This subparagraph shall not apply if the spouse of the taxpayer does not have any nonfarm adjusted gross income for the taxable year.

"(D) NONFARM ADJUSTED GROSS INCOME.—For purposes of this section, the term 'nonfarm adjusted gross income' means the adjusted gross income computed without regard to income or deductions attributable to farming.

"(3) SUBTRACTIONS FROM ACCOUNT.—If there is any amount in the excess deductions account at the close of any taxable year (determined before any amount is subtracted under this paragraph for such year) there shall be subtracted from the account—

"(A) an amount equal to the farm net income for such year, plus the amount (determined as provided in regulations prescribed by the Secretary or his delegate) necessary to adjust the account for deductions which did not result in a reduction of the taxpayer's tax under this subtitle for the taxable year or any preceding taxable year (including such amounts which did not result in a reduction of tax because of the application of section 84 (relating to limit on tax preferences)), and

"(B) after applying paragraph (2) or subparagraph (A) of this paragraph (as the case may be), an amount equal to the sum of the amounts treated under subsection (c) as gain from the sale or exchange of property which is neither a capital asset nor property described in section 1231.

"(4) EXCEPTION FOR TAXPAYERS USING CERTAIN ACCOUNTING METHODS.—

"(A) GENERAL RULE.—Except to the extent that the taxpayer has succeeded to an excess deductions account as provided in paragraph (5), additions to the excess deductions account shall not be required by a taxpayer who elects to compute taxable income from farming (i) by using inventories, and (ii) by charging to capital account all expenditures paid or incurred which are properly chargeable to capital account (including such expenditures which the taxpayer may, under this chapter or regulations prescribed thereunder, otherwise treat or elect to treat as expenditures which are not chargeable to capital account).

"(B) TIME, MANNER, AND EFFECT OF ELECTION.—An election under subparagraph (A) for any taxable year shall be filed within the time prescribed by law (including extensions thereof) for filing the return for such taxable year, and shall be made and filed in such manner as the Secretary or his delegate shall prescribe by regulations. Such election shall be binding on the taxpayer for such taxable year and for all subsequent taxable years and may not be revoked except with the consent of the Secretary or his delegate.

"(C) CHANGE OF METHOD OF ACCOUNTING, ETC.—If, in order to comply with the election made under subparagraph (A), a tax-

payer changes his method of accounting in computing taxable income from the business of farming, such change shall be treated as having been made with the consent of the Secretary or his delegate and for purposes of section 481(a)(2) shall be treated as a change not initated by the taxpayer.

"(5) TRANSFER OF ACCOUNT.—

"(A) CERTAIN CORPORATE TRANSACTIONS.—In the case of a transfer described in subsection (d)(3) to which section 371(a), 374(a), or 381 applies, the acquiring corporation shall succeed to and take into account as of the close of the day of distribution or transfer, the excess deductions account of the transferor.

"(B) CERTAIN GIFTS.—If—

"(i) farm recapture property is disposed of by gift, and

"(ii) the potential gain (as defined in subsection (e)(5)) on farm recapture property disposed of by gift during any one-year period in which any such gift occurs is more than 80 percent of the potential gain on farm recapture property held by the donor immediately prior to the first of such gifts, the donees of the property shall succeed (as of the close of the donor's taxable year in which the first of such gifts is made) to the donor's excess deductions account (or in the case of more than one donee, to his ratable share of such account) determined, after the application of paragraphs (2) and (3) with respect to the donor, as of the close of such taxable year.

"(6) JOINT RETURN.—In the case of an addition to an excess deductions account for a taxable year for which a joint return was filed under section 6013, for any subsequent taxable year for which a separate return was filed the Secretary or his delegate shall provide rules for allocating any remaining amount of such addition in a manner consistent with the purposes of this section.

"(c) ORDINARY INCOME.—

"(1) GENERAL RULE.—Except as otherwise provided in this section, if farm recapture property (as defined in subsection (e)(1)) is disposed of during a taxable year beginning after December 31, 1969, the amount by which—

"(A) in the case of a sale, exchange, or involuntary conversion, the amount realized, or

"(B) in the case of any other disposition, the fair market value of such property,

exceeds the adjusted basis of such property shall be treated as gain from the sale or exchange of property which is neither a capital asset nor property described in section 1231. Such gain shall be recognized notwithstanding any other provision of this subtitle.

"(2) LIMITATION.—

"(A) AMOUNT IN EXCESS DEDUCTIONS ACCOUNT.—The aggregate of the amounts treated under paragraph (1) as gain from the sale or exchange of property which is neither a capital asset nor property described in section 1231 for any taxable year shall not exceed the amount in the excess deductions account at the close of the taxable year after applying subsection (b)(3)(A).

"(B) DISPOSITIONS TAKEN INTO ACCOUNT.—If the aggregate of the amounts to which paragraph (1) applies is limited by the application of subparagraph (A), paragraph (1) shall apply in respect of such dispositions (and in such amounts) as provided under regulations prescribed by the Secretary or his delegate.

"(C) SPECIAL RULE FOR DISPOSITION OF LAND.—In applying subparagraph (A), any gain on the sale or exchange of land shall be taken into account only to the extent of its potential gain (as defined in subsection (e)(5)).

"(d) EXCEPTIONS AND SPECIAL RULES.—

"(1) GIFTS.—Subsection (c) shall not apply to a disposition by gift.

"(2) TRANSFER AT DEATH.—Except as provided in section 691 (relating to income in respect of a decedent), subsection (c) shall not apply to a transfer at death.

"(3) CERTAIN CORPORATE TRANSACTIONS.—If the basis of property in the hands of a transferee is determined by reference to its basis in the hands of the transferor by reason of the application of section 332, 351, 361, 371(a), or 374(a), then the amount of gain taken into account by the transferor under subsection (c)(1) shall not exceed the amount of gain recognized to the transferor on the transfer of such property (determined without regard to this section). This paragraph shall not apply to a disposition to an organization (other than a cooperative described in section 521) which is exempt from the tax imposed by this chapter.

"(4) LIKE KIND EXCHANGES; INVOLUNTARY CONVERSION, ETC.—If property is disposed of and gain (determined without regard to this section) is not recognized in whole or in part under section 1031 or 1033, then the amount of gain taken into account by the transferor under subsection (c)(1) shall not exceed the sum of—

"(A) the amount of gain recognized on such disposition (determined without regard to this section), plus

"(B) the fair market value of property acquired with respect to which no gain is recognized under subparagraph (A), but which is not farm recapture property.

"(5) PARTNERSHIPS.—

"(A) IN GENERAL.—In the case of a partnership, each partner shall take into account separately his distributive share of the partnership's farm net losses, gains from dispositions of farm recapture property, and other items in applying this section to the partner.

"(B) TRANSFERS TO PARTNERSHIPS.—If farm recapture property is contributed to a partnership and gain (determined without regard to this section) is not recognized under section 721, then the amount of gain taken into account by the transferor under subsection (c)(1) shall not exceed the excess of the fair market value of farm recapture property transferred over the fair market value of the partnership interest attributable to such property. If the partnership agreement provides for an allocation of gain to the contributing partner with respect to farm recapture property contributed to the partnership (as provided in section 704(c)(2)), the partnership interest of the contributing partner shall be deemed to be attributable to such property.

"(6) PROPERTY TRANSFERRED TO CONTROLLED CORPORATIONS.—Except for transactions described in subsection (b)(5)(A), in the case of a transfer, described in paragraph (3), of farm recapture property to a corporation, stock received by a transferor in the exchange shall be farm recapture property to the extent attributable to the fair market value of farm recapture property (or if less, the adjusted basis plus the potential gain (as defined in subsection (e)(5)) on farm recapture property) contributed to the corporation by such transferor.

"(e) DEFINITIONS.—For purposes of this section—

"(1) FARM RECAPTURE PROPERTY.—The term 'farm recapture property' means any property (other than section 1250 property) described in paragraph (1) (relating to business property held for more than 12 months), (3) (relating to livestock), or (4) (relating to an unharvested crop) of section 1231(b) which is or has been used in the trade or business of farming by the taxpayer or by a transferor in a transaction described in subsection (b)(5).

"(2) FARM NET LOSS.—The term 'farm net loss' means the amount by which—

"(A) the deductions allowed or allowable by this chapter which are directly connected with the carrying on of the trade or business of farming, exceed

"(B) the gross income derived from such trade or business.

Gains and losses on the disposition of farm recapture property referred to in section 1231(a) (determined without regard to this section or section 1245(a)) shall not be taken into account.

"(3) FARM NET INCOME.—The term 'farm net income' means the amount by which the amount referred to in paragraph (2)(B) exceeds the amount referred to in paragraph (2)(A).

"(4) TRADE OR BUSINESS OF FARMING.—

"(A) HORSE RACING.—In the case of a taxpayer engaged in the raising of horses, the term 'trade or business of farming' includes the racing of horses.

"(B) SEVERAL BUSINESSES OF FARMING.—If a taxpayer is engaged in more than one trade or business of farming, all such trades and businesses shall be treated as one trade or business."

"(5) POTENTIAL GAIN.—The term 'potential gain' means an amount equal to the excess of the fair market value of property over its adjusted basis, but limited in the case of land to the extent of the deductions allowable in respect to such land under sections 175 (relating to soil and water conservation expenditures) and 182 (relating to expenditures by farmers for clearing land) for the taxable year and the 4 preceding taxable years."

(b) CONFORMING AMENDMENTS.—

(1) Section 301(b)(1)(B)(ii) (relating to corporate distributions of property) is amended by striking out "or 1250(a)" and inserting in lieu thereof "1250(a), or 1251(c)".

(2) Section 301(d)(2)(B) (relating to the basis of property distributed by a corporation) is amended by striking out "or 1250(a)" and inserting in lieu thereof "1250(a), or 1251(c)".

(3) Section 312(c)(3) (relating to adjustment to corporate earnings and profits) is amended by striking out "or 1250(a)" and inserting in lieu thereof "1250(a), or 1251(c)".

(4) Section 341(e)(12) (relating to nonapplication of section 1245(a) with respect to collapsible corporations) is amended by striking out "and 1250(a)" and inserting in lieu thereof "1250(a), and 1251(c)".

(5) Section 453(d)(4)(B) (relating to distribution of installment obligations under certain liquidations) is amended by striking out "or 1250(a)" and inserting in lieu thereof "1250(a), or 1251(c)".

(6) Section 751(c) (relating to unrealized receivables in partnership transactions) is amended by striking out "section 1250(c)" and inserting in lieu thereof "section 1250(c), and farm recapture property (as defined in section 1251(e)(1))"; and by striking out "1250(a)" and inserting in lieu thereof "1250(a), or 1251(c)".

(7) The table of sections for part IV of subchapter P of chapter 1 is amended by adding at the end thereof the following:

"Sec. 1251. Gain from disposition of property used in farming where farm losses offset nonfarm income."

(c) EFFECTIVE DATES.—The amendments made by this section shall apply to taxable years beginning after December 31, 1969.

SEC. 212. LIVESTOCK.

(a) DEPRECIATION RECAPTURE.—

(1) GENERAL RULE.—Section 1245(a)(2) (relating to recomputed basis with respect to gain from disposition of certain depreciable property) is amended by striking out "or" at the end of subparagraph (A), by adding "or" at the end of subparagraph (B), and by inserting immediately after subparagraph (B) the following:

"(C) with respect to livestock, its adjusted basis recomputed by adding thereto

all adjustments attributable to a period after December 31, 1969,"

(2) CONFORMING AMENDMENT.—Section 1245(a)(3) (relating to section 1245 property) is amended by striking out "(other than livestock)".

(3) EFFECTIVE DATE.—The amendments made by paragraphs (1) and (2) shall apply with respect to taxable years beginning after December 31, 1969.

(b) LIVESTOCK USED IN TRADE OR BUSINESS.—

(1) AMENDMENT OF SECTION 1231.—Section 1231(b)(3) (relating to property used in a trade or business) is amended to read as follows:

"(3) LIVESTOCK.—Such term includes livestock regardless of age, held by a taxpayer for draft, breeding, sporting, or dairy purposes, but only if held by him for at least 365 days after such animal normally would have first been used for any of such purposes. Such term does not include poultry."

(2) EFFECTIVE DATE.—The amendments made by paragraph (1) shall apply to livestock acquired after December 31, 1969.

SEC. 213. HOBBY LOSSES.

(a) Section 270 (relating to limitation on deductions allowable to individuals in certain cases) is amended to read as follows:

"SEC. 270. LIMITATION ON DEDUCTIONS IN CERTAIN CASES.

"(a) GENERAL RULE.—Items attributable to an activity shall be allowed only to the extent of the gross income from such activity unless such activity is carried on with a reasonable expectation of realizing a profit.

"(b) REBUTTABLE PRESUMPTION.—If the deductions attributable to an activity exceed the gross income from such activity by $25,000 or more for any 3 of 5 consecutive years ending with the taxable year, then unless the taxpayer establishes to the contrary, the activity shall be deemed to have been carried on without a reasonable expectation of realizing a profit."

(b)(1) Section 6504 (relating to cross references with respect to limitations on assessment and collection) is amended by striking out paragraph (8).

(2) The table of sections for part IX of subchapter B of chapter 1 is amended by striking out—

"Sec. 270. Limitation on deductions allowable to individuals in certain cases."

and inserting in lieu thereof the following:

"Sec. 270. Limitation on deductions in certain cases."

(c) The amendment made by this section shall apply to taxable years beginning after December 31, 1969.

SUBTITLE C—INTEREST

SEC. 221. INTEREST.

(a) LIMITATION ON INTEREST DEDUCTION ATTRIBUTABLE TO INVESTMENT INDEBTEDNESS.—Section 163 (relating to interest) is amended by redesignating subsection (d) and (e), and by inserting after subsection (c) the following new subsection:

"(d) LIMITATION ON INTEREST ON INVESTMENT INDEBTEDNESS.—

"(1) IN GENERAL.—In the case of a taxpayer other than a corporation (except an electing small business corporation as defined in section 1371(b)), the amount of investment interest allowable as a deduction under subsection (a) shall not exceed the sum of—

"(A) $25,000 ($12,500, in the case of a separate return by a married individual),

"(B) the amount of the net investment income (as defined in paragraph (3)(C)), and

"(C) an amount equal to the amount by which the net long-term capital gain exceeds the net short-term capital loss for the taxable year.

"(2) CARRYFORWARD OF DISALLOWED INVESTMENT INTEREST.—The amount of disallowed investment interest for any taxable year shall be treated (except for purposes of paragraph (1)(A)) as investment interest paid or accrued in the succeding taxable year.

"(3) DEFINITIONS.—For purposes of this subsection—

"(A) INVESTMENT INCOME.—The term 'investment income' means the gross amount of income from interest, dividends, rents, and royalties and net short-term capital gains derived from the disposiition of property held for investment, but only to the extent that such gross income or such gains are not derived from the conduct of a trade or business.

"(B) INVESTMENT EXPENSES.—The term 'investment expenses' means all deductions allowable under section 164(a) (1) or (2), 166, 167, 171, 212, or 611 directly connected with the production of investment income.

"(C) NET INVESTMENT INCOME.—The term 'net investment income' means the excess, if any, of investment income over investment expenses.

"(D) INVESTMENT INTEREST.—The term 'investment interest' means interest paid or accrued on indebtedness incurred or continued to purchase or carry property held for investment.

"(E) DISALLOWED INVESTMENT INTEREST.—The term 'disallowed investment interest' means, with respect to any taxable year, the amount disallowed as a deduction solely by reason of the limitation in paragraph (1).

"(4) SPECIAL RULES.—

"(A) PARTNERSHIPS.—In the case of a partnership, the provisions of this subsection shall apply with respect to the partnership and with respect to each partner.

"(B) NET OPERATING LOSSES OF ELECTING SMALL BUSINESS CORPORATIONS.—The net operating loss deduction allowed to shareholders of an electing small business corporation under section 1374 shall be deemed an investment interest deduction to the extent such investment interest is allowed as a deduction to the corporation. Section 1374(d) shall be disregarded to the extent such net operating loss deduction is deemed to be an investment interest deduction.

"(C) RENTS.—Gross income derived from rents shall not be considered as gross income derived from the conduct of a trade or business unless (i) the sum of the deductions with respect to the rent producing property which are allowable under section 162 (relating to trade or business expenses) equals or exceeds 15 percent of the rental income produced by such property, and (ii) the taxpayer is neither guaranteed a specified return nor is guaranteed in whole or in part against loss of income."

(b) CAPITAL GAINS DEDUCTION.—The first sentence of section 1202 (relating to deduction for capital gains) is amended by striking out "exceeds the net short-term capital loss" and inserting in lieu thereof "exceeds the sum of the net short-term capital loss and the amount of investment interest allowable as a deduction under section 163(d)(1)(C)".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 1969.

SUBTITLE D—MOVING EXPENSES

SEC. 231. MOVING EXPENSES.

(a) DEDUCTION FOR MOVING EXPENSES.—Section 217 (relating to moving expenses) is amended to read as follows:

SEC. 217. MOVING EXPENSES.

"(a) DEDUCTION ALLOWED.—There shall be allowed as a deduction moving expenses paid or incurred during the taxable year in connection with the commencement of work by the taxpayer as an employee at a new principal place of work.

"(b) DEFINITION OF MOVING EXPENSES.—

"(1) IN GENERAL.—For purposes of this section, the term 'moving expenses' means only the reasonable expenses—

"(A) of moving household goods and personal effects from the former residence to the new residence,

"(B) of traveling (including meals and lodging) from the former residence to the new place of residence,

"(C) of traveling (including meals and lodging), after obtaining employment, from the former residence to the general location of the new principal place of work and return, for the principal purpose of searching for a new residence.

"(D) of meals and lodging while occupying temporary quarters in the general location of the new principal place of work during any period of 30 consecutive days after obtaining employment, or

"(E) constituting qualified residence sale, purchase, or lease expenses.

"(2) QUALIFIED RESIDENCE SALE, ETC., EXPENSES.—For purposes of paragraph (1)(E), the term 'qualified residence sale, purchase, or lease expenses' means only reasonable expenses incident to—

"(A) the sale or exchange by the taxpayer or his spouse of the taxpayer's former residence (not including expenses for work performed on such residence in order to assist in its sale) which (but for this subsection and subsection (e)) would be taken into account in determining the amount realized on the sale or exchange,

"(B) the purchase by the taxpayer or his spouse of a new residence in the general location of the new principal place of work which (but for this subsection and subsection (e)) would be taken into account in determining—

"(i) the adjusted basis of the new residence, or

"(ii) the cost of a loan (but not including any amounts which represent payments or prepayments of interest),

"(C) the settlement of an unexpired lease on property used by the taxpayer as his former residence, or

"(D) the acquisition of a lease by the taxpayer or his spouse on property used by the taxpayer as his new residence in the general location of the new principal place of work (not including amounts which are payments or prepayments of rent).

"(3) LIMITATIONS.—

"(A) DOLLAR LIMITS.—The aggregate amount allowable as a deduction under subsection (a) in connection with a commencement of work which is attributable to expenses described in subparagraph (C) or (D) of paragraph (1) shall not exceed $1,000. The aggregate amount allowable as a deduction under subsection (a) which is attributable to qualified residence sale, purchase, or lease expenses shall not exceed $2,500, reduced by the aggregate amount so allowable which is attributable to expenses described in subparagraph (C) or (D) of paragraph (1).

"(B) HUSBAND AND WIFE.—In the case of a husband and wife filing separate returns, subparagraph (A) shall be applied by substituting '$500' for '$1,000', and by substituting '$1,250' for '$2,500'.

"(C) INDIVIDUALS OTHER THAN TAXPAYER.—In the case of any individual other than the taxpayer, expenses referred to in subparagraphs (A) through (D) of paragraph (1) shall be taken into account only if such individual has both the former residence and the new residence as his principal place of abode and is a member of the taxpayer's household.

"(c) CONDITIONS FOR ALLOWANCE.—No deduction shall be allowed under this section unless—

"(1) the taxpayer's new principal place of work—

"(A) is at least 50 miles farther from his former residence than was his former principal place of work, or

"(B) if he had no former principal place of work, is at least 50 miles from his former residence, and

"(2) during the 12-month period immediately following his arrival in the general location of his new principal place of work, the taxpayer is a full-time employee, in such general location, during at least 39 weeks.

"(d) RULES FOR APPLICATION OF SUBSECTION (c)(2).—

"(1) The condition of subsection (c)(2) shall not apply if the taxpayer is unable to satisfy such condition by reason of—

"(A) death or disability, or

"(B) involuntary separation (other than for willful misconduct) from the service of, or transfer for the benefit of, an employer after obtaining full-time employment in which the taxpayer could reasonably have been expected to satisfy such condition.

"(2) If a taxpayer has not satisfied the condition of subsection (c)(2) before the time prescribed by law (including extensions thereof) for filing the return for the taxable year during which he paid or incurred moving expenses which would otherwise be deductible under this section, but may still satisfy such condition, then such expenses may (at the election of the taxpayer) be deducted for such taxable year notwithstanding subsection (c)(2).

"(3) If—

"(A) for any taxable year moving expenses have been deducted in accordance with the rule provided in paragraph (2), and

"(B) the condition of subsection (c)(2) (as modified by paragraph (1) of this subsection) cannot be satisfied at the close of a subsequent taxable year,

then an amount equal to the expenses which were so deducted shall be included in gross income for the first such subsequent taxable year.

"(e) DENIAL OF DOUBLE BENEFIT.—The amount realized on the sale of the residence described in subparagraph (A) of subsection (b)(2) shall not be decreased by the amount of any expenses described in such subparagraph which are allowed as a deduction under subsection (a), and the basis of a residence described in subparagraph (B) of subsection (b)(2) shall not be increased by the amount of any expenses described in such subparagraph which are allowed as a deduction under subsection (a). This subsection shall not apply to any expenses with respect to which an amount is included in gross income under subsection (d)(3).

"(f) REGULATIONS.—The Secretary or his delegate shall prescribe such regulations as may be necessary to carry out the purposes of this section."

(b) INCLUSION IN GROSS INCOME OF MOVING EXPENSE REIMBURSEMENTS.—Part II of subchapter B of chapter 1 (relating to items specifically included in gross income) is amended by adding after section 81 the following new section:

"SEC. 82. REIMBURSEMENT FOR EXPENSES OF MOVING.

"There shall be included in gross income (as compensation for services) any amount received or accrued, directly or indirectly, by an individual from his employer as a payment for or reimbursement of expenses of moving from one residence to another residence."

(c) CLERICAL AMENDMENTS.—The table of sections for part II of subchapter B of chapter 1 is amended by adding at the end thereof the following:

"Sec. 82. Reimbursement for expenses of moving."

(d) EFFECTIVE DATES.—The amendments made by this section shall apply to taxable years beginning after December 31, 1969, except that section 217 of the Internal Revenue Code of 1954 (as amended by subsection (a)) shall not apply to any item to the extent that the taxpayer received reimbursement or other expense allowance for such item on or before December 31, 1969, which was not included in his gross income.

TITLE III—OTHER ADJUSTMENTS PRIMARY AFFECTING INDIVIDUALS

SUBTITLE A—LIMIT ON TAX PREFERENCES AND ALLOCATION OF DEDUCTIONS

SEC. 301. LIMIT ON TAX PREFERENCES FOR INDIVIDUALS, ESTATES, AND TRUSTS.

(a) IN GENERAL.—

(1) Part II of subchapter B of chapter 1 (relating to items specifically included in gross income) is amended by adding at the end thereof the following new section:

"SEC. 84. DISALLOWED TAX PREFERENCES.

"(a) GENERAL RULE.—In the case of a taxpayer (other than a corporation), there shall be included in gross income for the taxable year the amount of disallowed tax preferences.

"(b) DISALLOWED TAX PREFERENCES.—For purposes of this section, the amount of disallowed tax preferences for a taxable year is the amount by which the sum of the items of tax preference exceeds the limit on tax preferences.

"(c) ITEMS OF TAX PREFERENCE.—

"(1) GENERAL RULE.—For purposes of this section, the items of tax preference are:

"(A) CHARITABLE CONTRIBUTION OF APPRECIATED PROPERTY.—The amount of the deduction (determined without regard to section 277) for charitable contributions under section 170 or 642 (c) allowable for the taxable year which is attributable to appreciation in the value of property not included in gross income (determined without regard to this section).

"(B) ACCELERATED DEPRECIATION.—With respect to each section 1250 property (as defined in section 1250(c)), the amount by which the deduction allowable for the taxable year for exhaustion, wear and tear, obsolescence, or amortization exceeds the depreciation deduction which would have been allowable for the taxable year had the taxpayer depreciated the property under the method described in section 167(b)(1) (relating to the straight line method of depreciation) for each taxable year of its useful life for which the taxpayer has held the property.

"(C) INTEREST ON CERTAIN GOVERNMENTAL OBLIGATIONS.—The excess (if any) of interest on obligations which is excludable from gross income for the taxable year under section 103 over the sum of—

"(i) the amount of the proper adjustment to basis required to be made for the taxable year under section 1016(a) (5) or (6), and

"(ii) the amount of deductions allocable to such interest which is disallowed by application of section 265(a)(1) (relating to expenses relating to tax-exempt income), multiplied by the transitional percentage as determined under paragraph (5).

"(D) FARM LOSSES.—The amount by which the farm net loss (as defined under section 1251(e)(2) but not including any item of tax preference specified in subparagraph (B)) exceeds the amount of the farm loss (if any) which would have been determined under the accounting methods described in section 1251 (b)(4).

"(E) CAPITAL GAINS DEDUCTION.—The amount allowable as a deduction for long-term capital gains under section 1202.

"(2) NONRESIDENT ALIENS.—In the case of a nonresident alien, the items of tax preference shall include only those items of income which are effectively connected with the conduct of a trade or business within the United States and those items of deductions which are allowable as deductions in determining taxable income which is effectively connected with the conduct of a trade or business within the United States.

"(3) SPECIAL RULE FOR COMPUTING NET OPERATING LOSS.—For purposes of computing the amount of a net operating loss or the amount of a net operating loss carryover, the items of tax preference shall be determined without regard to paragraph (1)(E).

"(4) SPECIAL RULE FOR SHAREHOLDERS OF AN ELECTING SMALL BUSINESS CORPORATION.—Under regulations prescribed by the Secretary or his delegate, the items of tax preference of an electing small business corporation (as defined in section 1371(b)) for each taxable year of the corporation shall be treated as items of tax preference of the shareholders of such corporation and shall be apportioned pro rata among such shareholders in a manner consistent with section 1374(c)(1). For purposes of the preceding sentence, this section shall be treated as applying to such corporation.

"(5) TRANSITIONAL PERCENTAGE APPLICABLE TO INTEREST ON CERTAIN GOVERNMENTAL OBLIGATIONS.—The transitional percentage referred to in paragraph (1)(C) is 10 percent multiplied by the number of taxable years beginning on or after January 1, 1970 (but not in excess of 100 percent).

"(d) LIMIT ON TAX PREFERENCES.—For purposes of this section, the limit on tax preferences is an amount equal to the greater of—

"(1) one-half of the sum of (A) the items of tax preference, and (B) the adjusted gross income computed without regard to this section and section 218(a), or

"(2) $10,000 ($5,000 in the case of a married individual filing a separate return).

(e) AMOUNTS INCLUDED IN INCOME.—For purposes of this chapter, the amount included in gross income under this section shall be considered derived proportionately from each item of tax preference.

"(f) CROSS REFERENCE.—

"For rules relating to adjustments for amounts disallowed as tax preferences by this section, see section 218."

(2) Part VII of subchapter B of chapter 1 (relating to additional itemized deductions for individuals) is amended by renumbering section 218 as 219, and by inserting after section 217 the following new section:

"SEC. 218. ADJUSTMENTS FOR DISALLOWED TAX PREFERENCES.

"(a) GENERAL RULE.—If in any taxable year a taxpayer has included disallowed tax preference (as determined under section 84(b)) in gross income, the amount thereof shall be allowed, subject to subsection (b), as a deduction in each of the 5 succeeding taxable years to the extent not used as a deduction in earlier taxable years which are subsequent to the taxable year in which the disallowed tax preferences arose. For purposes of the preceding sentence, the amount of disallowed tax preferences to which this section applies shall be reduced by the amount of any basis adjustments resulting from application of subsection (c) during the taxable year to which this section is being applied and any prior taxable years which are subsequent to the taxable year in which the disallowed tax preferences arose.

"(b) LIMITATIONS.—The deduction under subsection (a) for any taxable year shall not exceed the amount of the limit on tax preferences (as defined in section 84(d)) for such taxable year reduced by—

"(1) the items of tax preference for such taxable year, and

"(2) the deduction under subsection (a) for such taxable year resulting from application of this section to disallowed tax preferences arising in taxable years preceding the taxable year in which the disallowed tax preferences being applied arose.

"(c) ADJUSTMENT TO BASIS.—

"(1) IN GENERAL.—Except as provided in paragraph (2)—

"(A) disallowed tax preferences which relate to items of tax preference described in section 84(c)(1)(B) shall increase the basis of the asset to which they relate, and

"(B) disallowed tax preferences which relate to items of tax preference described in section 84 (c)(1)(D) shall increase the basis of any farm asset other than section 1250 property (as defined in section 1250(c)), to the extent not allowed as a deduction or as an addition to basis under this section for an earlier taxable year. Such increase shall not be taken into account for purposes of the deduction allowed by section 167.

"(2) FARM ASSETS.—The increase in basis of farm assets provided in paragraph (1) shall apply to such assets in the order of disposition and shall not increase the basis of an asset to an amount greater than—

"(A) the amount which the basis would have been had the taxpayer used the accounting methods described in section 1251(b)(4), or

"(B) if the taxpayer so chooses, an amount determined by use of reasonable estimates of the unit costs of the different classes of assets."

(b) TECHNICAL AMENDMENTS.—

(1) Section 62 (relating to definitions of adjusted gross income) is amended by inserting after paragraph (9) the following new paragraph:

"(10) ADJUSTMENTS FOR DISALLOWED TAX PREFERENCES.—The deduction allowed by section 218."

(2) Section 1016 (relating to adjustments to basis) is amended by redesignating subsection (c) as subsection (d) and by inserting after subsection (b) the following new subsection:

"(c) LIMIT ON TAX PREFERENCES.—Adjustments to basis shall be computed under this section without regard to section 84 and section 218 except as otherwise provided in section 218(c)."

(c) CLERICAL AMENDMENTS.—

(1) The table of sections for part II of subchapter B of chapter 1 is amended by adding at the end thereof the following:

"Sec. 84. Disallowed tax preferences."

(2) The table of sections for part VII of subchapter B of chapter 1 is amended by striking out the last item and inserting in lieu thereof the following:

"Sec. 218. Adjustments for disallowed tax preferences.

"Sec. 219. Cross references."

(d) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 1969.

SEC. 302. ALLOCATION OF DEDUCTIONS.

(a) IN GENERAL.—Part IX of subchapter B of chapter 1 (relating to items not deductible) is amended by adding at the end thereof the following new section:

"SEC. 277. LIMITATION ON DEDUCTIONS FOR INDIVIDUALS.

"(a) GENERAL RULE.—If a taxpayer (other than a corporation) has allocable expenses for a taxable year, the deduction otherwise allowable under this chapter for such expenses shall be disallowed to the extent of an amount equal to the lesser of—

"(1) the aggregate of such expenses multiplied by the section 277 fraction, or

"(2) the allowable tax preferences.

"(b) SECTION 277 FRACTION.—For purposes of this section, the section 277 fraction is the fraction the numerator of which is the allowable tax preferences and the denominator of which is the sum of the allowable tax preferences plus modified adjusted gross income.

"(c) DEFINITIONS.—For purposes of this section—

"(1) ALLOCABLE EXPENSES.—

"(A) IN GENERAL.—The term 'allocable expenses' means the sum of the amounts allowable as deductions (without regard to this section and section 172(d)) by application of the following provisions (to the extent not otherwise disallowed as a deduction under section 265):

"(i) section 163 (relating to interest), determined without regard to section 163(d)(1),

"(ii) section 164 (relating to taxes),

"(iii) section 165 (relating to losses), but only with respect to a loss described in section 165(c)(3) (relating to casualty losses),

"(iv) section 170 (relating to charitable contributions),

"(v) section 172 (relating to net operating loss deduction), but only to the extent that the amount allowable (without regard to this section) as a deduction is attributable to a loss described in section 165(c)(3),

"(vi) section 213 (relating to medical, dental, etc., expenses), and

"(vii) section 216 (relating to deduction of certain amounts by cooperative housing corporation tenant-stockholders).

"(B) EXCEPTION.—Subparagraph (A) shall not apply to interest and taxes paid or incurred in the conduct of a trade or business (other than for investment interest, as defined in section 163(d)(3)(D)).

"(C) TAXABLE YEARS BEGINNING IN 1970.—For taxable years beginning in 1970, the allocable expenses shall be one-half of the amount determined under subparagraph (A).

"(2) ALLOWABLE TAX PREFERENCES.—

"(A) GENERAL RULE.—The term 'allowable tax preferences' means the excess (if any) of the total of the items of tax preference determined under section 84(c) (but only to the extent that such items are not included in gross income under section 84), as modified in subparagraphs (B), (C), and (D), over $10,000 ($5,000 in the case of a married individual filing a separate return).

"(B) INTEREST ON CERTAIN GOVERNMENTAL OBLIGATIONS.—For purposes of subparagraph (A), interest excludable from gross income under section 103 on obligations issued before July 12, 1969, shall not be taken into account.

"(C) DEPLETION AND INTANGIBLE DRILLING AND DEVELOPMENT COSTS.—With respect to each property (as defined in section 614), there shall be added to the items of tax preference (as determined under subparagraph (A)) the amount by which the sum of the deduction for depletion allowable under section 611 for the taxable year, plus the deduction for intangible drilling and development costs allowable by application of the provisions of section 263(c) for the taxable year, exceeds the sum of the amounts which would have been allowable for the taxable year for depletion and depreciation under section 611 if no deductions were allowable in any taxable year by reason of the application of section 613 or 263(c). Intangible drilling and development costs incurred in drilling a nonproductive well shall not be taken into account.

"(D) ADJUSTMENTS FOR DISALLOWED TAX PREFERENCES.—There shall be added to the items of tax preference (as determined in subparagraph (A)) the amount of the deduction allowable for the taxable year under section 218 (relating to adjustments for disallowed tax preferences).

"(3) MODIFIED ADJUSTED GROSS INCOME.—

"(A) GENERAL RULE.—For purposes of this section, the term 'modified adjusted gross income' means taxable income (determined without regard to this section) plus allocable expenses, but in no case shall modified adjusted gross income be less than zero.

"(B) NET OPERATING LOSS COMPUTATION.—Taxable income and allocable expenses shall be modified in computing modified adjusted gross income, for purposes of determining the amount of a net operating loss or a net operating loss carryover by making the modifications specified in subsections (b)(2)(A) and (d) of section 172.

"(d) AMOUNT DISALLOWED FROM EACH ALLOCABLE EXPENSE.—For purposes of this chapter, the amount of deductions disallowed by this section shall be disallowed proportionately from each allocable expense.

"(e) LIMIT ON DISALLOWED INTEREST EXPENSE.—For purposes of this section, the amount of investment interest (as defined in section 163(d)(3)(D)) disallowed by application of subsection (a) shall be reduced, but not below zero, by the amount of such interest expense disallowed as a deduction during the taxable year by application of section 163(d)(1)."

(1)(b) TECHNICAL AMENDMENTS.—

Section 265 (relating to expenses and interest relating to tax-exempt interest) is amended—

(A) by inserting "(a) GENERAL RULE.—" before "No deduction",

(B) by amending paragraph (1) of subsection (a) of section 265, as amended by subparagraph (A) of this paragraph, to read as follows:

"(1) EXPENSES.—Any amount otherwise allowable as a deduction (without regard to section 277) which is allocable to one or more classes of income other than interest (whether or not any amount of income of that class or classes is received or accrued) wholly exempt from the taxes imposed by this subtitle, or any amount otherwise allowable under section 212 (relating to expenses for production of income) which is allocable to interest (whether or not any amount of such interest is received or accrued) wholly exempt from the taxes imposed by this subtitle (without regard to section 84).",

(C) by amending paragraph (2) of subsection (a) of section 265, as amended by subparagraph (A) of this paragraph, by inserting "(without regard to section 84)" immediately after "taxes imposed by this subtitle" each time it appears, and

(D) by adding at the end thereof the following new subsection:

"(b) SPECIAL RULE FOR OBLIGATIONS DESCRIBED IN SECTION 103.—In the case of a taxpayer (other than a corporation), subsection (a)(2) shall not apply to that portion of any interest on indebtedness (other than interest paid or incurred in the conduct of a trade or business) incurred or continued to purchase or carry an obligation, the interest on which is wholly exempt from the taxes imposed by this subtitle by application of section 103 (without regard to section 84), which bears the same ratio to the total amount of such interest on indebtedness as the excess (if any) of the amount of interest income determined under section 84(c)(1)(C) as modified by section 277(c)(2)(B) over $10,000 ($5,000 in the case of a married individual filing a separate return) bears to the amount of interest income wholly exempt from the taxes imposed by this subtitle by application of section 103 (without regard to section 84)."

(2) Section 643(a)(6)(A) (relating to the definition of distributable net income in the case of the income of a foreign trust) is amended by inserting "(a)" immediately after "section 265".

(c) CLERICAL AMENDMENT.—The table of sections for part IX of subchapter B of chapter 1 is amended by adding at the end thereof the following new item:

"Sec. 277. Limitation on deductions for individuals."

(d) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 1969.

SUBTITLE B—INCOME AVERAGING

SEC. 311. INCOME AVERAGING.

(a) LIMITATION OF TAX.—Section 1301 (relating to limitation on tax) is amended by striking out "20 percent of such income" and all that follows and inserting in lieu thereof "20 percent of such income to 120 percent of average base period income."

(b) AVERAGABLE INCOME.—Section 1302 (relating to the definition of averagable income and related definitions) is amended to read as follows:

"SEC. 1302. DEFINITION OF AVERAGABLE INCOME; RELATED DEFINITIONS

"(a) AVERAGABLE INCOME.—For purposes of this part, the term 'averagable income' means the amount (if any) by which taxable income for the computation year (decreased by the amount (if any) to which section 72(m)(5) applies) exceed 120 percent of average base period income.

"(b) AVERAGE BASE PERIOD INCOME.—For purposes of this part—

"(1) IN GENERAL.—The term 'average base period income' means one-fourth of the sum of the base period incomes for the base period.

"(2) BASE PERIOD INCOME.—The base period income for any taxable year is the taxable income for such year increased by the amount (if any) equal to the excess of—

"(A) the amount excluded from gross income under section 911 (relating to earned income from sources without the United States) and subpart D of part III of subchapter N (sec. 931 and following, relating to income from sources within possessions of the United States), over

"(B) the deductions which would have been properly allocable to or chargeable against such amount but for the exclusion of such amount from gross income.

"(c) OTHER RELATED DEFINITIONS.—For purposes of this part—

"(1) COMPUTATION YEAR.—The term 'computation year' means the taxable year for which the taxpayer chooses the benefits of this part.

"(2) BASE PERIOD.—The term 'base period' means the 4 taxable years immediately preceding the computation year.

"(3) BASE PERIOD YEAR.—The term 'base period year' means any of the 4 taxable years immediately preceding the computation year.

"(4) JOINT RETURN.—The term 'joint return' means the return of a husband and wife made under section 6013."

(c) SPECIAL RULES.—Section 1304(b) (relating to special rules applicable to income averaging) is amended—

(1) by striking out "$5,000" in paragraph (1) and inserting in lieu thereof "$6,100";

(2) by striking out "and" at the end of paragraph (3);

(3) by striking out the period at the end of paragraph (4) and inserting in lieu thereof a comma; and

(4) by adding at the end thereof the following new paragraphs:

"(5) section 668(b) (relating to limitation on tax with respect to amounts deemed distributed by a trust in preceding years), and

"(6) section 1348 (relating to 50-percent maximum rate on earned income)."

(d) CONFORMING AMENDMENTS.—

(1) Section 1303(c)(2)(B) is amended by striking out "adjusted".

(2) Section 1304 is amended—

(A) by striking out paragraph (3) of subsection (c) and by redesignating paragraphs (4) and (5) of such subsection as paragraphs (3) and (4), respectively;

(B) by striking out "Paragraphs (2), (3), and (4)" in subsection (c)(1) and inserting in lieu thereof "Paragraphs (2) and (3)";

(C) by striking out "paragraph (4)" in subsection (c)(1)(B) and inserting in lieu thereof "paragraph (3)";

(D) by striking out "adjusted" in subparagraph (B) of subsection (c)(3) (as redesignated);

(E) by striking out "section 143" in subsection (c)(4) (as redesignated) and inserting in lieu thereof "section 153";

(F) by striking out in subsection (d) ", and the $3,000 figure contained in section 1302(b)(2)(C) shall be applied to the aggregate net incomes";

(G) by striking out subsections (e) and (f) and inserting in lieu thereof the following:

"(e) TREATMENT OF CERTAIN OTHER ITEMS.—

"(1) SECTION 72(m)(5).—Section 72(m)(5) (relating to penalties applicable to certain amounts received by owner-employees) shall be applied as if this part had not been enacted.

"(2) OTHER ITEMS.—Except as otherwise provided in this part, the order and manner in which items of income or limitations on tax shall be taken into account in computing the tax imposed by this chapter on the income of any eligible individual to whom section 1301 applies for any computation year shall be determined under regulations prescribed by the Secretary or his delegate."; and

(H) by redesignating subsection (g) as (f).

(3) Section 6511(d)(2)(B)(ii) is amended—

(A) by striking out "1302(e)(1)" and inserting in lieu thereof "1302(c)(1)"; and

(B) by striking out "1302(e)(3)" and inserting in lieu thereof "1302(c)(3)".

(e) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to computation years (within the meaning of section 1302(c)(1) of the Internal Revenue Code of 1954) beginning after December 31, 1969, and to base period years (within the meaning of section 1302(c)(3) of such Code) applicable to such computation years.

SUBTITLE C—RESTRICTED PROPERTY

SEC. 321. RESTRICTED PROPERTY.

(a) IN GENERAL.—Part II of subchapter B of chapter 1 (relating to items specifically included in gross income) is amended by adding at the end thereof the following new section:

"SEC. 85. RESTRICTED PROPERTY.

"(a) GENERAL RULE.—If, in connection with the performance of services, property is transferred to any person other than the person for whom such services are performed, the excess of—

"(1) the fair market value of such property (determined without regard to any restriction other than a restriction which by its terms will never lapse) at the first time the rights of the person having the beneficial interest in such property are transferable or are not subject to a substantial risk of forfeiture, whichever occurs earlier, over

"(2) the amount (if any) paid for such property, shall be included in gross income in the first taxable year in which the rights of the person having the beneficial interest in such property are transferable or are not subject to a substantial risk of forfeiture, whichever is applicable.

"(b) SUBSTANTIAL RISK OF FORFEITURE.—For purposes of this section, the rights of a person in property are subject to a substantial risk of forefeiture if the transferee's rights to full enjoyment of such property are conditioned upon the future performance of substantial services.

"(c) CERTAIN RESTRICTIONS WHICH WILL NEVER LAPSE.—

"(1) VALUATION.—In the case of property subject to a restriction which by its terms will never lapse, and which allows the transferee to sell such property only at a price determined under a formula, such formula price shall be deemed to be the fair market value of the property unless established to the contrary by the Secretary or his delegate, and the burden of proof shall be on the Secretary or his delegate with respect to such value.

"(2) CANCELLATION.—If, in the case of property subject to a restriction which by its terms will never lapse, the restriction is canceled, then, unless the taxpayer establishes—

"(A) that such cancellation was not compensatory, and

"(B) that the person, if any, who would be allowed a deduction if the cancellation were treated as compensatory, will treat the transaction as not compensatory, as evidenced in such manner as the Secretary or his delegate shall prescribe by regulations, the excess of the fair market value of the property (computed without regard to the restrictions) at the time of cancellation over the sum of—

"(C) the fair market value of such property (computed by taking the restriction into account) immediately before the cancellation, and

"(D) the amount, if any, paid for the cancellation,

shall be treated as compensation for the taxable year in which such cancellation occurs.

"(d) APPLICABILITY OF SECTION.—This section shall not apply to—

"(1) a transaction to which section 421 applies,

"(2) a transfer to a trust described in section 401(a),

"(3) the transfer of an option without a readily ascertainable fair market value, or

"(4) the transfer of property pursuant to the exercise of an option with a readily ascertainable fair market value at the date of grant.

"(e) HOLDING PERIOD.—In determining the period for which the taxpayer has held property to which this section applies, there shall be included only the period beginning at the first time his rights in such property are transferable or are not subject to a substantial risk of forfeiture, whichever occurs earlier.

"(f) TRANSITION RULES.—This action shall apply to property transferred after June 30, 1969, except that this section shall not apply to property transferred—

"(1) pursuant to a binding written contract entered into before April 22, 1969,

"(2) upon the exercise of an option granted before April 22, 1969, or

"(3) before February 1, 1970, pursuant to a written plan adopted and approved before July 1, 1969."

(b) NONEXEMPT TRUSTS AND NONQUALIFIED ANNUITIES.—

(1) BENEFICIARY OF NON-EXEMPT TRUST.—Section 402(b) (relating to taxability of beneficiary of non-exempt trust) is amended to read as follows:

"(b) TAXABILITY OF BENEFICIARY OF NONEXEMPT TRUST.—Contributions to an employees' trust made by an employer during a taxable year of the employer which ends within or with a taxable year of the trust for which the trust is not exempt from tax under section 501(a) shall be included in the gross income of the employee in accordance with section 85 (relating to restricted property). The amount actually distributed or made available to any distributee by any such trust shall be taxable to him in the year in which so distributed or made available, under section 72 (relating to annuities), except that distributions of income of such trust before the annuity starting date (as defined in section 72(c)(4)) shall be included in the gross income of the employee without regard to section 72(e)(1) (relating to amount not received as annuities). A beneficiary of any such trust shall not be considered the owner of any portion of such trust under subpart E of part I of subchapter J (relating to grantors and others treated as substantial owners)."

(2) BENEFICIARY UNDER NONQUALIFIED ANNUITY.—Section 403 (relating to taxation of employee annuities) is amended by striking out subsections (c) and (d) and inserting in lieu thereof the following new subsection:

"(c) TAXABILITY OF BENEFICIARY UNDER NON-QUALIFIED ANNUITIES OR UNDER ANNUITIES PURCHASED BY EXEMPT ORGANIZATIONS.—Premiums paid by an employer for

an annuity contract which is not subject to subsection (a) shall be included in the gross income of the employee in accordance with section 85 (relating to restricted property). If the employer is exempt from tax under section 501(a) or 521(a), the preceding sentence shall apply only to that portion of the premiums paid which is not excluded from gross income under section (b). The amount actually paid or made available to any beneficiary under such contract shall be taxable to him in the year in which so paid or made available under section 72 (relating to annuities)."

(c) CLERICAL AMENDMENT.—The table of sections for part II of subchapter B of chapter 1 is amended by adding at the end thereof the following new item:

"Sec. 85. Restricted property."

(d) EFFECTIVE DATES.—The amendments made by subsections (a) and (c) shall take effect upon the date of enactment of this Act. The amendments made by subsection (b) shall apply to transfers made and to premiums paid after August 4, 1969.

SUBTITLE D—OTHER DEFERRED COMPENSATION

SEC. 331. DEFERRED COMPENSATION.

(a) IN GENERAL.—Subchapter Q of chapter 1 (relating to readjustment of tax between years and special limitations) is amended by adding at the end thereof the following new part:

"PART VIII—DEFERRED COMPENSATION

"Sec. 1354. Deferred compensation.

"SEC. 1354. DEFERRED COMPENSATION.

"(a) MINIMUM TAX.—If an individual receives a deferred compensation payment during the taxable year, the tax imposed by section 1 for the taxable year which is attributable to the excess (if any) of such payment over $10,000 shall not be less than the lower of—

"(1) the aggregate increase in tax resulting from adding to the employee's taxable income (as modified under subsection (c)) for each taxable year in which such excess is deemed to have been earned the portion of such excess deemed to have been earned in each such year, or

"(2) the tax determined by multiplying by the number of taxable years in the period during which such excess is deemed to have been earned, the average of the increase in tax resulting from adding to the employee's taxable income (as modified under subsection (c)), for the 3 taxable years during the last 10 years of such period for which his taxable income is highest, the portion of such excess deemed to have been earned in each such year.

"(b) YEAR IN WHICH EARNED.—A deferred compensation payment shall be deemed to have been earned ratably over (1) the employee's entire period of service with the employer (or any predecessor or successor of the employer or a parent or subsidiary corporation of the employer), or (2) a portion of such period, if under regulations prescribed by the Secretary or his delegate, such payment is properly attributable to such portion.

"(c) EFFECT OF PRIOR DEFERRED COMPENSATION PAYMENTS.—For purposes of applying subsection (a) with respect to a deferred compensation payment, the employee's taxable income for any taxable year referred to in subsection (a) shall be first increased by any amount added to the taxable income for such taxable year with respect to any deferred compensation payment previously received.

"(d) EMPLOYEE.—For purposes of this section, the term 'employee' includes any individual who performs services for any person, notwithstanding the fact that such individual is not regarded as the employee of such person for any other purpose of this title.

"(e) INFORMATION REQUIREMENT.—Subsection (a)(1) shall not apply unless the taxpayer supplies such information as the Secretary or his delegate may by regulations prescribe with respect to his income for each taxable year in which the deferred compensation payment is deemed to have been earned.

"(f) APPLICABILITY OF SECTION.—This section shall not apply to any deferred compensation payment made under a written plan—

"(1) which meets the requirements of section 401(a) (3), (4), (5), (6), (7), and (8),

"(2) which would meet such requirements but for the fact that such plan is unfunded, or

"(3) in the case of a plan in existence on August 4, 1969, which is amended before January 1, 1972, so as to meet the requirements of paragraph (1) or (2).

"(g) TRANSITION RULES.—The minimum tax imposed by subsection (a) shall not apply to the ratable portion of any deferred compensation payment attributable to a taxable year—

"(1) beginning before January 1, 1970, or

"(2) beginning before January 1, 1974, if paid or made available pursuant to an obligation which was, on July 11, 1969, and at all times thereafter, binding (without regard to the effect of any possibility of forfeiture of the employee)."

(b) CLERICAL AMENDMENT.—The table of parts for subchapter Q of chapter 1 is amended by adding at the end thereof the following new item:

"Part VIII. Deferred compensation."

(c) EFFECTIVE DATE.—The amendments made by subsections (a) and (b) shall apply with respect to taxable years ending after June 30, 1969.

SUBTITLE E—ACCUMULATION TRUSTS, MULTIPLE TRUSTS, ETC.

SEC. 341. TREATMENT OF EXCESS DISTRIBUTIONS BY TRUSTS.

(a) DEFINITIONS—

(1) Subsections (b) and (c) of section 665 (relating to definitions applicable to subpart D) are amended to read as follows:

"(b) ACCUMULATION DISTRIBUTIONS.—For purposes of this subpart, the term 'accumulation distribution' means, for any taxable year of the trust, the amount by which—

"(1) the amounts specified in paragraph (2) of section 661(a) for such taxable year, exceed

"(2) distributable net income reduced (but not below zero) by the amounts specified in paragraph (1) of section 661(a).

"(c) SPECIAL RULE APPLICABLE TO DISTRIBUTIONS BY CERTAIN FOREIGN TRUSTS.—Any amount paid to a United States person which is from a payor who is not a United States person and which is derived directly or indirectly from a foreign trust created by a United States person shall be deemed in the year of payment to have been directly paid by the foreign trust."

(2) Subsection (d) of such section is amended by striking out "sections 667 and" and inserting in lieu thereof "section".

(3) Subsection (e) of such section is amended to read as follows:

"(e) PRECEDING TAXABLE YEAR.—In the case of a trust (other than a foreign trust created by a United States person), the term 'preceding taxable year' does not include any taxable year of the trust ending before April 23, 1964. In the case of a foreign trust created by a United States person, the term does not include any taxable year of the trust to which this part does not apply. In the case of a preceding taxable year with respect to which a trust qualifies (without regard to this subpart) under the provisions of subpart B, for purposes of the application of this subpart to such trust for such taxable year, such trust shall, in accordance with regulations prescribed by the Secretary or his delegate, be treated as a trust to which subpart C applies."

(b) ACCUMULATION DISTRIBUTION ALLOCATED TO PRECEDING YEARS.—

(1) So much of section 666 as precedes subsection (b) is amended to read as follows:

"SEC. 666. ACCUMULATION DISTRIBUTION ALLOCATED TO PRECEDING YEARS.

"(a) AMOUNT ALLOCATED.—In the case of a trust which is subject to subpart C, the amount of the accumulation distribution of such trust for such taxable year shall be deemed to be an amount within the meaning of paragraph (2) of section 661(a) distributed on the last day of each of the preceding taxable years to the extent that such amount exceeds the total of any undistributed net incomes for any taxable years intervening between the taxable year with respect to which the accumulation distribution is determined and such preceding taxable year. The amount deemed to be distributed in any such preceding taxable year under the preceding sentence shall not exceed the undistributed net income of such preceding taxable year. For purposes of this subsection, undistributed net income for each of such preceding taxable years shall be computed without regard to such accumulation distribution and without regard to any accumulation distribution determined for any succeeding taxable year."

(2) Section 666 is amended by adding at the end thereof the following new subsection:

"(d) SPECIAL RULE FOR DISTRIBUTIONS COVERED BY SECTION 665(b) BEFORE APRIL 23, 1969.—For the purpose of determining the undistributed net income for any preceding taxable year of a trust, amounts distributed before April 23, 1969, which were excluded from the definition of an accumulation distribution under section 665(b) as in effect before such date shall reduce the undistributed net income of the preceding taxable year or years of the trust on the last day of which they are deemed to have been distributed under this subpart."

(c) DENIAL OF REFUND TO TRUSTS.—Section 667 is amended to read as follows:

"SEC. 667. DENIAL OF REFUND TO TRUSTS.

"No refund or credit shall be allowed to a trust for any preceding taxable year by reason of a distribution deemed to have been made by such trust in such year under section 666."

(d) AMOUNTS TREATED AS DISTRIBUTED IN PRIOR YEARS.—Section 668 is amended to read as follows:

"SEC. 668. TREATMENT OF AMOUNTS DEEMED DISTRIBUTED IN PRECEDING YEARS.

"(a) GENERAL RULE.—The total of the amounts which are treated under section 666 as having been distributed by the trust in a preceding taxable year shall be included in the income of a beneficiary or beneficiaries of the trust when paid, credited, or required to be distributed to the extent that such total would have been included in the income of such beneficiary or beneficiaries under section 662 (a) (2) and (b) if such total had been paid to such beneficiary or beneficiaries on the last day of such preceding taxable year.

"(b) LIMITATION ON TAX.—

"(1) ALTERNATIVE METHODS.—The tax attributable to the amounts treated under subsection (a) as having been received by the beneficiary from a trust on the last day of a preceding taxable year of the trust shall not be greater than—

"(A) the aggregate of the taxes attributable to those amounts had they been included in the gross income of the beneficiary on such day in accordance with section 662(a)(2) and (b), or

"(B) the tax determined by multiplying by the number of preceding taxable years of the trust, on the last day of each of which an amount is deemed under section 666(a) to have been distributed, the average of the increase in tax attributable to recomputing the beneficiary's gross income for the taxable year and each of his 2 taxable years immediately preceding the year of the accumulation distribution by adding to the income of each of such years an amount determined by dividing the amount required to be included in income under subsection (a) by such number of preceding taxable years of the trust. The recomputation for the taxable year shall be made without regard to the inclusion in income required by subsection (a) of the accumulation distribution to which the limitation is being applied.

"(2) EXCEPTIONS.—

"(A) When an accumulation distribution is deemed under section 666(a) to have been distributed on the last day of less than 3 taxable years of the trust, the taxable years of the beneficiary for which a recomputation is made under paragraph (1)(B) shall equal the number of years to which section 666(a) applies, commencing with the most recent taxable year of the beneficiary.

"(B) If a beneficiary was not alive on the last day of each preceding taxable year of the trust with respect to which a distribution is deemed made under section 666(a), paragraph (1)(A) shall not apply. In applying paragraph (1)(B), no recomputation shall be made for a beneficiary for a taxable year for which he was not alive.

"(3) EFFECT OF PRIOR ACCUMULATION DISTRIBUTIONS.—In computing the limitations on tax under paragraph (1) for any beneficiary to whom a prior accumulation distribution or distributions have been paid, credited, or required to be distributed (whether from the same trust or another trust), the income of the beneficiary for each of his preceding taxable years shall include amounts previously deemed distributed to such beneficiary for such year under section 666 as a result of prior accumulation distributions.

"(4) MULTIPLE DISTRIBUTIONS IN THE SAME TAXABLE YEAR.—In the case of accumulation distributions made from more than one trust which are includable in the income of a beneficiary in the same taxable year, the distributions shall be deemed to have been made consecutively in whichever order the beneficiary shall determine.

"(5) INFORMATION REQUIREMENT.—

"(A) The limitation on tax provided in paragraph (1)(A) shall not be effective unless the beneficiary supplies such information with respect to his income, for each taxable year on the last day of which an amount is deemed distributed under section 666(a), as the Secretary or his delegate may by regulations prescribe.

"(B) In addition, in the case of a foreign trust created by a United States person, the limitation on tax provided in paragraph (1) shall not be effective unless the beneficiary supplies such information with respect to the operation and accounts of the trust, for each taxable year on the last day of which an amount is deemed distributed under section 666(a), as the Secretary or his delegate may by regulations prescribe.

"(c) CREDIT FOR TAXES PAID BY TRUST.—The tax imposed on a beneficiary under this chapter shall be credited with the amount of taxes deemed distributed to him under section 666 (b) and (c)."

(e) DELETION OF SPECIAL RULES APPLICABLE TO CERTAIN FOREIGN TRUSTS.—Section 669 (relating to special treatment of beneficiaries of certain foreign trusts) is repealed.

(f) TECHNICAL AMENDMENTS.—The table of sections for subpart D of part I of subchapter J of chapter 1 (relating to treatment of excess distributions by trusts) is amended—

(1) by striking out

"Sec. 666. Accumulation distribution allocated to 5 preceding years."

and inserting in lieu thereof

"Sec. 666. Accumulation distribution allocated to preceding years."

(2) by striking out

"Sec. 669. Special rules applicable to certain foreign trusts."

(g) EFFECTIVE DATE AND TRANSITIONAL RULES.—

(1) Except for amounts credited or required to be distributed before April 23, 1969, and except as provided in paragraph (2), the amendments made by this section shall apply with respect to all distributions by trusts paid, credited, or required to be distributed after April 22, 1969.

(2) For the taxable year of the trust in which April 23, 1969, occurs—

(A) DISTRIBUTIONS NOT EXCEEDING $2,000.—If the total of the amounts specified in paragraph (2) of section 661(a) of the Internal Revenue Code of 1954 do not exceed distributable net income of the trust reduced by the amounts specified in paragraph (1) of section 661(a) of such Code by more than $2,000, there shall be deemed to be no accumulation distribution for such taxable year.

(B) If amounts were paid, credited, or were required to be distributed by a trust during the portion of the year occurring before April 23, 1969, the accumulation distribution for the year shall be the total of—

(i) The accumulation distribution for the portion of the year before April 23, 1969, determined in accordance with the law in effect before the enactment of this Act, and

(ii) The accumulation distribution for the portion of the year after April 22, 1969, determined in accordance with the law as amended by this Act.

In making these determinations, there shall be allocated to the portion of the year after April 22, 1969, the distributable net income of the trust except to the extent it exceeds the amounts specified in section 661(a) of such Code for such portion of the year. The remainder, if any, of the distributable net income shall be allocated to the portion of the year before April 23, 1969.

SEC. 342. TRUST INCOME FOR BENEFIT OF A SPOUSE.

(a) INCOME FOR BENEFIT OF GRANTOR'S SPOUSE.—

(1) Paragraphs (1), (2), and (3) of section 677(a) (relating to income for benefit of grantor) are amended by striking out "the grantor" each place it appears and inserting in lieu thereof "the grantor or the grantor's spouse".

(2) Section 677(b) is amended by striking out "beneficiary" and inserting in lieu thereof "beneficiary (other than the grantor's spouse)".

(b) EFFECTIVE DATE.—The amendments made by subsection (a) shall apply in respect of property transferred in trust after April 22, 1969.

TITLE IV—ADJUSTMENTS PRIMARILY AFFECTING CORPORATIONS

SUBTITLE A—MULTIPLE CORPORATIONS

SEC. 401. MULTIPLE CORPORATIONS.

(a) IN GENERAL.—

(1) Section 1561 (relating to surtax exemptions in case of certain controlled corporations) is amended to read as follows:

"SEC. 1561. LIMITATIONS ON CERTAIN MULTIPLE TAX BENEFITS IN THE CASE OF CERTAIN CONTROLLED CORPORATIONS.

"(a) GENERAL RULE.—The component members of a controlled group of corporations on a December 31 shall, for their taxable years which include such December 31, be limited for purposes of this subtitle to—

"(1) one $25,000 surtax exemption under section 11(d),

"(2) one $100,000 amount for purposes of computing the accumulated earnings credit under section 535(c) (2) and (3), and

"(3) one $25,000 amount for purposes of computing the limitation on the small business deduction of the insurance companies under sections 804(a)(4) and 809(d)(10).

The amount specified in paragraph (1) shall be divided equally among the component members of such group on such December 31 unless all of such component members consent (at such time and in such manner as the Secretary or his delegate shall by regulations prescribe) to an apportionment plan providing for an unequal allocation of such amount. The amounts specified in paragraphs (2) and (3) shall be divided equally among the component members of such group on such December 31 unless the Secretary or his delegate prescribes regulations permitting an unequal allocation of such amounts.

"(b) CERTAIN SHORT TAXABLE YEARS.—If a corporation has a short taxable year which does not include a December 31 and is a component member of a controlled group of corporations with respect to such taxable year, then for purposes of this subtitle—

"(1) the surtax exemption under section 11(d),

"(2) the amount to be used in computing the accumulated earnings credit under sections 535(c) (2) and (3); and

"(3) the amount to be used in computing the limitation on the small business deduction of life insurance companies under sections 804(a)(4) and 809(d)(10).

of such corporation for such taxable year shall be the amount specified in subsection (a) (1), (2), or (3), as the case may be, divided by the number of corporations which are component members of such group on the last day of such taxable year. For purposes of the preceding sentence, section 1563(b) shall be applied as if such last day were substituted for December 31."

(2) Section 1562 (relating to privilege of groups to elect multiple surtax exemptions) is repealed.

(b) TRANSITIONAL RULES FOR CONTROLLED GROUPS OF CORPORATIONS.—

(1) Part II of subchapter B of chapter 6 (relating to certain controlled corporations) is amended by adding at the end thereof the following new section:

"SEC. 1564. TRANSITIONAL RULES IN THE CASE OF CERTAIN CONTROLLED CORPORATIONS.

"(a) LIMITATION ON ADDITIONAL BENEFITS.—

"(1) IN GENERAL.—With respect to any December 31 after 1968 and before 1976, the amount of—

"(A) each additional $25,000 surtax exemption under section 1562 in excess of the first such exemption,

"(B) each additional $100,000 amount under section 535(c) (2) and (3) in excess of the first such amount, and

"(C) each additional $25,000 limitation on the small business deduction of life insurance companies under sections 804(a)(4) and 809(d)(10) in excess of the first such limitation,

otherwise allowed to the component members of a controlled group of corporations for their taxable years which include such December 31 shall be reduced to the amount set forth in the following schedule:

"Taxable years including—	Surtax exemption	Amount under sec. 535(c) (2) and (3)	Small business deduction limitation
Dec. 31, 1969	$21,875	$87,500	$21,875
Dec. 31, 1970	18,750	75,000	18,750
Dec. 31, 1971	15,625	62,500	15,625
Dec. 31, 1972	12,500	50,000	12,500
Dec. 31, 1973	9,375	37,500	9,375
Dec. 31, 1974	6,250	25,000	6,250
Dec. 31, 1975	3,125	12,500	3,125

"(2) ELECTION.—With respect to any December 31 after 1968 and before 1976, the component members of a controlled group of corporations shall elect (at such time and in such manner as the Secretary or his delegate shall by regulations prescribe) which component member of such group shall be allowed for its taxable year which includes such December 31 the surtax exemption, the amount under section 535(c) (2) and (3), or the small business deduction limitation which is not reduced under paragraph (1).

"(b) DIVIDENDS RECEIVED BY CORPORATIONS.—

"(1) GENERAL RULE.—If—

"(A) an election of a controlled group of corporations (as defined in section 1563(a) (1) or (4)) under section 1562(a) (relating to privilege of a controlled group of corporations to elect to have each of its component members make its returns without regard to section 1561) was made on or before April 22, 1969, and

"(B) such election is effective with respect to the taxable year of each component member of such group which includes December 31, 1969,

then, with respect to a dividend distributed on or before December 31, 1978, out of earnings and profits of a taxable year including a December 31 after 1968 and before 1976, subsections (a)(3) and (b) of section 243 (relating to dividends received by corporations) shall be applied to the members that comprise an affiliated group (as defined in section 243(b)(5)) in the manner set forth in paragraph (2).

"(2) SPECIAL RULES.—

"(A) An election under section 243(b)(2) may be made for a taxable year including a December 31 after 1968 and before 1976, notwithstanding that an election under section 1562(a) is in effect for the taxable year.

"(B) Section 243(b)(1)(B)(ii) shall not apply with respect to a dividend distributed on or before December 31, 1978, out of earnings and profits of a taxable year including a December 31 after 1968 and before 1976 for which an election under section 1562(a) is in effect, and in lieu of the percentage specified in section 243(a)(3) with respect to such dividend, the percentage shall be the percentage set forth in the following schedule:

"If the dividend is distributed out of earnings and profits of the distributing corporation's taxable year which includes—	The percentage shall be—
December 31, 1969	87 percent
December 31, 1970	89 percent
December 31, 1971	91 percent
December 31, 1972	93 percent
December 31, 1973	95 percent
December 31, 1974	97 percent
December 31, 1975	99 percent.

"(C) For taxable years which include a December 31 after 1968 for which an election under section 1562(a) is in effect, section 243(b)(3)(C)(v) shall not be applied to limit the number of surtax exemptions.

"(c) CERTAIN SHORT TAXABLE YEARS.—If—

"(1) a corporation has a short taxable years beginning after December 31, 1968 and ending before December 31, 1975, which does not include a December 31, and

"(2) such corporation is a component member of a controlled group of corporations with respect to such taxable (determined by applying section 1563(b) as if the last day of such taxable year were substituted for December 31),

then subsections (a) and (b) shall be applied as if the last day of such taxable year were the nearest December 31 to such day."

(2) If—

(A) an election of a controlled group of corporations (as defined in section 1563(a)(1) of the Internal Revenue Code of 1954) under section 1562(a) of such Code (relating to privilege of a controlled group of corporations to elect to have each of its component members make its returns without regard to section 1561) was made on or before April 22, 1969,

(B) such election is effective with respect to the taxable year of each component member of such group which includes December 31, 1969,

(C) one or more component members of such group sustains a net operating loss (within the meaning of section 172 of such Code) in a taxable year ending on or after December 31, 1969, for which the election under section 1562(a) is in effect, and

(D) such net operating loss is a carryover to a subsequent taxable year for which the members of such group join in the filing of a consolidated return,

then under regulations prescribed by the Secretary or his delegate, such net operating loss shall be allowed (if it would have been allowable had the election under section 1562(a) not been in effect) as a deduction against the income of other members of such group in the same proportion as the additional surtax exemptions of such group were reduced under section 1564(a) of such Code for the taxable year in which such net operating loss was sustained.

(3)(A) The first of sentence of section 1562(b)(1) is amended by striking out "$25,000" and inserting in lieu thereof "the amount of such corporation's surtax exemption for such taxable year".

(B) Section 11(d) is amended by striking out "section 1561" and inserting in lieu thereof "section 1561 or 1564".

(C) Section 535(c)(5) is amended by striking out "section 1551" and inserting in lieu thereof "section 1551, and for limitation on such credit in the case of certain controlled corporations, see section 1564".

(D) Section 804 is amended by adding after subsection (c) the following new subsection:

"(d) CROSS REFERENCE.—

"For reduction of the $25,000 amount provided in subsection (a)(4) in the case of certain controlled corporations, see section 1564."

(E) The table of sections for part II of subchapter B of chapter 6 is amended by adding at the end thereof the following:

"Sec. 1564. Transitional rules in the case of certain controlled corporations."

(c) BROTHER-SISTER CONTROLLED GROUPS.—Section 1563(a)(2) is amended to read as follows:

"(2) BROTHER-SISTER CONTROLLED GROUP.—Two or more corporations if 5 or fewer persons who are individuals, estates, or trusts own (within the meaning of subsection (d)(2)) stock possessing—

"(A) at least 80 percent of the total combined voting power of all classes of stock entitled to vote or at least 80 percent of the total value of shares of all classes of the stock of each corporation, and

"(B) more than 50 percent of the total combined voting power of all classes of stock entitled to vote or more than 50 percent of the total value of shares of all classes of stock of each corporation, taking into account the stock ownership of each such person only to the extent such stock ownership is identical with respect to each such corporation."

(d) EXCLUDED STOCK RULES.—

(1) Section 1563(c)(2)(A) is amended by striking out "or" at the end of clause (ii); striking out "stock," at the end of clause (iii) and inserting in lieu thereof "stock, or"; and adding after clause (iii) the following new clause:

"(iv) stock in the subsidiary corporation owned (within the meaning of subsection (d)(2)) by an organization (other than the parent corporation) to which section 501 (relating to certain educational and charitable organizations which are exempt from tax) applies and which is controlled directly or indirectly by the parent corporation or subsidiary corporation, by an individual, estate, or trust that is a principal stockholder (within the meaning of clause (ii)) of the parent corporation, by an officer of the parent corporation, or by any combination thereof."

(2) Section 1563(c)(2)(B) is amended—

(A) by striking out "a person who is an individual, estate, or trust (referred to in this paragraph as 'common owner') owns" and inserting in lieu thereof "5 or fewer persons who are individuals, estates, or trusts (referred to in this paragraph as 'common owners') own";

(B) by striking out "or" at the end of clause (i);

(C) by striking out in clause (ii) "such common owner", "the common owner", and "stock." and inserting in lieu thereof "any of such common owners", "any of the common owners", and "stock, or", respectively; and

(D) by adding after clause (ii) the following new clause:

"(iii) stock in such corporation owned (within the meaning of subsection (d)(2)) by an organization to which section 501 (relating to certain educational and charitable organizations which are exempt from tax) applies and which is controlled directly or indirectly by such corporation, by an individual, estate, or trust that is a principal stockholder (within the meaning of subparagraph (A)(ii)) of such corporation, by an officer of such corporation, or by any combination thereof."

(e) INVESTMENT CREDIT.—

(1) Section 46(a)(5) is amended to read as follows:

"(5) CONTROLLED GROUPS.—In the case of a controlled group, the $25,000 amount specified under paragraph (2) shall be reduced for each component member of such group by apportioning $25,000 among the component members of such group in such manner as the Secretary or his delegate shall by regulations prescribe. For purposes of the preceding sentence, the term 'controlled group' has the meaning assigned to such term by section 1563(a)."

(2) Section 48(c)(2)(C) is amended to read as follows:

"(C) CONTROLLED GROUPS.—In the case of a controlled group, the $50,000 amount specified under subparagraph (A) shall be reduced for each component member of the group by apportioning $50,000 among the component members of such group in accordance with their respective amounts of used section 38 property which may be taken into account."

(3) Section 48(c)(3)(C) is amended to read as follows:

"(C) CONTROLLED GROUP.—The term 'controlled group' has the meaning assigned to such term by section 1563(a), except that the phrase 'more than 50 percent' shall be substituted for the phrase 'at least 80 percent' each place it appears in section 1563(a)(1)."

(4) Section 48(d)(2) is amended by striking out "member" and "affiliated group" wherever they appear and inserting in lieu thereof "component member" and "controlled group", respectively.

(f) ADDITIONAL FIRST-YEAR DEPRECIATION.—Section 179(d) is amended—

(1) by striking out in paragraph (2)(B) "member" and "affiliated group" wherever they appear and inserting in lieu thereof "component member" and "controlled group", respectively, and

(2) by amending paragraphs (6) and (7) to read as follows:

"(6) DOLLAR LIMITATION OF CONTROLLED GROUP.—For purposes of subsection (b) of this section—

"(A) all component members of a controlled group shall be treated as one taxpayer, and

"(B) the Secretary or his delegate shall apportion the dollar limitation contained in such subsection (b) among the component members of such controlled group in such manner as he shall by regulations prescribe.

(7) CONTROLLED GROUP DEFINED.—For purposes of paragraphs (2) and (6), the term 'controlled group' has the meaning assigned to it by section 1563(a), except that, for such purposes, the phrase 'more than 50 percent' shall be substituted for the phrase 'at least 80 percent' each place it appears in section 1563(a)(1)."

(g) MUTUAL INSURANCE COMPANIES.—

(1) Section 821 (relating to tax on mutual insurance companies to which part II applies) is amended by redesignating subsection (f) as subsection (g) and by inserting after subsection (e) the following new subsection:

"(f) CERTAIN CONTROLLED CORPORATIONS.—In the case of a controlled group of corporations (as defined in section 1563(a)), each of the stated dollar amounts in subsections (a)(1) and (c) shall be apportioned, under regulations prescribed by the Secretary or his delegate, among the corporations subject to taxation under this section which are component members (determined without the application of section 1563(b)(2)(D)) of such group."

(2) Section 823(c) (relating to special deduction for small company having gross amount of less than $1,100,000) is amended by adding at the end thereof the following new paragraph:

"(3) CERTAIN CONTROLLED CORPORATIONS.—In the case of a controlled group of corporations (as defined in section 1563(a)), each of the stated dollar amounts in paragraph (1) shall be apportioned, under regulations prescribed by the Secretary or his delegate, among the corporations subject to taxation under section 821 which are component members (determined without the application of section 1563(b)(2)(D)) of such group."

(3) Section 501(c)(15) (relating to exemption from tax of certain mutual insurance companies) is amended by striking out "$150,000" and inserting in lieu thereof "the smaller of (A) $150,000, or (B) if any amount is apportioned to such corporation in accordance with section 821(f), such amount".

(h) EFFECTIVE DATES.—

(1) The amendments made by subsection (a) shall apply with respect to taxable years beginning after December 31, 1975.

(2) The amendments made by paragraphs (1) and (3) of subsection (b) shall apply with respect to taxable years beginning after December 31, 1968.

(3) Paragraph (2) of subsection (b) shall apply with respect to net operating losses sustained in taxable years ending on or after December 31, 1969.

(4) The amendments made by subsections (c) through (f) shall apply with respect to taxable years ending on or after December 31, 1969.

(5) The amendments made by subsection (g) shall apply with respect to taxable years beginning after December 31, 1971.

SUBTITLE B—DEBT-FINANCED CORPORATE ACQUISITIONS AND RELATED PROBLEMS

SEC. 411. INTEREST ON INDEBTNESS INCURRED BY CORPORATIONS TO ACQUIRE STOCK OR ASSETS OF ANOTHER CORPORATION.

(a) DISALLOWANCE OF INTEREST DEDUCTION.—Part IX of subchapter B of chapter 1 (relating to items not deductible) is amended by adding at the end thereof the following new section:

"SEC. 279. INTEREST OF INDEBTEDNESS INCURRED BY CORPORATIONS TO ACQUIRE STOCK OR ASSETS OF ANOTHER CORPORATION.

"(a) GENERAL RULE.—No deduction shall be allowed for any interest paid or incurred by a corporation during the taxable year with respect to its corporate acquisition indebtedness to the extent that such interest exceeds—

"(1) $5,000,000, reduced by

"(2) the amount of interest paid or incurred by such corporation during such year on obligations which are described in subsection (b)(1) but which are not corporate acquisition indebtedness.

"(b) CORPORATION ACQUISITION INDEBTEDNESS.—For purposes of this section, the term 'corporate acquisition indebtedness' means any obligation evidenced by a bond, debenture, note, or certificate or other evidence of indebtedness issued by a corporation (hereinafter in this section referred to as the 'issuing corporation') if—

"(1) such obligation is issued to provide consideration for the acquisition of the stock in, or assets, of, another corporation (hereinafter referred to in this section as the 'acquired corporation'), except that, where the obligation is issued to provide consideration for the acquisition of assets, at least two-thirds of the total value of all the assets of the acquired corporation are acquired pursuant to a plan of acquisition.

"'(2) such obligation is subordinated to the claims of trade creditors of the issuing corporation generally,

"(3) the bond or other evidence of indebtedness is either—

"(A) convertible directly or indirectly into stock of the issuing corporation, or

"(B) part of an investment unit or other arrangement which includes, in addition to such bond or other evidence of indebtedness, an option to acquire, directly or indirectly, stock in the issuing corporation, and

"(4) as of a day determined under subsection (c)(1), either—

"(A) the ratio of debt to equity (as defined in subsection (c)(2)), of the issuing corporation exceeds 2 to 1, or

"(B) the projected earnings (as defined in subsection (c)(3)), do not exceed 3 times the annual interest to be paid or incurred (determined under subsection (c)(4)).

"(c) RULES FOR APPLICATION OF SUBSECTION (b)(4).—For purposes of subsection (b)(4)—

"(1) TIME OF DETERMINATION.—Determinations are to be made as of the last day of any taxable year of the issuing corporation in which it issues any obligation to provide consideration for an acquisition described in subsection (b)(1) of stock in, or assets of, the acquired corporation.

"(2) RATIO OF DEBT TO EQUITY.—The term 'ratio of debt to equity' means the ratio which the total indebtedness of the issuing corporation bears to the sum of its money and all its assets (in an amount equal to their adjusted basis for determining gain) less such total indebtedness.

"(3) PROJECTED EARNINGS.—

"(A) The term 'projected earnings' means the 'average annual earnings' (as defined in subparagraph (B)) of—

"(i) the issuing corporation only, if clause (ii) does not apply, or

"(ii) both the issuing corporation and the acquired corporation, in any case where the issuing corporation has acquired control (as defined in section 368(c)), or has acquired substantially all of the properties, of the acquired corporation.

"(B) The average annual earnings referred to in subparagraph (A) is, for any corporation, the amount of its earnings and profits for any 3-year period ending with the last day of a taxable year of the issuing corporation described in subsection (c)(1), computed without reduction for—

"(i) interest paid or incurred,

"(ii) liability for tax under this chapter, and

"(iii) distributions to which section 301(c)(1) applies (other than such distributions from the acquired to the issuing corporation),

and reduced to an annual average for such 3-year period pursuant to regulations prescribed by the Secretary or his delegate. Such regulations shall include rules for cases where any corporation was not in existence for all of such 3-year period or such period includes only a portion of a taxable year of any corporation.

"(4) ANNUAL INTEREST TO BE PAID OR INCURRED.—The term 'annual interest to be paid or incurred' shall be—

"(A) if subparagraph (B) does not apply, the annual interest to be paid or incurred by the issuing corporation only, determined by reference to its total indebtedness outstanding, or

"(B) if projected earnings are determined under clause (ii) of paragraph (3)(A) because the issuing corporation has acquired control of the acquired corporation, the annual interest to be paid or incurred by both the issuing corporation and the acquired corporation, determined by reference to their combined total indebtedness outstanding.

"(d) TAXABLE YEARS TO WHICH APPLICABLE.—In applying this section—

"(1) The deduction of interest on any obligation shall not be disallowed under subsection (a) before the first taxable year of the issuing corporation as of the last day of which the application of either subparagraph (A) or subparagraph (B) of subsection (b)(4) results in such obligation being corporate acquisition indebtedness.

"(2) Except as provided in paragraph (3), if an obligation is determined to be corporate acquisition indebtedness as of the last day of any taxable year of the issuing corporation, it shall be deemed to be corporate acquisition indebtedness for such taxable year and all subsequent taxable years.

"(3) If an obligation is determined to be corporate acquisition indebtedness as of the close of a taxable year of the issuing corporation in which clause (i) of subsection (c)(3)(A) applied, but would not be corporate acquisition indebtedness if the determination were made as of the close of the first taxable year of such corporation thereafter in which clause (ii) of subsection (c)(3)(A) could apply, such obligation shall be considered not to be corporate acquisition indebtedness for such later taxable year and all taxable years thereafter.

"(e) NONTAXABLE TRANSACTIONS.—An acquisition of stock of a corporation of which the issuing corporation is in control (as defined in section 368(c)) in a transaction in which gain or loss is not recognized shall not be deemed an acquisition described in subsection (b)(1) unless immediately before such transaction (1) the acquired corporation was in existence, and (2) the issuing corporation was not in control (as defined in section 368(c)) of such corporation.

"(f) EXEMPTION FOR CERTAIN ACQUISITIONS OF FOREIGN CORPORATIONS.—Subsection (a) shall not apply to interest paid or incurred on any indebtedness issued to any person to provide consideration for the acquisition of stock in, or assets of, any foreign corporation substantially all of the income of which, for the 3-year period ending with the date of such acquisition or for such part of such period as the foreign corporation was in existence, is from sources without the United States.

"(g) AFFILIATED GROUPS.—In any case in which the issuing corporation is a member of an affiliated group, the application of this section shall be determined, pursuant to regulations prescribed by the Secretary or his delegate, by treating all of the members of the affiliated group in the aggregate as the issuing corporation, except that the ratio of debt to equity, projected earnings, and annual interest to be paid or incurred of any corporation (other than the issuing corporation determined without regard to this subsection) shall be included in the determinations required under subparagraphs

(A) and (B) of subsection (b)(4) as of any day only if such corporation is a member of the affiliated group on such day and, in determining projected earnings of such corporation under subsection (c)(3), there shall be taken into account only the earnings and profits of such corporation for the period during which it was a member of the affiliated group. For purposes of the preceding sentence, the term 'affiliated group' has the meaning assigned to such term by section 1504(a), except that all corporations other than the acquired corporation shall be treated as includible corporations (without any exclusion under section 1504(b)) and the acquired corporation shall not be treated as an includible corporation.

"(h) CHANGES IN OBLIGATION.—For purposes of this section—

"(1) Any extension, renewal, or refinancing of an obligation evidencing a preexisting indebtedness shall not be deemed to be a new obligation.

"(2) Any obligation which is corporate acquisition indebtedness of the issuing corporation is also corporate acquisition indebtedness of any corporation which becomes liable for such obligation as guarantor, endorser, or indemnitor or which assumes liability for such obligation in any transaction.

"(i) EFFECT ON OTHER PROVISIONS.—No inference shall be drawn from any provision in this section that any instrument designated as a bond, debenture, note, or certificate or other evidence of indebtedness by its issuer represents an obligation or indebtedness of such issuer in applying any other provision of this title."

(b) CLERICAL AMENDMENT.—The table of sections for part IX of subchapter B of chapter 1 is amended by adding at the end thereof the following new item:

"Sec. 279. Interest on indebtedness incurred by corporations to acquire stock or assets of another corporation."

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to the determination of the allowability of the deduction of interest paid or incurred with respect to indebtedness incurred after May 27, 1969.

SEC. 412. INSTALLMENT METHOD.

(a) INSTALLMENT METHOD.—Section 453(b)(1) (relating to sales of realty and casual sales of personalty) is amended by inserting before the period at the end thereof the following: ", but only if such sale or other disposition qualifies as an installment transaction (as defined in paragraph (3))."

(b) SPECIAL RULE.—Section 453(b) (relating to sales of realty and casual sales of personalty) is amended by adding at the end thereof the following new paragraphs:

"(3) INSTALLMENT TRANSACTION DEFINED.—For purposes of subsection (b), the term 'installment transaction' means a transaction in which the payments of principal or principal and interest are required to be paid periodically and in such amounts over the installment period as prescribed under regulations by the Secretary or his delegate. The requirement stated in the preceding sentence shall be deemed to be satisfied if—

"(A) such payments are required to be made at least once every 2 years in relatively even or declining amounts over the installment period; or

"(B) at least 5 percent of the principal is required to have been paid by the end of the first quarter of the installment period, at least 15 percent of the principal is required to have been paid by the end of the second quarter of the installment period, and at least 40 percent of the principal is required to have been paid by the end of the third quarter of the installment period.

"(4) RULE FOR APPLYING PARAGRAPH (2)(A)(ii).—In applying clause (ii) of paragraph (2)(A), a bond or other evidence of indebtedness issued by a corporation or a government or political subdivision thereof with interest coupons attached, in registered form, or in any other form designed to render such bond or other evidence of indebtedness readily tradable on an established securities market shall not be treated as an evidence of indebtedness of a purchaser."

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to sales or other dispositions occurring after May 27, 1969.

SEC. 413. BONDS AND OTHER EVIDENCES OF INDEBTEDNESS.

(a) BONDS AND OTHER EVIDENCES OF INDEBTEDNESS.—Section 1232(a) (relating to general rule) is amended to read as follows:

"(a) GENERAL RULE.—For purposes of this subtitle, in the case of bonds, debentures, notes, or certificates or other evidences of indebtedness, which are capital assets in the hands of the taxpayer, and which are issued by any corporation, or by any government or political subdivision thereof—

"(1) RETIREMENT.—Amounts received by the holder on retirement of such bonds or other evidences of indebtedness shall be considered as amounts received in exchange therefor (except that in the case of bonds or other evidences of indebtedness issued before January 1, 1955, this paragraph shall apply only to those issued with interest coupons or in registered form, or to those in such form on March 1, 1954).

"(2) SALE OR EXCHANGE.—

"(A) CORPORATE BONDS ISSUED AFTER MAY 27, 1969.—Except as provided in subparagraph (C), on the sale or exchange of bonds or other evidences of indebtedness issued by a corporation after May 27, 1969, held by the taxpayer more than 6 months, any gain shall (except as provided in the following sentence) be considered gain from the sale or exchange of a capital asset held for more than 6 months. If at the time of original issue there was an intention to call the bond or other evidence of indebtedness before maturity, any gain realized on sale or exchange thereof which does not exceed an amount equal to the original issue discount (as defined in subsection (b)) shall be considered as gain from the sale or exchange of property which is not a capital asset.

"(B) CORPORATE BONDS ISSUED ON OR BEFORE MAY 27, 1969, AND GOVERNMENT BONDS.—Except as provided in subparagraph (C), on sale or exchange of bonds or other evidences of indebtedness issued by a government or political subdivision thereof after December 31, 1954, or by a corporation after December 31, 1954, and on or before May 27, 1969, held by the taxpayer more than 6 months, any gain realized which does not exceed—

"(i) an amount equal to the original issue discount (as defined in subsection (b)), or

"(ii) if at the time of original issue there was no intention to call the bond or other evidence of indebtedness before maturity, an amount which bears the same ratio to the original issue discount (as defined in subsection (b)) as the number of complete months that the bond or other evidence of indebtedness was held by the taxpayer bears to the number of complete months from the date of original issue to the date of maturity,

shall be considered as gain from the sale or exchange of property which is not a capital asset. Gain in excess of such amount shall be considered gain from the sale or exchange of a capital asset held more than 6 months.

"(C) EXCEPTIONS.—This paragraph shall not apply to—

"(i) obligations the interest on which is not includible in gross income under section 103 (relating to certain governmental obligations), or

"(ii) any holder who has purchased the bond or other evidence of indebtedness at a premium.

"(D) DOUBLE INCLUSION IN INCOME NOT REQUIRED.—This section shall not require the inclusion of any amount previously includible in gross income.

"(3) INCLUSION IN INCOME OF ORIGINAL ISSUE DISCOUNT ON CORPORATE BONDS ISSUED AFTER MAY 27, 1969.—

"(A) GENERAL RULE.—There shall be included in the gross income of the holder of any bond or other evidence of indebtedness issued by a corporation after May 27, 1969, the ratable monthly portion of original issue discount multiplied by the number of complete months (plus any fractional part of a month determined in accordance with the last sentence of this subparagraph) such holder held such bond or other evidence of indebtedness during the taxable year. Except as provided in subparagraph (B), the ratable monthly portion of original issue discount shall equal the original issue discount (as defined in subsection (b)) divided by the number of complete months from the date of original issue to the stated maturity date of such bond or other evidence of indebtedness. For purposes of this section, a complete month commences with the date of original issue and the corresponding day of each succeeding calendar month (or the last day of a calendar month in which there is no corresponding day); and, in any case where a bond or other evidence of indebtedness is acquired on any other day, the ratable monthly portion of original issue discount for the complete month in which such acquisition occurs shall be allocated between the transferor and the transferee in accordance with the number of days in such complete month each held the bond or other evidence of indebtedness.

"(B) REDUCTION IN CASE OF ANY SUBSEQUENT HOLDER.—For purposes of this paragraph, the ratable monthly portion of original issue discount shall not include an amount, determined at the time of any purchase after the original issue of such bond or other evidence of indebtedness, equal to the excess of—

"(i) the cost of such bonds or other evidence of indebtedness incurred by such holder, over

"(ii) the issue price of such bond or other evidence of indebtedness increased by the portion of original discount previously includible in the gross income of any holder (computed without regard to this subparagraph),

divided by the number of complete months (plus any fractional part of a month commencing with the date of purchase) from the date of such purchase to the stated maturity date of such bond or other evidence of indebtedness.

"(C) PURCHASE DEFINED.—For purposes of subparagraph (B), the term 'purchase' means any acquisition of a bond or other evidence of indebtedness, but only if the basis of the bond or other evidence of indebtedness is not determined in whole or in part by reference to the adjusted basis of such bond or other evidence of indebtedness in the hands of the person from whom acquired, or under section 1014(a) (relating to property acquired from a decedent).

"(D) EXCEPTION.—This paragraph shall not apply to any holder who has purchased the bond or other evidence of indebtedness at a premium.

"(E) BASIS ADJUSTMENTS.—The basis of any bond or other evidence of indebtedness in the hands of the holder thereof shall be increased by the amount included in his gross income pursuant to subparagraph (A)."

(b) ISSUE PRICE.—Section 1232(b)(2) (relating to issue price) is amended by adding at the end thereof the following:

"In the case of a bond or other evidence of indebtedness and an option or other security issued together as an investment unit, the issue price for such investment unit shall be

determined in accordance with the rules stated in this paragraph. Such issue price attributable to each element of the investment unit shall be that portion thereof which the fair market value of such element bears to the total fair market value of all the elements in the investment unit. The issue price of the bond or other evidence of indebtedness included in such investment unit shall be the portion so allocated to it. In the case of a bond or other evidence of indebtedness, or an investment unit as described in this paragraph, issued for property, the issue price of such bond or other evidence of indebtedness or investment unit, as the case may be, shall be the fair market value of such property."

(c) REQUIREMENT OF REPORTING.—Section 6049(a)(1) (relating to requirements of reporting interest) is amended to read as follows:

"(a) REQUIREMENT OF REPORTING.—

"(1) IN GENERAL.—Every person—

"(A) who makes payments of interest (as defined in subsection (b)) aggregating $10 or more to any other person during any calendar year,

"(B) who receives payments of interest as a nominee and who makes payments aggregating $10 or more during any calendar year to any other person with respect to the interest so received, or

"(C) which is a corporation that has outstanding any bond, debenture, note, or certificate or other evidence of indebtedness in registered form as to which there is during any calendar year an amount of original issue discount aggregating $10 or more includible in the gross income of any holder under section 1232(a)(3) without regard to subparagraph (B) thereof,

shall make a return according to the forms or regulations prescribed by the Secretary or his delegate, setting forth the aggregate amount of such payments and such aggregate amount includible in the gross income of any holder and the name and address of the person to whom paid or such holder."

(d) STATEMENTS TO BE FURNISHED TO PERSONS WITH RESPECT TO WHOM INFORMATION IS FURNISHED.—Section 6049(c) (relating to statements to be furnished to persons with respect to whom information is furnished) is amended to read as follows:

"(c) STATEMENTS TO BE FURNISHED TO PERSONS WITH RESPECT TO WHOM INFORMATION IS FURNISHED.—Every person making a return under subsection (a)(1) shall furnish to each person whose name is set forth in such return a written statement showing—

"(1) the name and address of the person making such return, and

"(2) the aggregate amount of payments to, or the aggregate amount includible in the gross income of, the person as shown on such return.

The written statement required under the preceding sentence shall be furnished to the person on or before January 31 of the year following the calendar year for which the return under subsection (a)(1) was made. No statement shall be required to be furnished to any person under this subsection if the aggregate amount of payments to, or the aggregate amount includible in the gross income of, such person shown on the return made under subsection (a)(1) is less than $10."

(e) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to bonds and other evidences of indebtedness issued after May 27, 1969.

SEC. 414. LIMITATION ON DEDUCTION OF BOND PREMIUM ON REPURCHASE.

(a) LIMITATION ON DEDUCTION OF BOND PREMIUM ON REPURCHASE.—Part VIII of subchapter B of chapter 1 of the Internal Revenue Code (relating to special deductions for corporations) is amended by adding at the end thereof the following new section:

"SEC. 249. LIMITATION ON DEDUCTION OF BOND PREMIUM ON REPURCHASE.

"(a) GENERAL RULE.—No deduction shall be allowed to a corporation for any premium paid or incurred upon the repurchase of a bond, debtenture, note, or certificate or other evidence of indebtedness which is convertible into the stock of the issuing corporation, or a corporation in control of, or controlled by, the issuing corporation, to the extent the repurchase price exceeds an amount equal to the adjusted issue price plus a normal call premium on bonds or other evidences of indebtedness which are not convertible. The preceding sentence shall not apply to the extent that the corporation can demonstrate to the satisfaction of the Secretary or his delegate that such excess is attributable to the cost of borrowing and is not attributable to the conversion feature.

"(b) SPECIAL RULES.—For purposes of subsection (a)—

"(1) ADJUSTED ISSUE PRICE.—The adjusted issue price is the issue price (as defined in section 1232(b)) increased by any amount of discount deducted prior to repurchase, or, in the case of bonds or other evidences of indebtedness issued subsequent to February 28, 1913, decreased by any amount of premium included in gross income prior to repurchase by the issuing corporation.

"(2) CONTROL.—The term 'control' has the meaning assigned to such term by section 368(c)."

(b) CLERICAL AMENDMENT.—The table of sections for part VIII of subchapter B of chapter 1 is amended by adding at the end thereof the following new item:

"Sec. 249. Limitation on deduction of bond premium on repurchase."

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to a convertible bond or other convertible evidence of indebtedness repurchased after April 22, 1969, other than such a bond or other evidence of indebtedness repurchased pursuant to a binding obligation incurred on or before April 22, 1969, to repurchase such bond or other evidence of indebtedness at a specified call premium, and no inference shall be drawn from the fact that subsection (a) does not apply to the repurchase of such convertible bond or other convertible evidence of indebtedness.

SUBTITLE C—STOCK DIVIDENDS

SEC. 421. STOCK DIVIDENDS.

(a) IN GENERAL.—Section 305 (relating to distributions of stock and stock rights) is amended to read as follows:

"SEC. 305. DISTRIBUTIONS OF STOCK AND STOCK RIGHTS.

"(a) GENERAL RULE.—Except as otherwise provided in this section, gross income does not include the amount of any distribution made by a corporation to its shareholders, with respect to the common stock of such corporation, in its stock or in rights to acquire its stock.

"(b) EXCEPTIONS.—Subsection (a) shall not apply to a distribution by a corporation of its stock (or rights to acquire its stock), and the distribution shall be treated as a distribution of property to which section 301 applies—

"(1) DISTRIBUTIONS IN LIEU OF MONEY.—If the distribution is, at the election of any of the shareholders (whether exercised before or after the declaration thereof), payable either—

"(A) in its stock (or in rights to acquire its stock), or

"(B) in property.

"(2) DISPROPORTIONATE DISTRIBUTIONS.—If the distribution (or a series of distributions of which such distribution is one) has the result of—

"(A) the receipt of property by some shareholders, and

"(B) an increase in the proportionate interests of other shareholders in the assets or earnings and profits of the corporation.

"(3) CONVERTIBLE PREFERRED STOCK.—If the distribution is of convertible preferred stock, unless it is established to the satisfaction of the Secretary or his delegate that such distribution will not have the result described in paragraph (2).

For purposes of paragraphs (1) and (2), section 306 stock shall be treated as property which is not stock.

"(c) CERTAIN REDEMPTIONS, ETC., TREATED AS DISTRIBUTIONS.—For purposes of this section and section 301, the Secretary or his delegate shall prescribe regulations under which a change in conversion ratio, a change in redemption price, a redemption which is treated as a section 301 distribution, or any transaction having a similar effect on the interest of any shareholder (or a holder of rights or convertible securities) shall be treated as a distribution with respect to any shareholder (or a holder of rights or convertible securities) whose proportionate interest in the earnings and profits or assets of the corporation is increased by such change, redemption, or similar transaction.

"(d) CROSS REFERENCES.—

"For special rules—

"(1) Relating to the receipt of stock and stock rights in corporate organizations and reorganizations, see part III (sec. 351 and following).

"(2) In the case of a distribution which results in a gift, see section 2501 and following.

"(3) In the case of a distribution which has the effect of the payment of compensation, see section 61(a)(1)."

(b) CONFORMING AMENDMENT.—Section 317(a) (relating to certain definitions) is amended to read as follows:

"(a) PROPERTY.—For purposes of this part, the term 'property' means money, securities, and any other property; except that such term does not include stock (or rights to acquire stock) in the corporation making the distribution distributed with respect to the common stock of such corporation."

(c) EFFECTIVE DATES.—

(1) Except as otherwise provided in this subsection, the amendments made by subsections (a) and (b) shall apply with respect to distributions made or considered as made after January 10, 1969, in taxable years ending after such date.

(2) The amendments made by subsections (a) and (b) shall not apply to a distribution of stock (or rights to acquire stock) made or considered as made before January 1, 1991, with respect to stock outstanding on January 10, 1969 (or with respect to stock issued pursuant to a contract binding on January 10, 1969, on the distributing corporation).

(3) In cases to which Treasury Decision 6990 (promulgated January 10, 1969) would not have applied, in applying paragraphs (1) and (2) of this subsection April 22, 1969, shall be substituted for January 10, 1969.

SUBTITLE D—FOREIGN TAX CREDIT

SEC. 431. FOREIGN TAX CREDIT REDUCTION IN CASE OF FOREIGN LOSSES.

(a) REDUCTION IN FOREIGN TAX CREDIT LIMITATION.—Section 904(a) (relating to limitation on credit) is amended by adding at the end thereof the following new paragraphs:

"(3) REDUCTION IN LIMITATION.—In the case of a taxpayer who in a prior taxable year sustains a loss in a foreign country or possession of the United States and chooses the limitation provided in paragraph (1) for such prior year, the amount of the taxpayer's taxable income from sources within such country or possession for the taxable

year (but not the taxpayer's entire taxable income for the same taxable year) shall, solely for purposes of determining the applicable limitation under paragraph (1) or (2), be determined without regard to section 172 (relating to net operating loss deduction) and be reduced by the lesser of—

"(A) (i) the amount of such loss, decreased by

"(ii) the amount of any reduction previously made under this paragraph with respect to such loss, or

"(B) an amount which is equal to 50 percent of the taxpayer's taxable income for the taxable year (determined without regard to this paragraph and section 172) from sources within such country or possession.

"(4) ALLOCATION OF LOSSES.—In applying paragraph (3) for any taxable year to which subsection (f) or (g) applies, a loss sustained in a foreign country or possession of the United States shall be allocated to the separate limitation (if any) under such subsection pursuant to regulations prescribed by the Secretary or his delegate.

"(5) SPECIAL LIMITATION ON CARRYBACKS AND CARRYOVERS.—For purposes of subsection (d), the amount by which tax paid or accrued to any foreign country or possession of the United States for any taxable year exceeds the applicable limitation under this subsection shall be determined without regard to paragraph (3).

"(6) CERTAIN DISPOSITIONS OF PROPERTY.—

"(A) Under regulations prescribed by the Secretary or his delegate, if during any taxable year property which is used in the trade or business which gives rise to the loss referred to in paragraph (3) is disposed of and such loss exceeds the amount by which the taxpayer's taxable income was reduced under paragraph (3) for such taxable year and preceding taxable years by reason of such loss, an amount equal to such excess shall be included in gross income for such taxable year.

"(B) No amount shall be included in gross income under subparagraph (A) in any case in which—

"(i) the property which is disposed of is not a material factor in the realization of the income (or loss) from the trade or business in which such property is used or is not a substantial portion of the assets used in, or held for use in, the conduct of such trade or business,

"(ii) the property is disposed of on account of its destruction or damage by fire, storm, shipwreck, or other casualty, or by reason of its theft,

"(iii) the property is transferred by reason of death, or

"(iv) the property is transferred in a transaction to which section 381(a) applies."

(b) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to losses sustained in taxable years beginning after December 31, 1969.

SEC. 432. SEPARATE LIMITATION ON FOREIGN TAX CREDIT WITH RESPECT TO FOREIGN MINERAL INCOME.

(a) LIMITATION ON AMOUNT OF FOREIGN TAXES TO BE TAKEN INTO ACCOUNT.—Section 904 (relating to limitation on credit) is amended by redesignating subsection (g) as subsection (h), and by inserting after subsection (f) the following new subsection:

"(g) APPLICATION OF SECTION IN CASE OF FOREIGN MINERAL INCOME.—

"(1) IN GENERAL.—If any foreign country or possession of the United States, or any agency or instrumentality of such country or possession—

"(A) requires the payment of any bonus or royalty with respect to property which gives rise to foreign mineral income,

"(B) holds substantial mineral rights with respect to such property, or

"(C) imposes any income, war profits, or excess profits taxes on such income at an effective rate higher than on other income.

subsections (a), (c), (d), and (e) of this section shall be applied separately with respect to foreign mineral income from sources within such country or possession.

"(2) FOREIGN MINERAL INCOME DEFINED.—

"(A) GENERAL RULE.—For purposes of paragraph (1), the term 'foreign mineral income' means taxable income from mines, wells, and other natural deposits within any foreign country or possession of the United States, to the extent such taxable income constitutes 'taxable income from the property' within the meaning of section 613. Such term includes, but is not limited to—

"(i) dividends received from a foreign corporation in respect of which taxes are deemed paid under section 902, to the extent such dividends are attributable to foreign mineral income, and

"(ii) that portion of the taxpayer's distributive share of the income of a partnership attributable to foreign mineral income.

"(B) SPECIAL RULES.—

"(i) For purposes of subparagraph (A), if for the taxable year a taxpayer's (or, where a consolidated income tax return is filed, the affiliated groups) foreign mineral income is less than $10,000, no part of the taxable income for such year shall be treated as foreign mineral income.

"(ii) For purposes of clause (i) of subparagraph (A), if less than 30 percent and less than $100,000, of the accumulated profits of the year or years from which dividends are paid, as determined under section 902(c), are attributable to foreign mineral income, no part of the dividends shall be treated as foreign mineral income.

"(3) OVERALL LIMITATION NOT TO APPLY.—The limitation provided by subsection (a)(2) shall not apply with respect to foreign mineral income. The Secretary or his delegate shall by regulations prescribe the manner of application of subsection (e) with respect to cases in which the limitation provided by subsection (a)(2) applies with respect to income other than foreign mineral income.

"(4) TRANSITIONAL RULES FOR CARRYBACKS AND CARRYOVERS.—

"(A) CARRYBACKS TO YEARS BEFORE TAX REFORM ACT OF 1969.—If, after applying subsection (d), taxes paid or accrued to any foreign country or possession of the United States in any taxable year beginning after the date of the enactment of the Tax Reform Act of 1969 are deemed paid or accrued in one or more taxable years beginning on or before such date, then the amount of such taxes deemed paid or accrued in such taxable year or years shall be determined without regard to the provisions of this subsection. To the extent the taxes paid or accrued to a foreign country or possession of the United States in any taxable year beginning after the date of the enactment of such Act are not, after applying the preceding sentence, deemed paid or accrued in any taxable year beginning on or before the date of the enactment of such Act, such taxes shall, for purposes of applying subsection (d), be deemed paid or accrued in a taxable year beginning after the date of the enactment of such Act with respect to foreign mineral income, and with respect to income other than foreign mineral income, in the same ratios as the amount of such taxes paid or accrued with respect to foreign mineral income, and the amount of such taxes paid or accrued with respect to income other than foreign mineral income, respectively, bear to the total amount of such taxes paid or accrued to such foreign country or possession of the United States.

"(B) CARRYOVERS TO YEARS AFTER TAX REFORM ACT OF 1969.—Where under the provisions of subsection (d) taxes paid or accrued to any foreign country or possession of the United States in any taxable year beginning on or before the date of the enactment of the Tax Reform Act of 1969 are deemed paid or accrued in one or more taxable years beginning after such date, the amount of such taxes deemed paid or accrued in any year beginning after such date shall, with respect to foreign mineral income, be an amount which bears the same ratio to the amount of such taxes deemed paid or accrued as the amount of the taxes paid or accrued to such foreign country or possession for such year with respect to foreign mineral income bears to the total amount of taxes paid or accrued to such foreign country or possession for such year; and the amount of such taxes deemed paid or accrued in any year beginning after such date with respect to income other than foreign mineral income shall be an amount which bears the same ratio to the amount of such taxes deemed paid or accrued for such year as the amount of taxes paid or accrued to such foreign country or possession for such year with respect to income other than foreign mineral income bears to the total amount of the taxes paid or accrued to such foreign country or possession for such year."

(b) CONFORMING AMENDMENTS.—Section 904(b) (relating to election of overall limitation) is amended—

(1) by striking out "with the consent of the Secretary or his delegate with respect to any taxable year" in paragraph (1) and inserting in lieu thereof "(A) with the consent of the Secretary or his delegate with respect to any taxable year, or (B) for the taxpayer's first taxable year beginning after the date of the enactment of the Tax Reform Act of 1969", and

(2) by striking out "If a taxpayer" in paragraph (2) and inserting in lieu thereof "Except in a case to which paragraph (1)(B) applies, if the taxpayer".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to taxable years beginning after the date of enactment of this Act.

SUBTITLE E—FINANCIAL INSTITUTIONS

SEC. 441. RESERVE FOR LOSSES ON LOANS; NET OPERATING LOSS CARRYBACKS.

(a) BAD DEBT DEDUCTIONS OF FINANCIAL INSTITUTIONS.—Part I of subchapter H of chapter 1 (relating to rules of general application to banking institutions) is amended by adding at the end thereof the following new section:

"SEC. 585. RESERVES FOR LOSSES ON LOANS OF FINANCIAL INSTITUTIONS.

"(a) INSTITUTIONS TO WHICH SECTION APPLIES.—This section shall apply to the following financial institutions—

"(1) to any—

"(A) bank (as defined in section 581) other than an organization to which section 593 applies, or

"(B) corporation to which subparagraph (A) would apply except for the fact that it is a foreign corporation and in the case of such foreign corporation this section shall apply only with respect to loans outstanding, the interest on which is effectively connected with the conduct of a banking business within the United States.

"(2) to a small business investment company operating under the Small Business Investment Act of 1958, and

"(3) to a business development corporation, which shall mean a corporation which was created by or pursuant to an act of a State legislature for purposes of promoting, maintaining, and assisting the economy and industry within such State on a regional or statewide basis by making loans which would generally not be made by banks (as defined in section 581) within such region or State

in the ordinary course of their business (except on the basis of a partial participation), and which is operated primarily for such purpose.

"(b) ADDITION TO RESERVES FOR BAD DEBTS.—

"(1) GENERAL RULE.—For purposes of section 166(c), except as provided in paragraph (2) the reasonable addition to the reserve for bad debts of any financial institution to which this section applies shall not exceed the amount necessary to increase the balance of the reserve for bad debts (as of the close of the taxable year) to the greater of—

"(A) the amount which bears the same ratio to loans outstanding at the close of the taxable year as (i) the total bad debts sustained during the taxable year and the 5 preceding taxable years (or, with the approval of the Secretary or his delegate, a shorter period), adjusted for recoveries of bad debts during such period, bears to (ii) the sum of the loans outstanding at the close of such 6 or fewer taxable years, or

"(B) the lower of—

"(i) the balance in the reserve as of the close of the base year, or

"(ii) if the amount of loans outstanding at the close of the taxable year is less than the amount of loans outstanding at the close of the base year, the amount which bears the same ratio to loans outstanding at the close of the taxable year as the balance of the reserve as of the close of the base year bears to the amount of loans outstanding at the close of the base year.

For purposes of this subparagraph, the term 'base year' means the last taxable year beginning on or before July 11, 1969.

"(2) NEW FINANCIAL INSTITUTIONS.—In the case of any taxable year beginning not more than 10 years after the day before the first day on which a financial institution (or any predecessor) was authorized to do business as a financial institution described in subsection (a), the reasonable addition to the reserve for bad debts of such financial institution shall not exceed the larger of the amount determined under paragraph (1) or the amount necessary to increase the balance of the reserve for bad debts as of the close of the taxable year to the amount which bears the same ratio (as determined by the Secretary or his delegate) to loans outstanding at the close of the taxable year as (i) the total bad debts sustained by all institutions described in the applicable paragraph of subsection (a) during the 6 preceding taxable years (adjusted for recoveries of bad debts during such period), bears to (ii) the sum of the loans by all such institutions outstanding at the close of such taxable years."

(b) 10-YEAR NET OPERATING LOSS CARRYBACK.—Section 172(b)(1) (relating to net operating loss deduction) is amended by striking out in subparagraph (A)(i) thereof "and (E)" and inserting in lieu thereof ", (E) and (F)", and by adding at the end thereof the following new subparagraph:

"(F) In the case of a financial institution to which section 585 or 593 applies, a net operating loss for any taxable year beginning after July 11, 1969, shall be a net operating loss carryback to each of the 10 taxable years preceding the taxable year of such loss and shall be a net operating loss carryover to each of the 5 taxable years following the taxable year of such loss."

(c) TECHNICAL AND CLERICAL AMENDMENTS.—

(1) Subsection (h) of section 166 (relating to bad debts) is amended by adding at the end thereof the following new paragraph:

"(4) For special rule for bad debt reserves of certain financial institutions other than certain mutual savings banks, domestic building and loan associations and cooperative banks, see section 585."

(2) The table of sections for part I of subchapter H of chapter 1 is amended—

(A) by striking out:

"Sec. 582. Bad debt and loss deduction with respect to securities held by banks."

and inserting in lieu thereof:

"Sec. 582. Bad debts, losses, and gains with respect to securities held by financial institutions."

(B) by adding at the end thereof the following:

"Sec. 585. Reserves for losses on loans of financial institutions."

(d) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to taxable years beginning after July 11, 1969.

SEC. 442. MUTUAL SAVINGS BANKS, ETC.

(a) RESERVE FOR LOSSES ON LOANS.—Section 593(b) (relating to addition to reserves for bad debts) is amended—

(1) by striking out subparagraph (A) of paragraph (1) and inserting in lieu thereof the following:

"(A) the amount determined to be a reasonable addition to the reserve for losses on nonqualifying loans, computed in the same manner as provided with respect to additions to reserves for bad debts of financial institutions under section 585(b)(1)(A), plus"

(2) by striking out paragraphs (2), (3), (4), and (5) and inserting in lieu thereof the following:

"(2) PERCENTAGE OF TAXABLE INCOME METHOD.—The amount determined under this paragraph for the taxable year shall be the excess of—

"(A) an amount equal to the applicable percentage of the taxable income for such year (determined under the following table), over:

"For a taxable year beginning in—	The applicable percentage under this paragraph shall be—
1969	60 percent.
1970	57 percent.
1971	54 percent.
1972	51 percent.
1973	48 percent.
1974	45 percent.
1975	32 percent.
1976	39 percent.
1977	36 percent.
1978	33 percent.
1979 or thereafter	30 percent.

"(B) that portion of the amount referred to in paragraph (1)(A) for such year (not in excess of 100 percent) which bears the same ratio to such amount as (i) 18 percent (28 percent in the case of mutual savings banks) bears to (ii) the percentage of the assets of the taxpayer which are not assets described in section 7701(a)(19)(C), but the amount determined under this paragraph shall not exceed the amount necessary to increase the balance (as of the close of the taxable year) of the reserve for losses on qualifying real property loans to 6 percent of such loans outstanding at such time. For purposes of this paragraph, taxable income shall be computed—

"(i) by excluding from gross income any amount included therein by reason of subsection (f),

"(ii) without regard to any deduction allowable for any addition to the reserve for bad debts,

"(iii) by excluding from gross income an amount equal to the net capital gain for the taxable year arising from the sale or exchange of stock of a corporation, or obligations described in section 103(a)(1),

"(iv) by excluding from gross income an amount equal to the lesser of ⅜ of the net or ⅜ of the net long-term capital gain for the taxable year from the sale or exchange of property other than property described in clause (iii), and

"(v) by excluding from gross income dividends with respect to which a deduction is allowed by part VIII of subchapter B.

"(3) LIMITATIONS.—If the percentage of the assets of a taxpayer described in subsection (a), which are assets described in section 7701(a)(19)(C), is less than—

"(A) 82 percent of the total assets in the case of a taxpayer other than a mutual savings bank, the percentage provided by paragraph (2)(A) shall be reduced (i) for taxable years beginning before January 1, 1972, by 1 percentage point for each 1 percentage point of such difference, (ii) for taxable years beginning after December 31, 1971, but before January 1, 1977, by 1 percentage point for each 1⅓ percentage points of such difference, and (iii) for taxable years beginning after December 31, 1976, by 1 percentage point for each 2 percentage points of such difference, or

"(B) 72 percent of the total assets in the case of a mutual savings bank, the percentage provided by paragraph (2)(A) shall be reduced (i) for taxable years beginning before January 1, 1972, by 2 percentage points for each 1 percentage point of such difference, (ii) for taxable years beginning after December 31, 1971, but before January 1, 1977, by 1½ percentage points for each 1 percentage point of such difference, and (iii) for taxable years beginning after December 31, 1976, by 1 percentage point for each 1 percentage point of such difference.

If the percentage of such assets is less than 60 percent of the total assets of such taxpayer, no amount shall be allowed under paragraph (2).

"(4) EXPERIENCE METHOD.—

"(A) Except as provided in subparagraph (B), the amount determined under this paragraph to be a reasonable addition to the reserve for losses on qualifying real property loans shall be computed in the same manner as is provided with respect to additions to reserves for bad debts of financial institutions under section 585(b)(1).

"(B) For any taxable year of an organization to which this section applies, beginning not more than 10 years after the day before the first day on which it (or any predecessor) was authorized to do business as an organization described in subsection (a), the amount determined under this paragraph for such organization shall be computed in the same manner as is provided with respect to additions to reserves for bad debts of financial institutions under section 585(b)(2)."

(b) INVESTMENT STANDARDS.—Section 7701(a)(19) is amended to read as follows:

"(19) DOMESTIC BUILDING AND LOAN ASSOCIATION.—The term 'domestic building and loan association' means a domestic building and loan association, a domestic savings and loan association, and a Federal savings and loan association—

"(A) which either (i) is an insured institution within the meaning of section 401(a) of the National Housing Act (12 U.S.C., sec. 1724(a)), or (ii) is subject by law to supervision and examination by State or Federal authority having supervision over such associations;

(B) substantially all of the business of which consists of acquiring the savings of the public and investing in loans; and

"(C) at least 60 percent of the amount of the total assets of which (as of the close of the taxable year) consists of—

"(i) cash,

"(ii) obligations of the United States or of a State or political subdivision thereof, and stock or obligations of a corporation which is an instrumentality of the United States or of a State or political subdivision thereof, but not including obligations the

interest on which is excludable from gross income under section 103,

"(iii) certificates of deposit in, or obligations of, a corporation organized under a State law which specifically authorizes such corporation to insure the deposits or share accounts of member associations,

"(iv) loans secured by a deposit or share of a member,

"(v) loans secured by an interest in real property which is (or, from the proceeds of the loan, will become) residential real property or real property used primarily for church purposes, loans made for the improvement of residential real property or real property used primarily for church purposes, provided that for purposes of this clause, residential real property shall include single or multifamily dwellings, facilities in residential developments dedicated to public use or property used on a nonprofit basis for residents, and moble homes not used on a transient basis,

"(vi) loans made for the improvement of real property located within any urban renewal area (as defined in section 110(a) of the Housing Act of 1949, as amended) or in any area covered by a program eligible for assistance under section 103 of the Demonstration Cities and Metropolitan Development Act of 1966, as amended,

"(vii) loans secured by an interest in educational, health, or welfare institutions or facilities, inculding structures designed or used primarily for residential purposes for students, residents, and persons under care, employees, or members of the staff of such institutions or facilities,

"(viii) property acquired through the liquidation of defaulted loans described in clause (v), (vi), or (vii), and

"(ix) loans made for the payment of expenses of college or university education or vocational training, in accordance with such regulations as may be prescribed by the Secretary or his delegate,

"(x) property used by the association in the conduct of the business described in subparagraph (B).

At the election of the taxpayer, the percentage specified in this subparagraph shall be applied on the basis of the average assets outstanding during the taxable year, in lieu of the close of the taxable year, computed under regulations prescribed by the Secretary or his delegate."

(c) CONFORMING AMENDMENTS.—Section 7701(a)(32) is amended—

(1) by striking out in subparagraph (B) ", (C), (D), (E), and (F)" and inserting in lieu thereof "and (C)", and

(2) by striking out the third sentence thereof.

(d) EFECTIVE DATE.—The amendments made by this section shall be effective for taxable years beginning after July 11, 1969.

SEC. 443. TREATMENT OF BONDS, ETC., HELD BY FINANCIAL INSTITUTIONS.

(a) GAIN ON SECURITIES HELD BY FINANCIAL INSTITUTIONS.—Subsection (c) of section 582 (relating to bad debt and loss deduction with respect to securities held by financial institutions) is amended by striking out such subsection and inserting the following in lieu thereof:

"(c) BOND, ETC., LOSSES AND GAINS OF FINANCIAL INSTITUTIONS.—For purposes of this subtitle, in the case of a financial institution to which section 585 or 593 applies, the sale or exchange of a bond, debenture, note, or certificate, or other evidence of indebtedness, shall not be considered a sale or exchange of a capital asset."

(b) CONFORMING AMENDMENT.—Paragraph (1) of section 1243 (relating to loss of a small business investment company) is amended to read as follows:

"(1) a loss is on stock received pursuant to the conversion privilege of convertible debentures acquired pursuant to section 304 of the Small Business Investment Act of 1958, and".

(c) CLERICAL AMENDMENT.—The heading for section 582 is amended to read as follows:

"SEC. 582. BAD DEBTS, LOSSES, AND GAINS WITH RESPECT TO SECURITIES HELD BY FINANCIAL INSTITUTIONS."

(d) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to taxable years beginning after July 11, 1969.

SEC. 444. FOREIGN DEPOSITS IN UNITED STATES BANKS.

Sections 861 and 2104 are amended by striking out "1972" wherever it appears in such sections and inserting in lieu thereof "1975".

SUBTITLE F—DEPRECIATION ALLOWED REGULATED INDUSTRIES; EARNINGS AND PROFITS ADJUSTMENT FOR DEPRECIATION

SEC. 451. PUBLIC UTILITY PROPERTY.

(a) IN GENERAL.—Section 167 (relating to depreciation) is amended by inserting after subsection (k) (added by section 521) the following new subsection:

"(1) SPECIAL RULES IN CASE OF PUBLIC UTILITY PROPERTY.—

"(1) EXISTING PUBLIC UTILITY PROPERTY.—In the case of existing public utility property (as defined in paragraph (5) (A)), the term 'reasonable allowance' as used in subsection (a) means an allowance computed under the straight-line method unless—

"(A) with respect to such property (or with respect to property of the same kind as such property) the taxpayer for his latest taxable year for which a return was filed on or before July 22, 1969, used a method other than the straight-line method, and

"(B) the requirement of paragraph (2) (if applicable) is met with respect to such property.

"(2) CONTINUATION OF NORMALIZATION.—In the case of public utility property described in paragraph (1) with respect to which (or with respect to property of the same kind) the taxpayer as of July 22, 1969, used the normalization method of accounting, the taxpayer may use, with respect to such property, for purposes of computing taxable income, a method of depreciation other than the straight-line method only if he continues to use the normalization method of accounting with respect to such property.

"(3) OTHER PUBLIC UTILITY PROPERTY.—In the case of public utility property other than existing public utility property, the term 'reasonable allowance' as used in subsection (a) means an allowance computed under the straight-line method unless—

"(A) the taxpayer uses the normalization method of accounting with respect to such property, or

"(B) with respect to property of the same kind as such property, the taxpayer for his latest taxable year for which a return was filed on or before July 22, 1969, used a method other than the straight-line method, and computed his tax expense for the purposes of establishing his cost of service (or of reflecting operating results in his regulated books of account) by using the method of depreciation he used for purposes of computing his allowance for depreciation under this section.

"(4) PUBLIC UTILITY PROPERTY.—For purposes of this subsection, the term 'public utility property' means property used predominantly in the trade or business of the furnishing or sale of—

"(A) electrical energy, water, or sewage disposal services, or

"(B) gas through a local distribution system, or

"(C) telephone services (other than those provided by the Communications Satellite Corporation for purposes authorized by the Communications Satellite Act of 1962 (76 Stat. 419; 47 U.S.C. 701)), or

"(D) transportation of gas, oil (including shale oil), or petroleum products by pipeline,

if the rates for such furnishing or sale, as the case may be, have been established or approved by a State or political subdivision thereof, by any agency or instrumentality of the United States, or by a public service or public utility commission or other similar body of any State or political subdivision thereof.

"(5) OTHER DEFINITIONS.—For purposes of this subsection—

"(A) EXISTING PUBLIC UTILITY PROPERTY.—The term 'existing public utility property' means public utility property—

"(i) the construction, reconstruction, or erection of which is completed by the taxpayer on or before December 31, 1969 (or if construction, reconstruction, or erection is completed after December 31, 1969, that portion of the basis of such property which is properly attributable to construction, reconstruction, or erection by the taxpayer on or before December 31, 1969), or

"(ii) which was acquired by the taxpayer and the use of which commences with the taxpayer on or before December 31, 1969.

"(B) NORMALIZATION METHOD OF ACCOUNTING.—A taxpayer uses the normalization method of accounting if, and only if, he—

"(i) computes his tax expense for purposes of establishing his cost of service (or of reflecting operating results in his regulated books of account) by using a method of depreciation other than the method he used for purposes of computing his allowance for depreciation under this section, and

"(ii) makes adjustments to a reserve for deferred taxes to reflect the deferral of taxes resulting from the use of such different methods of depreciation.

"(C) STRAIGHT LINE METHOD.—The term 'straight line method' includes any method determined by the Secretary or his delegate to result in a reasonable allowance under subsection (a), other than (i) a declining balance method, (ii) the sum of the years-digits method or, (iii) any other method allowable solely by reason of the application of subsection (b)(4) or paragraph (1)(C) of subsection (j)."

(b) EFFECTIVE DATE.—The amendment made by subsection (a) shall apply with respect to taxable years ending after July 22, 1969.

SEC. 452. EFFECT ON EARNINGS AND PROFITS.

Section 312 (relating to effect on earnings and profits) is amended by adding at the end thereof the following new subsection:

"(m) EFFECT ON EARNINGS AND PROFITS OF DEPRECIATION.—

"(1) For the purpose of computing its earnings and profits with respect to any taxable year beginning after June 30, 1972, a corporation shall use the aggregate amount of depreciation which would be allowable with respect to such year if depreciation had been computed under—

"(A) the straight line method, or

"(B) a method determined by the Secretary or his delegate to result in a reasonable allowance under section 167(a), not including—

"(i) any declining balance method,

"(ii) the sum of the years-digits method, or

"(iii) any other method allowable solely by reason of the application of subsection (b)(4), (j)(1)(C), or (m) of section 167.

"(2) The provisions of paragraph (1) shall apply notwithstanding the use, by a corporation, of methods of depreciation otherwise allowable under section 167 or 179, and notwithstanding an election, by a corporation, of the amortization deduction under section 168."

SUBTITLE G—ALTERNATIVE CAPITAL GAIN RATE FOR CORPORATIONS

SEC. 461. INCREASE OF RATE.

(a) IN GENERAL.—Section 1201(a) (relating to alternative tax in the case of corporations) is amended by striking out the last sentence of subsection (a), and by amending paragraph (2) to read as follows:

"(2) an amount equal to 30 percent of such excess"

(b) CONFORMING AMENDMENTS.—

(1) Section 802(a)(2)(B) (relating to alternative tax in case of capital gains of life insurance companies) is amended by striking out "25 percent" and inserting in lieu thereof "30 percent".

(2) Section 852(b)(3) (relating to method of taxation of regulated investment companies and their shareholders in the case of capital gains) is amended:

(A) by striking out "25 percent", wherever it appears in subparagraphs (A) and (D)(ii) of such section, and inserting in lieu thereof "30 percent", and

(B) by striking out "75 percent", in subparagraph (D)(iii) of such section, and inserting in lieu thereof "70 percent".

(3) Section 857(b)(3)(A) (relating to imposition of tax in the case of capital gains of real estate investment trusts) is amended by striking "25 percent" and inserting in lieu thereof "30 percent".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to sales and other dispositions after July 31, 1969. In the case of a taxable year beginning before and ending after July 31, 1969, the amendments made by this section shall be applied in a manner to be prescribed by the Secretary of the Treasury or his delegate.

TITLE V—ADJUSTMENTS AFFECTING INDIVIDUALS AND CORPORATIONS

SUBTITLE A—NATURAL RESOURCES

SEC. 501. NATURAL RESOURCES.

(a) PERCENTAGE DEPLETION.—

(1) RATES.—Subsection (b) of section 613 (relating to percentage depletion) is amended to read as follows:

"(b) PERCENTAGE DEPLETION RATES.—The mines, wells, and other natural deposits, and the percentage, referred to in subsection (a) are as follows:

"(1) 20 percent—oil and gas wells located in the United States, in its possessions, in the Commonwealth of Puerto Rico, or on the Outer Continental Shelf (within the meaning of section 2 of the Outer Continental Shelf Lands Act, as amended and supplemented; 43 U.S.C. 1331).

"(2) 17 percent—

"(A) sulfur and uranium; and

"(B) if from deposits in the United States—anorthosite, clay, laterite, and nepheline syenite (to the extent that alumina and aluminum compounds are extracted therefrom), asbestos, bauxite, celestite, chromite, corundum, fluorspar, graphite, ilmenite, kyanite, mica, olivine, quartz crystals (radio grade), rutile, block steatite talc, and zircon, and ores of the following metals: antimony, beryllium, bismuth, cadmium, cobalt, columbium, lead, lithium, manganese, mercury, nickel, platinum and platinum group metals, tantalum, thorium tin, titanium, tungsten, vanadium, and zinc.

"(3) 15 percent—if the mines or deposits are located in the United States—

"(A) gold, silver, copper, and iron ore mines, and

"(B) oil shale.

"(4) 11 percent—

"(A) metal mines (if paragraphs (2)(B) or (3)(A) do not apply), rock asphalt, and vermiculite; and

"(B) if neither paragraph (2)(B), (6), or (7)(B) applies, ball clay, bentonite, china clay, sagger clay, and clay used or sold for use for purposes dependent on its refractory properties.

"(5) 7 percent—asbestos (if paragraph (2)(B) does not apply), brucite, coal, lignite, perlite, sodium chloride, and wollastonite.

"(6) 5 percent—clay and shale used or sold for use in the manufacture of sewer pipe or brick, and clay, shale, and slate used or sold for use as sintered or burned lightweight aggregates.

"(7) 4 percent—

"(A) gravel, peat, pumice, sand, scoria, shale (except shale described in paragraphs (3)(B) and (6)), and stone (except stone described in paragraph (8));

"(B) clay used, or sold for use, in the manufacture of drainage and roofing tile, flower pots, and kindred products; and

"(C) if from brine wells—bromine, calcium chloride, and magnesium chloride.

"(8) 11 percent—all other minerals including, but not limited to, aplite, barite, borax, calcium carbonates, diatomaceous earth, dolomite, feldspar, fullers earth, garnet, gilsonite, granite, limestone, magnesite, magnesium carbonates, marble, mollusk shells (including clam shells and oyster shells), phosphate rock, potash, quartzite, slate, soapstone stone (used or sold for use by the mine owner or operator as dimension stone or ornamental stone), thenardite, tripoli, trona, and (if paragraph (2)(B) does not apply) bauxite, flake graphite, fluorspar, lepidolite, mica, spodumene, and talc (including pyrophyllite), except that, unless sold on bid in direct competition with a bona fide bid to sell a mineral listed in paragraph (4), the percentage shall be 4 percent for any such other mineral (other than slate to which paragraph (6) applies) when used, or sold for use, by the mine owner or operator as rip rap, ballast, road material, rubble, concrete aggregates, or for similar purposes. For purposes of this paragraph, the term 'all other minerals' does not include—

"(A) soil, sod, dirt, turf, water, or mosses;

"(B) minerals from sea water, the air, or similar inexhaustible sources; or

"(C) oil and gas wells."

(2) EFFECTIVE DATE.—The amendments made by this subsection shall apply to taxable years beginning after July 22, 1969.

(b) MINERAL PRODUCTION PAYMENTS.—

(1) IN GENERAL.—Subchapter I of chapter 1 (relating to natural resources) is amended by adding at the end thereof the following new part:

"PART IV—MINERAL PRODUCTION PAYMENTS

"Sec. 636. Income tax treatment of mineral production payments.

"SEC. 636. INCOME TAX TREATMENT OF MINERAL PRODUCTION PAYMENTS.

"(a) CARVED-OUT MINERAL PAYMENT.—A production payment carved out of mineral property shall be treated, for purposes of this subtitle, as if it were a mortgage loan on the property, and shall not qualify as an economic interest in the mineral property. In the case of a production payment carved out for exploration or development of a mineral property, the preceding sentence shall apply only if and to the extent gross income from the property (for purposes of section 613) would be realized, in the absence of the application of such sentence, by the person creating the production payment.

"(b) RETAINED PRODUCTION PAYMENT ON SALE OF MINERAL PROPERTY.—A production payment retained on the sale of a mineral property shall be treated, for purposes of this subtitle, as if it were a purchase money mortgage loan and shall not qualify as an economic interest in the mineral property.

"(c) RETAINED PRODUCTION PAYMENT ON LEASE OF MINERAL PROPERTY.—A production payment retained in a mineral property by the lessor in a leasing transaction shall be treated, for purposes of this subtitle, insofar as the lessee (or his successors in interest) is concerned, as if it were a bonus granted by the lessee to the lessor payable in installments. The treatment of the production payment in the hands of the lessor shall be determined without regard to the provisions of this subsection.

"(d) DEFINITION.—As used in this section, the term 'mineral property' has the meaning assigned to the term 'property' in section 614(a).

"(e) REGULATIONS.—The existence and amount of any production payment for purposes of this section and its treatment under this subtitle shall be determined under regulations prescribed by the Secretary or his delegate."

(2) CLERICAL AMENDMENT.—The table of parts for subchapter I of chapter 1 is amended by adding at the end thereof the following:

"Part IV. Mineral production payments."

(3) EFFECTIVE DATES.—

(A) GENERAL RULE.—The amendments made by this subsection shall be applicable to mineral production payments created on or after April 22, 1969.

(B) SPECIAL RULE.—If a taxpayer during the taxable year which includes April 22, 1969, made expenditures prior to such date which are deductible under section 263(c), 615, 616, or 617 of the Internal Revenue Code of 1954, the amendment made by paragraph (1) of this subsection shall apply to proceeds of carved-out mineral production payments sold during such taxable year on or after April 22, 1969, to the extent the proceeds do not exceed the aggregate of such expenditures, only for the purposes of section 613 of such Code (relating to percentage depletion) and section 904 of such Code (relating to limitations on foreign tax credit).

(C) EXCEPTION.—The amendments made by this subsection shall not apply to a mineral production payment created prior to January 1, 1971, pursuant to a binding contract entered into before April 22, 1969.

(c) EXPLORATION EXPENDITURES.—

(1) AMENDMENT TO SECTION 615.—Section 615 (relating to exploration expenditures) is amended by adding new subsection (h) at the end thereof:

"(h) RECAPTURE FOR CERTAIN EXPENDITURES.—The rules set forth in subsections (b) through (g), inclusive, of section 617 (relating to additional exploration expenditures in the case of domestic mining) shall apply to expenditures to which this section applies and which are made after July 22, 1969."

(2) AMENDMENTS TO SECTION 617.—Section 617 (relating to additional exploration expenditures in the case of domestic mining) is amended—

(A) by striking out the heading and inserting in lieu thereof:

"SEC. 617. DEDUCTION AND RECAPTURE OF CERTAIN MINING EXPLORATION EXPENDITURES."

(B) by redesignating subsection (h) as subsection (i), and

(C) by inserting a new subsection (h) as follows:

"(h) EXCEPTION.—If the taxpayer's deductions under this section and section 615 total less than $400,000, then to the extent of the difference between $400,000 and such total, a deduction shall be allowed under this section for expenditures paid or incurred during the taxable year if paid or incurred after July 22, 1969, for the purpose of ascertaining the existence, location, extent, or quality of any deposit of ore or mineral not located in the United States or on the Outer Continental Shelf (within the meaning of section 2 of the Outer Continental Shelf Lands Act, as amended and supplemented; 43 U.S.C. 1331)."

(d) CLERICAL AMENDMENT.—The table of

sections for part I of subchapter I of chapter 1 is amended by striking out:

"Sec. 617. Additional exploration expenditures in the case of domestic mining."

and inserting in lieu thereof:

"Sec. 617. Deduction and recapture of certain mining exploration expenditures."

SUBTITLE B—CAPITAL GAINS AND LOSSES

SEC. 511. REPEAL OF ALTERNATIVE CAPITAL GAINS TAX FOR INDIVIDUALS.

(a) IN GENERAL.—Section 1201 (relating to alternative tax) is amended by striking out subsection (b), and by redesignating subsection (c) as (b).

(b) CONFORMING AMENDMENTS.—

(1) Section 5(a) (relating to cross references relating to tax on individuals) is amended by striking out paragraph (3), and by renumbering paragraph (4) as (3).

(2) Section 871(b)(1) (relating to tax on nonresident alien individuals) is amended by striking out "or 1201(b)".

(3) Section 877(b) (relating to expatriation to avoid tax) is amended by striking out "or section 1201(b)".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to sales and other dispositions after July 25, 1969. In the case of a taxable year beginning before and ending after July 25, 1969, the alternative tax imposed by section 1201(b) of the Internal Revenue Code of 1954 shall be computed in a manner to be prescribed by the Secretary of the Treasury or his delegate.

SEC. 512. CAPITAL LOSSES OF INDIVIDUALS.

(a) LIMITATION ON ALLOWANCE OF CAPITAL LOSSES.—Section 1211(b) (relating to limitation on capital losses of taxpayers other than corporations) is amended to read as follows:

"(b) OTHER TAXPAYERS.—

"(1) IN GENERAL.—In the case of a taxpayer other than a corporation, losses from sales or exchanges of capital assets shall be allowed only to the extent of the gains from such sales or exchanges, plus (if such losses exceed such gains) whichever of the following is smallest:

"(A) the taxable income for the taxable year,

"(B) $1,000, or

"(C) the sum of—

"(i) the excess of the net short-term capital loss over the net long-term capital gain, and

"(ii) one-half of the excess of the net long-term capital loss over the net short-term capital gain.

"(2) MARRIED INDIVIDUALS.—In the case of a husband or wife who files a separate return, the amount specified in paragraph (1)(B) shall be $500 in lieu of $1,000.

"(3) COMPUTATION OF TAXABLE INCOME.—For purposes of paragraph (1), taxable income shall be computed without regard to gains or losses from sales or exchanges of capital assets and without regard to the deductions provided in section 151 (relating to personal exemptions) or any deduction in lieu thereof. If the taxpayer elects to pay the optional tax imposed by section 3, 'taxable income' as used in this subsection shall read as 'adjusted gross income'."

(b) CAPITAL LOSS CARRYOVER.—Section 1212(b) (relating to capital loss carryover of taxpayers other than corporations) is amended by striking out "beginning after December 31, 1963" at the beginning of paragraph (1), by striking out the last sentence of paragraph (1), and by striking out paragraph (2) and inserting in lieu thereof the following new paragraphs:

"(2) SPECIAL RULES.—

"(A) For purposes of determining the excess referred to in paragraph (1)(A), an amount equal to the amount allowed for the taxable year under section 1211(b)(1) (A), (B), or (C) shall be treated as a short-term capital gain in such year.

"(B) For purposes of determining the excess referred to in paragraph (1)(B), an amount equal to the sum of—

"(i) the amount allowed for the taxable year under section 1211(b)(1) (A), (B), or (C), and

"(ii) the excess of the amount described in clause (i) over the net short-term capital loss (determined without regard to this subsection) for such year,

shall be treated as a short-term capital gain in such year.

"(3) TRANSITIONAL RULE.—In the case of any amount which, under paragraph (1) and section 1211 (b) (as in effect for taxable years beginning before July 26, 1969), is treated as a capital loss in the first taxable year beginning after July 25, 1969, paragraph (1) and section 1211(b) (as in effect for taxable years beginning before July 26, 1969) shall apply (and paragraph (1) and section 1211 (b) as in effect for taxable years beginning after July 25, 1969, shall not apply) to the extent such amount exceeds the total of any net capital gains (determined without regard to this subsection) of taxable years beginning after July 25, 1969."

(c) CONFORMING AMENDMENT.—Section 1222(9) (defining net capital gain) is amended by striking out "In the case of a corporation, the" and inserting in lieu thereof "The".

(d) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after July 25, 1969.

SEC. 513. LETTERS, MEMORANDUMS, ETC.

(a) TREATMENT AS PROPERTY WHICH IS NOT A CAPITAL ASSET.—Section 1221(3) (relating to definition of capital asset) is amended to read as follows:

"(3) a copyright, a literary, musical, or artistic composition, a letter or memorandum, or similar property, held by—

"(A) a taxpayer whose personal efforts created such property,

"(B) in the case of a letter, memorandum, or similar property, a taxpayer for whom such property was prepared or produced, or

"(C) a taxpayer in whose hands the basis of such property is determined, for purposes of determining gain from a sale or exchange, in whole or part by reference to the basis of such property in the hands of a taxpayer described in subparagraph (A) or (B);".

(b) CONFORMING AMENDMENTS.—

(1) Section 341(e)(5)(A)(iv) (relating to definition of subsection (e) asset in the case of collapsible corporations) is amended to read as follows:

"(iv) property (unless included under clause (i), (ii), or (iii)) which consists of a copyright, a literary, musical, or artistic composition, a letter or memorandum, or similar property, or any interest in any such property, if the property was created in whole or in part by the personal efforts of, or (in the case of a letter, memorandum, or similar property) was prepared or produced in whole or in part for, any individual who owns more than 5 percent in value of the stock of the corporation."

(2) Section 1231(b)(1)(C) (relating to definition of property used in the trade or business) is amended by inserting ", a letter or memorandum" before ", or similar property".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to sales and other dispositions occurring after July 25, 1969.

SEC. 514. HOLDING PERIOD OF CAPITAL ASSETS.

(a) CAPITAL GAINS AND LOSSES.—Section 1222 (relating to other terms relating to capital gains and losses) is amended by striking out "6 months" wherever it appears therein and inserting in lieu thereof "12 months".

(b) CONFORMING AMENDMENTS.—The following sections are amended by striking out "6 months" wherever it appears therein and inserting in lieu thereof "12 months":

(1) Section 166(d)(1) (relating to nonbusiness debts);

(2) Section 333(g) (1) and (2) (relating to special rule as to liquidations in the case of the election as to recognition of gain);

(3) Section 341(a) (relating to treatment of gain to shareholders in the case of collapsible corporations);

(4) Section 342(a) (relating to liquidation of certain foreign personal holding companies);

(5) Section 402(a)(2) (relating to capital gains treatment for certain distributions in the case of a beneficiary of an exempt employees' trust);

(6) Section 403(a)(2) (relating to capital gains treatment for certain distributions in the case of a beneficiary under a qualified annuity plan);

(7) Section 423(a)(1) (relating to employee stock purchase plans);

(8) Section 424(a)(1) and (c)(1) and (2) (relating to restricted stock options);

(9) Section 584(c)(1) (A) and (B) (relating to inclusions in taxable income of participants in common trust funds);

(10) Section 631 (relating to gain or loss in the case of timber, coal, or domestic iron ore);

(11) Section 702(a) (1) and (2) (relating to income and credits of partner);

(12) Section 817(a)(1)(A) relating to treatment of capital gains and losses, etc., in the case of life insurance companies);

(13) Section 852(b) (3) and (4) (relating to treatment of capital gain dividends by shareholders of regulated investment companies);

(14) Section 856(c)(4) (relating to definition of real estate investment trust);

(15) Section 857(b)(3)(B) (relating to treatment of capital gain dividends by shareholders of real estate investment trusts);

(16) Section 1231 (relating to property used in the trade or business and involuntary conversions);

(17) Section 1232(a)(2) (relating to sale or exchange in the case of bonds and other evidences of indebtedness);

(18) Section 1233 (b), (d), and (e) (relating to gains and losses from short sales);

(19) Section 1234(c)(1) (relating to special rule for gain on lapse of an option granted as part of a straddle);

(20) Section 1235(a) (relating to sale or exchange of patents);

(21) Section 1240 (relating to taxability to employee of termination payments);

(22) Section 1246(a)(4) (relating to holding period in the case of gain on foreign investment company stock);

(23) Section 1247(i) (relating to loss on sale or exchange of certain stock in the case of foreign investment companies electing to distribute income currently); and

(24) Section 1248 (b) and (f) (relating to gain from certain sales or exchanges of stock in certain foreign corporations).

(c) TIMBER.—Section 631(a) (relating to election to treat cutting of timber as a sale or exchange) is amended by striking out "before the beginning of such year" in the first sentence.

(d) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after July 25, 1969.

SEC. 515. TOTAL DISTRIBUTIONS FROM QUALIFIED PENSION, ETC., PLANS.

(a) LIMITATION ON CAPITAL GAINS TREATMENT.—

(1) EMPLOYEES' TRUST.—SECTION 402(a) (relating to taxability of beneficiary of exempt trust) is amended by adding at the end thereof the following new paragraph:

"(5) LIMITATION ON CAPITAL GAINS TREATMENT.—The first sentence of paragraph (2)

shall apply to a distribution paid after December 31, 1969, only to the extent that it does not exceed the sum of—

"(A) the benefits accrued by the employee on behalf of whom it is paid during plan years beginning before January 1, 1970, and

"(B) the portion of the benefits accrued by such employee during plan years beginning after December 31, 1969, which the distributee establishes does not consist of the employee's allocable share of employer contributions to the trust by which such distribution is paid.

The Secretary or his delegate shall prescribe such regulations as may be necessary to carry out the purposes of this paragraph."

(2) EMPLOYEE ANNUITIES.—Section 403(a)(2) (relating to capital gains treatment for certain distributions under a qualified annuity plan) is amended by adding at the end thereof the following new subparagraph:

"(C) LIMITATION ON CAPITAL GAINS TREATMENT.—Subparagraph (A) shall apply to a payment paid after December 31, 1969, only to the extent that it does not exceed the sum of—

"(i) the benefits accrued by the employee on behalf of whom it is paid during plan years beginning before January 1, 1970, and

"(ii) the portion of the benefits accrued by such employee during plan years beginning after December 31, 1969, which the payee establishes does not consist of the employee's allocable share of employer contributions under the plan under which the annuity contract is purchased.

The Secretary or his delegate shall prescribe such regulations as may be necessary to carry out the purposes of this subparagraph."

(b) LIMITATION ON TAX.—Section 72(n) (relating to treatment of certain distributions with respect to contributions by self-employed individuals) is amended—

(1) by striking out so much thereof as precedes paragraph (2) and inserting in licu thereof the following:

(n) TREATMENT OF TOTAL DISTRIBUTIONS.—

"(1) APPLICATION OF SUBSECTION.—

"(A) GENERAL RULE.—This subsection shall apply to amounts—

"(i) distributed to a distrbutee, in the case of an employees' trust described in section 401(a) which is exempt from tax under section 501(a), or

"(ii) paid to a payee, in the case of an annuity plan described in section 403(a) if the total distributions or amounts payable to the distributee or payee with respect to an employee (including an individual who is an employee within the meaning of section 401(c)(1)) are paid to the distributee or payee within one taxable year of the distributee or payee, but only to the extent that section 402(a)(2) or 403(a)(2) does not apply to such amounts.

"(B) DISTRIBUTIONS TO WHICH APPLICABLE.—This subsection shall apply only to distributions or amounts paid—

"(i) on account of the employee's death,

"(ii) with respect to an individual who is an employee without regard to section 401(c)(1), on account of his separation from the service,

"(iii) with respect to an employee within the meaning of section 401(c)(1), after he has attained the age of 59½ years, or

"(iv) with respect to an employee within the meaning of section 401(c)(1), after he has become disabled (within the meaning of subsection (m)(7)).

"(C) MINIMUM PERIOD OF SERVICE.—This subsection shall apply to a distribution from or under a plan to an employee only if he has been a participant in such plan for 5 or more years before such distribution.

"(D) AMOUNTS SUBJECT TO PENALTY.—This subsection shall not apply to amounts described in clauses (ii) and (iii) of subparagraph (A) of subsection (m)(5) (but, in the case of amounts described in clause (ii) of such subparagraph, only to the extent that subsection (m)(5) applies to such amounts)."; and

(2) by adding at the end thereof the following new paragraph:

"(4) REFUND OF TAX WITH RESPECT TO CERTAIN DISTRIBUTIONS.—Notwithstanding any other provision of this title, if the limitation of tax provided in paragraph (2) on the total distributions or amounts payable with respect to an individual who is an employee without regard to section 401(c)(1) exceeds—

"(A) the aggregate increase in tax that would result from the inclusion in gross income of the recipient of 20 percent of the amount to which this subsection applies for the taxable year in which such amount is received and each of his 4 succeeding taxable years, or

"(B) if the recipient dies within the 4-year period beginning on the last day of the taxable year in which such amount is received, 5 times the average of the increase in tax that would result from the inclusion in gross income of the recipient of 20 percent of the amount to which this subsection applies for such taxable year and each succeeding taxable year other than the taxable year ending with his death, such excess shall be deemed to be an overpayment of the tax imposed by this chapter for the last taxable year referred to in subparagraph (A) or (B), whichever is applicable."

(c) TECHNICAL AND CONFORMING AMENDMENTS.—

(1) Section 405(e) (relating to capital gains treatment not to apply to bonds distributed by trusts) is amended—

(A) by striking out "CAPITAL GAINS TREATMENT" in the heading and inserting in lieu thereof "CAPITAL GAINS TREATMENT AND LIMITATION OF TAX";

(B) by striking out "Section 402(a)(2)" and inserting in lieu thereof "Section 72(n) and section 402(a)(2)"; and

(C) by striking out "section" and inserting in lieu thereof "sections".

(2) Section 406(c) (relating to termination of status as deemed employee not to be treated as separation from service for purpose of capital gain provisions) is amended—

(A) by striking out "PROVISIONS." in the heading and inserting in lieu thereof "PROVISIONS AND LIMITATION OF TAX."; and

(B) by striking out "section 402(a)(2)" and inserting in lieu thereof "section 72(n), section 402(a)(2),".

(3) Section 407(c) (relating to termination of status as deemed employee not to be treated as separation from service for purposes of capital gain provisions) is amended—

(A) by striking out "PROVISIONS." in the heading and inserting in lieu thereof "PROVISIONS AND LIMITATION OF TAX."; and

(B) by striking out "section 402(a)(2)" and inserting in lieu thereof "section 72(n), section 402(a)(2),".

(4) Section 1304(b)(2) (relating to certain provisions inapplicable) is amended to read as follows:

"(2) section 72(n)(2) (relating to limitation of tax in case of total distribution)".

SEC. 516. OTHER CHANGES IN CAPITAL GAINS TREATMENT.

(a) SALES OF TERM INTERESTS.—Section 1001 (relating to determination of amount of and recognition of gain or loss) is amended by adding at the end thereof the following new subsection:

"(e) CERTAIN TERM INTERESTS.—

"(1) IN GENERAL.—In determining gain or loss from the sale or other disposition of a term interest in property, that portion of the adjusted basis of such interest which is determined pursuant to section 1014 or 1015 (to the extent that such adjusted basis is a portion of the entire adjusted basis of the property) shall be disregarded.

"(2) TERM INTEREST IN PROPERTY DEFINED.—For purposes of paragraph (1), the term 'term interest in property' means—

"(A) a life interest in property,

"(B) an interest in property for a term of years, or

"(C) an income interest in a trust.

"(3) EXCEPTION.—Paragraph (1) shall not apply to a sale or other disposition which is a part of a transaction in which a fee interest is transferred to any person or persons."

(b) CERTAIN CASUALTY LOSSES UNDER SECTION 1231.—Section 1231(a) (relating to property used in the trade or business and involuntary conversions) is amended by striking out all that follows paragraph (1) and inserting in lieu thereof the following:

"(2) losses (including losses not compensated for by insurance or otherwise) upon the destruction, in whole or in part, theft or seizure, or requisition or condemnation of (A) property used in the trade or business or (B) capital assets held for more than 12 months shall be considered losses from a compulsory or involuntary conversion.

In the case of any involuntary conversion (subject to the provisions of this subsection but for this sentence) arising from fire, storm, shipwreck, or other casualty, or from theft, of any property used in the trade or business or of any capital asset held for more than 12 month and held for the production of income, this subsection shall not apply to such conversion (whether resulting in gain or loss) if, during the taxable year, the recognized losses from such conversions exceed the recognized gains from such conversions."

(c) TRANSFER OF FRANCHISES.—

(1) IN GENERAL.—Part IV of subchapter P of chapter 1 (relating to special rules for determining capital gains and losses) is amended by adding at the end thereof the following new section:

"SEC. 1252. TRANSFER OF FRANCHISES.

"(a) GENERAL RULE.—A transfer of a franchise shall not be treated as a sale or exchange of a capital asset or of property to which section 1231 applies, if the transferor retains any significant power, right, or continuing interest with respect to the subject matter of the franchise.

"(b) DEFINITIONS.—For purposes of this section—

"(1) FRANCHISE.—The term 'franchise' means a franchise, distributorship, or other like interest.

"(2) SIGNIFICANT POWER, RIGHT, OR CONTINUING INTEREST.—The term 'significant power, right, or continuing interest' includes, but is not limited to—

"(A) a right to disapprove any assignment of the franchise,

"(B) a right to disapprove any subcontract made by the holder of the franchise, and

"(C) a right to terminate the franchise at will.

"(c) EXCEPTION.—Subsection (a) shall not apply with respect to amounts received or accrued, in connection with a transfer of a franchise, which are attributable to the transfer of all substantial rights to a patent, trademark, or trade name (or an undivided interest therein which includes a part of all such rights), to the extent such amounts are separately identified and are reasonable in amount."

(2) CLERICAL AMENDMENT.—The table of sections for part IV of subchapter P of chapter 1 is amended by adding at the end thereof the following:

"Sec. 1252. Transfer of franchises."

(d) EFFECTIVE DATES.—The amendments made by subsections (a) and (c) shall apply with respect to sales and other dispositions, and transfers, after July 25, 1969. The amendment made by subsection (b) shall ap-

ply to taxable years beginning after July 25, 1969.

SUBTITLE C—REAL ESTATE DEPRECIATION

SEC. 521. DEPRECIATION OF REAL ESTATE.

(a) SECTION 1250 PROPERTY AND REHABILITATION PROPERTY.—Section 167 (relating to depreciation) is amended by redesignating subsection (j) as subsection (n), and by inserting after subsection (i) the following new subsections:

"(j) SPECIAL RULES FOR SECTION 1250 PROPERTY.—

"(1) GENERAL RULE.—Except as provided in paragraphs (2) and (3), in the case of section 1250 property, subsection (b) shall not apply and the term 'reasonable allowance' as used in subsection (a) shall include an allowance computed in accordance with regulations prescribed by the Secretary or his delegate, under any of the following methods:

"(A) the straight line method,

"(B) the declining balance method, using a rate not exceeding 150 percent of the rate which would have been used had the annual allowance been computed under the method described in subparagraph (A), and

"(C) any other consistent method productive of an annual allowance which, when added to all allowances for the period commencing with the taxpayer's use of the property and including the taxable year, does not, during the first two-thirds of the useful life of the property, exceed the total of such allowances which would have been used had such allowances been computed under the method described in subparagraph (B).

Nothing in this paragraph shall be construed to limit or reduce an allowance otherwise allowable under subsection (a) except where allowable solely by reason of paragraph (2), (3), or (4) of subsection (b).

"(2) HOUSING.—Paragraph (1) of this subsection shall not apply, and subsection (b) shall apply in any taxable year, to a building or structure which is residential rental housing the original use of which commences with the taxpayer. For purposes of the preceding sentence, a building or structure shall be considered to be residential rental housing with respect to any taxable year if and only if 80 percent or more of the gross income from such building or structure for such year is derived from the use of dwelling units (within the meaning of subsection (k)(3)(C)) in such building or structure to provide living accommodations on a rental basis. Any change in the computation of the allowance for depreciation for any taxable year, permitted or required by reason of the application of this paragraph, shall not be considered a change in a method of accounting.

"(3) PROPERTY CONSTRUCTED, ETC., BEFORE JULY 25, 1969.—Paragraph (1) of this subsection shall not apply, and subsection (b) shall apply, in the case of property—

"(A) the construction, reconstruction or erection of which was begun before July 25, 1969, or

"(B) for which a written contract entered into before July 25, 1969, with respect to any part of the construction, reconstruction, or erection or for the permanent financing thereof, was at all times thereafter binding on the taxpayer.

Under regulations prescribed by the Secretary or his delegate, rules similar to the rules provided in paragraphs (5), (9), (10), and (13) of section 48(h) shall be applied for purposes of subparagraphs (A) and (B).

"(4) USED SECTION 1250 PROPERTY.—In the case of section 1250 property acquired after July 24, 1969, the original use of which does not commence with the taxpayer, the allowance for depreciation under this section shall be limited to an amount computed under—

"(A) the straight line method, or

"(B) any other method determined by the Secretary or his delegate to result in a reasonable allowance under subsection (a), not including—

"(i) any declining balance method,

"(ii) the sum-of-the-years digits method, or

"(iii) any other method allowable solely by reason of the application of subsection (i)(4) or paragraph (1)(C) of this subsection.

"(k) DEPRECIATION OF REHABILITATION PROPERTY CONSISTING OF LOW-COST RENTAL HOUSING.—

"(1) 60-MONTH RULE.—The taxpayer may at any time elect in accordance with regulations prescribed by the Secretary or his delegate to compute a depreciation deduction in subsection (a) attributable to rehabilitation expenditures made after July 24, 1969, under the straight-line method using a useful life of 60 months. Such method shall be in lieu of any other method of computing the depreciation deduction under subsection (a) and in lieu of any deduction for amortization.

"(2) LIMITATIONS.—

"(A) The aggregate amount of expenditures with respect to any low-cost rental housing which are eligible for the method provided by paragraph (1) shall not exceed $15,000 per dwelling unit in such housing.

"(B) EXCEPTION.—Expenditures in any taxable year shall be taken into account for purposes of paragraph (1) only if the sum of the rehabilitation expenditures over a period of two consecutive taxable years, including the taxable year, exceeds $3,000 per dwelling unit of low-cost housing.

"(3) DEFINITIONS.—For purposes of this subsection—

"(A) REHABILITATION EXPENDITURES.—The term 'rehabilitation expenditures' means amounts chargeable to capital account and incurred for property or additions or improvements to property (or related facilities) with a useful life of 5 years or more, in connection with the rehabilitation of an existing building for low-cost rental housing; but such term does not include the cost of acquisition of such building or any interest therein.

"(B) LOW-COST RENTAL HOUSING.—The term 'low-cost rental housing' means any building the dwelling units in which are held for occupancy on a rental basis by families and individuals of low or moderate income, as determined by the Secretary or his delegate in a manner consistent with the policies of the Housing and Urban Development Act of 1968 pursuant to regulations prescribed under this subsection.

"(C) DWELLING UNIT.—The term 'dwelling unit' means a house or an apartment in a building or structure, but does not include a unit in a hotel, motel, inn, or other establishment more than one-half of the units in which are used on a transient basis."

(b) RECAPTURE OF ADDITIONAL DEPRECIATION.—Section 1250(a) (relating to gain from dispositions of certain depreciable realty) is amended to read as follows:

"(a) GENERAL RULE.—Except as otherwise provided in this section—

"(1) ADDITIONAL DEPRECIATION AFTER JULY 24, 1969.—If section 1250 property is disposed of after July 24, 1969, the lower of—

"(A) that portion of the additional depreciation (as defined in subsection (b)(1) or (4)) attributable to periods after July 24, 1969, in respect of the property, or

"(B) the excess of—

"(i) the amount realized (in the case of a sale, exchange, or involuntary conversion), or the fair market value of such property (in the case of any other disposition), over

"(ii) the adjusted basis of such property,

shall be treated as gain from the sale or exchange of property which is neither a capital asset nor property described in section 1231. Such gain shall be recognized notwithstanding any other provision of this subtitle.

"(2) ADDITIONAL DEPRECIATION AFTER DECEMBER 31, 1963, AND BEFORE JULY 25, 1969.—

"(A) If section 1250 property is disposed of after December 31, 1963, and the amount determined under subsection (a)(1)(B) exceeds the amount determined under subsection (a)(1)(A), then the applicable percentage of the lower of—

"(i) that portion of the additional depreciation attributable to periods before July 25, 1969, in respect of the property, or

"(ii) the excess of the amount determined under subsection (a)(1)(B) over the amount determined under subsection (a)(1)(A),

shall also be treated as gain from the sale or exchange of property which is neither a capital asset nor property described in section 1231. Such gain shall be recognized notwithstanding any other provision of this subtitle.

"(E) APPLICABLE PERCENTAGE.—For purposes of paragraph (A) the term 'applicable percentage' means 100 percent minus 1 percentage point for each full month the property was held after the date on which the property was held for 20 full months."

(c) Section 1250(b) (relating to gain from certain depreciable realty) is amended by adding at the end thereof the following new paragraph:

"(4) ADDITIONAL DEPRECIATION ATTRIBUTABLE TO REHABILITATION EXPENDITURES.—For purposes of this section, the term 'additional depreciation' means, in respect of the depreciation deduction allowed under section 167(k), the adjustments computed under such section, except that, in the case of property held more than one year, it means such adjustments only to the extent that they exceed the amount of the depreciation adjustments which would have resulted if such adjustments had been determined under the straight line method of adjustment without regard to the useful life permitted under section 167(k)."

(d) CHANGE IN METHOD OF COMPUTING DEPRECIATION.—Section 167(e) (relating to depreciation) is amended by adding at the end thereof the following new paragraph:

"(3) CHANGE WITH RESPECT TO SECTION 1250 PROPERTY.—A taxpayer may, on or before the last day prescribed by law (including extensions thereof) for filing his return for his first taxable year beginning after July 24, 1969, and in such manner as the Secretary or his delegate shall by regulation prescribe, elect to change his method of depreciation in respect of section 1250 property (as defined in section 1250(c)) from any declining balance or sum of the years-digits method to the straight line method. An election may be made under this paragraph notwithstanding any provision to the contrary in an agreement under subsection (d)."

(e) TECHNICAL AND CONFORMING CHANGES.—

(1) Subsection (d) of section 1250 is amended by striking out "subsection (a)(1)" wherever it appears and inserting in lieu thereof "subsection (a)."

(2) Subsection (f) of section 1250 is amended—

(A) by striking out "subsection (a)(1)" in paragraph (1) and inserting lieu thereof "subsection (a)," and

(B) by striking out paragraph (2) thereof and inserting in lieu thereof the following:

"(2) ORDINARY INCOME ATTRIBUTABLE TO AN ELEMENT.—For purposes of paragraph (1), the amount taken into account for any element shall be the sum of—

"(A) the amount which bears the same ratio to the lower of the amounts specified in subparagraph (A) or (B) of subsection (a)(1) for the section 1250 property as the additional depreciation for such element attributable to periods after July 24, 1969, bears to the sum of the additional depreciation for

all elements attributable to periods after July 24, 1969, and

"(B) the amount (if any) determined by multiplying—

"(i) the amount which bears the same ratio to the lower of the amounts specified in subsection (a)(2)(A) (i) or (ii) for the section 1250 property as the additional depreciation for such element attributable to periods before July 25, 1969, bears to the sum of the additional depreciation for all elements attributable to periods before July 25, 1969, by

"(ii) the applicable percentage for such element.

For purposes of this paragraph, determinations with respect to any element shall be made as if it were a separate property."

(f) Section 381(c)(6) (relating to carryovers in certain corporate acquisitions) is amended to read as follows:

"(6) METHOD OF COMPUTING DEPRECIATION ALLOWANCE.—The acquiring corporation shall be treated as the distributor or transferor corporation for purposes of computing the depreciation allowance under paragraphs (2), (3), and (4) of section 167(b), or subsection (j)(1), (k), or (m) of section 167, on property acquired in a distribution or transfer with respect to so much of the basis in the hands of the acquiring corporation as does not exceed the adjusted basis in the hands of the distributor or transferor corporation."

(g) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to taxable years ending after July 24, 1969.

SUBTITLE D—COOPERATIVES

SEC. 531. COOPERATIVES.

(a) QUALIFIED WRITTEN NOTICE OF ALLOCATION.—The last sentence of section 1388(c)(1) (relating to qualified written notice of allocation defined) is amended to read as follows:

"Such term does not include any written notice of allocation which is paid as part of a patronage dividend or as part of a payment described in section 1382(c)(2)(A) unless—

"(C) at least 20 percent of the amount of such patronage dividend, or such payment, is paid in money or by qualified check, and in addition, during the payment period for the taxable year to which such patronage dividend, or such payment, relates at least the 'applicable percentage' (as determined under paragraph (5)) of such patronage dividend, or such payment, is paid in money or in qualified check, either—

"(i) as a part of such patronage dividend, or such payment,

"(ii) or in redemption (to the extent allocated by the payor to such patronage dividend for the purpose of meeting the requirements of this clause, if not previously allocated to any other patronage dividend) of any qualified written notice of allocation previously paid as a part of a patronage dividend, or such payment, for any taxable year, and

"(D) either (i) at all times on and after the date of issuance of such written notice of allocation, the bylaws of the organization require the remainder of such patronage dividend, or such payment, to be paid in money within the 15-year period beginning with the close of the taxable year with respect to which such written notice of allocation is made, and the bylaws provide that such requirement shall in no event be changed without the consent of those adversely affected, or (ii) an unconditional written evidence of indebtedness is issued for the remainder of such patronage dividend, or such payment, which matures within such 15-year period."

(b) APPLICABLE PERCENTAGE.—Section 1388(c) (relating to qualified written notice of allocation) is amended by adding at the end thereof the following new paragraph:

"(5) APPLICABLE PERCENTAGE.—For purposes of subsection (a)—

"For taxable years beginning in—	The applicable percentage is—
1970	3 percent
1971	6 percent
1972	9 percent
1973	12 percent
1974	15 percent
1975	18 percent
1976	21 percent
1977	24 percent
1978	27 percent
1979 or any subsequent year	30 percent."

(c) QUALIFIED PER-UNIT RETAIN CERTIFICATE.—Section 1388(h)(1) (relating to definition of qualified per-unit retain certificate) is amended to read as follows:

"(1) DEFINED.—For purposes of this subchapter, the term 'qualified per-unit retain certificate' means any per-unit retain certificate—

"(A) which the distributee has agreed, in the manner provided in paragraph (2) to take into account at its stated dollar amount as provided in section 1385(a), and

"(B) which (i) at all times on and after the date of issuance of such certificate, the bylaws of the organization require the stated dollar amount to be paid in money within the 15-year period beginning with the close of the taxable year with respect to which such certificate is issued, and the by-laws provide that such requirement shall in no event be changed without the consent of those adversely affected, or (ii) is in the form of an unconditional written evidence of indebtedness which matures within such 15-year period."

(d) EFFECTIVE DATE.—The amendments made by this section apply to taxable years beginning after December 31, 1969.

SUBTITLE E—SUBCHAPTER S CORPORATIONS

SEC. 541. QUALIFIED PENSION, ETC., PLANS OF SMALL BUSINESS CORPORATIONS.

(a) IN GENERAL.—Subchapter S of chapter 1 (relating to election of certain small business corporations as to taxable status) is amended by adding at the end thereof the following new section:

SEC. 1379. CERTAIN QUALIFIED PENSION, ETC., PLANS.

"(a) ADDITIONAL REQUIREMENT FOR QUALIFICATION.—A trust forming part of a stock bonus or profit-sharing plan which provides contributions or benefits for employees some or all of whom are shareholder-employees shall not constitute a qualified trust under section 401 (relating to qualified pension, profit-sharing, and stock bonus plans) unless the plan of which such trust is a part provides that forfeitures attributable to contributions deductible under section 404(a)(3) for any taxable year (beginning after December 31, 1969) of the employer with respect to which it is an electing small business corporation may not inure to the benefit of any individual who is a shareholder-employee for such taxable year. A plan shall be considered as satisfying the requirement of this subsection for the period beginning with the first day of a taxable year and ending with the 15th day of the third month following the close of such taxable year, if all the provisions of the plan which are necessary to satisfy this requirement are in effect by the end of such period and have been made effective for all purposes with respect to the whole of such period.

"(b) TAXABILITY OF SHAREHOLDER-EMPLOYEE BENEFICIARIES.—

"(1) INCLUSION OF EXCESS CONTRIBUTIONS IN GROSS INCOME.—Notwithstanding the provisions of section 402 (relating to taxability of beneficiary of employees' trust), section 403 (relating to taxation of employee annuities), or section 405(d) (relating to taxability of beneficiaries under qualified bond purchase plans), an individual who is a shareholder-employee of an electing small business corporation shall include in gross income, for his taxable year in which or with which the taxable year of the corporation ends, the excess of the amount of contributions paid on his behalf which is deductible under section 404(a)(1), (2), or (3) by the corporation for its taxable year over the lesser of—

"(A) 10 percent of the compensation received or accrued by him from such corporation during its taxable year, or

"(B) $2,500.

"(2) TREATMENT OF AMOUNTS INCLUDED IN GROSS INCOME.—Any amount included in the gross income of a shareholder-employee under paragraph (1) shall be treated as consideration for the contract contributed by the shareholder-employee for purposes of section 72 (relating to annuities),

"(3) DEDUCTION FOR AMOUNTS NOT RECEIVED AS BENEFITS.—If—

"(A) amounts are included in the gross income of an individual under paragraph (1), and

"(B) the rights of such individual (or his beneficiaries) under the plan terminate before payments under the plan which are excluded from gross income equal the amounts included in gross income under paragraph (1),

then there shall be allowed as a deduction, for the taxable year in which such rights terminate, an amount equal to the excess of the amounts included in gross income under paragraph (1) over such payments.

"(c) CARRYOVER OF AMOUNTS DEDUCTIBLE.—No amount deductible shall be carried forward under the second sentence of section 404(a)(3)(A) (relating to limits on deductible contributions under stock bonus and profit-sharing trusts) to a taxable year of a corporation with respect to which it is not an electing small business corporation from a taxable year with respect to which it is an electing small business corporation.

"(d) SHAREHOLDER-EMPLOYEE.—For purposes of this section, the term 'shareholder-employee' means an employee or officer of an electing small business corporation who owns (or is considered as owning within the meaning of section 318(a)(1)), on any day during the taxable year of such corporation, more than 5 percent of the outstanding stock of the corporation."

(b) CONFORMING AMENDMENT.—Section 62 (relating to adjusted gross income defined) is amended by adding at the end thereof the following new paragraph:

"(9) PENSION, ETC., PLANS OF ELECTING SMALL BUSINESS CORPORATIONS.—The deduction allowed by section 1379(b)(3)."

(c) CLERICAL AMENDMENT.—The table of sections for subchapter S of chapter 1 is amended by adding at the end thereof the following new item:

"Sec. 1379. Certain qualified pension, etc., plans."

(d) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to taxable years of a corporation beginning after December 31, 1969.

TITLE VI—STATE AND LOCAL OBLIGATIONS

SEC. 601. INTEREST ON CERTAIN GOVERNMENTAL OBLIGATIONS

(a) ELECTION TO ISSUE TAXABLE BONDS.—Section 103 (relating to interest on certain governmental obligations) is amended by redesignating subsection (b) as subsection (e), by redesignating subsection (d) as subection (f), and by inserting after subsection (a) the following new subsection:

"(b) ELECTION TO ISSUE TAXABLE BONDS.—

"(1) SUBSECTION (a)(1) NOT TO APPLY.—The issuer of obligations described in subsec-

tion (a) (1) may elect to issue obligations to which subsection (a) (1) does not apply.

"(2) ELECTION.—The election described in paragraph (1) shall be made (at such time, in such manner, and subject to such conditions as the Secretary or his delegate by regulation prescribes) with respect to each issue of obligations to which it is to apply. An election with respect to any issue once made shall be irrevocable.

"(3) CROSS REFERENCE.—

"For provisions relating to the payment by the United States of a portion of the interest cost of an obligation which is part of an issue for which the election described in this subsection has been made, see section 602 of the Tax Reform Act of 1969."

(b) ARBITRAGE OBLIGATIONS.—Section 103 is amended by inserting after subsection (c) the following new subsection:

"(d) ARBITRAGE OBLIGATIONS.—Under regulations prescribed by the Secretary or his delegate, any arbitrage obligation shall be treated as an obligation not described in subsection (a) (1)."

(c) CLERICAL AMENDMENT.—The heading of subsection (e) of section 103 (as redesignated by subsection (a) of this section) is amended to read as follows:

"(e) CERTAIN OBLIGATIONS OF THE UNITED STATES.—".

"(d) EFFECTIVE DATES.—The amendments made by subsection (a) shall apply to obligations issued in calendar quarters beginning after the date of the enactment of this section. The amendment made by subsection (b) shall apply to obligations issued after July 11, 1969.

SEC. 602. UNITED STATES TO PAY FIXED PERCENTAGE OF INTEREST YIELD ON TAXABLE ISSUES.

(a) PERMANENT APPROPRIATION.—There are appropriated, out of any moneys in the Treasury not otherwise appropriated, such sums as may be necessary to carry out the provisions of this section; and such appropriations shall be deemed permanent annual appropriations.

(b) PAYMENT OF FIXED PERCENTAGE OF INTEREST YIELD.—

(1) IN GENERAL.—The Secretary of the Treasury or his delegate shall pay a fixed percentage of the interest yield on each issue of obligations to which an election under section 103(b) of the Internal Revenue Code of 1954 applies. Before the first day of each calendar quarter, the Secretary or his delegate shall determine (and publish in the Federal Register) the fixed percentage—

(A) for calendar quarters beginning before January 1, 1975, not less than 30 percent and not more than 40 percent, and

(B) for calendar quarters beginning after December 31, 1974, not less than 25 percent and not more than 40 percent,

of interest yield which he determines it is necessary for the United States to pay in order to encourage the States and political subdivisions thereof to make elections under section 103(b). The fixed percentage so determined and published shall apply with respect to all issues of obligations made during such calendar quarter to which elections under such section 103(b) apply.

(2) INTEREST YIELD.—For purposes of this section, the interest yield on any issue of obligations shall be determined immediately after such obligations are issued.

(3) TIME OF PAYMENT.—Payment of any interest required pursuant to paragraph (1) shall be made by the Secretary of the Treasury or his delegate not later than the time at which the interest payment on the obligation is required to be made by the issuer.

(c) DUAL COUPON OBLIGATIONS.—At the request of the issuer, the liability of the United States under this section to pay interest to the holders of an issue of obligations shall be made through assumption by the United States of the obligation to pay a separate set of interest coupons issued with the obligations.

(d) SECTION TO APPLY ONLY TO SECTION 103(b) OBLIGATIONS.—This section shall apply only to obligations which, but for an election under section 103(b) of the Internal Revenue Code of 1954, would be obligations to which section 103(a)(1) of such Code applies.

(e) EFFECTIVE DATE.—This section shall apply only to obligations issued in calendar quarters beginning after the date of the enactment of this section.

TITLE VII—EXTENSION OF TAX SURCHARGE AND EXCISE TAXES; TERMINATION OF INVESTMENT CREDIT

SEC. 701. EXTENSION OF TAX SURCHARGE.

(a) SURCHARGE EXTENSION.—Section 51(a) (relating to imposition of tax surcharge) is amended—

(1) by adding at the end of paragraph (1) (A) the following:

"CALENDAR YEAR 1970

"TABLE 1.—SINGLE PERSON (OTHER THAN HEAD OF HOUSEHOLD) AND MARRIED PERSONS FILING SEPARATE RETURN

"If the adjusted tax is: At least	But less than	The tax is—

980 and over,		2.5% of the adjusted tax.

(2) by striking out the table in paragraph (1)(B) and inserting in lieu thereof the following table:

"Calendar year	Percent: Estates and trusts	Corporations
1968	7.5	10.0
1969	10.0	10.0
1970	2.5	2.5".

(3) by striking out "January 1, 1970" the first time it appears in paragraph (2)(A) and inserting in lieu thereof "July 1, 1970", and

(4) by striking out paragraph (2)(A)(ii) and inserting in lieu thereof the following:

"(ii) a fraction, the numerator of which is the sum of the number of days in the taxable year occurring on and after the effective date of the surcharge and before January 1, 1970, plus one-half times the number of days in the taxable year occurring after December 31, 1969, and before July 1, 1970, and the denominator of which is the number of days in the entire taxable year."

(b) RECEIPT OF MINIMUM DISTRIBUTIONS.—The last sentence of section 963(b) (relating to receipt of minimum distributions by domestic corporations) is amended by striking out "December 31, 1969" and inserting in lieu thereof "June 30, 1970".

(c) EFFECTIVE DATES.—The amendments made by subsections (a) and (b) shall apply to taxable years ending after December 31, 1969, and beginning before July 1, 1970.

SEC. 702. CONTINUATION OF EXCISE TAXES ON COMMUNICATION SERVICES AND ON AUTOMOBILES.

(a) PASSENGER AUTOMOBILES.—

(1) IN GENERAL.—Section 4061(a)(2)(A) (relating to tax on passenger automobiles, etc.) is amended to read as follows:

"(A) Articles enumerated in subparagraph (B) are taxable at whichever of the following rates is applicable:

"If the article is sold—	The tax rate is—
Before January 1, 1971	7 percent.
During 1971	5 percent.
During 1972	3 percent.
During 1973	1 percent.

The tax imposed by this subsection shall not apply with respect to articles enumerated in subparagraph (B) which are sold by the

manufacturer, producer, or importer after December 31, 1973."

(2) CONFORMING AMENDMENT.—Section 6412(a)(1) (relating to floor stocks refunds on passenger automobiles, etc.) is amended by striking out "January 1, 1970, January 1, 1971, January 1, 1972, or January 1, 1973", and inserting in lieu thereof "January 1, 1971, January 1, 1972, January 1, 1973, or January 1, 1974".

(b) COMMUNICATIONS SERVICES.—

(1) CONTINUATION OF TAX.—Section 4251(a)(2) (relating to tax on certain communications services) is amended by striking out the table and inserting in lieu thereof the following table:

"Amounts paid pursuant to bills first rendered—	Percent—
Before January 1, 1971	10
During 1971	5
During 1972	3
During 1973	1".

(2) CONFORMING AMENDMENT.—Section 4251(b) (relating to termination of tax) is amended by striking out "January 1, 1973", and inserting in lieu thereof "January 1, 1974".

(3) REPEAL OF SUBCHAPTER B OF CHAPTER 33.—Section 105(b)(3) of the Revenue and Expenditure Control Act of 1968 (82 Stat. 266) is amended to read as follows:

"(3) REPEAL OF SUBCHAPTER B OF CHAPTER 33.—Effective with respect to amounts paid pursuant to bills first rendered on or after January 1, 1974, subchapter B of chapter 33 (relating to the tax on communications) is repealed. For purposes of the preceding sentence, in the case of communications services rendered before November 1, 1973, for which a bill has not been rendered before January 1, 1974, a bill shall be treated as having been first rendered on December 31, 1973. Effective January 1, 1974, the table of subchapters for chapter 33 is amended by striking out the item relating to such subchapter B."

SEC. 703. TERMINATION OF INVESTMENT CREDIT.

(a) IN GENERAL.—Subpart B of part IV of subchapter A of chapter 1 (relating to rules for computing credit for investment in certain depreciable property) is amended by adding at the end thereof the following new section:

"SEC. 49. TERMINATION OF CREDIT.

"(a) GENERAL RULE.—For purposes of this subpart, the term 'section 38 property' does not include property—

"(1) the physical construction, reconstruction, or erection of which is begun after April 18, 1969, or

"(2) which is acquired by the taxpayer after April 18, 1969,

other than pre-termination property.

"(b) PRE-TERMINATION PROPERTY.—For purposes of this section—

"(1) BINDING CONTRACTS.—Any property shall be treated as pre-termination property to the extent that such property is constructed, reconstructed, erected, or acquired pursuant to a contract which was, on April 18, 1969, and at all times thereafter, binding on the taxpayer.

"(2) EQUIPPED BUILDING RULE.—If—

"(A) pursuant to a plan of the taxpayer in existence on April 18, 1969 (which plan was not substantially modified at any time after such date and before the taxpayer placed the equipped building in service), the taxpayer has constructed, reconstructed, erected, or acquired a building and the machinery and equipment necessary to the planned use of the building by the taxpayer, and

"(B) more than 50 percent of the aggregate adjusted basis of all the property of a character subject to the allowance for depreciation making up such building as so equipped is attributable to either property the construction, reconstruction, or erection of which was begun by the taxpayer before April 19, 1969, or property the acquisition of which by the taxpayer occurred before such date,

then all property comprising such building as so equipped (and any incidental property adjacent to such building which is necessary to the planned use of the building) shall be pre-termination property. For purposes of subparagraph (B) of the preceding sentence, the rules of paragraphs (1) and (4) shall be applied. For purposes of this paragraph, a special purpose structure shall be treated as a building.

"(3) PLANT FACILITY RULE.—

"(A) GENERAL RULE.—If—

"(i) pursuant to a plan of the taxpayer in existence on April 18, 1969 (which plan was not substantially modified at any time after such date and before the taxpayer placed the plant facility in service), the taxpayer has constructed, reconstructed, or erected a plant facility, and either

"(ii) the construction, reconstruction, or erection of such plant facility was commenced by the taxpayer before April 19, 1969, or

"(iii) more than 50 percent of the aggregate adjusted basis of all the property of a character subject to the allowance for depreciation making up such plant facility is attributable to either property the construction, reconstruction, or erection of which was begun by the taxpayer before April 19, 1969, or property the acquisition of which by the taxpayer occurred before such date,

then all property comprising such plant facility shall be pre-termination property. For purposes of clause (iii) of the preceding sentence, the rules of paragraphs (1) and (4) shall be applied.

"(B) PLANT FACILITY DEFINED.—For purposes of this paragraph, the term 'plant facility' means a facility which does not include any building (or of which buildings constitute an insignificant portion) and which is—

"(i) a self-contained, single operating unit or processing operation,

"(ii) located on a single site, and

"(iii) identified, on April 18, 1969, in the purchasing and internal financial plans of the taxpayer as a single unitary project.

"(C) SPECIAL RULE.—For purposes of this subsection, if—

"(i) a certificate of convenience and necessity has been issued before April 19, 1969, by a Federal regulatory agency with respect to two or more plant facilities which are included under a single plan of the taxpayer to construct, reconstruct, or erect such plant facilities, and

"(ii) more than 50 percent of the aggregate adjusted basis of all the property of a character subject to the allowance for depreciation making up such plant facilities is attributable to either property the construction, reconstruction, or erection of which was begun by the taxpayer before April 19, 1969, or property the acquisition of which by the taxpayer occurred before such date,

such plant facilities shall be treated as a single plant facility.

"(D) COMMENCEMENT OF CONSTRUCTION.—For purposes of subparagraph (A)(ii), the construction, reconstruction, or erection of a plant facility shall not be considered to have commenced until construction, reconstruction, or erection has commenced at the site of such plant facility. The preceding sentence shall not apply if the site of such plant facility is not located on land.

"(4) MACHINERY OR EQUIPMENT RULE.—Any piece of machinery or equipment—

"(A) more than 50 percent of the parts and components of which (determined on the basis of cost) were held by the taxpayer on April 18, 1969, or are acquired by the taxpayer pursuant to a binding contract which was in effect on such date, for inclusion or use in such piece of machinery or equipment, and

"(B) the cost of the parts and components of which is not an insignificant portion of the total cost,

shall be treated as property which is pre-termination property.

"(5) CERTAIN LEASE-BACK TRANSACTIONS, ETC.—Where a person who is a party to a binding contract described in paragraph (1) transfers rights in such contract (or in the property to which such contract relates) to another person but a party to such contract retains a right to use the property under a lease with such other person, then to the extent of the transferred rights such other person shall, for purposes of paragraph (1), succeed to the position of the transferor with respect to such binding contract and such property. In any case in which the lessor does not make an election under section 48(d)—

"(A) the preceding sentence shall apply only if a party to the contract retains the right to use the property under a lease for a term of at least 1 year; and

"(B) if such use is retained, the lessor shall be deemed for the purposes of section 47 as having made a disposition of the property at such time as the lessee loses the right to use the property.

For purposes of subparagraph (B), if the lessee transfers the lease in a transfer described in paragraph (7), the lessee shall be considered as having the right to use of the property so long as the transferee has such use.

"(6) CERTAIN LEASE AND CONTRACT OBLIGATIONS.—

"(A) Where, pursuant to a binding lease or contract to lease in effect on April 18, 1969, a lessor or lessee is obligated to construct, reconstruct, erect, or acquire property specified in such lease or contract, any property so constructed, reconstructed, erected, or acquired by the lessor or lessee shall be pre-termination property. In the case of any project which includes property other than the property to be leased to such lessee, the preceding sentence shall be applied, in the case of the lessor, to such other property only if the binding leases and contracts with all lessees in effect on April 18, 1969, cover real property constituting 25 percent or more of the project (determined on the basis of rental value). For purposes of the preceding sentences of this paragraph, in the case of any project where one or more vendor-vendee relationships exist, such vendors and vendees shall be treated as lessors and lessees.

"(B) Where, in order to perform a binding contract or contracts in effect on April 18, 1969, (i) the taxpayer is required to construct reconstruct, erect, or acquire property specified in any order of a Federal regulatory agency for which application was filed before April 19, 1969, (ii) the property is to be used to transport one or more products under such contract or contracts, and (iii) one or more parties to the contract or contracts are required to take or to provide more than 50 percent of the products to be transported over a substantial portion of the expected useful life of the property, then such property shall be pre-termination property.

"(7) CERTAIN TRANSFERS TO BE DISREGARDED.

"(A) If property or rights under a contract are transferred in—

"(i) a transfer by reason of death, or

"(ii) a transaction as a result of which the basis of the property in the hands of the transferee is determined by reference to its basis in the hands of the transferor by reason of the application of sections 332, 351, 361, 371(a), 374(a), 721, or 731,

and such property (or the property acquired under such contract) would be treated as pre-termination property in the hands of the decedent or the transferor, such property shall be treated as pre-termination property in the hands of the transferee.

"(B) If—

"(i) property or rights under a contract

are acquired in a transaction to which section 334 (b) (2) applies,

"(ii) the stock of the distributing corporation was acquired before April 19, 1969, or pursuant to a binding contract in effect April 18, 1969, and

"(iii) such property (or the property acquired under such contract) would be treated as pre-termination property in the hands of the distributing corporation,

such property shall be treated as pre-termination property in the hands of the distributee.

"(8) PROPERTY ACQUIRED FROM AFFILIATED CORPORATION.—For purposes of this subsection, in the case of property acquired by a corporation which is a member of an affiliated group from another member of the same group—

"(A) such corporation shall be treated as having acquired such property on the date on which it was acquired by such other member,

"(B) such corporation shall be treated as having entered into a binding contract for the construction, reconstruction, erection, or acquisition of such property on the date on which such other member entered ito a contract for the construction, reconstruction, erection, or acquisition of such property, and

"(C) such corporation shall be treated as having commenced the construction, reconstruction, or erection of such property on the date on which such other member commenced such construction, reconstruction, or erection.

For purposes of this subsection and subsection (c), a contract between two members of an affiliated group shall not be treated as a binding contract as between such members. For purposes of the preceding sentences, the term 'affiliated group' has the meaning assigned to it by section 1504(a), except that all corporations shall be treated as includible corporations (without any exclusion under section 1504(b)).

"(9) BARGES FOR OCEAN-GOING VESSELS.—In the case of any ocean-going vessel which is—

"(A) pre-termination property,

"(B) constructed under a binding contract which was in effect on April 18, 1969, to which the Maritime Administration, Department of Commerce, is a party, and

"(C) designed to carry barges,

then the barges specified in such contract (not in excess of the number specified in such contract) constructed, reconstructed, erected, or acquired for use with such vessel, together with the machinery and equipment to be installed on such barges and necessary for their planned use, shall be treated as pre-termination property.

"(10) CERTAIN NEW-DESIGN PRODUCTS.—Where—

"(A) on April 18, 1969, the taxpayer had undertaken a project to produce a product of a new design pursuant to binding contracts in effect on such date which—

"(i) were fixed-price contracts (except for provisions for escalation in case of changes in rates of pay), and

"(ii) covered more than 60 percent of the entire production of such design to be delivered by the taxpayer before January 1, 1973, and

"(B) on or before April 18, 1969, more than 50 percent of the aggregate adjusted basis of all property of a character subject to the allowance for depreciation required to carry out such binding contracts was property the construction, reconstruction, or erection of which had been begun by the taxpayer, or had been acquired by the taxpayer (or was under a binding contract for such construction, reconstruction, erection, or acquisition),

then all tangible personal property placed in service by the taxpayer before January 1, 1972, which is required to carry out such binding contracts shall be deemed to be pre-termination property. For purposes of subparagraph (B) of the preceding sentence, jigs, dies, templates, and similar items which can be used only for the manufacture or assembly of the production under the project and which were described in written engineering and internal financial plans of the taxpayer in existence on April 18, 1969, shall be treated as property which on such date was under a binding contract for construction.

"(c) LEASED PROPERTY.—In the case of property which is leased after April 18, 1969 (other than pursuant to a binding contract to lease entered into before April 19, 1969), which is section 38 property with respect to the lessor but is property which would not be section 38 property because of the application of subsection (a) if acquired by the lessee, and which is property of the same kind which the lessor ordinarily sold to customers before April 19, 1969, or ordinarily leased before such date and made an election under section 48(d), such property shall not be section 38 property with respect to either the lessor or the lessee.

"(d) RATE OF CREDIT WHERE PROPERTY IS PLACED IN SERVICE AFTER 1970.—In the case of property placed in service after December 31, 1970, section 38 and this subpart shall be applied by reducing the 7 percent figure of section 46 (a) (1) by one-tenth of 1 percent for each full calendar month between November 30, 1970, and the date on which the property is placed in service, except that in the case of property placed in service after December 31, 1974, 0 percent shall be substituted for 7 percent."

(b) LIMITATIONS ON USE OF CARRYOVERS AND CARRYBACKS.—Section 46(b) (relating to carryback and carryover of unused credits) is amended by adding at the end thereof the following new paragraph:

"(5) TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1968, AND ENDING AFTER APRIL 18, 1969.—The amount which may be added under this subsection for any taxable year beginning after December 31, 1968, and ending after April 18, 1969, shall not exceed 20 percent of the higher of—

"(A) the aggregate of the investment credit carrybacks and investment credit carryovers to the taxable year, or

"(B) the highest amount computed under subparagraph (A) for any preceding taxable year which began after December 31, 1968, and ended after April 18, 1969."

(c) RULES RELATING TO CERTAIN CASUALTIES AND THEFTS.—Section 47(a) (4) (relating to rules with respect to section 38 property destroyed by casualty, etc.) is amended by adding at the end thereof the following:

"Subparagraphs (B) and (C) shall not apply with respect to any casualty or theft occurring after April 18, 1969. In the case of any casualty or theft occurring on or before April 18, 1969, to the extent of any replacement after such date (with property which would be section 38 property but for section 49) this part shall be applied without regard to section 49."

(d) CONFORMING AMENDMENT.—The table of sections for subpart B of part IV of subchapter A of chapter 1 (relating to rules for computing credit for investment in certain depreciable property) is amended by adding at the end thereof the following new item:

"Sec. 49. Termination of credit."

SEC. 704. AMORTIZATION OF POLLUTION CONTROL FACILITIES.

(a) ALLOWANCE.—Part VI of subchapter B of chapter 1 (relating to itemized deductions for individuals and corporations) is amended by striking out sections 168 and 169 and by inserting after section 167 the following new section:

"SEC. 168. AMORTIZATION OF POLLUTION CONTROL FACILITIES.

"(a) ALLOWANCE OF DEDUCTION.—Every person, at his election, shall be entitled to a deduction with respect to the amortization of the adjusted basis (for determining gain) of any certified pollution control facility (as defined in subsection (d)), based on a period of 60 months. Such amortization deduction shall be an amount, with respect to each month of such period within the taxable year, equal to the adjusted basis of the pollution control facility at the end of such month divided by the number of months (including the month for which the deduction is computed) remaining in the period. Such adjusted basis at the end of the month shall be computed without regard to the amortization deduction for such month. The amortization deduction provided by this section with respect to any month shall be in lieu of the depreciation deduction with respect to such pollution control facility for such month provided by section 167. The 60-month period shall begin, as to any pollution control facility, at the election of the taxpayer, with the month following the month in which such facility was completed or acquired, or with the succeeding taxable year.

"(b) ELECTION OF AMORTIZATION.—The election of the taxpayer to take the amortization deduction and to begin the 60-month period with the month following the month in which the facility is completed or acquired, or with the taxable year succeeding the taxable year in which such facility is completed or acquired, shall be made by filing with the Secretary or his delegate, in such manner, in such form, and within such time, as the Secretary or his delegate may by regulations prescribe, a statement of such election.

"(c) TERMINATION OF AMORTIZATION DEDUCTION.—A taxpayer which has elected under subsection (b) to take the amortization deduction provided in subsection (a) may, at any time after making such election, discontinue the amortization deduction with respect to the remainder of the amortization period, such discontinuance to begin as of the beginning of any month specified by the taxpayer in a notice in writing filed with the Secretary or his delegate before the beginning of such month. The depreciation deduction provided under section 167 shall be allowed, beginning with the first month as to which the amortization deduction does not apply, and the taxpayer shall not be entitled to any further amortization deduction under this section with respect to such pollution control facility.

"(d) DEFINITIONS.—For purposes of this section—

"(1) CERTIFIED POLLUTION CONTROL FACILITY.—The term 'certified pollution control facility' means a new identifiable treatment facility which is used to abate or control water or atmospheric pollution or contamination, respectively, by removing, altering, disposing, or storing of pollutants, contaminants, wastes, or heat and which—

"(A) the State certifying authority having jurisdiction with respect to such facility has certified to the Federal certifying authority as having been constructed, reconstructed, erected, or acquired in conformity with the State program or requirements for abatement or control of water or atmospheric pollution or contamination; and

"(B) the Federal certifying authority has certified to the Secretary or his delegate (i) as meeting the minimum performance standards described in subsection (e), (ii) as being in compliance with the applicable regulations of Federal agencies, and (iii) as being in furtherance of the general policy of the United States for cooperation with the States in the prevention and abatement of water pollution under the Federal Water Pollution Control Act, as amended (33 U.S.C. 466 et seq.), or in the prevention and abatement of atmospheric pollution and contamination under the Clean Air Act, as amended (42 U.S.C. 1857 et seq.).

"(2) STATE CERTIFYING AUTHORITY.—The term 'State certifying authority' means, in the case of water pollution, the State water pollution control agency as defined in section 13(a) of the Federal Water Pollution Control Act and, in the case of air pollution, the air pollution control agency as defined

in section 302(b) of the Clean Air Act. The term 'State certifying authority' includes any interstate agency authorized to act in place of a certifying authority of the State.

"(3) FEDERAL CERTIFYING AUTHORITY.—The term 'Federal certifying authority' means, in the case of water pollution, the Secretary of the Interior and, in the case of air pollution, the Secretary of Health, Education, and Welfare.

"(4) NEW IDENTIFIABLE TREATMENT FACILITY.—For purposes of paragraph (1), the term 'new identifiable treatment facility' includes only tangible property (not including a building and its structural components, other than a building which is exclusively a treatment facility) which is of a character subject to the allowance for depreciation provided in section 167, which is identifiable as a treatment facility, and which is property—

"(A) the construction, reconstruction, or erection of which is completed by the taxpayer after December 31, 1968, or

"(B) acquired after December 31, 1968, if the original use of the property commences with the taxpayer and commences after such date.

In applying this section in the case of property described in subparagraph (A), there shall be taken into account only that portion of the basis which is properly attributable to construction, reconstruction, or erection after December 31, 1968.

"(e) AUTHORIZATION OF SECRETARY OF INTERIOR AND OF HEALTH, EDUCATION, AND WELFARE TO SET STANDARDS, ETC.—

"(1) PERFORMANCE STANDARDS.—The Federal certifying authority shall from time to time promulgate minimum performance standards for purposes of subsection (d)(1)(B), taking into account advances in technology and specifying the tolerance of such pollutants and contaminants as shall be appropriate.

"(2) PROFITMAKING ABATEMENT WORKS, ETC.—The Federal certifying authority shall not certify any property under subsection (d)(1)(B) to the extent it appears that (A) by reason of profits derived through the recovery of wastes or otherwise in the operation of such property, its costs will be recovered over its actual useful life, or (B) such property would be constructed, reconstructed, erected, or acquired without regard to the need to abate or control water or atmospheric pollution or contamination.

"(f) ALLOCATION OF BASIS.—In the case of property with respect to which an election has been made under subsection (a) but only a portion of the adjusted basis of which is amortizable under this section, such portion of the adjusted basis (hereinafter in this section referred to as 'amortization basis') shall be determined under regulations prescribed by the Secretary of his delegate. The depreciation deduction provided by section 167 shall, despite the provisions of subsection (a) of this section, be allowed with respect to the portion of the adjusted basis which is not amortizable under this section.

"(g) INVESTMENT CREDIT NOT TO BE ALLOWED.—In the case of any property with respect to which an election has been made under subsection (a), so much of the adjusted basis of the property as (after the application of subsection (f)) constitutes the amortization basis for purposes of this section shall not be treated as section 38 property within the meaning of section 48(a).

"(h) LIFE TENANT AND REMAINDERMAN.—In the case of property held by one person for life with remainder to another person, the deduction under this section shall be computed as if the life tenant were the absolute owner of the property and shall be allowable to the life tenant.

(i) CROSS REFERENCE.—

"For special rule with respect to certain gain derived from the disposition of property the adjusted basis of which is determined with regard to this section, see section 1245."

(b) CONFORMING, ETC., AMENDMENTS.—

(1) The table of sections for part VI of subchapter B of chapter 1 is amended by striking out the items relating to sections 168 and 169 and inserting in lieu thereof the following new item:

"Sec. 168. Amortization of pollution control facilities."

(2) The heading and the first sentence of section 642(f) (relating to special rules for credits and deductions of estates and trusts) are amended to read as follows:

"(f) AMORTIZATION OF POLLUTION CONTROL FACILITIES.—The benefit of the deductions for amortization of pollution control facilities provided by section 168 shall be allowed to estates and trust in the same manner as in the case of an individual."

(3) Section 1082(a)(2)(B) (relating to basis for determining gain or loss) is amended by striking out "or 169".

(4) Section 1245(a) of such Code (relating to gain from disposition of certain depreciable property) is amended—

(A) by striking out "or" at the end of paragraph (2)(A);

(B) by inserting "or" at the end of paragraph (2)(B) and by inserting after such paragraph the following new subparagraph:

"(C) with respect to any property referred to in paragraph (3)(D), its adjusted basis recomputed by adding thereto all adjustments attributable to periods beginning with the first month for which a deduction for amortization is allowed under section 168,";

(C) by striking out "or" at the end of paragraphs (3)(A) and (B);

(D) by striking out the period at the end of paragraph (3)(C) and inserting in lieu thereof ", or"; and

(E) by adding at the end of paragraph (3) the following new subparagraph:

"(D) so much of any real property (other than any property described in subparagraph (B)) as is a certified pollution control facility which has an adjusted basis in which there are reflected adjustments for amortization under section 168."

(c) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to taxable years ending after December 31, 1968.

SEC. 705. DEPRECIATION OF CERTAIN RAILROAD ROLLING STOCK.

(a) IN GENERAL.—Section 167 (relating to depreciation) is amended by inserting after subsection (l) (added by section 451) the following new subsection:

"(m) DEPRECIATION OF CERTAIN RAILROAD ROLLING STOCK.—A domestic common carrier by railroad subject to part I of the Interstate Commerce Act may elect, in accordance with regulations prescribed by the Secretary or his delegate, to compute the depreciation deduction provided by subsection (a) attributable to railroad rolling stock (other than locomotives)—

"(1) the construction or reconstruction of which is completed by the taxpayer after July 31, 1969, and then only to that portion of the basis which is properly attributable to such construction or reconstruction after such date, or

"(2) which was acquired by the taxpayer after July 31, 1969, if the original use of such property commences with the taxpayer and commences after such date,

under the straight line method using a useful life of 84 months. Such method shall be in lieu of any other method of computing the depreciation deduction under subsection (a) and in lieu of any deduction for amortization."

(b) EFFECTIVE DATE.—The amendments made by subsection (a) shall apply with respect to taxable years ending after July 31, 1969.

TITLE VIII—ADJUSTMENT OF TAX BURDEN FOR INDIVIDUALS

SEC. 801. LOW INCOME ALLOWANCE; INCREASE IN STANDARD DEDUCTION.

(a) IN GENERAL.—Section 141 (relating to the standard deduction) is amended by striking out subsections (a), (b), and (c) and inserting in lieu thereof the following:

"(a) STANDARD DEDUCTION.—Except as otherwise provided in this section, the standard deduction referred to in this title is the larger of the percentage standard deduction or the low income allowance.

"(b) PERCENTAGE STANDARD DEDUCTION.—The percentage standard deduction is an amount equal to the applicable percentage of adjusted gross income shown in the following table, but not to exceed the maximum amount shown in such table (or one-half of such amount in the case of a separate return by a married individual):

"Taxable years beginning in—	Applicable percentage	Maximum amount
1970	13	$1,400
1971	14	1,700
1972 and thereafter	15	2,000".

"(c) LOW INCOME ALLOWANCE.—

"(1) IN GENERAL.—The low income allowance is an amount equal to the sum of—

"(A) the basic allowance, and

"(B) the additional allowance.

"(2) BASIC ALLOWANCE.—For purposes of this subsection, the basic allowance is an amount equal to the sum of—

"(A) $200, plus

"(B) $100, multiplied by the number of exemptions.

The basic allowance shall not exceed $1,000.

"(3) ADDITIONAL ALLOWANCE.—

"(A) IN GENERAL.—For purposes of this subsection, the additional allowance is an amount equal to the excess (if any) of $900 over the sum of—

"(i) $100, multiplied by the number of exemptions, plus

"(ii) the income phase-out.

"(B) INCOME PHASE-OUT.—For purposes of subparagraph (A)(ii), the income phase-out is an amount equal to one-half of the amount by which the adjusted gross income for the taxable year exceeds the sum of—

"(i) $1,100, plus

"(ii) $600, multiplied by the number of exemptions.

"(4) MARRIED INDIVIDUALS FILING SEPARATE RETURNS.—In the case of a married taxpayer filing a separate return—

"(A) the low income allowance is an amount equal to the basic allowance, and

"(B) the basic allowance is an amount (not in excess of $550) equal to the sum of—

"(i) $100, plus

"(ii) $100, multiplied by the number of exemptions.

"(5) NUMBER OF EXEMPTIONS.—For purposes of this subsection, the number of exemptions is the number of exemptions allowed as a deduction for the taxable year under section 151."

(b) DETERMINATION OF MARITAL STATUS.—Section 143 (relating to determination of marital status) is amended—

(1) by striking out "For purposes of this part—" and inserting in lieu thereof "(a) GENERAL RULE.—For purposes of this part—"; and

(2) by adding at the end thereof the following new subsection:

"(b) CERTAIN MARRIED INDIVIDUALS LIVING APART.—For purposes of this part, if—

"(1) an individual who is married (within the meaning of subsection (a)) and who files a separate return maintains as his home a household which constitutes for more than one-half of the taxable year the principal place of abode of a dependent (A) who (within the meaning of section 152) is a son, stepson, daughter, or stepdaughter of

the individual, and (B) with respect to whom such individual is entitled to a deduction for the taxable year under section 151,

"(2) such individual furnishes over half of the cost of maintaining such household during the taxable year, and

"(3) during the entire taxable year such individual's spouse is not a member of such household,

such individual shall not be considered as married."

(c) TECHNICAL AND CONFORMING AMENDMENTS.—

(1) Section 4(c) (relating to married individuals filing separate returns) is amended to read as follows:

"(c) HUSBAND OR WIFE FILING SEPARATE RETURNS.—

"(1) A husband or wife may not elect to pay the optional tax imposed by section 3 if the tax of the other spouse is determined under section 1 on the basis of taxable income computed without regard to the standard deduction.

"(2) Except as otherwise provided in this subsection, in the case of a husband or wife filing a separate return the tax imposed by section 3 shall be the lesser of the tax shown in Table IV or Table V of section 3.

"(3) Table V of section 3 shall not apply in the case of a husband or wife filing a separate return if the tax of the other spouse is determined with regard to the percentage standard deduction; except that an individual described in section 141(d)(2) may elect (under regulations prescribed by the Secretary or his delegate) to pay the tax shown in Table V of section 3 in lieu of the tax shown in Table IV of section 3. For purposes of this title, an election under the preceding sentence shall be treated as an election made under section 141(d)(2).

"(4) For purposes of this subsection, determination of marital status shall be made under section 143."

(2) Section 141(d) (relating to married individuals filing separate returns) is amended—

(A) by striking out "minimum standard deduction" each place it appears and inserting in lieu thereof "low income allowance"; and

(B) by striking out "10-percent" each place it appears therein and inserting in lieu thereof "percentage".

(3) Section 1304(c)(5) (relating to special rules for income averaging) is amended by striking out "section 143" and inserting in lieu thereof "section 143(a)".

(4) Section 6014(a) (relating to tax not computed by taxpayer) is amended by striking out the last sentence.

(d) EFFECTIVE DATE.—The amendments made by subsections (a), (b), and (c) shall apply to taxable years beginning after December 31, 1969.

(e) YEARS AFTER 1970.—Effective with respect to taxable years beginning after December 31, 1970, section 141(c) (relating to low income allowance), as amended by subsection (a), is amended to read as follows:

"(c) LOW INCOME ALLOWANCE.—The low income allowance is $1,100 ($550, in the case of a married individual filing a separate return)."

"SEC. 802. FIFTY-PERCENT MAXIMUM RATE ON EARNED INCOME.

(a) IN GENERAL.—Part VI of subchapter Q of chapter 1 (relating to other limitations) is amended by adding at the end thereof the following new section:

"SEC. 1348. FIFTY-PERCENT MAXIMUM RATE ON EARNED INCOME.

"(a) GENERAL RULE.—If an individual has earned taxable income for any taxable year beginning after December 31, 1969, which exceeds the amount of taxable income specified in paragraph (1), the tax imposed by section 1 for such year shall, unless the taxpayer chooses the benefits of part I (relating to income averaging), be the sum of—

"(1) the tax imposed by section 1 on the lowest amount of taxable income on which the rate of tax under section 1 exceeds 50 percent,

"(2) 50 percent of the amount by which his earned taxable income exceeds the lowest amount of taxable income on which the rate of tax under section 1 exceeds 50 percent, and

"(3) the tax attributable to the remainder of his taxable income, as determined under subsection (b)(3).

"(b) DEFINITIONS.—For purposes of this section—

"(1) EARNED INCOME.—The term 'earned income' has the meaning assigned to such term by section 911(b), except that such term does not include any distribution to which section 72(n), 402(a)(2), or 403(a)(2) applies or any deferred compensation payment.

"(2) EARNED TAXABLE INCOME.—The earned taxable income of an individual is the amount which bears the same ratio (but not in excess of 100 percent) to his taxable income as his earned income bears to his adjusted gross income.

"(3) TAX ON OTHER INCOME.—For purposes of subsection (a)(3), the tax attributable to the remainder of any individual's taxable income is the amount by which the tax computed under section 1 without regard to this section exceeds the tax so computed with reference solely to his earned taxable income.

"(c) MARRIED INDIVIDUALS.—This section shall apply to a married individual only if such individual and his spouse make a joint return for the taxable year."

(b) CLERICAL AMENDMENT.—The table of sections for part VI of subchapter Q of chapter 1 is amended by adding at the end thereof the following new item:

"Sec. 1348. Fifty-percent maximum rate on earned income."

SEC. 803. INTERMEDIATE TAX RATES; SURVIVING SPOUSE TREATMENT.

(a) INTERMEDIATE TAX RATE INDIVIDUALS.—

(1) IN GENERAL.—Section 1(b)(2) (relating to head of household) is amended—

(A) by striking out so much of such paragraph as proceeds subparagraph (A) and inserting in lieu thereof the following:

"(2) DEFINITION OF INTERMEDIATE TAX RATE INDIVIDUALS.—For purposes of this subtitle, an individual is an intermediate tax rate individual if, and only if, such individual is not married at the close of his taxable year, is not a surviving spouse (as defined in section 2(b)), and—";

(B) by striking out "or" at the end of subparagraph (A) and by striking out the period at the end of subparagraph (B) and inserting in lieu thereof ", or"; and

(C) by inserting after subparagraph (B) the following new subparagraph:

"(C) has attained age 35 before the close of his taxable year or is an individual whose spouse died before the beginning of his taxable year."

(2) TECHNICAL AND CONFORMING AMENDMENTS.—

(A) Section 1(b)(3) is amended by striking out "and" at the end of subparagraph (C), by striking out the period at the end of subparagraph (D) and inserting in lieu thereof "; and", and by adding at the end thereof the following new subparagraph:

"(E) if an individual has been married two or more times, the status of such individual shall be determined only with reference to his last marriage."

(B) Section 1(b)(4) is amended by striking out "a head of a household" and inserting in lieu thereof "an intermediate tax rate individual".

(C) Sections 6014 and 6015 are amended by striking out "a head of a household" each place it appears in such sections and inserting in lieu thereof "an intermediate tax rate individual".

(b) SURVIVING SPOUSE.—Section 2(b)(1)(A) (relating to surviving spouse) is amended to read as follows:

"(A) whose spouse died before the beginning of the taxable year, and".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to taxable years beginning after December 31, 1969.

SEC. 804. TAX RATES.

(a) RATES OF TAX ON INDIVIDUALS.—Section 1(a) is amended by inserting "and before January 1, 1971," after "December 31, 1964," each place it appears and by adding at the end thereof the following new paragraphs:

"(3) TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1970.—In the case of a taxable year beginning after December 31, 1970, there is hereby imposed on the taxable income of every individual (other than an intermediate tax rate individual to whom subsection (b) applies) a tax determined in accordance with the following table:

"If the taxable income is:	The tax is:
Not over $500	14% of the taxable income.
Over $500 but not over $1,000.	$70, plus 15% of excess over $500.
Over $1,000 but not over $1,500.	$145, plus 16% of excess over $1,000.
Over $1,500 but not over $2,000.	$225, plus 17% of excess over $1,500.
Over $2,000 but not over $4,000.	$310, plus 19% of excess over $2,000.
Over $4,000 but not over $6,000.	$690, plus 21.5% of excess over $4,000.
Over $6,000 but not over $8,000.	$1,120, plus 24% of excess over $6,000.
Over $8,000 but not over $10,000.	$1,600, plus 27.5% of excess over $8,000.
Over $10,000 but not over $12,000.	$2,150, plus 31.5% of excess over $10,000.
Over $12,000 but not over $14,000.	$2,780, plus 35.5% of excess over $12,000.
Over $14,000 but not over $16,000.	$3,490, plus 38% of excess over $14,000.
Over $16,000 but not over $18,000.	$4,250, plus 41% of excess over $16,000.
Over $18,000 but not over $20,000.	$5,070, plus 43.5% of excess over $18,000.
Over $20,000 but not over $22,000.	$5,940, plus 46% of excess over $20,000.
Over $22,000 but not over $26,000.	$6,860, plus 48.5% of excess over $22,000.
Over $26,000 but not over $32,000.	$8,800, plus 51% of excess over $26,000.
Over $32,000 but not over $38,000.	$11,860, plus 52.5% of excess over $32,000.
Over $38,000 but not over $44,000.	$15,010, plus 55% of excess over $38,000.
Over $44,000 but not over $50,000.	$18,310, plus 57% of excess over $44,000.
Over $50,000 but not over $60,000.	$21,730, plus 60% of excess over $50,000.
Over $60,000 but not over $70,000.	$27,730, plus 62% of excess over $60,000.
Over $70,000 but not over $80,000.	$33,930, plus 63% of excess over $70,000.
Over $80,000 but not over $90,000.	$40,230, plus 64.5% of excess over $80,000.
Over $90,000 but not over $100,000.	$46,680, plus 65% of excess over $90,000.
Over $100,000 but not over $120,000.	$53,180, plus 66% of excess over $100,000.
Over $120,000 but not over $150,000.	$66,380, plus 66.5% of excess over $120,000.
Over $150,000 but not over $200,000.	$86,330, plus 67% of excess over $150,000.
Over $200,000	$119,830, plus 67.5% of excess over $200,000.

"(4) TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1971.—In the case of a taxable year beginning after December 31, 1971, there is hereby imposed on the taxable income of every individual (other than an intermediate tax rate individual to whom

subsection (b) applies) a tax determined in accordance with the following table:

"If the taxable income is:	The tax is:
Not over $500	14% of taxable income.
Over $500 but not over $1,000.	$70, plus 15% of excess over $500.
Over $1,000 but not over $1,500.	$145, plus 16% of excess over $1,000.
Over $1,500 but not over $2,000.	$225, plus 17% of excess over $1,500.
Over $2,000 but not over $4,000.	$310, plus 19% of excess over $2,000.
Over $4,000 but not over $6,000.	$690, plus 21% of excess over $4,000.
Over $6,000 but not over $8,000.	$1,110, plus 23% of excess over $6,000.
Over $8,000 but not over $10,000.	$1,570, plus 27% of excess over $8,000.
Over $10,000 but not over $12,000.	$2,110, plus 31% of excess over $10,000.
Over $12,000 but not over $14,000.	$2,730, plus 35% of excess over $12,000.
Over $14,000 but not over $16,000.	$3,430, plus 37% of excess over $14,000.
Over $16,000 but not over $18,000.	$4,170, plus 40% of excess over $16,000.
Over $18,000 but not over $20,000.	$4,970, plus 42% of excess over $18,000.
Over $20,000 but not over $22,000.	$5,810, plus 44% of excess over $20,000.
Over $22,000 but not over $26,000.	$6,690, plus 47% of excess over $22,000.
Over $26,000 but not over $32,000.	$8,570, plus 49% of excess over $26,000.
Over $32,000 but not over $38,000.	$11,510, plus 50% of excess over $32,000.
Over $38,000 but not over $44,000.	$14,510, plus 52% of excess over $38,000.
Over $44,000 but not over $50,000.	$17,630, plus 54% of excess over $44,000.
Over $50,000 but not over $60,000.	$20,870, plus 58% of excess over $50,000.
Over $60,000 but not over $80,000.	$26,670, plus 60% of excess over $60,000.
Over $80,000 but not over $100,000.	$38,670, plus 61% of excess over $80,000.
Over $100,000 but not over $120,000.	$50,870, plus 62% of excess over $100,000.
Over $120,000 but not over $150,000.	$63,270, plus 63% of excess over $120,000.
Over $150,000 but not over $200,000.	$82,170, plus 64% of excess over $150,000.
Over $200,000	$114,170, plus 65% of excess over $200,000."

(b) INTERMEDIATE TAX RATES.—Section 1 (b) (1) is amended by inserting "and before January 1, 1971," after "December 31, 1964," each place it appears and by adding at the end thereof the following new subparagraphs:

(C) TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1970.—In the case of a taxable year beginning after December 31, 1970, there is hereby imposed on the taxable income of every individual who is an intermediate tax rate individual a tax determined in accordance with the following table:

"If the taxable income is:	The tax is:
Not over $1,000	14% of taxable income.
Over $1,000 but not over $2,000.	$140, plus 16% of excess over $1,000.
Over $2,000 but not over $4,000.	$300, plus 18% of excess over $2,000.
Over $4,000 but not over $6,000.	$660, plus 20% of excess over $4,000.
Over $6,000 but not over $8,000.	$1,060, plus 21.5% of excess over $6,000.
Over $8,000 but not over $10,000.	$1,490, plus 24.5% of excess over $8,000.
Over $10,000 but not over $12,000.	$1,980, plus 26.5% of excess over $10,000.
Over $12,000 but not over $14,000.	$2,510, plus 30% of excess over $12,000.
Over $14,000 but not over $16,000.	$3,110, plus 31% of excess over $14,000.
Over $16,000 but not over $18,000.	$3,730, plus 34% of excess over $16,000.
Over $18,000 but not over $20,000.	$4,410, plus 35.5% of excess over $18,000.
Over $20,000 but not over $22,000.	$5,120, plus 38.5% of excess over $20,000.
Over $22,000 but not over $24,000.	$5,890, plus 40% of excess over $22,000.
Over $24,000 but not over $26,000.	$6,690, plus 42% of excess over $24,000.
Over $26,000 but not over $28,000.	$7,530, plus 43.5% of excess over $26,000.
Over $28,000 but not over $32,000.	$8,400, plus 44.5% of excess over $28,000.
Over $32,000 but not over $36,000.	$10,180, plus 46.5% of excess over $32,000.
Over $36,000 but not over $38,000.	$12,040, plus 48% of excess over $36,000.
Over $38,000 but not over $40,000.	$13,000, plus 49.5% of excess over $38,000.
Over $40,000 but not over $44,000.	$13,990, plus 50.5% of excess over $40,000.
Over $44,000 but not over $50,000.	$16,010, plus 53.% of excess over $44,000.
Over $50,000 but not over $52,000.	$19,190, plus 54.5% of excess over $50,000.
Over $52,000 but not over $60,000.	$20,280, plus 55.5% of excess over $52,000.
Over $60,000 but not over $64,000.	$24,720, plus 56.6% of excess over $60,000.
Over $64,000 but not over $70,000.	$26,980, plus 57% of excess over $64,000.
Over $70,000 but not over $76,000.	$30,400, plus 58% of excess over $70,000.
Over $76,000 but not over $80,000.	$33,880, plus 58.5% of excess over $76,000.
Over $80,000 but not over $88,000.	$36,220, plus 60% of excess over $80,000.
Over $88,000 but not over $100,000.	$41,020, plus 60.5% of excess over $88,000.
Over $100,000 but not over $120,000.	$48,280, plus 63% of excess over $100,000.
Over $120,000 but not over $140,000.	$60,880, plus 64.5% of excess over $120,000.
Over $140,000 but not over $160,000.	$73,780, plus 65% of excess over $140,000.
Over $160,000 but not over $180,000.	$86,780, plus 66% of excess over $160,000.
Over $180,000 but not over $200,000.	$99,980, plus 66.5% of excess over $180,000.
Over $200,000 but not over $300,000.	$113,280, plus 67% of excess over $200,000.
Over $300,000	$180,280, plus 67.5% of excess over $300,000.

"(D) TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1971.—In the case of a taxable year beginning after December 31, 1971, there is hereby imposed on the taxable income of every individual who is an intermediate tax rate individual a tax determined in accordance with the following table:

"If the taxable income is:	The tax is:
Not over $1,000	14% of the taxable income.
Over $1,000 but not over $2,000.	$140, plus 16% of excess over $1,000.
Over $2,000 but not over $4,000.	$300, plus 18% of excess over $2,000.
Over $4,000 but not over $6,000.	$660, plus 20% of excess over $4,000.
Over $6,000 but not over $8,000.	$1,060, plus 21% of excess over $6,000.
Over $8,000 but not over $10,000.	$1,480, plus 24% of excess over $8,000.
Over $10,000 but not over $12,000.	$1,960, plus 26% of excess over $10,000.
Over $12,000 but not over $14,000.	$2,480 plus 29% of excess over $12,000.
Over $14,000 but not over $16,000.	$3,060, plus 30% of excess over $14,000.
Over $16,000 but not over $18,000.	$3,660, plus 33% of excess over $16,000.
Over $18,000 but not over $20,000.	$4,320, plus 35% of excess over $18,000.
Over $20,000 but not over $22,000.	$5,020, plus 37% of excess over $20,000.
Over $22,000 but not over $24,000.	$5,760, plus 39% of excess over $22,000.
Over $24,000 but not over $26,000.	$6,540, plus 41% of excess over $24,000.
Over $26,000 but not over $28,000.	$7,360, plus 42% of excess over $26,000.
Over $28,000 but not over $32,000.	$8,200, plus 43% of excess over $28,000.
Over $32,000 but not over $36,000.	$9,920, plus 45% of excess over $32,000.
Over $36,000 but not over $38,000.	$11,720, plus 46% of excess over $36,000.
Over $38,000 but not over $40,000.	$12,640, plus 47% of excess over $38,000.
Over $40,000 but not over $44,000.	$13,580, plus 48% of excess over $40,000.
Over $44,000 but not over $50,000.	$15,500, plus 51% of excess over $44,000.
Over $50,000 but not over $60,000.	$18,560, plus 53% of excess over $50,000.
Over $60,000 but not over $80,000.	$23,860, plus 55% of excess over $60,000.

"If the taxable income is:	The tax is:	
Over $80,000 but not over $100,000.	$34,860, plus of excess over $80,000.	57%
Over $100,000 but not over $120,000.	$46,260, plus of excess over $100,000.	60%
Over $120,000 but not over $160,000.	$58,260, plus of excess over $120,000.	62%
Over $160,000 but not over $200,000.	$83,060, plus of excess over $160,000.	63%
Over $200,000 but not over $300,000.	$108,260, plus of excess over $200,000.	64%
Over $300,000	$172,260, plus of excess over $300,000."	65%

(c) OPTIONAL TAX TABLES.—Section 3(b) (relating to optional tax) is amended—

(1) by inserting in the heading before the period the following: "And Before January 1, 1970";

(2) by inserting in the text "and before January 1, 1970," after "beginning after December 31, 1964,";

(3) by inserting after "After December 31, 1964" each place it appears in the tables the following: "And Before January 1, 1970"; and

(4) by adding at the end thereof the following new subsection:

"(c) TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1969.—In lieu of the tax imposed by section 1, there is hereby imposed for each taxable year beginning after December 31, 1969, on the taxable income of every individual whose adjusted gross income for such year is less than $5,000 ($6,100 for the calendar year 1970) and who has elected for such year to pay the tax imposed by this section, a tax determined under tables, applicable to such taxable year, which shall be prescribed by the Secretary or his delegate. The tables so prescribed shall be the same as the tables contained in this subsection as in effect before August 1, 1969, except the amounts and rates of tax shall be computed on the basis of the taxable income computed by taking the standard deduction and on the basis of the rates prescribed by section 1."

(d) TAX NOT COMPUTED BY TAXPAYER.—

(1) The first sentence of section 6014(a) (relating to election by taxpayer) is amended by striking out "gross income is less than $5,000" and inserting in lieu thereof "adjusted gross income and". The last sentence of section 6014(a) is repealed.

(2) Section 6014(b) (relating to regulations) is amended—

(A) by inserting after the first sentence the following: "Such regulations may provide that the credit provided for by section 37 (relating to retirement income) shall be allowed in determining the amount payable and that the Secretary or his delegate shall compute the tax with regard to a taxpayer's status as an intermediate tax rate individual (as defined in section 1(b)) or as a surviving spouse (as defined in section 2(b)) electing the benefits of subsection (a).", and

(B) by adding at the end thereof the following new sentence: "The Secretary or his delegate is authorized to extend (under regulations) any election made under subsection (a) to any taxpayer regardless of the limitations provided by subsection (a)."

(3) The amendments made by this subsection shall apply to taxable years beginning after December 31, 1969.

SEC. 805. COLLECTION OF INCOME TAX AT SOURCE ON WAGES.

(a) REQUIREMENT OF WITHHOLDING.—The first sentence of section 3402(a) (relating to requirement of withholding) is amended by striking out "in accordance with the following tables." and inserting in lieu thereof "in accordance with tables prescribed by the Secretary or his delegate. The tables so prescribed shall be the same as the tables contained in this subsection as in effect before August 1, 1969, except the amounts set forth as amounts of wages and amounts of income tax to be withheld shall be computed on the basis of the rates prescribed by section 1." The second sentence of such section is amended by striking out "as shown in the table in subsection (b)(1)" and inserting in lieu thereof "as shown in the table prescribed by the Secretary or his delegate pursuant to subsection (b)(1)".

(b) PERCENTAGE METHOD OF WITHHOLDING.—Paragraph (1) of section 3402(b) (relating to percentage method of withholding) is amended to read as follows:

"(1) The table referred to in subsection (a) shall be prescribed by the Secretary or his delegate on the basis of the amount of one withholding exemption being $600."

(c) WAGE BRACKET WITHHOLDING.—Section 3402(c) (relating to wage bracket withholding) is amended—

(1) by striking out paragraph (1) and inserting in lieu thereof the following:

"(1) WAGE BRACKET WITHHOLDING.—At the election of the employer with respect to any employee, the employer shall deduct and withhold upon the wages paid to such employee a tax (in lieu of the tax required to be deducted and withheld under subsection (a)) determined in accordance with tables prescribed by the Secretary or his delegate. The tables so prescribed shall be the same as the tables contained in this subsection as in effect before August 1, 1969, except the amounts set forth as amounts and rates of tax to be deducted and withheld shall be computed on the basis of the rates of tax prescribed by section 1(a) and the additional low income allowance."

(d) EFFECTIVE DATE.—The amendments made by this section shall apply with respect to wages paid after December 31, 1969.

LEGISLATIVE PROGRAM FOR WEEK OF AUGUST 4

(Mr. SMITH of California asked and was given permission to address the House for 1 minute.)

Mr. SMITH of California. Mr. Speaker, I take this time in order to inquire of the majority leader the program for today and for next week.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. SMITH of California. I yield to the gentleman from Oklahoma, the majority leader.

Mr. ALBERT. Mr. Speaker, in response to the request of the acting minority leader, we have no further legislative business for this week.

The program for next week is as follows:

Monday is Consent Calendar day.

Immediately after the call of the Consent Calendar, House Resolution 509, to concur in Senate amendments to H.R. 9951, providing for extension of the income tax surcharge until December 31, 1969, will be called up by the distinguished gentleman from Mississippi on which there will be 1 hour of debate.

There will be four suspensions, as follows:

S. 912, to provide for the establishment of the Florissant Fossil Beds National Monument, Colo.

H.R. 11959, to provide increased educational assistance under the Veterans' Administration education law.

House Joint Resolution 764, to authorize appropriations for expenses of the President's Council on Youth Opportunity.

S. 1611, to provide for a National Center on Educational Media and Materials for the Handicapped.

Also on Monday there will be considered:

House Joint Resolution 247, relating to the administration of the national park system, under an open rule with 1 hour of debate; and,

H.R. 471, to hold in trust certain lands for the Pueblo de Taos Indians in New Mexico, under an open rule with 1 hour of debate.

Tuesday is Private Calendar day.

Also on Tuesday there will be considered H.R. 13018, the military construction authorization, for the fiscal year 1970, under an open rule with 3 hours of debate.

For Wednesday and the balance of the week, there are scheduled:

H.R. 13270, the Tax Reform Act of 1969, subject to a rule being granted; and

H.R. 12829, Interest Equalization Tax Extension Act of 1969, under a closed rule with 4 hours of debate, waiving points of order.

This announcement is made subject to the usual reservation that conference reports may be brought up at any time and any further program may be announced later.

Mr. SMITH of California. May I inquire of the gentleman whether he has any statement as to whether or not we may work next Friday, if necessary?

Mr. ALBERT. I am glad the gentleman reminded me of that, because it is not only possible but it may be quite probable, if the tax reform bill takes as long as might be indicated, that we may have to meet on Friday to consider the Interest Equalization Tax Extension Act.

Mr. SMITH of California. I thank the gentleman.

ADJOURNMENT TO MONDAY, AUGUST 4, 1969

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourns to meet on Monday next.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

DISPENSING WITH BUSINESS IN ORDER UNDER THE CALENDAR WEDNESDAY RULE ON WEDNESDAY NEXT

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that business in order under the Calendar Wednesday rule may be dispensed with on Wednesday next.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

RECAPITULATIONS ON BUDGETARY REQUESTS, UNEXPENDED BALANCES, AND TOTAL AMOUNTS OF FOREIGN AID

(Mr. PASSMAN asked and was given permission to address the House for 1

minute and to revise and extend his remarks and to include pertinent information.)

Mr. PASSMAN. Mr. Speaker, I am today inserting in the RECORD a recapitulation showing the total new budgetary requests for foreign aid. Also a recapitulation showing the unexpended balances of all spigots of foreign aid, known as the pipeline. And also a recapitulation showing the total amount of foreign aid given to 121 nations of the world since the inception of the foreign aid program.

Incidentally, all three recapitulation sheets will be mailed to each Member of the House and Senate for their information. The envelopes will be marked "Personal." Whether you agree or disagree with my philosophy on foreign aid, the statistics are extremely important and represent some 120 hours of painstaking research on my part.

The material follows:

New budgetary requests for authorization and appropriation for foreign assistance for fiscal year 1970

Foreign assistance (mutual security)	$2,710,020,000
Receipts and recoveries from previous programs	274,785,000
Military assistance (in Defense budget)	2,230,900,000
Economic assistance (in Defense budget)	76,600,000
Foreign military credit sales fund	275,000,000
MAAG's, missions, and mil-groups	168,800,000
Export-Import Bank:	
Long-term credits	1,872,200,000
Regular operations	570,423,000
Export expansion program	100,000,000
Public Law 480 (agricultural commodities)	986,600,000
Inter-American Development Bank (FSO)	300,000,000
International Development Association:	
1.	160,000,000
2. Supplemental	160,000,000
Asian Development Bank:	
Regular contribution	20,000,000
Special funds	25,000,000
Peace Corps	101,100,000
Permanent military construction—foreign nations	255,300,000
Contributions to international organizations	130,187,000
Educational (foreign and other students)	43,614,000
Ryukyu Islands	20,651,000
Migrants and refugees	5,511,000
Trust Territories of the Pacific Islands	41,612,000
Total new requests for foreign assistance for fiscal year 1970	10,528,303,000

Unexpended balances in pipeline from prior years for foreign aid programs

Foreign assistance (mutual security)	$5,265,936,000
Foreign military credit sales fund	222,000,000
MAAG's, missions, and mil-groups	5,000,000
Military and economic assistance (in Defense budget)	1,086,000,000
Export-Import Bank:	
Long-term credits	3,296,800,000
Regular operations	193,400,000
Uncommitted borrowing authority	5,288,300,000
Public Law 480 (agricultural commodities)	507,748,000

Unexpended balances in pipeline from prior years for foreign aid programs—Continued

Inter-American Development Bank	$2,109,494,000
International Development Association	103,600,000
Asian Development Bank	130,000,000
Peace Corps	35,619,000
Permanent military construction—foreign nations	390,000,000
Contributions to international organizations	2,838,000
Educational (foreign and other students)	29,263,000
Ryukyu Islands	7,705,000
Migrants and refugees	3,616,000
Trust Territories of the Pacific Islands	16,551,000
Inter-American Highway	14,146,000
Total	18,708,016,000

Total net foreign assistance to 121 nations and 7 territories of the world, fiscal years 1946 through 1969—Statistics finalized July 1, 1969

[*The 5 "F" formula: Frustrating, Fanatical, Frightening, Foolish, but Factual*]

Afghanistan	$370,500,000

Grand total—cost of foreign assistance (1946–69)	182,583,375,000

Of the 3½ billion people of the world, all but 36 million have received aid from the United States.

SLICING DEFENSE FAT

(Mr. CABELL asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. CABELL. Mr. Speaker, in recent months there has been a great deal of discussion and debate on the subject of reduction of military expenditures.

Some of this has been aimed at a reduction of our military posture that would be a suicidal move in relation to our defensive capability.

Some have been a meat-ax approach that completely ignores the fundamental approach to the needs of our country in the maintenance of our obligation as a defender of freedom-loving peoples of the world.

One very practical and sensible approach to this subject has come to my attention. The author of this approach is eminently qualified in this field, and it is worthy of the attention of all Members of the Congress. He is a man who "has been there" but is not looking to the past—he has a clear perspective of the present and the future.

At this point I insert in the RECORD the remarks of Gen. Ira C. Eaker on the subject of "Slicing Defense Fat."

SLICING DEFENSE FAT

(By Ira C. Eaker)

Two recent Pentagon announcements, manpower cuts and restoration of the military to advisory status, have not yet received the public recognition they deserve.

First there was the great debate about weapons like the ABM and MIRV, which dominated the national security area. Then speculation on the rate of withdrawal of U.S. forces from Vietnam moved up front as the foremost defense issue. More recently the well earned and richly deserved headline harvest of Apollo 11 pushed Pentagon news to the back pages.

The recent revelation that defense manpower was to be cut initially by 25,000 with the hint of more to come is very encouraging.

During the seven years of the McNamara reign as Secretary of Defense manpower costs rose by about $7 billion. This was not due to the Vietnam War, since it has been U.S. policy to fight that limited war largely with existing forces and thus avoid the great troop buildups of earlier wars with the consequent shock and fracture to the national economy when peace came.

The McNamara rationale for DOD management included two factors largely responsible for the dramatic rise in manpower requirements and costs.

First there was the determination to reduce military influence in the decision making process on weapons selection, size of defense forces and budget for the armed services. This made it necessary to create a much larger civilian staff and superimpose it between the Secretary and his military advisers, the Joint Chiefs of Staff.

Thomas L. Gates, McNamara's predecessor had a staff of 200 civilians and 200 military. Seven years later the DOD staff had grown to more than 10,000.

The second decision which skyrocketed manpower costs was the determination to centralize command and control at the DOD level. This organizational change created several new agencies like DSA (Defense Supply Agency), DIA (Defense Intelligence Agency) and DCA (Defense Communications Agency).

It was planned originally that when these new organizations became operational, similar activities in the Army, Navy and Air Force would be greatly curtailed or abolished. In fact the Armed Services have been forced to increase their staffs in these areas, due to the fact that one busy beaver bureaucrat at DOD level can demand so many reports and studies.

Now there are nearly five times as many people in DOD, supervising 3½ million people, civil and military, as there were at this level at the height of World War II when the defense establishment was 12 million strong!

In order to reduce DOD manpower costs the place to start is in the Pentagon. If the people employed there were reduced by 50%, the Army, Navy and Air Force staffs could be reduced accordingly and with increased efficiency.

The decision, announced recently by Under Secretary Packard, to restore the military to their former advisory status will also result in defense savings. Many of the costly mistakes in weapons selection during the past seven years were directly due to failure to heed military advice. The TFX, a $5 billion dollar blunder and the McNamara Line in Vietnam, at a cost of $2 billions and now abandoned, are such examples. There are many others, including the strategy and tactics employed in the Vietnam War.

In the past, defense budget cuts have resulted in reduced military hardware and less funds for research and development, defense muscle. Some esesntial new weapons systems have been killed to match the money squeeze.

There is now hope that the Laird-Packard team may have discovered, in their defense survey which has been in progress for several months, that personnel cuts offer the best way to reduce defense budgets without jeopardizing a sound defense posture.

THE COMPLEXITY OF MAN-BEAR RELATIONSHIPS

(Mr. KOCH asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. KOCH. Mr. Speaker, none of us will forget the tragedy that took place in August 1967, when two girls camping in two locations on the Glacier National Park were attacked and killed by grizzly bears. Fortunately, no one was killed last year in our parks, but there were 777 "bear incidents" reported. This was an 8-percent increase in incidents over the previous year.

It has gotten to the point that campers sleep with fear in our mountain campgrounds as stories circulate daily about bears running through the campsites tearing up tents, threatening visitors, and stealing food.

This matter was brought to my attention by Mrs. Pat Thaler, my sister, who is traveling with her husband and three young children through the western part of the United States. She reported that "we had lovely weather and beautiful sights," but she was not able to escape reading in a local newspaper about the "latest bear incident"; in Yellowstone National Park two sleeping campere were injured when a bear invaded their tent about three in the morning. The two young men were bitten about the head.

Certainly we do not want to eliminate the bears from our parks; but it is a needless tragedy for our campers who are on their vacations to be attacked, maimed and at times killed. My sister made several suggestions for improving camp safety:

First, that camping areas be enclosed with a bear-proof fence with a lighted gateway:

Second, tenting areas be eliminated in areas frequented by bears;

Third, that bears be physically removed to noncamping areas; and

Fourth, that people be fined for encouraging or approaching bears in that there are already signs advising "bears are dangerous, do not get out of cars," which are all too often disobeyed.

I have received a response from Theodor R. Swem, Assistant Director of the National Park Service, which I would like to submit for reprinting in the RECORD. In his letter, Mr. Swem assures me that "the total problem of man-bear relionships is highly complex," and that the Park Service is continually working to improve the situation. Mr. Swem also noted that the last three suggestions made by my sister have been implemented and the first is being considered.

With his letter, Mr. Swem included a pamphlet on enjoying bear country entitled, "In Grizzly Country." I read this pamphlet with interest and would like to quote from part of it on what one should do when suddenly confronted by a grizzly:

> Whatever you do, try to remain calm. Speak softly to the animal. Steady soft human monotones often appear effective in assuring bears that no harm is meant to them. However, while standing your ground and speaking softly, look for a tree to climb.

This is fine advice for those standing and awake. But, it is useless for those in sleeping bags who are suddenly awakened by a bear sniffing their belongings and about to take a bite.

The two girls killed in 1967 were both sleeping in populated camping grounds. The bears' existence was well known, and in fact they had been encouraged by open garbage containers to come into the camp as a tourist attraction. While the nightly bear visits and antics were well known throughout the Glacier Park, nothing was done by the rangers to stop them.

Because of the articles in the press and national magazines on the 1967 incidents indicating possible negligence on the part of the National Park Service, it is apparent that only a public hearing getting all the facts on what happened then and what is being done now will satisfy the public and in particular those who use the national parks. The National Park Service conducted an extensive investigation of the 1967 incidents, but we all recognize that investigations by a department of itself are rarely satisfactory, and do not have the public acceptance of an independent investigation.

Therefore, I would urge the appropriate congressional committee to hold a public hearing on the total problem. Bears and men are not compatible in close quarters and perhaps thought should be given to having areas of our wilderness free of man for bears and surely camp sites should be free of bears.

The material referred to follows:

U.S. DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Washington, D.C., July 28, 1969.

HON. EDWARD I. KOCH,
House of Representatives,
Washington, D.C.

DEAR MR. KOCH: Secretary of the Interior Hickel has asked that we reply to your inquiry concerning bears in national parks.

Each bear incident that results in personal injury or destruction of property is investigated to determine the extent of injury or damage, the circumstances surrounding the incident and, more specifically, the probable cause of the incident. The enclosed report on the tragic deaths of two young girls in Glacier National Park, while somewhat more elaborate than a routine bear accident report, will give you an idea of the types of information we believe are essential to understand the man-bear conflict problem.

The facts surrounding each incident vary, of course, and we must recognize that the total problem of man-bear relationships is highly complex. Food, however, appears to be directly or indirectly associated with the majority of incidents. Therefore, one of our major efforts in bear management is directed toward improving campground and roadside sanitation and methods of garbage disposal.

The above effort is supplemented with public relations, educational and law enforcement programs, park zoning—that include temporary and permanent closures of certain high risk areas—and the physical removal or destruction of troublesome bears from areas of visitor concentration.

Our bear management objectives are: (1) Totally eliminate all man-bear conflicts that are attributable to man's use of, or behavior in, the national parks. (2) Restore and maintain natural abundance, distribution, and behavior of the bear populations for the aesthetic, educational, and scientific enjoyment of man. While there are many problems yet to be resolved, we are pleased to state that a great deal of progress has been made to reduce the hazard of bears in national parks. In Great Smoky Mountains National Park, for instance, the installation of bear-resistant garbage cans and timely garbage collections have reduced significantly the frequency of bear incidents. Our experience in this park indicates that without the open garbage cans the bears do not remain on the park road shoulders. Therefore, bear feeding by the park visitors has dropped off considerably. The need to take direct action against the bears also has been reduced; through the middle of July only four bears had to be live trapped from campgrounds and picnic areas.

The comparative lack of roadside bears in Great Smoky Mountains has resulted in a public relations problem. Both the park Superintendent and this Office are receiving a rash of complaints from visitors demanding that the bears be reinstalled along the roadsides. We do not believe, however, that national parks were meant to be roadside zoos and feel justified, both from the standpoints of maintaining healthy wildlife populations and public safety, in continuing our bear management program.

Certainly, we cannot deny that people have derived considerable enjoyment over the years watching bears rummaging through garbage cans. If the current management program is to receive public acceptance, it is imperative that public informational and educational programs be strengthened so that park visitors can find equal enjoyment observing wild bears in their natural environment. The enclosed leaflet, "In Grizzly Country" is an example of the type of education we are attempting.

We appreciate the four suggestions made by your sister. Most people are either probear or antibear, and it is a rare delight to receive objective comments on the bear problem. She will be pleased to know that all of her suggestions are being considered; indeed, the last three have been implemented. It may be necessary to separate physically man from the bears by fencing the campgrounds. Fences have been used with limited success to keep bears out of small areas in Alaska; but if food is available within the fence, we are inclined to believe there is no such thing as a bear-proof fence. With better camper food storage facilities and garbage disposal practices we believe the bears will avoid the campgrounds.

You will be interested in the enclosed summary of bear incidents for 1967–68. None of the 38 injuries reported last year were serious, and only one was attributed to a grizzly bear. Some 37 million visits were made to the 16 "bear" parks during 1968, and the vast majority of the park visitors enjoyed the park bears without injury.

We appreciate your interest and hope the enclosed information will be useful to you.

Sincerely yours,

THEODOR R. SWEM,
Assistant Director.

VETERANS OUTREACH SERVICES TO ASSIST RECENTLY DISCHARGED VETERANS

(Mr. ANDERSON of California asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. ANDERSON of California. Mr. Speaker, I am introducing legislation to help rectify the present inadequacies of the current veterans law, under which only 21.4 percent of the returning Vietnam veterans have utilized the college and vocational aid programs since January 1966. This bill would amend chapter 3 of title 38, United States Code, to provide the Veterans' Administration with a veterans outreach services pro-

gram. This program would assist eligible veterans in the application for and acquisition of, benefits and services—as well as education, training, and employment—to which they are entitled.

The need for such legislation is cogently attested to by comparison of the utilization of benefits today and utilization following World War II and the Korean war. Whereas barely over 20 percent of the Vietnam returnees are using their rights, 50 percent of the World War II veterans, and 42 percent of those after Korea, used theirs.

Such disuse is especially unfortunate in light of the large number of veterans who are high school dropouts and could profit from use of the available educational aid. Out of the total of 1 million men or women to be discharged this year from the Armed Forces, 23 percent have not completed a high school education. Tragically, it is exactly these veterans who need to use the GI bill the most and who have the most to gain who show the least interest and desire to participate. Only 2.4 percent of the veterans who are high school dropouts are participating in GI bill education programs.

The executive branch has made an attempt to provide for the services needed by increasing numbers of Vietnam veterans. Following the passage of the Veterans' Readjustment Benefits Act of 1966, the Veterans' Administration assigned personnel to military hospitals and to military installations discharging large groups of servicemen. Concurrently, the Veterans' Administration extended itinerant counseling service to locations not having full-time VA installations as a further step toward satisfying the increasing requests. However, it became obvious that these measures were not adequate to meet the increasing need for assistance.

In November 1967, the President set up a task force of representatives of administrative agencies to formulate a method of dealing with the problem. Based on the detailed plans developed by that task force, the President directed the establishment of an initial group of 20 veterans assistance centers, known as USVAC's. One-stop service on all Federal benefits is provided to veterans in these centers. The initial 10 centers were opened in February 1968, the next 10 in March, and in July another 51 locations were established.

These efforts taken by the executive are commendable, but they are not, in themselves, adequate to the need for such assistance. Although the Veterans' Administration characterizes the USVAC program as directed toward the educationally disadvantaged, only two or three of these centers actually are located in neighborhoods where the educationally disadvantaged veterans reside. Furthermore, of the total of 232,125 initial interviews at the 71 centers during fiscal 1969, only 37,179—about 16 percent—were with the educationally disadvantaged. That is considerably below the figure of 23 percent that represents the total percentage of discharged veterans who are educationally disadvantaged, and the discrepancy is especially appalling when it is taken into account that it is the educationally disadvantaged whom we should be seeking out and who are in greatest need of these services. Clearly, the services must be made more accessible to these people.

It is in recognition of this need that I am introducing this bill. Such legislation has been introduced in the Senate as S. 2700 by Senator ALAN CRANSTON and coauthored by Senator KENNEDY, Senator RANDOLPH, Senator SCHWEIKER, and Senator YARBOROUGH. This bill would aim to aid discharged veterans, especially those who are educationally disadvantaged, in securing the maximum services and benefits which they are entitled to under VA programs, as well as under other Federal, State, or local governmental programs. Also, this bill would charge the VA with a congressionally sanctioned obligation of seeking out and offering a wide range of assistance to recently discharged veterans—a sanctioned obligation that is necessary in view of the fact that the VA has been operating the centers on questionable statutory authority.

If enacted, this bill would provide for the Veterans' Affairs Administrator to make specified outreach service available to all eligible veterans and dependents, and especially to recently discharged veterans who are educationally disadvantaged—that is, those who have not completed a high school education. The outreach functions which are specified in the bill include the following:

The distribution of full information regarding all benefits and services veterans may be entitled to under laws administered by the Veterans' Administration and to which they are entitled under other governmental programs;

The arrangement and conduction of person-to-person interviews to explain benefits and services and to plan individual programs of education, training, and employment as may best be suited to rapid social and economic readjustment to civilian life;

The provision of job and other appropriate referrals and job placement assistance when appropriate;

The provision of social and other special services necessary to aid veterans in obtaining maximum assistance from the benefits and services to which they are entitled;

The provision of aid and assistance in the preparation and presentation of claims under the title and in connection with any other program;

The maintenance of full records of the outreach services offered and the conduction of periodic followups to determine the success of this assistance.

This bill would require that USVAC's be located with due regard to areas with high concentrations of educationally disadvantaged veterans and the provision of appropriate outreach services in less populated areas would also be required. Also, under this bill efforts would have to be made to employ veterans who personally reside in the regions served at these outreach centers.

This bill would charge the VA with conducting studies in consultation with other Federal agencies to determine the most efficacious type of program to carry out the purposes of this bill regarding the educationally disadvantaged veterans. Finally, the Administrator of Veterans' Affairs would be required to present semiannual reports to Congress on the program's effectiveness, the amount of coordination with other agencies and programs, and on recommendations for improvement.

Mr. Speaker, I believe the enactment of this bill would constitute an important step toward increasing GI bill participation by Vietnam era veterans, especially the educationally disadvantaged. The country must not lose the energy and potential of these young men; let us make it possible for them to develop that potential and make a contribution to society. Veterans' benefits are more than recognition of past services performed in service to our country—they are an investment in the future of the veteran and the Nation.

U.S. PARTICIPATION IN AN ISRAEL DESALINATION PLANT

(Mr. RYAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RYAN. Mr. Speaker, on July 30, I testified before the House Committee on Foreign Affairs in support of U.S. participation in an Israel desalination plant. The committee is presently conducting hearings on the foreign assistance program.

During the last two Congresses, I have introduced legislation to provide assistance to Israel in the design, development, and construction of a dual purpose desalination and electric power plant. In the 90th Congress, this legislation was introduced as H.R. 14250 and, with cosponsors, as H.R. 14438. In the current Congress, I have introduced H.R. 587 and H.R. 4307, which, in addition to myself, has eight other cosponsors—Mr. ADDABBO, Mr. BURTON of California, Mr. CORMAN, Mr. GIAIMO, Mr. HELSTOSKI, Mr. SCHEUER, Mr. VAN DEERLIN, and Mr. WOLFF.

The depletion of existing sources of fresh water in Israel, as well as our own need for additional research and technical information on desalination processes that will help this country to meet its own needs for additional sources of fresh water, underscore the urgency of enacting this legislation.

The prospect of American participation in an Israel desalination project has been extensively studied and discussed in the 5 years since President Johnson announced in 1964 that the United States and Israel would cooperate in desalting research and development.

On January 19, 1969, the late Premier Levi Eshkol of Israel announced to the Israel public that President Johnson had promised executive support for U.S. participation in the construction of a desalination plant. Two days earlier, on January 17, Assistant Secretary of the Interior Max Edwards transmitted a bill to Congress similar to my own.

Despite the commitment made by President Johnson to Israel, however, the Nixon administration has declined to affirm its support for U.S. participation in this vital program. Even though I have written to President Nixon on

two occasions, February 18 and April 2, urging that the administration take a position on this project, the White House has declined to state its position on the bill recommended to Congress by President Johnson.

The Foreign Affairs Committee has an opportunity to contribute to stability in the Middle East by approving this project, and I hope that it will take the necessary action.

I include at this point in the RECORD the statement which I made in support of U.S. participation in a dual purpose desalination and electric powerplant before the House Commitee on Foreign Affairs on July 30. My exchange of correspondence with the President was presented in the CONGRESSIONAL RECORD on May 14, 1969, at page 12459 when I spoke on the authorization bill for the Office of Saline Water. The statement follows:

STATEMENT OF CONGRESSMAN WILLIAM F. RYAN

I appreciate having this opportunity to appear in support of legislation which would provide assistance to Israel in the design, development, and construction of a dual purpose desalinization and electric power plant.

As one who for two years now has sponsored legislation for United States participation in the construction of a prototype desalinization project with Israel, I am pleased that the Committee on Foreign Affairs is considering incorporating such a project into the foreign assistance program. The depletion of existing sources of fresh water in Israel, as well as our own need for additional research and technical information on desalinization processes that will help this country to meet its own needs for additional sources of fresh water, underscore the urgency of enacting this legislation. Already, 95% of presently available fresh water supplies in Israel are being utilized. Israel presently has a population of approximately 2.7 million people. With the need for fresh water for irrigation of arid land already acute, about 95% of existing fresh water sources have already been tapped. With Israel's population scheduled to increase by at least 1.5 million by the early 1980's, it is clear that agricultural needs will not be met if additional sources of fresh water are not developed. If these sources are to be developed, it is imperative that development of a saline water conversion facility be begun as soon as is technically possible. In light of the fresh water requirements of this Nation in the next decade, U.S. participation in a desalinization project in Israel is also important to the development of a domestic saline water conversion program in this country.

During the last two Congresses, I have introduced legislation to provide assistance to Israel in the design, development and construction of a dual purpose desalinization and electric power plant. In the 90th Congress, this legislation was introduced as H.R. 14250 and, with co-sponsors, as H.R. 14438. In the current Congress, I have introduced H.R. 587 and H.R. 4307, which, in addition to myself, has eight other co-sponsors.

Under the provisions of H.R. 587, which has been referred to the House Foreign Affairs Committee, the Secretary of the Interior would be authorized to enter into an agreement with the government of Israel to share the cost of constructing a desalinization plant which is capable of producing 100 to 150 million gallons of fresh water and 300,000 to 400,000 kilowatts of electricity daily. I advocate the construction of a plant of this size on the basis of a report made by the American-Israel Desalting Board which concluded that a facility producing the quantities of fresh water and electricity mentioned in my bill was both appropriate to the needs of Israel and technically feasible.

Support for United States participation in the construction of a desalting project in Israel has been evident since 1964, when then President Johnson announced that the United States and Israel would cooperate in desalting research and development. Since that time, several Members of Congress in addition to myself—in both the House and the Senate—have proposed that Congress authorize the Executive Branch to enter into an agreement with Israel to construct such a facility. While the feasibility of a desalting program has been thoroughly studied in the five years since President Johnson first authorized this joint saline water conversion research, no action has been taken since the Senate adopted a resolution in December of 1967 calling for regional plants to provide water and power for both Israelis and Arabs and to stimulate refugee resettlement. This plan had been proposed by former President Eisenhower and Admiral Lewis Strauss, the former chairman of the Atomic Energy Commission. It was hoped that Senate passage of this plan would lead to action; however, the political intransigence of the Arabs undermined hopes for cooperation in the development of saline water conversion facilities.

Since 1967, development of a saline water conversion project has focused on U.S. participation in a prototype plant in Israel. On January 19 of this year, Premier Levi Eshkol told the Israeli public that President Johnson had written to him promising Executive support for the construction of a desalinization plant. Two days earlier, on January 17, 1969, Assistant Secretary of the Interior Max Edwards transmitted a bill to Congress similar to my own. Assistant Secretary Edwards pointed out in his accompanying letter of January 17 to the President of the Senate and the Speaker of the House of Representatives that the project, in addition to being "vital to Israel in terms of water supply and power," also gives the United States "an opportunity to improve and advance science and technology in the field of saline water conversion and to contribute materially to the development of low-cost desalinization processes." The Interior Department went on to urge the enactment of legislation which would give the Secretary of the Interior authority to enter into a formal agreement with Israel to construct a desalinization plant.

As one who had long advocated the development of such a program, I was extremely pleased that the Johnson Administration had recommended this legislation to Congress and had made the commitment to Premier Eshkol. Because President Johnson was about to leave office, it was essential that President Nixon promptly reaffirm Executive support for this program.

On February 18, during the course of his appearance before the House Committee on Interior and Insular Affairs, however, Secretary of the Interior Walter Hickel indicated that the Interior Department was considering deleting the $40 million from the FY 1970 budget of the Office of Saline Water Research which former President Johnson recommended be allocated for participation in the construction of a prototype desalinization plant in Israel. Because I believed Executive support to be vital to the enactment of this legislation, I wrote to President Nixon on the same day (February 18, 1969) urging him to uphold the commitment which President Johnson had made for Executive support of this program. In its reply of February 24 the White House declined to state its position on the Johnson Administration's bill, but promised that I would "hear further soon."

When no answer was forthcoming, I again wrote to President Nixon on April 2. In an April 11 reply, however, the White House again declined to state its position on the Israeli desalinization project.

To this date, the Administration refuses to take a position on this important commitment to Israel by President Johnson.

If the Administration will not uphold the commitment this Nation has to assist Israel in her economic and technological development, then Congress must take action on its own. New incremental sources of water, as former Assistant Secretary Edwards noted, "must be made available by the mid-seventies" if Israel is to maintain her industrial and economic growth. A desalinization plant would make it possible for Israel to cultivate large portions of arid desert land which cannot now be utilized. The usable land and jobs which would be created by such a plant would make a significant contribution to the stability of the entire Middle East.

I believe the Foreign Affairs Committee has a clear opportunity to assist Israel in the development of water and electric power resources that are crucial to its future economic and industrial strength. By incorporating legislation which would authorize the Executive Branch to enter into an agreement with Israel to construct a prototype desalinization plant, the Committee can also lay the groundwork for the development of our own technical ability to produce large amounts of fresh water at low cost. The benefits to be gained by both Israel and the United States by participation in this project lead me to believe that the development of a desalinization plant in Israel should receive high priority in the foreign assistance program.

POST OFFICE SERVICE—A GOVERNMENT FUNCTION

(Mr. MADDEN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MADDEN. Mr. Speaker, during my recent survey of the postal service in my congressional district I found practically no sentiment either from postal employees or the public that the Post Office administration should be removed from Government control.

When one considers the limited budget for the operation of this gigantic business of distributing multimillions of pieces of mail daily and the low wage of postal employees, coupled with limited facilities, it must be conceded that the American people are getting outstanding postal service under unfavorable circumstances.

President George Meany, of the AFL–CIO, testified before the House Post Office Committee recently. Under unanimous consent, I include in my remarks excerpts from his testimony recorded at the hearings from a news release in the AFL–CIO News of August 2, 1969:

POST OFFICE REFORMS FAVORED OVER CORPORATION PROPOSAL

Labor wants to see "substantial reform" in the nation's postal service but it strongly believes that the government must continue to "carry the mail," Pres. George Meany testified.

Meany and the AFL–CIO Government Employes Council attacked provisions of the Administration-backed corporate structure bill which would "drastically undercut the bargaining power of postal employes and their unions."

The AFL–CIO and GEC supported a second bill before the committee to provide postal reforms without altering the department's public service functions.

Despite valid criticisms of the Post Office, Meany pointed out, it handles over 80

billion of pieces of mail a year—millions of pieces each day—with a smaller "error factor" than any giant corporation can boast in its operations.

"Certainly America's big car manufacturers, now calling back thousands of defect-marred automobiles—can't claim such a record," he said.

While there are delays in delivery and operations are not always efficient, he continued, "the Post Office performs this service with such a high degree of integrity and honesty, that America's trust in the mails is legendary."

The postal problems, he said, spring from the fact that the Post Office "is woefully undercapitalized," forced to use old structures in traffic-jammed streets, and burdened by "unrealistic rates" for circular mail—so-called junk mail.

"It is also burdened by a high rate of employe-turnover," Meany added, "reflecting poor working conditions and inadequate wages in today's job market."

He then stressed that these and other problems can be resolved by adequate financing of the Post Office and improved postal management—reforms that can be achieved within the present structure.

He warned that the "widely advertised" efficiency of a postal corporation could be achieved only by eliminating services, such as home delivery of mail.

"We opposed the abandonment of such service," he added. "Substantial reform—rather than a corporate setup—is the prudent realistic and workable approach to the problem."

WORST FEATURES

The corporate structure legislation's provisions pertaining to employes, Meany said, "combine the worst features of public and private labor laws" in that they would wipe out civil service while continuing to deny workers the right to strike.

"If the Administration has decided that postal employes should no longer be considered government employes," he said "then it should go all the way and grant them the right all private employes have in a free country—the right to strike."

He pointed out that Dulski's bill contains reforms while retaining Congress' right to "oversight" of postal operations, as well as financing them through appropriations.

Stripping Congress of its continuous right of review of postal operations, he stated, "would work an injustice on American mail users and taxpayers because they would lose a highly important opportunity to contribute their views through elected officials."

THE ENVIRONMENTAL QUALITY AND PRODUCTIVITY ACT OF 1969

(Mr. DADDARIO asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DADDARIO. Mr. Speaker, on behalf of Congressman CHARLES A. MOSHER and myself, I rise to propose the Environmental Quality and Productivity Act of 1969, which I shall include at the end of my remarks as exhibit 1. This Congress has had before it over 40 bills dealing with various aspects of the environment, certainly a major issue of our time. A review of all these pieces of legislation shows a remarkable degree of agreement on a national policy of restoring, maintaining, and enhancing the values found in our natural surroundings. At the same time, there is a bewildering variety of organizational proposals to put this policy into practice. Our bill is an attempt to simplify matters in a way which will assure that the executive and legislative branches will be served with the information, advice, and coordinated constructive action which they demand.

Actually, the Congress is to be complimented in what it has already contributed to the betterment of environmental management. The intense interest in this problem over the past few years has caused many committees to look into different aspects including, of course, the basic legislation to abate air and water pollution. The result is that innovative alternatives have been generated for organization, policy, and programs. The executive branch has chosen to implement many of these legislative suggestions and thus a number of Members may now feel a well-justified satisfaction from leadership in the new emphasis on environmental quality and productivity.

In the case of our Science, Research, and Development Subcommittee, I would mention specifically four examples apparent from the excerpts appended to this statement.

First. In 1966 we recommended a system approach in environmental matters with coordination of all Federal R. & D. and operational programs. The FCST Committee on Environmental Quality was formed in 1967 to accomplish this assignment. See exhibit 2.

Second. In 1968, one of our reports called for a national policy to be expressed in legislation by both Houses, a step we are undertaking today. See exhibit 3.

Third. Our 1968 report called for an environmental Cabinet to assure conformity of Federal operations with the national policy for the environment. This suggestion has been implemented in the Cabinet-level Environmental Quality Council established by President Nixon. See exhibit 3a.

Fourth. We recommended a strengthening of OST and the recent Presidential announcement has assigned that office a major role in science related to the environment. See exhibit 3.

Thus, a considerable history of legislative influence in addition to specific laws can be demonstrated.

Title I of the bill we are introducing today is a declaration of policy. Its exact wording is not critical but nevertheless these words are the result of several years' work by legislative and executive branch officials and their staffs. See exhibit 4. Title I affirms the great interdependence of man and his environment and the ultimate requirement for harmony between his actions and ecological principles. It recognizes a human right to a healthful environment and a personal responsibility for preservation and enhancement of these values.

The bill calls on all agencies to conform their activities to these policy statements. This directive should provide an administrative route for redress of grievances by citizens groups who now must go to court in order to bring the rights for environmental quality into balance with Federal or private operations.

The origin of national policy for the environment can be traced back over the past several years. There was an apparent and growing concern of citizens everywhere that the earlier guidelines of economic exploitation were yielding by-products of deterioration, pollution, and esthetic offense. Many organizations in Government and the private sector began studies and programs to describe the cause-and-effect relationships between society's actions and environmental quality. At the same time, increased productivity from the landscape was demanded by a growing world population and desire for higher living standards. These studies found that environmental quality and productivity go hand in hand. In fact, in the long run the most productive environment is one which is kept at a high state of quality.

We are pleased to recognize phrases in title I which have stemmed from the hearings and reports of the Subcommittee on Science, Research, and Development of the House Committee on Science and Astronautics. It is for this reason that we are prompted to advocate this bill as the best measure before the House, even though no hearings have been held on it per se. In effect, our committee and several others in both Houses have been holding appropriate hearings for years.

Title II of our bill would satisfy the clearly defined need for an independent advisory group by giving a statutory basis to the present Citizens' Advisory Committee on Environmental Quality established by Executive Order 11472, May 29, 1969. Funds for adequate staffing would make this unit able to perform an information-gathering analysis and program review function which has been shown to be necessary by recent hearings in the House and the Senate. Since the present terms of the members of the CACEQ will expire in 1970, the President will have immediate opportunity to broaden and deepen the expertise in this group beyond the present makeup which stems from its former designation as the Citizens' Advisory Committee on Recreation and Natural Beauty.

By establishing the CACEQ by legislation, the authority and concern of the Congress will be clear. Adequate appropriations for its functions will be defensible.

At the same time, no new agency would be added. We believe this is extremely important. President Nixon has announced the formation, by the same Executive order, of a Cabinet-level Environmental Quality Council. It is agreed by all that this is necessary to assure that the action programs of the Government are coordinated and conform to national policy. The President ultimately would resolve conflicts among the departments and agencies and so it is very encouraging to see him clearly accepting the responsibility as Chairman of the new Council.

The other Presidential moves are to redesignate the former Advisory Panel on Recreation and Natural Beauty as the Citizens' Advisory Committee on Environmental Quality and to assign to the Office of Science and Technology the staff work for both the Cabinet Council and the Advisory Committee. On these two counts, the criticism has mounted. We would not take issue with those who doubt the ability of the CACEQ and OST to do what is necessary under present conditions of status and funding.

But it seems patently foolish for the Congress to add another new, unwanted

agency to the Executive Office of the President. Rather, we see great value in using the structure that the President is in favor of and providing for it the statutory base and funding support to assure the performance that the entire Nation desires.

The Citizens' Advisory Committee, when established by congressional action, would satisfy all the demands for independent, expert, balanced, widely representative assistance. The membership of 15 would allow the inclusion of the diversity of talent which environmental matters require. An executive secretary and staff of great competence should be attracted by the central role which the CACEQ will play. The participation of private sector leaders, including industry—which must bear the brunt of environmental enhancement while continuing efficient productivity—will give all citizens a direct access to governmental planning and priorities for the environment.

We believe we must take the President's announcement at face value and help him make it work, and strengthen the role of the Congress at the same time. The number of different bills before us illustrates the difficulty of agreement on these administrative formats. Surely we do not need an array of advisory groups, one selected by the President and one chartered by the Congress. The possibilities for conflict should be obvious to anyone. It is for this reason that our bill specifically directs the CACEQ to overview the functions of the many environmental advisory groups now proliferating in the agencies. Special task forces may be attached to the CACEQ to develop advice for any department or agency upon request. But a plurality of uncoordinated advisory groups is to be avoided.

Finally the CACEQ established by our bill will issue an annual report to the President, the Congress, and the Nation on the state of the environment. We will receive authoritative information on status and trends. We will have confidence in a balanced and independent review of Federal programs. We will obtain the depth of study and analysis which long-range planning demands. We will strengthen rather than confuse the President's arrangements. And we will bring the intent of the Congress directly to bear on the activities of the executive branch.

The exhibits referred to follow:

EXHIBIT 1

A bill to establish a national policy for the environment and to establish a Citizens' Advisory Committee on Environmental Quality

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Environmental Quality and Productivity Act of 1969".

The purposes of this Act are: To declare a national policy which will encourage productive and enjoyable harmony between man and his environment; to promote efforts which will prevent or eliminate damage to the environment and biosphere and stimulate the health and welfare of man; to enrich the understanding of the ecological systems and natural resources important to the Nation; and to establish a Citizens' Advisory Committee on Environmental Quality.

TITLE I

DECLARATION OF NATIONAL ENVIRONMENTAL POLICY

SEC. 101. (a) The Congress, recognizing that man depends on his biological and physical surroundings for food, shelter, and other needs, and for cultural enrichment as well; and recognizing further the profound influences of population growth, high-density urbanization, industrial expansion, resource exploitation, and new and expanding technological advances on our physical and biological surroundings and on the quality of life available to the American people; hereby declares that it is the continuing policy and responsibility of the Federal Government to use all practical means, consistent with other essential considerations of national policy, to improve and coordinate Federal plans, functions, programs, and resources to the end that the Nation may—

(1) fulfill the responsibilities of each generation as trustee of the environment for succeeding generations;

(2) assure for all Americans safe, healthful, productive, and esthetically and culturally pleasing surroundings;

(3) attain the widest range of beneficial uses of the environment without degradation, risk to health or safety, or other undesirable and unintended consequences;

(4) preserve important historic, cultural, and natural aspects of our national heritage, and maintain, wherever possible, an environment which supports diversity and variety of individual choice;

(5) achieve a balance between population and resource use which will permit high standards of living and a wide sharing of life's amenities; and

(6) enhance the quality of renewable resources and approach the maximum attainable recycling of depletable resources.

(b) The Congress recognizes that each person has a fundamental and inalienable right to a healthful environment and that each person has a responsibility to contribute to the preservation and enhancement of the environment.

SEC. 102. The Congress authorizes and directs that the policies, regulations, and public laws of the United States, to the fullest extent possible, be interpreted and administered in accordance with the policies set forth in this Act, and that all agencies of the Federal Government—

(a) utilize to the fullest extent possible a systematic, interdisciplinary approach which will insure the integrated use of the natural and social sciences and the environmental design arts in planning and in decisionmaking which may have an impact on man's environment;

(b) identify and develop methods and procedures which will insure that presently unquantified environmental amenities and values may be given appropriate consideration in decisionmaking along with economic and technical considerations;

(c) include in every recommendation or report on proposals for legislation and other Federal actions significantly affecting the quality of the human environment, a finding by the responsible official that—

(i) the environmental impact of the proposed action has been studied and considered;

(ii) any adverse environmental effects which cannot be avoided by following reasonable alternatives are justified by other stated considerations of national policy;

(iii) local short-term uses of man's environment are consistent with maintaining and enhancing long term productivity; and that

(iv) any irreversible and irretrievable commitments of resources are warranted.

(d) study, develop, and describe appropriate alternatives to recommend courses of action in any proposal which involves unresolved conflicts concerning alternative uses of land, water, or air;

(e) recognize the worldwide and long-range character of environmental problems and lend appropriate support to initiatives, resolutions, and programs designed to maximize international cooperation in anticipating and preventing a decline in the quality of mankind's world environment; and

(f) review present statutory authority, administrative regulations, and current policies and procedures for conformity to the purposes and provisions of this Act and propose to the President and to the Congress such measures as may be necessary to make their authority consistent with this Act.

SEC. 103. The policies and goals set forth in this Act are supplementary to, but shall not be considered to repeal, the existing mandates and authorizations of Federal agencies.

TITLE II

CITIZENS' ADVISORY COMMITTEE ON ENVIRONMENTAL QUALITY

SEC. 201. (a) There is hereby established the Citizens' Advisory Committee on Environmental Quality (hereinafter referred to as the "Committee"). The Committee shall be composed of a Chairman, Vice Chairman, and not more than thirteen other members appointed by the President. Appointments to membership on the Committee shall be for staggered terms. The Vice Chairman shall perform the duties of the Chairman in his absence.

(b) Persons appointed as members of the Committee (1) shall be selected from among representatives of various State, interstate, and local government agencies and including, but not limited to, representatives of industry and commerce, public utilities, colleges and universities, land use planning, water resources management, conservation and beauty, recreation, and reclamation who have demonstrated competence, ability and foresight with regard to problems of the environment; (2) shall be selected solely on the basis of established records of distinguished service; and (3) shall be so selected as to provide representation of the views of all areas of the Nation.

(c) Members of the Committee shall receive no compensation from the United States by reason of their services, but shall be entitled to receive travel and expenses, including per diem in lieu of subsistence as authorized by law (5 U.S.C. 5701–5708) for persons in the Government service employed intermittently.

(d) The persons who on the date of the enactment of this Act are members of the Citizens' Advisory Committee on Environmental Quality established by part II of Executive Order 11472 of May 29, 1969, shall, until the expiration of their respective terms as such, and without further action by the President, be the initial members of the Committee established by this title. Upon the date of the enactment of this Act the Citizens' Advisory Committee on Environmental Quality established by part II of such Executive order shall cease to exist, and the Committee established by this title shall be its successor.

SEC. 202. (a) The function of the Committee shall be to study and anlyze environmental trends and the factors that affect these trends, relating each area of study and analysis to the conservation, social, economic, and health goals of this Nation. In carrying out this function, the Committee shall:

(1) report at least once each year to the President and to the Environmental Quality Council on the state and condition of the environment;

(2) provide advice, assistance, and staff support to the President on the formulation of national policies to foster and promote the improvement of environmental quality;

(3) obtain information using existing sources, to the greatest extent practicable, concerning the quality of the environment

and make such information available to the public; and

(4) perform such other activities or studies as the President may direct.

(b) The Committee shall periodically review and appraise Federal programs, projects, activities, and policies which affect the quality of the environment and make recommendations thereon to the President and to the Environmental Quality Council.

SEC. 203 (a) In order to promote efficient and coordinated Federal practices, the Committee is authorized to appoint special advisory commissions to render specific advice on agency operations, including those of wholly owned Government corporations.

(b) Members of the Commissions so appointed shall receive no compensation from the United States by reason of their services under this title but shall be entitled to receive travel and expenses, including per diem in lieu of subsistence, as authorized by law (5 U.S.C. 5701–5708) for persons in the Government service employed intermittently.

(c) It is the sense of Congress that agency heads, including the heads of wholly owned Government corporations, utilize the service and advice of the Committee insofar as practicable in planning and executing their respective programs.

(d) It is further the sense of Congress that any advisory group heretofore or hereafter created by regulation or law to advise any agency, including wholly owned Government corporations, on matters relating to the quality of the environment shall coordinate its activities with the Committee and shall keep the Committee fully and currently informed.

SEC. 204. The Committee shall render an annual report to the President for submission to the Congress on or before the 15th day of January of each year summarizing the activities of the Committee and making such recommendations as it may deem appropriate. Such report shall set forth (a) the status and condition of the major natural, manmade, or altered environmental classes of the Nation; and (b) current and foreseeable trends in quality, management, and utilization of such environments and the effects of those trends on the social, economic, and other requirements of the Nation.

SEC. 205. The Committee may employ a staff to be headed by a civilian executive secretary who shall be appointed by the President and shall receive compensation at a rate established by the President and not to exceed that of level II of the Federal Executive Salary Schedule. The executive secretary, subject to the direction of the Committee, is authorized to appoint and fix the compensation of such personnel, including not more than seven persons who may be appointed without regard to the provisions of title 5, United States Code, governing appointments in the competitive service and compensated at not to exceed the highest rate authorized for grade GS–18 by section 5332 of such title, as may be necessary.

SEC. 206. There are hereby authorized to be appropriated such sums as may be necessary to carry out the purposes of this title.

EXHIBIT 2

[Excerpts from report of the Subcommittee on Science, Research, and Development to the Committee on Science and Astronautics, House of Representatives, October 1966]

ENVIRONMENTAL POLLUTION—A CHALLENGE TO SCIENCE AND TECHNOLOGY

Environmental quality, pollution abatement, waste management—these are concepts closer to everyday life than some other highly technical programs such as military weapons or space projects. The intricacies of pollution are of keen interest (which leads to public awareness and consensus for action) because each one of us is immersed in the environment. We are the polluters and the polluted, and our own senses tell us that the surroundings are not right. There is no need for detailed instrumental measurement or for emotional appeals of naturalists, we freely admit that we have a problem. Further definition of the problem, however, becomes a very difficult project involving natural and social sciences, economics, and governmental and private institutions. Making appropriate choices as we proceed will depend on much more knowledge than we now have.

Since man is very much a part of the biosphere, the living environment, he has always been changing and using the natural resources for his own benefit. Mistakes have been made and consequencies have not always been foreseen, but civilization has advanced by taking risks which were largely overshadowed by obvious benefits. Furthermore, man is an adaptive creature, a product of evolutionary processes through which he could cope with these slow environmental changes.

* * * * *

Considering the powerful forces for ecological change which are at man's disposal, admitting the impossibility of complete foreknowledge of the consequences of many activities, and granting that a highly technical, over-populated world must continue to take risks with natural resources, an "early warning system" for unwanted consequences is extremely important. We do not have such a system at present.

* * * * *

Federal Government scientific activities are not yet channeled to support announced goals in pollution abatement. There is no organization or coordinating group capable of systems analysis and broad management of Federal projects. Insufficient funding has made support of research spotty and disproportionate among problem areas. Agency missions may inhibit long term and comprehensive ecological studies. "Pollution" can cover an enormous variety of Federal agency programs ranging from water resources research to agricultural engineering. Limitations of definition will be necessary for effective program coordination.

Technical manpower will be a limiting factor in abatement progress unless additional effort is organized into retraining, graduate education, and transfer of skills from other technology programs.

Ecology, as an organized profession, is not in good condition to become the umbrella for increased research. As a scientific discipline it is the logical focal point. As a point of view it is already effective in coordinating other sciences and this may be the most important function in the long run.

Complete solution of pollution problems may not be possible, but two trends are discernible. More recycling of materials is a way of managing and eliminating wastes as well as a sound conservation policy. The impact of recycling on the economy can be lessened by imaginative product and process design. The other trend is the controlled transport of unusable wastes to some sort of perpetual safe storage. The use of ocean depths, deep wells, salt domes, burial, and caves needs careful study to assure that there are no undesirable effects on the biosphere from such disposal.

To improve our knowledge of what we are about, scientific activity in ecology and related fields should be immediately expended to provide—

(*a*) Baseline measurements in plant and animal communities and the environment—an ecological survey.

(*b*) Continued monitoring of changes in the biosphere.

(*c*) Abilities to predict the consequences of man-made changes.

(*d*) Early detection of such consequences.

(*e*) Knowledge of the environmental determinants of disease.

Ecological surveys and research should be centralized as to management in some one science-based Federal agency. The scientific activity should be performed (whether in Government laboratories or under contract by local universities and research institutes) in geographical regions which correspond generally to natural environmental boundaries.

To place pollution abatement on a comparable basis with other national technology programs, systems analysis and management capability should be established within the Federal Government. This approach should be used along with the "planning, programming, budgeting" technique to organize both near and long-term Federal research and operational efforts in pollution abatement. More attention should be paid to interfaces between agency missions which make the management of environmental problems difficult.

* * * * *

The Federal Government should undertake an analysis to identify and separate those abatement action programs which are well supported by facts and for which practical answers are available, from those problem areas where more R. & D. is needed. A public information program should make these differences clear to the Nation so that installation, enforcement, and research can each proceed on a logical timetable. Actions to decrease pollution should continue even though the ultimate criteria cannot be set at this time.

The Congress should endeavor to review its broad authorizations and appropriations for water, reclamation, transportation, and conservation in the context of environmental quality goals. The diversity of executive agency missions places an added responsibility on the legislative branch to avoid conflicts in large-scale engineering projects.

The scientific and engineering community should respond to the challenge of the pollution problem as a major opportunity to serve a public need. Work in this field should be recognized as interesting, rewarding, and important. Proposals for organization, funding, and schedules which will assure the participation of excellent technical personnel in adequate numbers should be the joint responsibility of Government and private sector research and development leaders.

EXHIBIT 3

MANAGING THE ENVIRONMENT—EXCERPTS

(NOTE.—In 1968, the subcommittee held hearings on bills to establish various versions of environmental advisory councils. The testimony reviewed environmental quality in considerable detail and resulted in a report, "Managing the Environment." Its conclusions and recommendations include the following.)

The human race is, in fact, managing the environment today. The powerful forces of technology at our disposal give us capabilities to alter and control the populations of other species, and the natural resources of air, water, minerals and food supplies. The task of optimizing the use of the world to the benefit of man is inescapable. There is no retreat to a passive, noninterfering, Eden-like relationship with nature.

The population of human beings is already great enough to require a careful and methodical approach to the environment, if all are to achieve a reasonable standard of living. There is little doubt that population pressures will increase for many years to come. Thus, the environment, both natural and artificial, will be subjected to heavier usage in the future than in the past.

One lesson of this technological age is that machines must be kept in good condition if they are to deliver high performance. This appears to apply to the mechanisms operating in ecosystems, as living things interact with each other and their physical surroundings. From this viewpoint, the maintenance of a high environmental quality is rationalized on the simple

basis that it is the best way to run the world. Degradation of the environment increases overall costs and may eliminate desired options of management. A high quality environment is also the most efficient environment in serving man's needs.

The long-term support for civilization must be based on a farsighted management of a healthy productive worldwide environment. The two are incapable of separation.

It is difficult to evaluate changes or uses for immediate gain in terms of their eventual effect on the status of the environment. There are conflicts when environmental quality is managed by different policies originating in conservation, agriculture, esthetics, recreation, economic development, human health, and so forth.

An overall policy for the environment must be established which integrates these purposes and objectives and which provides for choice when they are incompatible. Within such a policy, for example, pollution abatement would be balanced against other national needs and other threats to environmental quality. Choices are not always quantitative and trade-offs are not systematic.

It is the mistakes in management, and not the concept of management, which should be our concern. Science and technology must be employed to reduce the number of mistakes in environmental management and to improve our ability to take the long view.

Increased knowledge and a national policy can result in individual (and, therefore, institutional) attitudes toward the environment which will support a restoration and maintenance of quality. This personal responsibility is the only means of achieving the indicated goals. The ultimate quality of the environment depends on the discipline of its human inhabitants.

The human environment is recognized as a whole (the "web of life"), but virtually all activities are directed at small parts. A lifetime spans many years but is lived a day at a time. These simplistic facts mean that a comprehensive policy toward the environment cannot help but be philosophical rather than specific. Regardless, such a policy does exist in the habits and attitudes of a nation. Presumably, these can be changed by discussion and education to become more mature. The quality of the environment is not a human health issue, per se. It is more a matter of the unacceptability, at face value, of offensive odors, discolored water, low visibility, eye irritation, littered landscapes, and nuisance soiling.

The recent history of Federal legislation and its administration illustrates the searching of society for a better balance between immediate exploitation of resources and a recognition of noneconomic, long-term values. The present laws relate pollution to the impairment of a desired use. The refinement of the relationship depends on scientific knowledge and technical economics.

The intent of Congress in these laws is to avoid arbitrary regulation and to establish a fact-based, rational decisionmaking process which integrates all the needs of society. The evidence to date is that the laws are floundering due to inadequate information, and misinterpretation of existing facts. The translation of information into action has not been smooth.

Both administrative and judicial bodies are being asked to act wtihout being able to document the basis for their decisions. Because the pace of technological change is rapid, and the pressures on natural resources from a rising standard of living and a growing population are great, actions cannot often be delayed. Some will be correct and others will turn out to be wrong. There is a difference betwen actions to correct clear and present dangers and those required for gradual eventual improvements which may take generations to accomplish. When the difference is not recognized, disappointing delays are likely to occur.

If errors in management are to be minimized, a greatly accelerated search for knowledge of the environment is necessary. Data must be organized and correctly interpreted. The physical, biological, and social sciences must be deployed to obtain this knowledge. A research strategy must be devised to get the relevant facts as soon as possible. An organizational structure of public and private institutions must use the facts efficiently and objectively.

The past several years have demonstrated this need but there is today no Federal Government plan to satisfy it. The short term, highly visible, demands on scientific resources are a barrier to formulating this strategy for ecological research and environmental engineering. But the leadership of the Nation, both public and private, must organize and carry out such a program. Otherwise, future subcommittees will again study the problem of environmental management and come to the same conclusion as does this one:

A well intentioned but poorly informed society is haphazardly deploying a powerful, accelerating technology in a complex and somewhat fragile environment. The consequences are only vaguely discernible.

III. RECOMMENDATIONS

A. National policy for environmental management

1. A national policy of the United States for the environment should be developed by Government and private sector interests. Worldwide effects should be considered during the planning of this policy.

2. Hazards to human health from environmental degradation cannot be the sole basis of policy (although research to elucidate these relationships should be accelerated). Legally useful cause-and-effect data may be so difficult to obtain that dependence on human health as the determinant of abatement action may delay management progress.

3. Elements of the policy should include:

a. Use of the environment for the benefit of all mankind;

b. Maximized productivity of the environment consistent with continued usage into the very long-term future;

c. Systematic management of applied science and technology to achieve best usage;

d. Incentives to industry, land developers and local governments;

e. International agreement on projects which have widespread or long-term effects;

f. Anticipatory assessment of new and extended applications of science;

g. Avoidance of speculative statements and emotional appeals in public relations;

h. An increased education and information program for the public in ecological principles.

4. The policy should be expressed in legislation after due deliberation by both Houses of the Congress. Informal joint House-Senate study groups should be convened from time to time to coordinate national policy in operational programs.

B. Science and technology related to the environment

1. The Office of Science and Technology should coordinate allocations and priorities in Federal agency R. & D. funding so that a greatly expanded knowledge of the environment is secured. The activities of the Committee on Environmental Quality should be conducted in a more open manner and be summarized in a promptly issued annual report to the Congress.

2. Baseline ecological information should be obtained by adequate funding and organization of the international biological program and the environmental sciences and biology program of the National Science Foundation.

3. Social science information to reduce the need for subjective choice among environmental values should be developed rapidly under the leadership of the National Science Foundation.

C. Organization for environmental engineering management

1. The Department of the Interior should be designated as the lead agency in coordinating environmental engineering operations of all Federal programs.

2. The hearings record suggests that the major environmental engineering operations of all Federal agencies should be placed together in the Department of the Interior. For example, the domestic environment related activities of the Corps of Engineers should be transferred from the Department of Defense. The nonhealth programs of the National Center for Air Pollution Control and the Solid Waste Division within the Department of Health, Education, and Welfare should be separated and transferred to the Department of the Interior.

It is recommended that the appropriate committees of the Congress (including the Subcommittee on Executive and Legislative Reorganization of the House Committee on Government Operations and the Subcommittee on Executive Reorganization of the Senate Committee on Government Operations) should immediately undertake the study which will be necessary to implement this suggestion in its organizational detail. The Executive Office of the President should consider initiating reorganization plans which may be necessary.

3. Human health criteria for environmental contamination (including air and water) should continue to be constructed and published under the direction of the DHEW, but with the full participation of all interests in an open manner characterized by the scientific method.

4. In each agency with substantial programs related to the environment, a high level official should be designated to supervise and correlate such activities.

5. An "Environmental Cabinet" should be formed of the designated officials from each agency plus the Chairman of the FCST Committee on Environmental Quality. This group, under the leadership of the Secretary of the Department of the Interior, should assure conformity of Federal operations with the national policy for the environment. If this mechanism does not achieve coordination, then a legislatively created special council should receive further consideration.

6. The Congress should proceed to develop an independent capability for assessing the impact of technology on the environment.

EXHIBIT 4

JOINT HOUSE-SENATE COLLOQUIUM ON A NATIONAL POLICY FOR THE ENVIRONMENT

Last summer, a joint House-Senate colloquium was held on a National Policy for the Environment. A Congressional White Paper was written on the basis of these discussions and issued over the signatures of seven Representatives and Senators from both political parties. The elements of policy were stated in these words:

"It is the policy of the United States that:

"Environmental quality and productivity shall be considered in a worldwide context, extending in time from the present to the long-term future.

"Purposeful, intelligent management to recognize and accommodate the conflicting uses of the environment shall be a national responsibility.

"Information required for systematic management shall be provided in a complete and timely manner.

"Education shall develop a basis of individual citizen understanding and appreciation of environmental relationships and participation in decisionmaking on these issues.

"Science and technology shall provide management with increased options and capabilities for enhanced productivity and constructive use of the environment."

Mr. Speaker, last November, the white paper referred to was sent to the Executive Office of the President for comment. A group of agency environmental experts was convened by the Federal Committee for Science and Technology in its Committee on Environmental Quality. In April 1969, they responded with an endorsement of the congressional views and some valuable additional policy elements. This correspondence was published in the CONGRESSIONAL RECORD on May 20, 1969—page 13148—for the benefit of the many Members and committees who were drafting legislation in this area.

PERSONAL EXPLANATION

(Mr. LOWENSTEIN asked and was given permission to address the House for 1 minute.)

Mr. LOWENSTEIN. Mr. Speaker, I am recorded as voting "yea" on rollcall No. 102, H.R. 11400, the conference report on the second supplemental appropriation bill. Title I of that bill contained additional funds for our military effort in Vietnam, and I had joined Congressman RYAN in moving to strike it when it came before the House on May 21. As I suspect everyone in the House knows by now, I am opposed to further military appropriations for Vietnam. At this point, I am not going to explain again why I oppose such appropriations. I have discussed that here several times, including once on July 9 in connection with the vote on the supplementary appropriations.

But I do want to be sure that the record is clear: that I am recorded as voting "yea" on rollcall No. 102 only because I had been misadvised about the parliamentary situation. I had been told that a "yea" vote would be consistent with moving again to delete title I; would in fact be the proper procedure if one approved of other items provided for by the supplemental appropriation. The distinguished majority leader, Mr. ALBERT, who was in the chair at the time recalled that when I explained my purpose to him, he informed me that my understanding of the parliamentary situation was incorrect. Since it was then too late to change my vote, he suggested that the best way to avoid confusion about my position would be to put an explanation in the permanent RECORD of the circumstances attending the vote on rollcall No. 102.

I realize this whole matter is of small moment since the vote in favor of H.R. 11400 was so overwhelming, but I do want the record to be clear that I was as opposed to the second supplemental appropriations bill when it came back from conference as I was when I voted against it on May 21 after we lost the motion to strike title I.

As I remarked on July 9, I cannot believe that it is healthy parliamentary practice, let alone in the best interests of representative government, to deny Members the opportunity to vote separately on matters that are separate or to deprive voters of a way to know how their representatives voted on matters of great moment. But the procedures being what they are, I want to take this occasion to announce again that I am utterly opposed to all further military funding for Vietnam while our present policies there continue.

AIR SAFETY

(Mr. HARVEY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HARVEY. Mr. Speaker, it is my privilege as chairman of an informal study group, formed over a year ago, to announce completion of an extensive research project into the problems and needs of air safety. Our study does not contain all the answers to the multitude of growing problems confronting air transportation. It does not include all the problems or all the solutions. But the sponsors of this study group paper, along with 25 other Members of Congress who have become associated with this project, believe the document contains recommendations and suggestions worthy of consideration by this Congress and the administration.

At this time, I would like to cite three other Members who joined with me as sponsors of this study group. They include FRANK HORTON, of New York, ROBERT T. STAFFORD, of Vermont, and J. WILLIAM STANTON, of Ohio.

The following Members of Congress have joined the study group in calling attention to our air safety needs by means of this study. They include:

JOHN B. ANDERSON, of Illinois;
MARK ANDREWS, of North Dakota;
ALPHONZO BELL, of California;
WILLIAM E. BROCK, of Tennessee;
GEORGE BUSH, of Texas;
SILVIO O. CONTE, of Massachusetts;
JOHN DELLENBACK, of Oregon;
MARVIN L. ESCH, of Michigan;
PAUL FINDLEY, of Illinois;
PETER H. B. FRELINGHUYSEN, of New Jersey;
PAUL N. MCCLOSKEY, JR., of California;
JOSEPH M. MCDADE, of Pennsylvania;
WILLIAM S. MAILLIARD, of California;
CHESTER L. MIZE, of Kansas;
F. BRADFORD MORSE, of Massachusetts;
CHARLES A. MOSHER, of Ohio;
HOWARD W. POLLOCK, of Alaska;
ALBERT H. QUIE, of Minnesota;
OGDEN R. REID, of New York;
HOWARD W. ROBISON, of New York;
PHILIP E. RUPPE, of Michigan;
FRED SCHWENGEL, of Iowa;
GARNER E. SHRIVER, of Kansas;
ROBERT TAFT, JR., of Ohio; and
CHARLES W. WHALEN, JR., of Ohio.

A new statement, now being released with the study, highlights the report. I am enclosing it at this time to be followed by "A Study of Air Safety":

REPUBLICAN CONGRESSMEN PROPOSE AIR SAFETY MEASURES

After a year of extensive research into the problems and needs of air safety, four Republican Congressmen today urged that the Federal government take positive steps to ensure safe air travel.

Their recommendations are contained in a study group paper prepared by James Harvey (Mich.), the group's chairman; Frank Horton (N.Y.); Robert Stafford (Vermont); and William Stanton (Ohio). Twenty-five other Republican Congressmen joined the group in calling attention to our air safety needs by means of this study. They are concerned about our safety preparations for 1980 when four times as many Americans will be flying as in 1965.

The group emphasized that it was not in disagreement or in competition with the air transportation message presented by President Nixon on June 16th. They considered their study as complementing the Administration's proposals, some of which are nearly identical.

The authors assert that it is inadequate to concentrate our safety efforts on the airworthiness and crashworthiness of the aircraft itself when the causes of air accidents are increasingly found in the approach and landing phase, in unknown and hazardous weather and environmental conditions, and in the interaction of human factors with the system. They say that air safety efforts must focus on the interaction of all elements of air travel.

They point out that the systems management approach has not been used to control air traffic, that nearly half of the airports served by scheduled airlines are underequipped, and that the plans for the development of new airports are still inadequately conceived.

The Congressmen recommend that the Federal government "prescribe a comprehensive air traffic system" and use a systems management approach to coordinate all its aspects. The FAA must give top priority to planning and Congress should provide the funds to develop the air traffic management that is necessary for us to be the masters rather than the victims of our technology.

One of the many recommendations is that the FAA receive funds to train and hire more air controllers. The pay, rest periods and vacations of air controllers must be increased and their administrative duties lightened to increase their effectiveness.

Also recommended are an Airport Trust Fund to help finance the development and operation of safe airports and the requirement of location signal devices to expedite the finding of missing planes.

A STUDY OF AIR SAFETY

INTRODUCTION

Our purpose is to define a new context within which to view the technological wonder of American air travel and to ask whether we are being swept along by the momentum of technology without adequate concern for the consequences of our acts—whether we have become the slave rather than the master of the revolution of technology.

This study has not been primarily concerned with passenger facilities on the ground, or in the air, or with hi-jackings, or airport delays, or scheduling foul-ups, or reservation mistakes, or noise levels in the suburbs. This study is not focused on the convenience of air travel, but on its safety. Implicit in our findings is the conclusion that too often the passengers, industry and government have sacrificed safety to convenience.

While the technical nature and vocabulary of today's aeronautical science defy in-depth understanding by the layman of all aspects of the air safety problem, we have tried to explore each aspect with the goal of establishing general familarity with the subject matter.

This basic paper can serve both as an introduction to more complete discussions in the appendices—and as a summary of our findings and conclusions. It contains a series of facts and impressions which we strongly recommend to the attention of the Congress, the Administration and the American people.

The history of aviation accidents indicates that flying has been relatively safe in comparison to other modes of travel, but that the safety factor is not increasing. Rather,

because of the increased volume of air traffic, the increased number of passengers which an aircraft can carry, and the increasing complexity of mechanisms for general aviation, the air accident fatalities will probably increase in the future.

Heretofore, aviation safety has been thought of entirely in terms of airworthiness and crashworthiness of the aircraft. But increasingly we find that the causal factor is rarely the aircraft. Accidents occur with increasing frequency in the approach and landing phase, in unknown and hazardous weather and environmental conditions, and because of the interaction of the human factor with the system.

The greatest single failure of the Federal effort in the development of civil aviation has been the failure of the FAA to conceive a program of planning and research and development aimed specifically at the development of the civil transport system's facilities. To date, the technologies which have supported air system activities have been largely derived from military research and development. They found their way into the total air transportation system at random. This course will no longer be adequate to follow, because military and civil aeronautical development is becoming more divergent.

The Federal government did not hesitate to come to the aid of the automobile when numbers surpassed the system's ability to accommodate them.

Likewise, the Federal government must now take a strong leadership position in formulating the research and development plans for the air system and must bear the financial burden to the point where the private sector can see the opportunity for profit. The government's role in the development of the SST is an example, but it is time that attention be focused less on the aircraft and more on the development of the system which accommodates it. It is vital, also, that the goals we seek improve the productivity and safety of the total transportation system.

The most critical parts of the civil aviation system which will bear directly on the potential for safe operations in the future are (1) air traffic control systems, (2) airport and facilities development, (3) noise and air pollution abatement, (4) human factors and their interaction with environment and equipment, (5) the relationship of the aviation system to the total transportation system and (6) the Federal effort to take a leadership position in directing the safe civil aviation effort.

SITUATIONS AND TENDENCIES

In the next pages we will do two things. First, we will comment on some of the situations and tendencies which trouble us. Thereafter, we will present our recommendations. The appendices provide supporting materials and cover the field in a more comprehensive manner.

Item: Between 1965 and 1980 the number of passengers carried by U.S. commercial airlines will have expanded four fold, while the total number of aircraft operations at FAA tower airports will have increased at an even greater rate (from 35.6 million to 184.6 million). (See Append.).

And yet, there is not now, nor is there contemplated, any comprehensive effort to apply the systems management approach to the control of air traffic. The government, the manufacturers, the airlines, and the pilots' associations are all concerned—over weather and airport standards and airport traffic control and aircraft construction and pilot training. Some progress in air safety can be cited in each area, but the growth of air traffic seems to overwhelm the planners—and we are losing ground.

The need, and it is desperate, is to create an air travel management system which integrates all aspects of the problem, and measures each proposed change against the capacity of the system to absorb it.

Item: Air traffic at some of our most important airports today has increased at a rate greater than the present or programmed traffic contol system can handle. This has already necessitated restricting flights at Washington's National Airport, Chicago's O'Hare and three New York area airports—Kennedy, LaGuardia and Newark.

Instrument operations increased by 5% between fiscal year 1965 and 1966 and forecasts indicate that this trend is not likely to diminish.

Instrument landing systems are still absent at more than 300 commercial airports today, out of 560 which service scheduled airlines. (See chart 19B, append.)

And yet, while many new instrument landing systems (ILS) are proposed for the next decade, a large number of these systems is proposed for big, multi-runway airports which already have ILS. There is growing evidence that such improved facilities simply concentrate traffic at a few airports and do nothing to relieve the growing tangle of air traffic jams elsewhere. Nearly half of the 560 airports served by scheduled airlines fall in the underequipped category. Congestion at major airports might be relieved if sufficient funds were given to these smaller underequipped airports, thus making them capable of handling more traffic. This aid might also reduce the growing number of air tragedies occurring at smaller airfields, for example, those which occurred on December 24, 1968, and January 6, 1969, at Bradford, Pennsylvania.

Item: The nation's airport and support facilities are in dire need of planning. By 1979, 85% of the air carrier fleet will be jets, but only 483 of today's 709 air carrier airports can handle jets, and only 500 will be able to handle jets in 1975. The amount of cargo handling and the number of passengers will triple in the next decade, far outstripping the airports' ability to handle all the traffic. (See Append.)

And yet, there is every indication that the National Airport plans of the past, whose funds have been allocated largely to a few airports, have, in fact, created congestion at many airports by luring traffic in search of good facilities. The next National Airport Plan, 1969–1972, is pursuing a similar course. The most crucial aspect—the development of a long-range national and international plan for the placing of airports—is still inadequately conceived and aimed at developing a system in a few urban areas only. There is insufficient attention to the following problems: air cargo, the linkage of remote population areas with urban centers, short-haul and long-haul operations, general aviation and commercial aviation interests, the connection between terminal and ground transportation, land acquisition and adequate funding, and the potential for improved runway utilization, configurations, and taxiway systems. The future of safe civil aviation operations hinges on this planned development.

Item: The nation's airports and support facilities are in dire need of financing. Federal estimates now call for a $6 billion investment by local, state and Federal governments over the next eight years—more than has been expended in total during this century for the National Airport System. The Federal Share of this development alone would amount to $1.53 billion for fiscal years 1967 through 1973. (See Append.)

And yet, the $6 billion is an underestimation of what is needed in the next decade. Excluded from this figure are major areas such as air traffic control systems, the state and local share for runway development, passenger handling, and the money the airlines themselves will spend. Add to this the fact that two-thirds of the airports are privately owned, and it is readily seen that much new money (beyond the Federal share of $1.53 billion) must be raised to meet the needs of the entire airway system. It is encouraging that President Nixon has suggested new methods for raising additional funds.

Item: Noise and air pollution directly caused by aircraft will almost certainly increase dramatically due to the increasing frequency of operations and the growing proximity of aircraft movement. Present noise abatement techniques such as slow climbs, sharp turns, steep descents, and noise levels, are a hazard, are expensive to monitor, and concentrate traffic. Air pollution abatement techniques have had little effect in increasing visibility.

And yet, the Federal government continues to consider its present air traffic control techniques to be a safe and effective noise and air pollution abatement program despite the fact that there is evidence to the contrary. It continues to rely on the good will of aircraft companies to develop quieter exhaust-free engines and on local communities to establish compatible land-use practices and building codes. Clearly the Federal government must appropriate more money for elementary research in noise and air pollution abatement far beyond what it is affording in the SST project, and it must control either by persuasion or mandate the land-use practices and building codes at the local level.

Item: After the introduction of the Boeing 727, a series of fatal crashes occurred within a 3 month period. Preliminary reports cite "pilot error" as the cause.

And yet, there is a recurring awareness that accidents should not always be blamed solely on aircraft failure or solely on "human error". Inadequate attention is being paid to how the human element reacts to the machine and to the environment. In the example cited above, further investigation by the FAA indicated that the pilots involved had not fully realized the high sink rate characteristic of the 727. Rather than being a "human error", it was simply a lack of adjustment between man and machine. This relationship is known as the "interface problem".

Item: The relationships of the aviation complex to the total transportation system and the environment in general have not been identified, analyzed, and ranked in a systems approach frame of reference. The benefits of faster and larger aircraft cannot be fully utilized if there are excessive delays to and from the airport.

And yet, the Federal government has failed to adequately coordinate industries' effort to develop faster, higher capacity aircraft with its own efforts in the related fields of mass transit, construction of airport facilities, and other related areas. To encourage the development of these large aircraft on the one hand, and neglect the development of related facilities on the other hand, seems to contradict the aim of the national transportation system.

More is involved than increased convenience for those seeking access to airports; alternative modes of transportation could be made more attractive so that the acceleration of pressure on our air system—and thereby on air safety—could be reduced.

Item: Implementation of most changes needed can be made within the present governmental structure and framework if the public would but recognize the need for this advance planning. The Federal Aviation Act, the Federal Airport Act, the National Aeronautics and Space Act, and the Department of Transportation Act have provided the necessary legislation and Congress has provided the necessary committees.

And yet, past administrations haven't given sufficient priority to the airway problem. There was inadequate coordination of federal, state and local government effort. We have needed stronger leadership to assure

adequate appropriation and sufficient programs to meet future needs.

Item: Aircraft operations at FAA tower airports manned by FAA personnel will have expanded over 400% between 1965 and 1980. (See Append.)

And yet, while experts agree that it is difficult for a traffic controller to handle more than seven planes at a single time, there is such a shortage of personnel today at some of the busiest airports that traffic controllers have been known to be responsible for between thirty and forty planes at one time.

Item: Today's total U.S. civil fleet consists of 128,500 planes, 98% of which are used in "general aviation," as contrasted with the airlines' carrier operations. In turn 20–25% of general aviation consists of personal pleasure flying—and the amount of personal pleasure flying is expected to double in the next ten years. (P. 3—Nat. Airport Plan—1968).

And yet, the licensing system for general aviation pilots surely will become inadequate to maximize safety in the future. Growing congestion increases the complexities which every pilot must be able to handle.

Item: In 1970, the first of the jumbo jet carriers, the Boeing 747, will be in operation. Within the next decade, other new aircraft, among them the Lockheed L–500, and the SST, will also become a reality. There is growing concern about handling their 400–700 passengers on the ground.

And yet, while this is a meritorious concern, we should be even more concerned about greater safety in the air, where one accident can be fatal to such large numbers of people.

Item: In considering the magnitude of the air safety problem, it is important to know not only of the crashes but of the near-misses ("incidents") as well.

And yet, information on near-misses has been woefully incomplete. Until 1968, many incidents were not reported by pilots because of the fear of punitive action which might be taken against them. In order to get accurate information, pilots reporting near-misses are now (as of January 1, 1968) granted immunity from punitive action in relation to them. By mid-March 1968, the pilots with their new immunity had reported as many near-misses as had been reported in all of 1967. For all of 1968, they submitted to the FAA more than 2,200 reports of near-misses. Presumably a great number of near-misses still goes unreported because pilots prefer not to have it on their record or to get involved. Experts estimate a total of 20–25 near-misses a week in the Boston–New York–Washington air corridor. (See append.)

Item: It is generally estimated that air crash fatalities could be cut in half if post-crash fires could be eliminated. In other words, 50% of air crash fatalities occur in the crash itself while the other 50% stem from burns or suffocation in fires which break out upon impact.

And yet, no major push for fire prevention or control is evident on the part of private enterprise or government. Not a single major civilian airport is equipped with the helicopter firefighting apparatus which is considered standard at military air fields for rapid access to crashes which occur on approach, landing or take-off. Many airports do not maintain any type of firefighting equipment and there is no requirement that they must. Gelled fuels and aircraft fuel systems designed to alleviate the instances of post-crash fire, have received some, but no major attention.

Item: In the last five years more than sixty planes have disappeared in the continental United States and Alaska. Presumably they crashed, but the wreckage has never been found. Obviously the chance of surviving a crash is partly a function of getting help to the scene quickly. The Federal government spends almost $60,000,000 a year in Search and Rescue operations.

And yet, there is no requirement that aircraft carry a location signal device, even though such devices are available and are quite inexpensive. Much money could be saved by making it easier to locate crashes.

Item: At the peak air traffic hour in New York, 6 p.m., there are over 35 airline carriers in the immediate landing pattern at JFK airport, over 25 at LaGuardia, and over 25 at Newark; at the same time there are over 80 carrier aircraft on the ground awaiting take-off at the three airports. There are literally dozens of aircraft at these three airports scheduled to take-off at precisely the same minute.

And yet, the government makes no effort to use its authority to adjust the scheduling of airlines to avoid the inevitable hazards of this kind of scheduled congestion. The strain on traffic controllers, by this kind of congestion, when added to the predictable hazards of weather conditions, human error, and mechanical failure means that this acquiescence in jammed scheduling is tantamount to courting disaster. Voluntary efforts at cooperative scheduling among the airlines have produced unsatisfactory progress.

Item: In addition to the commercial airlines under control of the traffic control towers in the New York area at the peak hour of 6 p.m., there are also likely to be at the same time on any given day between 200 and 300 general aviation aircraft in the same air space—operating under visual (VFR) rather than the system's instrument (IFR) flight rules.

And yet, the government has not as yet established adequate regulations with regard to the type of aircraft, aircraft instrument equipment and pilot instrument ability necessary for flying in areas of high air traffic density. Only recently has it barred VFR traffic from certain high density air traffic areas. The role of federal jurisdiction in imposing and enforcing comprehensive safety standards at hub airports—or any airports—is unclear, with resulting disparity among the various airports across the nation.

Item: The FAA has been curiously cautious and reluctant in utilizing its authority to issue safety regulations without assurance that its fears were actually justified. Too often, this means that safety precautions are issued only after accidents prove the wisdom of them—and justify them to potential critics.

And yet, on the other hand, crash investigation reports by the National Transportation Safety Board takes an inexplicably long time to produce—sometimes as long as two full years after the accident occurs. In the meantime, the conditions which contributed to the crash are likely to be reproduced because of the absence of regulations—and upon occasion the slow report is largely irrevelant when it is finally filed because the systems involved have been replaced by technological innovations.

The delay of the NTSB investigation reports is a possible obstacle to the cause of air safety. The recent issuing of interim reports is helpful, but the NTSB ought to be able to reach a conclusion in less than the two years it occasionally takes. Hopefully, a better system of investigating and reporting will be found to hasten the report of the accident while maintaining accuracy.

Item: Most air carrier crashes occur near airports in the take-off or approach and landing process. Thus, particularly as instrument flight rules govern an increasing proportion of these operations, the FAA air traffic control towers and personnel become absolutely critical factors in air safety.

And yet, the government, through the National Transportation Safety Board, is charged with the responsibility of investigating all crashes, and, therefore of passing judgment on the performance of its own personnel, procedures, equipment and regulations. Not the least factor to be considered is that the findings of the government's agency, the NTSB, are likely to be the principal basis for claims against the government. It is a fact that in only two instances have FAA tower operations or personnel ever been cited as even contributing factors in official accident reports. The tendency toward apologia or worse is too great a risk when men are asked to investigate the performance of those who are close to them. The suggestion that the investigative function be contracted to private enterprise has yet to be considered seriously as an alternative. In this case, the NTSB would still retain the authority of reviewing the findings and recommending action to be taken by the FAA.

Item: The only source of comprehensive statistical information on air traffic and air safety is the FAA.

And yet, the FAA has seemed often to interpret its role in this area as the responsibility to join with the airlines industry to assure the public that air travel is impressively safe. Thus, FAA statistics have been based on measures which tend to paint a more serene picture than really exists. Only recently has the FAA begun to measure safety in terms of fatalities rather than in terms of accidents. Comparing the number of fatalities to the number of total passenger miles in effect is misleading when each year bigger planes are carrying more passengers longer distances. And trying to compare air safety with highway safety is irrelevant in the extreme, given the price of any single air crash and the total absence of control an air passenger has over his own fate.

Item: A continuing and major government research and development program in the techniques of all air safety is an obvious requirement of the rapid growth of American air traffic.

And yet, neither the FAA nor the Department of Transportation conducts or controls a major "R and D" program of its own in this area. They make recommendations on aeronautical research needs to NASA, some of which are pursued and some are not. They benefit from, but do not exercise a controlling interest in, the research programs of both NASA and the Department of Defense. The past R and D priorities of the government in air safety appear best illustrated by a heavy pre-occupation with developing safety programs for the SST, which is scheduled for operations in 1980. More government money and effort are concentrated on that effort than on all other aspects of air safety combined. (See append.)

RECOMMENDATIONS

The comprehensive list of recommendations which follow is based on the detailed studies present in the technical appendices attached. Although we would like to see change in all the areas we mention, we believe that top priority must be given to improving air traffic control systems, developing airports and facilities and abating noise and air pollution. If we do not see immediate, massive and drastic change in these three areas, we will be in danger of being completely overwhelmed by the civil aviation complex we have created. The recommendations appear under several sub-headings.

AIR TRAFFIC CONTROL SYSTEMS

1. The first object of government in air travel must be to guard the public's welfare. The Federal government should prescribe a comprehensive air traffic system which is safe. Only the Federal government can implement or permit such changes which are consistent with a safe system and reject or prohibit those which are not. Through systems management it must coordinate all aspects of an integrated air traffic system—personnel training, airport standards, air-

craft production, airlines scheduling, pilot certification, weather observation, traffic control. The government must be able to supervise; the capacity to cope is not good enough.

2. The proposed plans for the development of the National Airspace System must be reassessed and a specific research project undertaken which will forecast needs and develop hardware for the improvement of the air traffic control system. In this project attention should be given to such things as enroute navigation systems, all-weather landing system, airborne collision avoidance systems, automatic weather communications system, nationwide traffic patterning systems and all other relevant aspects of the air traffic control complex. Particular attention must be given to the establishment of priorities so that a just, orderly, and efficient pattern of improvement will occur. Placing all new and advanced air traffic control equipment in certain areas of high density traffic is an inadequate answer to our present problem.

3. In accordance with its new emphasis on development of a long-range, comprehensive and safe systems management approach to air traffic control, the FAA should involve a greater proportion of its personnel in planning, which should receive top priority. It should recruit staff with planning skills. Day-by-day operations of the air traffic system can hardly be ignored, but when planning for a safe future is given less than top priority, as is the case today, the FAA is not fully doing its job.

4. Congress should appropriate the funds necessary for safe systems management over air traffic. Doing so will be necessary if we are to be the masters rather than the victims of our technology. In the past the FAA has lacked an adequate system and the Budget Bureau has cut those funds it did seek; furthermore, the FAA appears to have defined its needs in accordance with what it thought it could get from the Congress. What the FAA has been spending on airports and all other programs is infinitesimal compared to the budget of the Bureau of Public Roads. The old $1.5 billion FAA estimate for pre-1975 federal expenditures on the National Airport Plan, for example, was so obviously inadequate that it casts doubt upon the whole plan. We applaud the present administration's foresight in seeking the need for additional funds for the National Airport Plan and believe it to be a step in the right direction.

5. Congress should appropriate funds sufficient to train and hire enough traffic controllers to permit safe operations at all air traffic control centers. At the same time the FAA should make extensive efforts to reduce the strain on traffic controllers through a cutback in their administrative duties, more equitable holiday assignments, guaranteed annual two-week leaves with pay, earlier retirement provisions, and liberalized regulations regarding controller workload.

6. In developing a comprehensive and safe systems management approach to air traffic control, the FAA should reverse the disastrous trend of concentrating jet operations and passenger operations (and corresponding feeder line operations) into relatively few major hub airports. This trend amounts to a courtship of convenience pointing toward a marriage which cannot work. It is the major weakness of the National Airport Plan 1969–1972.

7. In order to reduce traffic congestion at peak hours, the FAA should implement to the fullest its authority to veto any airlines flight schedules it feels to be inconsistent with safe operations.

8. On the basis of extensive research, the FAA should issue new regulations governing the use of carrier pilots and crew on long-distance flights, which can seriously impair efficiency through fatigue and disruption of the standard 24-hour physiological cycle. Such regulations might also cover crew facilities for relaxation and reorganization of cockpit procedures and team functions to reduce procedural errors through fatigue.

9. As a priority matter, provisions must be established for periodic retesting for all general aviation pilots—both in terms of their knowledge of developments related to their flying and their continued capacity.

10. The FAA must devise a more satisfactory means of assuring full knowledge of near-collision incidents. The current system of pilot immunity upon reporting near-misses has increased reports, but probably not to a satisfactory point. It might be more appropriate to suggest that when a pilot participates in a near-miss, but does not report it, the incident should be investigated and appropriate action should be considered.

11. The FAA should require installation of a locating device in every aircraft flying in certain defined high hazard areas to aid search parties to find it in case of accident.

DEVELOPING AIRPORTS AND FACILITIES

1. An airport trust fund, similar in nature and operation to the successful highway trust fund, should be established to help finance the development and operation of safe public airports. A variety of potential sources of trust revenue should be considered including a minimal passenger tax (perhaps distinguishing between domestic and international travel), a non-refundable fuel tax on all aviation fuel users (commercial as well as private), and/or an annual aircraft license fee for all civil aviation based on the value of the aircraft.

2. The proposed National Airport Plan must be reassessed and a specific research project awarded which will find answers to the following problems: land acquisition, funding, linkage of remote and urban areas, short-haul and long-haul operations, general aviation and commercial aviation interests, procedures for cargo handling, airport placement, runway configuration and utilization, and airport design and facilities.

3. The FAA should encourage the development of and make use of state departments of aviation in order to attempt to resolve predictably difficult questions of conflicting local jurisdictions before resorting to the imposition of Federal authority. The state departments of aviation should also be encouraged to promote the orderly development of land acquisitions for future airports, as well as to identify and define air traffic control systems which will ensure the safe operations of general aviation and air carrier operations alike.

4. The Civil Aeronautics Act should be amended to require that certification shall be issued for the operation of airports used in interstate commerce. Such certification should define the standards for safe operation, proper maintenance, and safety equipment (e.g. firefighting equipment). Airport certification should also be tied to the kind of aircraft which can operate at the airport, or the manner in which aircraft may operate at the airport.

5. Because 50% of all air crash fatalities stem not from the crash itself but from the resulting fire, federal airport certification as recommended above should include requirements for minimal firefighting apparatus capable of rapid access to any plane which might crash upon take-off, landing or approach. Similar emphasis in FAA-sponsored research should be given efforts to developing aircraft fuel systems or fuels which are fire, smoke and toxic gas preventive.

6. The Federal government must pursue the development of civil aviation within the context of total transportation systems development. Otherwise, the benefits of high speed travel will be in danger of being completely negated by the growing speed differentials between ground and air travel. Of crucial importance at this time is the development of hardware and the concentration on applications research rather than basic research in order to make door-to-door travel a reality.

NOISE AND AIR POLLUTION ABATEMENT

1. A concentrated effort must be made in research and development to attain the most basic understanding of air and noise pollution phenomena. If the most effective and economical method of abatement seems to be the development of noiseless and pollution-free aircraft engines, that must be pursued. If the answer appears to be in the control of land-use and environmental factors like sound-proofing, that must be pursued. In the meantime, all noise abatement regulations now in effect should be carefully reviewed, particularly in order to eliminate any regulations which impose risks to safety.

OTHER RECOMMENDATIONS

Weather

1. U.S. support for current but long-standing Geneva negotiations on the establishment of a global weather observation system should be underscored—and the U.S. negotiating team should transmit to its colleagues the sense of urgency with which the American government views their deliberations.

Research

1. The FAA should conduct its own aeronautical research and development program; relying on the good sense and will of NASA and the Department of Defense is simply insufficient. Spinoffs from the research of others can be valuable, but FAA should not be at the mercy of anybody else's definition of need or decision on timing.

2. A specific research project should be undertaken to study how the human element reacts with other components of the aviation system to effect a safer operating system. Attention should be given to such aspects of the problem as: air traffic controller stress, pilot fatigue, private sector pilot performance, the understanding of weather phenomena, the collection and dissemination of weather information, environmental hazards, cockpit configuration (e.g. altimeter placement) and aircraft evacuation procedures.

Reorganization

1. The FAA, through the Department of Transportation, should be represented on the Aeronautics and Astronautics Coordinating Board, so that it can have maximum influence on the R and D directions which other agencies pursue and receive maximum information on related research projects.

2. On the other hand, the functions of the National Transportation Safety Board, at least as they relate to air travel, should be performed by an agency or bureau totally separated from the FAA. There should be careful examination of the adequacy of the present statutory separation. It may be appropriate to establish an adequately-funded independent board which would report directly to the Congress.

3. The Civil Aeronautics Board should be abolished and its only remaining function (regulation of fares and awarding of routes) transferred to the FAA. Its present separation from the FAA serves no rational purpose and flows only from now obsolete legislative history.

SUMMARY PERSPECTIVE

The airplane has surely changed our lives. It has quickened the pace of society and business. It has made us an even more mobile society. It has brought opportunities and nations and recreation and loved ones closer.

But the nagging questions remain. We have allowed numbers of aircraft to increase

without providing a system adequate to regulate their safe movement. We have tended to interpret safety only in terms of aircraft capability rather than considering the interface of these elements with others in the aeronautical system.

Most of all, we have failed to face the fact that civil aviation has reached a point where we must make a massive financial and intellectual effort in the public sector of the aviation complex—airports, air traffic control systems, air and noise pollution, and human and transportation interface problems if safe air travel is to continue. Public concern must force the government to take the leadership position necessary—and we must pay.

APPENDICES

INTRODUCTION TO APPENDICES

Each appendix to this report covers an aspect of air safety. Each of the aspects covered is important. This organization of the study has been followed to facilitate both the layman's understanding of it and the expert's reference to it.

Nonetheless, the treatment of the subject matter in distinct appendices, no matter how necessary for our purposes, is artificial—and if not recognized as artificial can compound a fundamental error which many concerned with air safety have been making for too long.

Each component part of the problem can be discussed separately, but does not exist in a vacuum. The safe management of air traffic will not result from an effort to solve each individual problem, but from a comprehensive systems management approach which can impose a comprehensive plan or system on every facet of the field. The nature of the big problem is far more serious than merely the sum of the artificially isolated aspects treated in these appendices.

An accident may well be caused by a pilot's inability to read quickly and accurately an indication of crucial information. This inability may stem from lack of training, which is a shortcoming of pilot certification procedures, or it may stem from an inappropriate layout of pilot information dials, which is a shortcoming.

On July 31, 1968, a Piedmont Airlines plane crashed upon approach to the mile-long mountaintop runway at Charleston, West Virginia, killing 32 of 37 persons aboard. The radio glide slope for the airport's Instrument Landing System was not operating at the time of the crash; visibility was approximately one mile; another 50 yards of runway would have meant the plane might have cleared the ravine where it crashed; the pilots had to rely on the dual altimeters in the aircraft. The causal factors in the crash thus may have included airport facilities, weather, traffic control, aircraft capability and pilot ability. To single out one and ignore the rest would be unwise; to treat each as totally unrelated to the rest would be unwise.

The most competent and correct answer to one aspect of air safety may affect adversely other parts of the problem. Systems management is needed to produce a comprehensive answer to all the problems with each answer being compatible with every other answer.

Systems management is the capacity to consider collectively a multitude of interrelated problems, to produce an integrated and internally consistent set of answers to them, and to supervise their implementation in an orderly, competent, and productive way. It is the mode of operation in the space program and in some aspects of the Defense Department—where the technical obstacles and data are obviously too great for any single mind or office to comprehend, but where every technical decision affects the range of options available in every other technical decision.

Systems management obviously must be the mode of solution to America's air traffic monstrosity. The practice has been the opposite—to segment a problem too large to handle into artificially distinct problems with which the human mind and traditional bureaucratic method can cope. The similar division of the problem into similarly artificial categories in these appendices is perhaps an aid to the reader, but we hope that his objective will be to find the means by which they all can be treated as inseparable elements of chaos in search of planning.

I. HISTORY OF ACCIDENTS

As in so many areas of modern America, the consumer of air travel services cannot easily discuss the accuracy of claims made on behalf of the product. No authoritative voice speaks for the air traveller, or to him, with relevant and decipherable information. Understandably, the industry wishes to present its safety record in the best light. Less understandably, the government has joined the industry in attempting to prove the safety of air travel rather than to determine how safe air travel is. As a case in point, this study has had to rely largely on statistical data prepared by the FAA. The statistics are not wrong, but they are misleading because they measure air safety in irrelevant ways. The following few paragraphs suggest that not even these misleading measurements paint a universally attractive picture.

For what this type of comparison is worth, the fatality rate per 100,000,000 passenger miles for U.S. domestic scheduled air transport planes has been consistently better than passenger automobiles and taxis, occasionally better than buses, and consistently (except 1966) worse than railroad passenger trains. (See Chart 1).

Comprehensively, accident rates demonstrating the annual number of accidents per million miles flown for all U.S. non-military aircraft have declined over the sixteen year period from 1951 through 1966. This accident rate figure for U.S. *air carrier operations*, for example, has declined from 0.177 to 0.044 in 1966.

Chart 2 indicates a general, but not steady, decline in the number of carrier accidents from 107 in 1951 to 78 in 1966. The number of miles flown, however, has risen sharply with a 1966 figure of 1,530,335,000 miles flown, being more than two and a half times the 1951 figure. The resulting accident rate has declined significantly.

Otherwise, viewed against the increase in mileage, even the fatal accident rate and the fatalities rate have declined. The number of fatal accidents and total fatalities, however, have not declined over the years, shifting erratically from year to year.

The accident rate for U.S. *supplemental air carrier operations* has declined from 0.536 in 1951 to 0.082 in 1966. Chart 3 indicates that, again in this category, the total number of accidents has declined, but not steadily, over the 16 year period from 24 to 7. Miles flown, however, have increased from 44,732,000 in 1951 to 94,911,000 in 1966. Thus, the resulting accident rate has declined significantly. Fatalities varied from zero in 1956 to as high as 169 in 1953, with no discernible trend. Fatal accident rates have declined as a result of increased mileage.

The accident rates per 100,000 hours and per million plane miles have steadily decreased for *General Aviation* flying over the last 16 years. (See Chart 4). The number of accidents has increased from 3,824 in 1951 to 5,425 in 1966. The number of fatal accidents has increased from a low of 356 in 1956 to a high of 538 in 1966. The number of fatalities has fluctuated with a general increase from 750 in 1951 to 1069 in 1966. However, because both estimated hours and plane miles flown have more than doubled since 1951, rates have decreased for accidents, fatal accidents and fatalities.

Close examination of General Aviation statistics reveals great differences in accident rates according to use of aircraft. "Pleasure" flying had the highest accident rates per 100,000 hours in 1966 for both total and fatal accidents, 40.63 and 5.36 respectively. "Aerial Application" was next highest in both categories with 31.12 and 4.24, respectively. "Air Taxi" had the lowest total accident rate with 12.44; and the second lowest fatal accident rate of 1.43, practically identical with that of "Business Corporate," 1.45. "Instructional" flying had by far the lowest rate of fatal accidents, 0.68, and its total accident rate, 15.71 was only slightly higher than that for "Business Corporate" at 15.45.

The vast majority of "Business Corporate" flying employes full-time professional pilots. The majority of these command pilots hold airline transport ratings, despite the absence of any legal requirement.

There were some 84 deaths in air-taxi operations in 1967; in 1966 the figure was 32 (out of a total of 272 for all air carrier operations, and 1,069 for general aviation). The difference is due to the phenomenal growth of the air-taxi business, which promises to expand rapidly in the next years as a vital link in the commercial air carrier business. There are over 3,800 air-taxi operators in the U.S., 165 of whom are "scheduled". Two certified airlines have contracted with scheduled air-taxi operators to operate a segment of the carriers' route, and there are 42 interline agreements between certified airlines and scheduled air-taxi operators for the onward carriage of airline passengers. The Post Office Department in 1967 had 80 mail routes operated by 35 air-taxi opeartors, carrying $3,500,000 worth of mail.

The accident rate statistics produced by the FAA are misleading and imply that a growth of safety has occurred, which is a dubious conclusion.

Measuring safety by comparing the number of accidents with the miles or hours flown ignores the exposure factor that does not exist with automobiles or pedestrians: an air accident involves many lives. For instance, a relatively small proportion of accidents between 1959–65 occurred on jet passenger service, but they produced a high proportion of all fatalities (1886 lives lost in 125 accidents). Nearly 41% of all fatalities occurred in only 18% of the total accidents.

Furthermore, relatively few accidents occur in "flight" as compared to takeoff and landing operation. Therefore, indices such as hours flown, miles flown, passenger miles, or passenger hours are far less relevant than the indices of numbers of flights and passengers per flight.

Norbert E. Rowe, Vice President for Engineering, de Havilland-Canada, has suggested a better measurement: "Statistics of fatalities in air transport must be related to the unit of carriage, the aircraft, rather than its overall productivity . . . I would suggest dual criteria in this respect: 'accidents per flight' and 'fatal accidents per flight.' It is a reduction of the former which gives a clear index of flight-safety progress. This is particularly important in the coming decade when aircraft seating capacity will increase to 500, even 1,000 per unit of carriage."[1]

It is also vital to realize that air carrier safety statistics are so sensitive to the relatively few number of major crashes, which produce most of the fatalities, that year-to-year comparisons can vary widely—and are largely irrelevant.

Footnotes at end of article.

Using more relevant measurements than the FAA employs produces a picture of the trends in air safety which is discomforting:

In a Senate Committee Report, "Policy Planning for Aeronautical Research and Development," May 19, 1966, the scheduled air carrier accident statistics indicate that aviation safety had not improved much over the previous 16 years. (See Chart 5.) Although 1966 saw only four fatal accidents, seven occurred in 1967. The "fatalities per million departures" and the "fatal accidents per million departures" for 1967 were about the same as they were during the first five years of this decade.

While U.S. commercial aviation in its forty-year history has shown a spectacular increase in safety measured in terms of passenger miles, a variety of recent indicators have not deviated sufficiently from their 15-year averages to establish a meaningful trend for the future.

General air accident rate statistics fail to reveal an important change in the dangers of air traffic.

In the next 10 years commercial air jet travel is expected to triple. If fatalities continue at the average rate of the past 12 years—airline deaths will reach aproximately 1,100 in 1977.[2]

K. O. Lundberg says that, "At the beginning of the next century the (free world) death toll would be some 60,000 per year due to, on the average, some three to five big newspaper headline air catastrophies every day, not to mention the practically countless accidents to private aircraft.[3]

The news is even more distressing when the history of "near misses" is examined. An average of 532 "near misses" per year have been reported in recent years, with approximately 11 to 17% of these rated as "critical." A "near miss" is usually thought of as an instance in which an accident would have occurred if corrective action had not taken place, and is recorded as such when the pilot reports the near miss. Near misses are classified by the FAA in three categories:

1. "No hazard"—when direction and altitude would have made a midair collision improbable regardless of evasive action taken (e.g., a pilot may report a near miss but he was at least 1,000 feet away);

2. "Potential"—an incident which would probably have resulted in a collision if no action had been taken by either pilot (a proximity of less than 500 feet would usually be involved in this type case);

3. "Critical"—a situation where collision avoidance was due to chance rather than pilot action (the pilot did not, or did not have time to, take action).

The near misses which have been reported in recent years numbered 563 in 1963, 562 in 1965, and 463 in 1966. But these statistics are not particularly reliable. Pilots may not wish to report near misses because of potential consequences to them—a situation not necessarily corrected by a recent FAA decision to give immunity from penalty to pilots who report being involved when a near miss is reported because the aircraft involved was not identified.

David Thomas, Deputy Administrator of the FAA, has reported that most near misses occur while a plane is en route and not under radar surveillance rather than in the situations which are generally considered most hazardous—i.e., at airports lacking radar or at crowded terminals even with radar.

But on April 26, 1968, the FAA gave a different report to representatives of the aviation industry on the first two and one-half months of its study after granting immunity from penalty to pilots who reported near misses. During that time, they received 554 reports of near mid-air collisions from pilots and other sources. Of the reports filed, general aviation pilots submitted 251, airline pilots 160, military pilots 141, and air traffic controllers 2. Incidents in the terminal area were the subject of 339; the remaining 215 dealt with en route incidents. Of the 436 reports submitted in January and February, 250 were classified as "no hazard" (no evasive action needed) and 186 were classified as "hazardous" (action was needed).

Of the 186 described as hazardous, 117 occurred in the terminal area (airport) and 69 en route. Sixty-three of the terminal incidents involved one plane operating under instruments (IFR) and the other under visual rules (VFR). In 53 cases, both aircraft were under VFR. Only one case involved aircraft both under IFR.

And as a final statement on the current hazards of complacency over air safety, we cite the words of Stanley Lyman, Vice President, Federal Aviation Administration Affairs, who reports that in the "Golden Triangle," the Boston-New York-Washington air corridor, the FAA has "information that shows anywhere from five to nine near misses a day being reported . . . and additional information documented by people in the various facilities within the east coast areas that shows we have near misses occurring unreported at the rate of 20 to 25 per week, depending on the weather conditions at the time." [4]

Footnotes at end of table.

CHART 1.—COMPARATIVE ACCIDENT DATA: 1948-66

[Passenger fatalities per 100,000,000 passenger-miles]

Year	Passenger automobiles and taxis	Buses	Railroad passenger trains	Domestic scheduled air transport planes
1948	2.10	0.18	0.13	1.33
1949	2.70	.20	.08	1.32
1950	2.90	.18	.53	1.15
1951	3.00	.24	.43	1.30
1952	3.00	.21	.04	.38
1953	2.90	.18	.16	.56
1954	2.70	.11	.08	.09
1955	2.70	.18	.07	.76
1956	2.70	.16	.20	.62
1957	2.60	.19	.07	.12
1958	2.30	.17	.27	.43
1959	2.30	.21	.05	.69
1960	2.20	.13	.16	.93
1961	2.10	.19	.10	.38

CHART 4.—AIRCRAFT ACCIDENTS, FATALITIES, AND ACCIDENT RATES—U.S. GENERAL AVIATION FLYING: 1951–66

Year	Accidents		Fatalities	Estimated hours flown (thousands)[1]	Estimated plane-miles flown (thousands)[1]	Accident rates			
						100,000 hours		Million plane-miles	
	Total	Fatal				Total	Fatal	Total	Fatal
1951	3,824	441	750	8,451	975,480	45.2	5.2	3.9	0.45
1952	3,657	401	691	8,186	972,055	44.6	4.8	3.7	.41
1953	3,232	387	635	8,527	1,045,346	37.9	4.5	3.0	.37
1954	3,381	393	684	8,963	1,119,295	37.7	4.3	3.0	.35
1955[2]	3,343	384	619	9,500	1,216,000	35.1	4.0	2.7	.32
1956[2]	3,474	356	669	10,200	1,315,000	34.0	3.4	2.6	.27
1957	4,200	438	800	10,938	1,426,285	38.4	4.0	2.9	.31
1958[2]	4,584	384	717	12,579	1,660,109	36.4	3.1	2.8	.23
1959[2]	4,576	450	823	12,903	1,716,019	35.5	3.5	2.7	.26
1960	4,793	429	787	13,121	1,768,704	36.5	3.3	2.7	.24
1961[2]	4,625	426	761	13,602	1,857,946	34.0	3.1	2.5	.23
1962[3]	4,840	430	857	14,500	1,964,586	33.4	3.0	2.5	.22
1963[2]	4,960	482	893	15,106	2,048,574	31.0	3.2	2.3	.24
1964	5,070	504	1,056	15,738	2,180,818	32.2	3.2	2.3	.23
1965	5,196	536	1,029	16,733	2,562,380	31.1	3.1	2.0	.21
1966 (preliminary)	5,425	538	1,069	21,023	3,336,138	25.8	2.6	1.6	.16

[1] Estimated by FAA.
[2] No general aviation survey was conducted for the designated years. Estimated hours flown and estimated plane-miles flown for 1958–61 have been revised according to a correction factor based on the 1962 survey of aircraft use in general aviation. Data for 1963 are based on hours and use reported on aircraft inspection reports adjusted by the same correction factor.
[3] The 1962 general aviation survey excluded gliders, dirigibles, and balloons. These data have been adjusted to include them.

CHART 5.—AVIATION SAFETY (UPDATED THROUGH 1967)[1]

Item	Calendar year							
	1960	1961	1962	1963	1964	1965	1966	1967
Departures, domestic (thousands)	3,619	3,532	3,446	3,557	3,692	3,917	4,087	4,662
Departures, international (thousands)	212	198	201	214	239	257	286	306
Total	3,831	3,730	3,647	3,771	3,931	4,174	4,373	4,968
Fatal accidents	12	5	5	5	9	7	4	7
Fatal accidents per million departures	3.1	1.0	1.7	1.6	2.0	1.7	.9	1.4
Fatalities (total)	378	135	183	145	226	257	72	250
Fatalities per million departures	99	36	50	39	57	60	16	50

[1] Table 1 was extracted from table 28, p. 92 of "Policy Planning for Aeronautical Research and Development," S. Doc. 90, 89th Cong., second sess., May 19, 1966, and updated with information from the CAB and the National Transportation Safety Board. Data for 1967 are preliminary and estimated.

II. PILOTS

In 80% of all accidents in 1966, the FAA cited the pilot as "a" cause but not necessarily "the" cause. In a separate study made several years ago by the Civil Aeronautics Board, pilot error was cited for 42% of air carrier accidents and 64% of general aviation accidents. (See Chart 6.)

Through the Federal Aviation Act of 1958 (Public Law 85–726), the FAA, for all practical purposes, has almost unlimited authority to say who may and who may not fly.

"The Administrator is empowered to issue airman certificates specifying the capacity in which the holders thereof are authorized to serve as airmen in connection with aircraft."

Pilot certification today involves written and practical examinations administered by FAA-designated or supervised examiners (generally private flight training schools) and medical examinations given by physicians in private practice whom the Agency has designated official aviation medical examiners. The system is haphazard. The quality of pilot competence in the air carrier industry is principally the result of industry rather than government standards. In general aviation there is no effective method in operation to double-check the relatively inattentive government testing procedures.

Written tests are developed by FAA and distributed to licensed flight schools for administration by the school. An article published in the February 29, 1968, issue of Business and Commercial Aviation reported that there were schools where fees were paid not to learn about the art and science of flying, the rules and regulations, but to learn in less than two days the exact answers to the written FAA tests being given. Citing legal obstacles to closing down such operations, the FAA has satisfied itself with only suggesting various alternatives to the existing system such as eliminating the tests and letting each licensed school devise its own examination, or simply eliminating all written exams altogether and evaluating a student's record of achievement or relying on a statement from his instructor.

General aviation, which would be most affected by such a procedure, has itself supported the establishment of a prescribed course from the FAA which must be completed before testing is administered. And a prototype is now offered at many flight schools to educate general aviation pilots in air traffic control regulations and procedures. In California, where such courses are under way, pilots have been known to come hundreds of miles to attend these workshops two and three nights a week.

Aviation medical examiners are given seminars by the FAA to receive training in modern aeromedical concepts, certification practices and procedures, and accident-investigation techniques. If an examiner denies an applicant medical certification, there are two avenues of appeal open to the applicant—one is the Federal Air Surgeon in Washington; the other is the Administrator who may exempt an applicant from established medical standards. Air carrier pilots, at the insistence of the industry, undergo periodic medical examinations and recertification procedures.

The lay reader may be surprised to learn that in general (non-carrier) aviation a private pilot's right to fly a certain type of craft is automatically retained merely by taking off and landing such a craft at least five times every three months and by passing a physical examination every 24 months. He need never take a second written or practical test. This is true despite the fact that more than half the people who hold pilot's licenses fly less than 50 hours a year. The conditions mentioned must raise questions as to many pilot's continued proficiency as the airways and traffic systems become more congested.

Training—Commercial aviation airline transport pilots are generally trained extensively by the employing carrier airline company and required to take refresher courses periodically. Airlines select one applicant out of 20, spend $100 an hour to train him, retest him every six months, send him back to flight school once a year, and pay him up to $40,000 a year. Electronic stimulators that faithfully reproduce the performance, visual and aural cues of aircraft in flight, have long been a cornerstone of such training and they will be even more important in the future. It has been said by experts that no man is one-tenth as capable of driving an automobile as the greenest carrier co-pilot is capable of flying. Flight crews which are to operate a new aircraft—one on which they have not previously been qualified—begin their training with a ground indoctrination course, which typically consists of 90 hours of classroom time and many more hours of homework. After the paperwork has been mastered, it is followed by intensive training in the aircraft, including take-offs and landing during day and night, normal emergency flight maneuvers, and flight under simulated instrument flight conditions. With this flight and ground training completed, but before the pilots begin service in scheduled operations, they are given a check flight in the aircraft under the supervision of a company check pilot or an FAA inspector to determine whether their proficiency meets the high standards of the airline and the FAA. Before going to command duty, the flight captain makes a check flight as captain with a Check-Flight Captain riding as monitor. Only then is the captain qualified to take command of the type of aircraft in which the checkout procedure has been completed. These training and checking programs are additional to the basic and comprehensive training and checking which flight crew members must have taken in order to obtain the FAA license which is a prerequisite to their receiving the airline training.

The industry and the FAA take steps to keep pilot training relevant to the new problems of new aircraft. For example, a number of accidents involving failure of jet transport aircraft to pull out properly from a high rate of descent when approaching for landing introduced altitude awareness and descent management subjects into the training program; these subjects include: first, a demonstration maneuver designed to show pilots the proper techniques for recovering from high rates of descent; secondly, an adequate experience on the part of pilots in command of certain types of turbojet aircraft before they could permit a co-pilot to make takeoffs, instrument approaches, or landings; and, thirdly, required completion during initial checkout in jet aircraft of an adequate number of landings under varying conditions. Similarly, to help pilots avoid accidents due to wake turbulence, which is a vortex phenomenon occurring behind larger aircraft, the FAA issued a circular describing the hazard, pointing out how it can best be avoided, and released a motion picture training film on the subject.

TRAINING—GENERAL AVIATION

Major General Joseph D. Caldera, President of the Flight Safety Foundation, Inc., states in an Air Safety Conference in Cincinnati, February 4, 1968, that too many licensed private pilots today cannot manage their aircraft in the environment in which they place themselves.[5] This is true in terms of weather, which is cited by the National

Footnotes at end of article.

Transportation Safety Board as a related factor in over 13% of all accidents, 22% of which are fatal. It is true in terms of the planes flown. (A 1967 study by the National Transportation Board found that 80% of the general aviation accidents are due to lack of proficiency or lack of procedural knowledge on the part of the pilot.) But it is even more true in terms of new traffic control and communications systems.

Virtually all commercial aviation pilots must be instrument-qualified, but this is not so with general aviation pilots. It used to be that a general aviation pilot was proficient if he kept himself alive. Now to be proficient he must learn procedures—what they are, how to talk his way through them—and how to push his vehicle through the necessary maneuvers to duplicate the sometimes complicated lines drawn on airline maps. In fiscal year 1966, general aviation conducted 25% of the instrument approaches recorded by the FAA, reflecting an increased technical capacity in general aviation which suggests that by 1980 general aviation will conduct over 70% of the civil instrument approaches in the United States. This accomplishment, however, does not flow from any systematic effort to require greater technical capacity from private pilots.

Training for the general aviation pilot can be improved by simplifying approach procedures whenever possible and by standardizing them so the transient pilot can expect the same thing to happen to him whether he is at his home field or anywhere across the country.

Also some technical advances could help, such as the single-frequency radar approach (TERPS), which allows thousands of small airfields to have their own instrument approach network which would result in more pilots developing instrument rating, Category II capability. And, of course, it is not inconceivable simply to require instrument ratings to be required for any pilot to use certain airports.

One of the better efforts on the part of the FAA toward encouraging instrument pilots to gain the necessary "live" experience to gain proficiency is the SIP program. This series of classes given at FAA flight schools have been extremely popular with general aviation pilots. An FAA funded program of the Flight Safety Foundation, known as General Aviation Pilot Education, has been successful and is being developed on a regional basis. Another effort was made when the *Airman's Information Manual,* the basic U.S. civil flight information publication, was refined and updated both in form and content. Furthermore, the FAA has also tried to modernize and develop cartographic materials used in operating the airspace system which are standard and easy to interpret.

It still remains to be demonstrated, however, that significant improvement in general aviation air safety is possible without stiffer testing and retesting of the pilots.

A GROWING PROBLEM OF PILOT FATIGUE

Pilot fatigue from new planes and practices comes from long hours without rest because of delays and night departures, night flying, and the disruption of the circadian rhythm (24 hour psychophysiological rhythm) involved in the rapid crossing of several time zones. FAA regulations limit pilot flight time to sixteen hours per day and it has a permitted emergency extension to 20; but delays and diversions caused by congested airports and jet scheduling practices which increase aircraft utilization, have caused greater pilot utilization without rest.

In the Australian Defense Scientific Service Aeronautical Research Laboratories, it was found that "since the introduction of jet transport aircraft, the volume and intensity of reports of fatigue among crews has tended to remain high and even to increase, contrary to the trend observed during the early days of service of piston-engine and turbo-prop aircraft."[6] The Australian study centered on the following causes of pilot fatigue: (1) late afternoon and night departures (over 50% after 1800 hours); (2) night flying (59% are at night); (3) morning arrivals after night work, requiring day sleep and a temporary reversal of the light-dark cycles; (4) time shift; and (5) early morning departures requiring early morning wake-up times. The major complaints made by the crews examined were just these and the chief symptom is lack of sleep, which has a marked effect on efficiency of physiological functions. There is a high level of stress among crew members during the approach and landing phases of flight, as the statements of the pilots themselves indicate.

The Australian study group concluded that "the present system followed in scheduling has many disadvantages."[7] They questioned the wisdom of heavy nighttime scheduling when the internal systems are at their least active, when the work load (approach and landing) is heaviest, when the crew is least physiologically prepared. They questioned the wisdom of setting the slippage points (where crews change and the tired are to rest) at the furthest geographical distance from home base, and, therefore, when the tired crew is least able to adapt. They questioned why the majority of slips are of a 24-hour duration, which is the least beneficial physiologically (12–14-hour and 36-hour slips are preferable to 24-hour and 48-hour because they have the advantage of remaining in-step with a 24-hour rest cycle).

The study suggested that the 16-hour flight duty time is to be seriously questioned *per se,* not only because of the growing instances of diversions and delays which extend the flight time considerably, but because as in any other occupation when the safety factor is less relevant, a 16-hour work day would be considered an unnecessary extension of human capacity and efficiency. The concept of extended working hours for flight personnel began in the days when air speeds necessitated long hours in the air just to reach a landing point, but aircraft capability and increased numbers of flights no longer make long hours necessary. The long duty times for crews makes consideration of the rest-time scheduling even more mandatory, but there is no evidence in present practices to suggest that slippage patterns are established more out of concern for pilot fatigue than for aircraft scheduling convenience and the economic advantage of the carrier.

The Australian study of pilot fatigue states that 46 of the 60 pilots interviewed attributed some effect of fatigue due to the discomforts of the flight deck—uncomfortable seats, cramped quarters, and unavailability of crew rest quarters. Food, feeding facilities and procedures, and dry cabin air causing dehydration were also sources of complaint. The interviewed pilots noted a state of heightened tension on the completion of a flight, manifested in reduced comprehension and retention, an increase in irritability, a greater inability to relax, a lack of energy, a decrease in sociability, and an unusual need for sleep accompanied by an inability to sleep. The symptoms associated with the "unwinding process" tend to persist for a period of two to three days.

In the light of these findings, it is only mildly conforting to know that the general health of commercial pilots has been found to be good and is not generally impaired as a result of flying as an occupation. Pilots have been found to be relatively free from cardiovascular and cardiac impairment. Nonetheless, many studies confirm that short-term disturbances, like indigestion and disrupted physiological functions, seem to be common due to irregular eating and sleeping patterns. Finally, it might be noted that though crew restrictions on drinking while on duty and for periods before duty are strict, over 68% of the pilots interviewed in the Australian study said they drank more when they were away from home, and 56% said that they smoked more.

In 1966 there were 548,757 active pilot certificates held, the number having very nearly doubled in ten years. (See Chart 7). The largest number of the certificates are for private flying (222,427), followed closely by the student and commercial categories (165,177 and 131,000 respectively). All categories have shown dramatic growth—practically tripling in ten years.

There are many more certificate holders than active airmen in both the pilot and non-pilot categories, because many pilots hold more than one kind of certificate. For instance many private pilots also fly for business and pleasure; many who hold commercial instrument certificates also have mechanic certificates and can service their own aircraft; many mechanics and controllers hold pilot's certificates; and as many as 10,000 pilots work part time as weekend instructors or charter flight pilots. (See Chart 8).

World War II and subsequent military operations have trained a large cadre of aircraft operating personnel—a source of civil aviation manpower ever since. This source of pilots is no longer adequate, according to The Report of the Aviation Human Resources Study Board, (September, 1964, FAA) because of the decreased military flight training and also because of the increase in air carrier traffic. Over half of the present commercial pilots are 45 years of age or older. A single aircraft requires five complete crews. New pilot hirings by U.S. carriers were estimated to be 4,454 in 1966 and Chart 9 indicates new aircraft cockpit crew estimates from 1967–75 to number 16,275 in total manpower.

One avenue of solution, suggested in the Congress, would be the establishment of a four-year program of instruction at a Civil Aviation Academy to train young men and women in all aspects of aviation, allowing the cadet to major in any one of a number of aviation fields—radar and electronics, aircraft maintenance, navigation, airways operations, pilot training, etc.

CHART 6.—CAUSAL FACTORS, 1959-62

[In percent]

	Air carrier	General aviation
Pilot	38	64
Copilot	4	
Total pilot	42	54
Other personnel	13	4
Total personnel	55	68
Landing gear	9	5
Powerplant	7	6
All other	8	3
Total equipment	24	14
Weather	14	10
Airport, terrain	7	8
Grand total	100	100

Footnotes at end of article.

The Report of the Aviation Human Resources Study Board concluded that the future employment demand can be met by existing education and training resources if a well coordinated industry-government program is aimed at continued motivation of American youth toward careers in aviation. They recommended the FAA to lead this effort. Also, research and training devices, simulators and flight proficiency testing can speed and improve the training of new crews. Better guidance and control techniques can keep manpower requirements per crew from rising as aircraft becomes more complicated.

History offers a warning. In the past, as any field of endeavor expanded to include many more participants, the average quality and competence of the participants seemed to suffer. In contemporary aviation, as the planes and the airways become more complex, increased manpower needs are matched by increased needs for quality and excellence on the part of all participants.

CHART 7.—ACTIVE AIRMAN CERTIFICATES HELD: DEC. 31, 1958-66

Category	1958	1959	1960	1961	1962	1963	1964	1965	1966
Pilot	354,365	359,875	348,062	[1] 352,860	365,971	378,700	431,041	479,770	548,757

III. OTHER PERSONNEL (PLANE CREW, TRAFFIC CONTROLLERS, MAINTENANCE)

Plane crew

It is generally accepted that a jet carrier aircraft can only be safely flown with a minimum cockpit complement of three men. Most jet aircraft, as chart 9 in Section II indicates fly with a three man cockpit crew, but this has not been made mandatory. Most large jets (e.g., Boeing 707 or DC-8) are operated with an option on cockpit crew size depending on the number of hours in flight. To some extent, the manufacturers have had more influence than the airlines or the pilots on the decisions made by putting planes with two-man cockpits on the market, such as the DC-9, the BAC-1-11, and the Boeing 737.

Most pilots appear to agree that existing air traffic and navigational systems require better qualified co-pilots, who would be able to take over absolutely, and flight navigators or engineers over long flights. They insist that ultra "human" systems capabilities and the clock of trained pilots makes this necessary and possible. The airlines claim that aircraft can be safely *flown* by two pilots; pilots claim these aircraft cannot be operated safely by a two pilot crew.

A similar question exists concerning the number of stewardesses or "flight attendants" on each flight. The FAA now requires that there must be at least one flight attendant if a flight has nine or more passengers and that a flight of 149 or more passengers must have at least four flight attendants.

The regulation does not appear to be very helpful, for it can and does mean that the fewer the passengers, the greater the ratio of attendance to their needs (both convenience and safety) and that the greater the number of passengers the less attendance to their needs. Small flights can operate with one stewardess to every nine passengers; large flights can operate with one stewardess to every 35 passengers. When measured against the need, in crash conditions, of efficent and knowledgeable operators to evacuate the airline, the regulation seems insufficient. The stewardess' unions have sought more attendants; the airlines view the added cost as prohibitive.

Traffic controllers

Currently, the FAA employs about 18,100 air traffic controllers who operate in three

kinds of facilities—air route traffic control centers (28 national centers which watch all en route traffic over the United States); airport control towers (at 304 of the 831 airports serving commercial traffic); and flight service stations (332 stations which provide to pilots additional service, such as weather information).

On July 4, 1968, and thereafter, arrivals and departures of commercial airline flights at the Nation's largest airports began to experience massive delays due to what air traffic controllers, particularly officials of PATCO (Professional Air Traffic Controllers Organization) claimed was strict enforcement of FAA landing and take off requirements and procedures. The slow down occurred within 48 hours of the July series of meetings of PATCO.

Apparently the issue was not so much whether FAA regulations had been or should be enforced strictly, but whether controllers' grievances were to be met, particularly their demand for more personnel help.

The Air Traffic Controllers Association charged that "flight was reaching a point of public peril because of shortages of trained men and modern equipment . . . we are fortunate that we don't have the collisions now . . . ninety percent of this is pure luck."[8] They cite instances of vacancies occurring in certain high density centers, necessitating use of trainees who are not checked out.

They point to the heavy work load which demands that they handle as many as 35 to 40 aircraft at a time. David Thomas, Deputy Administrator of the FAA, himself a veteran controller, has said that the man behind the radarscope should not be asked to keep track of more than six at one time.

Medical research done by such organizations as the FAA medical staff at Georgetown Medical Center, the FAA Aeromedical Institute at Oklahoma City, the U.S. Air Force Human Factors Research Laboratory and the British RAF Institute of Aviation Medicine report that controllers have an undue amount of tension and pressure. The ACTA has said that over half of the eleven controllers who retired in April, 1968 were disability retirements, and that in the same month, five controllers suffered heart attacks on the job.

The retirement age for controllers is now 55. Many of the medical studies mentioned above and the Air Traffic Controllers Association point to an unsafe situation created by the fact that controller ability begins to slip after age forty. Much of the burden must shift to other men.

The number of air traffic controllers has doubled over the past 10 years and is expected to increase by 10% this year. But the ACTA says that recruiting and retention of controllers is becoming an increasing problem. Representing about 5,500 controllers, the Association suggests that people no longer want to enter service because of the job pressure.

Many suggest that the pay is too low in view of the hazards and skill needed in the job. Controllers earnings are determined by the experience of the controller and the level of the facility in which he operates—a variable which depends on the number of operations at the facility and the hours of operation of the facility. The average air traffic controller has a General Services rating of GS–11, 12 or 13. In 1968, the salary range from a low GS–11 to a high GS–13 was $10,203 to $18,729.

Deputy Administrator of the FAA, David Thomas, has stated that the addition of the 2,400 new air traffic controllers to the system as provided for in the DOT appropriations for 1969 would help ease congestion by perhaps only 5%; the limiting factor in easing congestion, he said, is the amount of concrete available for takeoffs and landings. Furthermore, it will take nearly two years to train the 2,400 new controllers adequately to assure high proficiency.

Authorizing, attracting and training more men is not a sufficient answer. It will also be necessary to reduce the pressure of the job which the air traffic controller is expected to perform. That pressure can result in errors. Consideration must be given to such changes as: a cutback of the administrative duties of controllers; liberalization of overtime and stand-by pay practices (Public Law 90–556 passed in the second session of the 90th Congress rectified one aspect of unfair overtime pay procedures); guarantee of at least two consecutive weeks of earned leave a year and more equitable holiday, pre-holiday and post-holiday duty assignment; accelerated training for new controllers; earlier retirement; creation of a Commission on Air Traffic Control to study the work-load and stress on controllers (S. 3727); and participation of representative groups of working level controllers in the development and establishment of national air traffic control procedures.

Even more important is some rational limitation on the growth of the traffic system these men are expected to control.

The incidents of accidents officially attributed to controller error are relatively low; usually 180 to 200 controller errors are reported in a year, 35 being classified as "near misses." This figure may be inaccurate due to the fact that like pilots, controllers do not record all their errors for fear of being reprimanded for lack of proficiency.

But the job they are expected to do keeps getting bigger and bigger. In 1967, the average number of operations at 308 towers was 154,942; at the ten busiest towers the number of operations ranged from 596,949 at Opa Locka, Florida to 382,548 at San Jose, California. These ten represent only 3% of the total number of towers, but handled about 15% of the operations. Unless a number of changes occur in other aspects of the airways system (e.g., more airports, relief of congestion at certain airports at certain times, more and better equipment) the addition of more controllers will be of dubious value.

Maintenance

In 1965, there were 135,351 aircraft mechanics certified by the FAA. With the implementation of the Airway Facilities Maintenance Certification Program in 1965, the FAA Academy was assigned responsibility for overall program administration in connection with the written, oral and performance examinations to prepare facility maintenance personnel for active employment.

The training program presently involves 78 types of systems in four career fields, with plans for expansion to include 86 systems in five fields. Centrally administered, the training program combines resident, on-the-job and correspondence training as well as distribution of refresher and briefing materials to Agency air traffic facilities.

Increasingly, maintenance is becoming automated by the use of computers which automatically "read-out" the state of the "health" of the aircraft. For example, the entire TWA DC–9 fleet will be equipped with this data analysis system which monitors 50 separate parameters of engine information and transmits it over the company's teletype system to the TWA maintenance center in Kansas City, where rapid computer analysis facilities quick and accurate diagnosis of maintenance requirements.

Pan American has recently purchased a computer oriented testing machine called TRACE 600, which can check out a Boeing 707 automatic pilot computer in ninety minutes (compared to 18 hours used in conventional testing methods) and can perform tests on anti-skid computers, general control panels, cabin address amplifiers, pneumatic systems, radio components and navigational aids on the Boeing 707 and 727 and on the DC–8 jet clippers.

Some computerized service does not, of course, decrease the need for highly skilled mechanics, but it does increase the proficency of the system considerably. The recourse to systems management techniques in the maintenance of aircraft is a logical outgrowth of the utilization of systems management in the design and manufacture of planes. In fact, the systems management approach to problem solving was invented precisely because the aircraft industry in the 1940's reached a stage where no single man or team of men had the capacity to retain the vast realm of technical knowledge and variables necessary to design or produce a modern plane. It is ironic that the field which mothered the concept of systems management for production of an individual plane has been so slow to see it as the only rational approach to govern the traffic of a multitude of planes.

IV. WEATHER (AND OTHER ENVIRONMENTAL FACTORS)

For general aviation, weather was cited by the National Transportation Safety Board as a related factor in 13.1% of all accidents—more frequently than any other factor in a study based on 1965–66 accident figures. Fatal accidents are far more likely to occur when weather forces a pilot to instrument flying than when he can follow Visual Flight Rule (VFR).

Weather conditions	Percent of accidents which were fatal	
	1965	1966
VFR	7.2	7.4
IFR	64.0	53.6
Below minimum	53.8	23.1

Source: National Transportation Safety Board, Department of Transportation, 1966.

Poor visibility on approach and clear air turbulence have been cited as major causes of commercial aircraft accidents. As well, Najeeb Halaby, former Administrator of FAA has said that the present aviation weather system is "obsolete and inadequate", and that of all the elements in aircraft accidents, weather is the least subject to control. A similar assessment was made by Capt. Eduward J. Burke, chairman of the Air Line Pilots Association's all-weather flying committee, when asked if all-weather flying was here yet. "Yes," he said. "It's still in the experimental stage, the same as it was in General Doolittle's time in 1929."[9]

There are four areas of principal concern relating to weather and air traffic: 1) Landing facilities at air terminals are insufficient; 2) Too little is known about the phenomena of air turbulence; 3) En route weather information is sparse and the capacity for weather prediction is limited; 4) The FAA has not acted.

Air terminal facilities

Najeeb Halaby suggested a few years ago that "at this date the best way to find out what the runway visibility is at an airport that has nearly a half-billion dollar investment in it . . . is to send a man out from the tower and have him stand at the end of the runway. In 1965 that is really primitive."[10]

Bad weather causes

One of the greatest problems facing air transportation today is the limitation on landings and take-offs and the resulting congestion at some airports. The question of what to do about it is seldom answered with a willingness to forgo business but rather

Footnotes at end of article.

with a drive for even more complicated systems pointing toward all-weather landing.

Current use of airports under adverse weather conditions are limited by regulation depending on available air traffic control equipment. The general situation is as follows: If weather conditions are below the "minimums"—500 foot ceiling and 1 mile of forward visibility—an airport may not be used unless it is equipped with an instrument landing system based upon radar (or a radio beam supplemented by a high-intensity approach light system). If that equipment is present, approaches are permitted at 200 foot ceilings and one-half mile of forward visibility. (Some instrument landing system installations due to geographical obstruction may be restricted below 400 feet).

Instrument landing equipment increases airport utilization. But it may also increase congestion by attracting aircraft which ordinarily would not land at that particular airfield. The equipment does not assure safety; it is dependent upon its own reliability and upon the airmen's ability to use it.

Minimums are being continually reduced as aircraft equipment becomes more sophisticated. Currently, most planes may land under Category I minimums (vertical visibility or "decision height" of 200 feet—horizontal visibility or "runway visibility range" RVR of at least 2,400 feet). By the end of 1966, however, four air carriers had received approval for operations under the minimums of 150 foot decision height and 1,600 foot RVR. This is the first step to qualifying for Category II operations—100 foot decision height and 1,200 RVR. At the end of 1966, runways at three major airports had qualified for Category II landing systems, and FAA reported that 20 additional runways had been identified for installation of the equipment necessary. Category III in which the decision height and the RVR are reduced to zero, is envisioned for the future as part of the all-weather landing system.

Instrument landing is at a stage where further developments and improvements are extraordinarily difficult and perhaps prohibitively expensive. A new system is under evaluation which uses microwave beam-forming techniques, but the problems in all-weather landing systems are subtle and more serious. In order to make substantial improvements, the system must fly the aircraft automatically which raises the problems of a) reliability; b) failure detection; c) corrective action or emergency procedures; d) acceptance by pilots; and e) procedures in case of sudden loss of electrical power. All-weather landing is complex, involving the ground system, the airborne system including autopilot and control characteristics of the airplane, displays, human factors, airport design, economics and reliability.

British manufacturers feel the ultimate solution lies in full automation with the pilot as a monitor. American manufacturers and operators are reluctant to accept this solution and favor retaining the pilot in the control loop while improving the instrumentation and visual guidance systems. In this approach minimum landing conditions (in terms of weather) are lowered as instrumentation and equipment are developed (such as an improved autopilot-amplifier-computer which provides on-course localizer and glide slope precision and autopilot controls integrated into a single display in the cockpit. This is the course present policy is following.

The vigor with which an all-weather landing system is pursued is a reflection on the relative emphasis national aviation places on the reliability of service as compared with safety. The airlines have a great desire to reduce the weather restrictions within which they operate because to minimize diversions and cancellations produces better service, better operations, and better profits. FAA recently accepted a study by United Research, Inc. covering 1957 operations which placed a dollar value on the improvement in the capacity of the system, improvement in the efficiency and reliability of the system, and benefits from improvements in the margin of safety as a result of an all-weather landing system. The total value of utilization of an all-weather landing system was placed at $24,962,000—$3,791,000 of which was the value of accidents prevented and $11,500,000 stemmed from increased revenues to air carriers. (See Chart 10).

The approach and landing phase remains the most dangerous in air travel. Thus, from a safety standpoint there is every reason to develop an all-weather landing system. This argues for significant improvement in research and development into such items as full automation of the landing system, the new microwave system intended to determine the reliability, failure detection, and emergency procedure aspects of automatic landing. But it is sadly ironic, and a reflection of distorted perspective, to approach such advances not with the goal of maximum safety in cases where landings must be made, but with the goal of maximum landings in presently unsafe conditions.

While much is done about limiting the effect weather has on landing, little is done to change the weather. Fog is an exception. About four years ago the airlines began a cooperative program to open some airports in the Pacific Northwest to regular operations by dropping dry ice into cold fog from a light plane. This method is successful only when the fog is supercooled. The airline supercooled fog dispersal program has now grown to include 19 airports, with seven participating airlines. Efforts to disperse warm fog have been less successful. FAA is now preparing to establish a program to test the more promising dispersal techniques with warm fog. It could produce important benefits for all of aviation.

Air turbulence

There are many types of turbulence. They are generally understood to exist in four general forms—mountain waves, gravity waves, thunderstorms and frontal systems. The first two are forms of clear air turbulence (CAT). Mountain waves are a vertical deflection of air masses. Gravity waves are found at the interface of air masses of different density and velocity, such as at the edge of a jetstream. Flying in turbulence has become more critical with advancements in speed, because aircraft velocity amplifies gust loads and stresses.

The instances of aircraft coming in contact with CAT increased dramatically with the introduction of jet transport in 1958. By 1964, there was a CAT report from an aircraft somewhere over the U.S. nearly once every hour; a commercial jet transport encountered moderate-or-greater CAT once every 34 hours. 50% of some 20 reports investigated between 1960 and 1963 occurred in clear air where the X- or C- band weather radars installed on transports could not detect the turbulence. The effect of CAT on passengers and control of the airplane is considerable, and numerous passenger and crew injuries as well as aircraft damage has been directly attributed to this phenomenon. There have been many fatal accidents in which CAT has been suspected as a cause.

Theoretical studies, supported by limited experimental evidence, show clearly that the influence of turbulence-induced stresses on the pilot and on the aircraft load is a critical factor affecting safety, especially on large aircraft. However, a technique of accounting for pilot's behavior must be developed before the available data can be applied to future aircraft.

Some improvement has been made by the airline industry in attempting to counteract this phenomenon. Meteorological forecasting has improved; pilots have been given briefing concerning the action of turbulence on aircraft; and instruments have been modified to portray clearly the attitude of the aircraft at large departures from horizontal.

Still the detection and forecasting of clear air turbulence is largely beyond present capabilities. There are no CAT detectors which can be considered sufficiently developed to even evaluate the problem. Forecasting capabilities have not progressed since 1959 when the jet aircraft promoted high-level mountain wave forecasting. Lasers, temperature sensors (on the aircraft), electric discharge monitors, and VHF radar and ozone detectors have been tested, but no one method of CAT detection has yet been demonstrated to be operationally useful and practical. It is NASA's conclusion that "Despite many commonly quoted theories about the nature and meteorology of CAT, not enough is actually known and proven about the phenomenon to enable the practical value of proposed CAT detection methods to be predicted with any useful degree of confidence." [11] NASA has recommended a broad scientific overview of research and development, and coordinated and increased effort in Research and Development work sponsored by the Government agencies in the area of CAT detection and warning.

En route weather information and the capacity to predict

Three hundred and thirty-three weather reporting stations in the United States serve over 16,000 civilian aircraft (183,500 estimated in 1977) at nearly 7,000 airports. Airport weather observing stations take hourly reading and 3- and 6-hour synoptic observations on a 24-hour, 7-day a week basis at all 333 locations. The basic communication system which gathers the observations and sends them to the weather forecast centers and then distributes forecast data is operated by the FAA as part of the over-all communication system. The Weather Bureau operates a number of flight advisory weather service centers to serve aviation directly.

Dr. Robert D. Fletcher, Director of Aerospace Sciences for the Air Weather Service, feels that science has hit a plateau of forecasting capability from which it is unlikely to climb much higher until more basic research is accomplished. He contends that the scientist and forecaster must work together more than they have in the past to bridge the gap between basic research and practice.

For many years, radar has been used to observe weather because large collections of raindrops, snowflakes, or cloud droplets backscatter enough of the radar energy incident on them to constitute detectable radar targets. Present day radar can only indicate the presence of precipitation and the relative size of the area it covers. Under study is a Doppler radar system which will detect the velocity of the raindrops or snowflakes in much the same way that police radar determines the speed of a car. Doppler radar will aid aviation weather research by finding the altitude at which snow turns to rain, the wind structure in storms, and the exact configuration of updrafts and downdrafts so that frontal systems may be determined.

Automated aviation weather forecasting and broadcasting has made some significant strides. "Mesonet" consists of 13 automated weather stations spaced within 30 miles of the National Aviation Facilities Experimental Center (NAFEC) in Atlantic City, New Jersey. Each station measures and transmits 10 different weather elements on an intricate time scale to a central collection point. The Mesonet approach is being followed to explore factors involved in providing effective short-range terminal weather forecasts for periods of one hour or less for highly critical subsonic and supersonic jet operations at high-density terminals.

A statistical terminal forecast technique called "Regression Estimate of Event Probability" (REEP) was also developed and

Footnotes at end of article.

tested in operational environment. The REEP technique provides automated probability forecasts for ceiling and visibilities in future time periods of 2, 5, and 7 hours. REEP forecasts have been transmitted to Los Angeles, San Francisco, Seattle, Chicago, New York, and Washington. Results to date indicate the feasibility of utilizing this technique at a centralized computer facility with forecast accuracies equivalent to those made by average aviation forecasters. The cost of processing and transmitting is minimal. Improvement in this type of weather forecasting and data transmission will lead to better forecasting capability, reduce manpower needs, and reduce costs.

As of June 1966, Automatic Terminal Information Service (ATIS) was operating at 23 of the Nation's busiest airports and projected for another 50 airports. Broadcasts are recorded on magnetic tape, giving ceiling, visibility, wind direction, barometric pressure, runway in use, and other pertinent data. The broadcasts ease controller workload, reduce radio frequency congestion, and permit pilots to obtain routine non-control information when cockpit duties are least pressing.

There is a possibility that a global weather observation system which includes the use of satellites to gather data from remote unmanned weather stations will be developed in the next few years. To the end of developing such a system, Congress passed H. Con. Res. 723, May 20, 1968, expressing "the sense of Congress that the United States should participate in and give full support to the world weather program." This resolution, in effect, gave U.S. representatives to an international weather program in Geneva, May 29, 1968, added impetus to continue work begun in 1961; this work is approaching the stage of important initial success.

Development of such a system would include the Weather Bureau's TIROS Operational Satellite System, or a more advanced system, which might be used to obtain daily cloud cover information on a global basis. Modern computer technology would speed the solution of mathematical weather forecasting formulas. A satellite communications network would connect world meteorological centers in Washington, Moscow, and Melbourne. The ultimate operational systems would give meteorologists three-dimensional atmospheric data in addition to day and night cloud cover pictures. The program would provide comprehensive data on temperature, humidity, and wind velocity from the surface up to an altitude of 100,000 feet. Satellites could conceivably report directly to a computer which would draw a weather map in great detail and also feed out printed weather forecasts.

Accurate forecasting will take on even greater importance when the giant jet transports become operational; and accurate forecasts of upper-air temperature will enable acceleration to supersonic speed at an altitude low enough to avoid excessive fuel consumption yet high enough to need to be forecast so that the pilot may choose a route to take advantage of these winds but also to avoid turbulence which may amplify sonic-booms to several times normal intensity.

Weather forecasting is an integral part of planning future facilities to minimize weather effects on air-traffic management techniques and systems.

The role of the FAA

The Federal Aviation Act of 1958, Sec. 310 provides that the "administrator is empowered and directed to make recommendations to the Secretary of Commerce for providing meteorological service necessary for the safe and efficient movement of aircraft in air commerce . . ." Thus, though the weather analysis system is administered through five different government agencies, the Administrator of FAA is empowered to recommend adequate weather analysis for a safe air traffic system, but he lacks the authority to do more than recommend. The fact is that FAA has largely abdicated even its responsibility to recommend.

The greatest amount of funding related to aviation weather service goes to the Department of Commerce—Weather Bureau—($93,888,000 in 1965) followed closely by the Air Force ($88,213,000 in 1965). The FAA's proportion in 1965 was $18,755,000 in 1965. The Weather Bureau estimates that about $12 million (12%) of its funds are spent each year in aviation services. FAA spends about 2% of its own funds for weather.

FAA has never defined with precision a weather information system adequate to the safety needs of a comprehensive air traffic system.

Other environmental factors

Terrain, as a category of environment, was cited by the FAA as a factor in less than 1% of the air carrier accidents between 1960–1964, and in 6% of general aviation accidents between 1959–1964, but it was cited as a related factor in 380 accidents for general aviation in 1966, 6.7% of the total; 7.1% of these were fatal. The mountainous areas of the East, West, and Far West have consistently been cited as particularly hazardous to general aviation because of severe weather changes, altitude, air density and down drafts, and inadequate weather reporting equipment and communication facilities in these areas.

Birds, as a category of environment, have been responsible for accidents and are still a hazard and a consideration in airport planning. In Boston, an ingestion of starlings in the engines on take-off caused the downing of an Electra; in Ellicott City, Maryland, in 1963, a United Viscount was downed after whistling swans struck the horizontal stabilizer. In four years the Civil Aeronautics Board has received 1,100 reports from pilots of bird strikes—primarily starlings and pigeons in altitudes of from 4,000 to 6,000 feet in the fall and spring.

Rather than trying to prevent the ingestion of birds (because frequently they cannot be seen in time), FAA's approach has been to try to develop equipment which will handle the ingestion. In the case of the Viscount, the windshield was strengthened to carry a 4-pound bird at 300 knots; and the Electra engine has been made to delay the automatic feathering, so that any ingestion that does occur would not cause the engine to feather and stop.

Low visibility, whether caused by smog, air pollution or darkness, and its interaction with other environmental factors like unmarked protruding objects are a continuing and increasing safety hazard. A study of "landing short" accidents by O. E. Kirchner of the Flight Safety Foundation, in December of 1960, showed that the leading type of approach accident occurred in aircraft which were on-course, more than one mile out, and struck a protruding object. The planes involved were on Instrument Flight Rules (IFR) at nighttime more often than any other combination followed by flying by Visual Flight Rules (VFR) under IFR conditions and in severe weather.

CHART 10

The analysis of the United Research survey resulted in the following values being placed on an all-weather landing system:

(1) Additional demand leading to increased revenues to air carriers	$11,500,000
(2) Cost savings to air carriers	9,379,000
(3) Cost savings to general aviation	292,000
(4) Value of accidents prevented	3,791,000
Total	24,962,000

Source: FAA

V. AIRCRAFT AIRWORTHINESS

Obviously, many factors can contribute to an air accident—weather, pilot error, inadequate traffic control, etc. Presumably, one of the areas most easily subjected to effective accident prevention is the plane itself. If the aircraft itself is a cause of an accident, the malfunction probably could have been predicted.

Nonetheless, faulty aircraft have been cited as a reason in a number of air accidents:

Power plant failure was cited as a cause in 7% of air carrier accidents studied between 1960 and 1964—and 5% of general aviation accidents between 1959–1964.

Landing gear failure was cited as a cause in 7% of air carrier accidents studied between 1960 and 1964—and 6% of general aviation accidents in 1966.

The air frame was cited as a cause in 1% of air carrier accidents studied between 1960 and 1964—and less than 1% of all general aviation accidents in 1966. (In the instance of clear air turbulance the air frame may be more of a cause than is presently thought.)

Altimeters may have been a causal factor in some instances. (The FAA estimates that there is a 0.3% probability that even given the correct information by the controller, a modern transport aircraft will be more than 200 feet off the assigned altitude. Roderick A. Dennis, President of Zeta Engineering Co. in Dallas, says that present altimeter capabilities may have caused two crashes in the Cincinnati area since 1965 and others in the Salt Lake City and Chicago areas. Dennis' theory is that moisture-laden air rising from a body of water causes an error in a plane's altimeter. When a plane calls an airport for landing instructions, the airport radios altimeter settings at the airport and in the case of the Greater Cincinnati Airport, the air at the field might be considerably dryer than the air two miles north over the Ohio River.)

Responsibility for assuring airworthiness of all aircraft lies firmly with the FAA. Under the Federal Aviation Act of 1958, Public Law 85–726, Title VI:

Section 601 empowers the Administrator "to promote safety of flight of civil aircraft in air commerce by prescribing . . . minimum standards governing the design, materials, workmanship, construction, and performance of aircraft, aircraft engines . . . a production certificate authorizing the production of duplicates of such aircraft . . . and if the Administrator finds that the aircraft conforms to the type certificate therefore, and, after inspection, that the aircraft is in condition for safe operation, he shall issue an airworthiness certificate."

Section 605 provides that "It shall be the duty of each air carrier to . . . maintain, overhaul, and repair. . . . The Administrator shall employ inspectors who shall be charged with the duty of making inspections. . . ."

Before a newly developed aircraft can be put into use, it must be "Type Certified" by the FAA. Certification is not given until the aircraft has passed its flight test, which means it is possible for a manufacturer to build an aircraft which never gets certified. Such an instance is rare, however, because manufacturers work closely with the FAA through a plane's final development and production stages. Nevertheless, the burden of proving the airworthiness of an aircraft is squarely with the manufacturer according to the rules laid down by the FAA.

Supplemental type certification is required when there is modification of the original model which is not great enough to require a new type certification. Such modification may occur after the aircraft has been in operation for a long period of time or after a series of accidents isolates some special characteristic of the plane which necessitates construction adjustment.

The FAA may issue a directive prescribing

appropriate methods of compliance to the manufacturer. In lieu of such directive, the FAA can be satisfied that all aircraft have been corrected as a result of an "alert" issued by the manufacturer or FAA.

In the example of the Boeing 727, after the investigation of the crash at Salt Lake City, approximately fifty amendments of the standards were recommended. The purpose of these modifications was to improve the emergency evacuation equipment requirements and the operating procedures in order to increase substantially the probability of occupant survival in an aircraft accident.

As an extreme measure, aircraft may be grounded until necessary changes are made. From 1938 to 1963, at least 8 such mandatory and voluntary groundings have taken place, according to the CAB. In two instances, the Beechcraft D–18C and the Martin 202, the aircraft was never returned to service.

To review the policies and concepts out of which emerge FAA's airworthiness standards for aircraft and equipment, the Administrator has appointed an Airworthiness Standards Evaluation Committee consisting of FAA personnel. The committee is assisted by five adjunct subcommittees which include in their membership advisors from other Government agencies and various segments of the aviation industry.

The FAA continuality monitors and evaluates the airworthiness of an aircraft. One program, implemented in June, 1966, is the performance and reliability system (PAR) which monitors performance in the airline industry as represented by 15 participating airlines. Information on certain selected safety parameters is displayed in graphs and charts for each airline taking into account such exposure factors as hours operated, aircraft movements and aircraft utilization.

Another new program is the Systemsworthiness Analysis Program (SWAP) which is a revision of the present system of routine inspections performed by cadres of inspector domiciled at the location of the air carrier's principal operations and maintenance base, instead of providing for strategically located teams of inspectors who periodically check air carrier compliance with the rules and regulations pertaining to the operations and maintenance of their aircraft. Normally FAA rides 1 to 1½% of an airlines' flights annually.

Surveillance of general aviation aircraft has been far less stringent than for aircarriers, for the mere reason that volume makes the task difficult. Some tightening has taken place in the last few years, however, e.g., inspection of air taxi aircraft at the rate of two per month per maintenance, inspector (formerly air taxi aircraft had no special surveillance), conversion from an annual to a when-needed basis for conducting formal inspections of repair stations, and requiring a maintenance system for large pressurized and turbojet aircraft.

The airlines themselves conduct a constant search for ways to reduce the unexpected malfunction of equipment essential for safety. One device is the airborne maintenance recorder which has been developed to the point that over 50 separate parameters of engine information can be recorded and monitored. This information provides a daily "health report" on the aircraft engines and systems. Each day a computer analysis can furnish an accurate diagnosis of maintenance requirements.

Regarding the substance of standards which FAA requires for airworthiness certification, David Thomas, Deputy Administrator FAA has said, "It is a fundamental assumption that they have redundant (back-up) systems and emergency devices. For example, in the electrical system there are in some cases three and four inverters and all sorts of switching arrangements; hydraulic systems operate the booster on controls; antiskid brakes may not work on the alternate hydraulic systems, but there is an alternate hydraulic system to lower the gear, and if that doesn't work there is an airbottle to blow it down." [12] Dynamic analysis, strength of materials, aerodynamic design, fire prevention, multiple engines, and parallel controls have been parts of the airworthiness standards effort.

Continued research, development and testing in the area of new materials, new components and higher performance will be needed, particularly in order to establish the highest standards for type certification of the jumbo jet and the supersonic transport.

One unsolved area to date is the aircraft requirements to withstand the phenomenon called clear air turbulence. As little is known about it, no standards have yet been established. Nevertheless, the pilot flying into clear air turbulence unexpectedly can expose his plane to severe aerodynamic loads which it must, but may not, withstand.

Another area of growing concern is what might be called "second generation airworthiness." It is simply not possible to say with precision that an aircraft which is safe when initially certified cannot through use develop unsafe characteristics. This is a problem similar to that faced in medicine where the long-range effect of some drugs is simply unknown until they have been used over the long-range. It is a relevant question to ask: Should commercial air carrier flights be the first test of the airworthiness of an aircraft at any age? Should not there be ongoing airworthiness tests of aircraft undertaken continuously, so that commercial flights are never the first to test the plane under new conditions—even if those conditions are merely that no aircraft of the type had ever accumulated so many total hours in flight before?

What FAA attempts to do in certifying airworthiness is done reasonably well, but the whole concept of FAA "airworthiness" certification and inspection can be challenged as an unrealistic isolation of one factor, the aircraft, in maintaining a safe system.

In an article by Prill and Hoekstra entitled "Transports of the Future—A Systems Approach," it is suggested that "the traditional concept of 'airworthiness' be broadened into a new concept of 'systemworthiness' "—that is to recognize and intensify the relationship between the transport manufacturer, the air carrier operator, and the FAA. Indeed, the very divergence between the operational and utilizational features of aircraft points to a direct need for this approach in FAA certification and surveillance procedures.

FAA has made a step in this direction in the establishment of MAC. The Maintenance Analysis Center which "contemplates systemworthiness analysis programs . . . will provide a centralized responsibility and capability for broad review and diagnosis of maintenance data and the issuance, when indicated, of alert warnings."

But the systems approach must be carried further. Besides the aspect of intersystem aircraft airworthiness consideration, the human interface problem (i.e. between aircraft and pilot) has also been a factor largely ignored in evaluating aircraft airworthiness. The "Aircraft Design-Induced Pilot Error Project" sponsored by the National Transportation Safety Board in 1967, found, for instance, that certain types of accidents were related primarily to detail design—particularly such things as those involving retractable landing gear and fuel systems mismanagement. In these cases improper sensing of control, inadequate identification of controls, inadequate indication and/or warning to the pilot, and lack of standardization were found to be the major design factors.

Similarly, there has been some indication that the design of altimeter dials may cause pilots to misread their altitude. The top dial is read for altitudes above 10,000 feet; the lower dial provides altitudes of less than 10,000 feet. Both sometimes show the same number. The problem is elusive, but FAA investigators now suspect pilot misinterpretation of the altimeter dials as a factor in a Boeing 727 crash into Lake Michigan, August 16, 1965, a TWA Convair 880 crash in Cincinnati, November 29, 1967, and a West Coast Airlines DC–9 crash near Wemme, Oregon, October 1, 1966.

VI. AIRCRAFT CRASHWORTHINESS

One goal of any air safety program is to minimize accidents; a second is to minimize fatalities when and if accidents occur. The FAA is thus concerned with both the airworthiness and the crashworthiness of craft. Its performance in the latter area has been distinctly less distinguished than in the former.

Public Law 85–726, Title VI, Sec. 601(a)(6) provides:

"The FAA Administrator is empowered and it shall be his duty to promote safety of flight of civil aircraft in air commerce by prescribing and reversing from time to time . . . such reasonable rules and regulation or minimum standards governing other practices, methods and procedure . . ."

FAA has interpreted this as authority to establish rules and standards of design and equipment which the aircraft must carry to insure the highest degree of survivability if an accident does occur. FAA has established rules based on knowledge gleaned from its own research studies, from conference studies, from the regular emergency evacuation tests required periodically of air carriers and from the industry. It requires a crashworthiness certificate for aircraft used in carrier operations.

An example of regulations instituted as a result of FAA research studies undertaken in 1966 are as follows:

Regulations adopted as a result of emergency evaluation medical research studies

1. Emergency evacuation demonstrations required on each type of air carrier passenger aircraft;
2. Portable battery powered megaphone(s) required;
3. Uniform passenger briefing procedure provided for;
4. Location and operation of emergency exits must be described to passengers;
5. Specific ratios of flight attendants to the number of passengers prescribed;
6. Emergency evacuation procedures made available by diagram;
7. Exit signs and opening clearly demarcated;
8. Life raft location and operation briefing on over-water flight;
9. Exterior markings around emergency exits required;
10. Clearly indicated external openings available on emergency exits;
11. Prescribed performance standards for flotation seat cushions;
12. Evacuation demonstrations must encompass 120 seconds or less time;
13. Separate demonstrations for ditchings must be accomplished;
14. Emergency exit operating handles must have instructions readable at 30 inches and have uniform markings; and
15. A source of light independent of the main lighting system must be installed to illuminate each emergency exit and locating sign.

Regulations under considerction as a result of emergency evacuation medical research studies

1. Individual passenger portable smoke mask (could double as emesis bag);
2. Delethalized seat back;
3. Individual passenger single strap inertial reel torso restraint (suitable for adult and child);

4. Emergency escape procedures in 400–1,000 passenger aircraft;

5. Dynamic tests of 40g (all directional) passenger seats.

Source: "Federal Aviation Agency Air Traffic Control Operations", *Hearings Before a Subcommittee on the Government Operations*, House of Representatives, 89th Congress, Second Session, April 26, 1966, page 70–71.

A study by the Aviation Crash Injury Research Division of the Flight Safety Foundation in 1961, indicated that occupant protection criteria of the FAA do not fully recognize safety advances which can be implemented on the basis of existing technology. Failure of the seat belt tie-down, rigid service trays, the design of seat backs and seat back webbing, and seating configuration all contributed to fatalities in crashes where the fuselage structure was left relatively intact. It would appear that not much change in any of these areas has occurred since the study was concluded.

The FAA consults industry during development of a new aircraft to define and establish criteria for crashworthiness certification. In the certifying of the new airbuses, for instance, (DC–10, Boeing 747) the FAA has followed the industry during development. The safety standards which are likely to emerge, however, will probably be little different from what is in effect today with smaller craft. McDonnell-Douglas says that no passenger will be more than one seat away from an aisle and that cabin width of more than 19 feet is 7 feet greater than the jetliners now flying. But these advertisements are misleading: The first claim refers only to first class configuration; and the latter claim fails to recognize that there will be just that many more seats across the cabin width. It is clear that a seating capacity of 300 passengers will mean that crowded seating conditions and hampered access to exits will be even more of a problem with the new airbuses than in today's craft. Aisle width of the DC–10 will measure 19 inches, which is one inch wider than in current coach sections. There will be only eight entrance and exit doors, more than on current aircraft, but possibly inadequate for a 300 passenger evacuation process. It is not clear that the FAA is exercising sufficient authority over the industry in defining what is and what is not safe.

Information gleaned from flight recorders is another source upon which regulations have been established. Flight recorders are instruments installed on the aircraft which record the actions of the aircraft and when played back after a crash can reveal aspects of causal factors. Formerly just a few parameters like the pilot's conversation with the ground, air speed, etc., were recorded, but equipment is now available which increases the parameters significantly, recording such things as pitch attitude, angle of attack, angle of bank, pitch rate, yaw rate, roll rate, position-control column, position-control wheel, position-rudder pedals, position-pitch trim, position flaps, ambient air temperature and engine parameters.

FAA is now considering making such equipment mandatory on certain types of air carrier aircraft at an estimated cost of from $20,000 to $25,000 for equipment and installation per aircraft. The value of such recorders is being debated, first because they do nothing to prevent a crash, and second because it is a very long and expensive procedure to process the "read-outs" from recorders—with results which are then often of such poor quality that they are all but useless. A somewhat more serious concern is the degree to which increased reliance is being placed upon recorder read-outs to provide the basis for future regulation changes. It may be administratively more "comfortable" to base safety regulations on facts which are proven in a crash than to act boldly before a crash proves you correct.

Crashworthiness regulations are almost non-existent for general aviation. Beyond FAA monitoring of repair stations and instrument schools, general aviation aircraft safety has been the responsibility of the manufacturer and the individual owner (except for air taxi or certain aerial applications).

The two principal areas of concern over the crashworthiness of aircraft are fire prevention and evacuation capacity.

Fire

An "FAA-Industry Conference on Crashworthiness and Passenger Evacuation Standards for Transport Category Airplanes" held in 1966 provided a list of 14 topics which represent areas of focus for crashworthiness attention. Ten of them related to fire prevention: crash resistant fuel tanks; combustible characteristics of cabin interior materials; cabin fog and foam systems; gelled fuels; fuel containment to prevent spillage; fuel cell inserting; ignition suppression; prevention of fire in cargo compartments; self contained fire extinguisher systems; rescue and fire fighting (exterior).

Time Magazine cites experts who figure that the number of crash deaths could be reduced by 50% if fire could be prevented.[13] Though all the passengers survived the crack-up of a United Boeing 727 crash at Salt Lake City on November 11, 1965, 42 died in the fire.

In a CAB investigation over an 11-year span, it was found that fire following the crash—not injuries resulting from the force of impact—killed 221 of 543 aboard the planes or 41% of all occupants. Only 24 or 4% were fatally injured by disintegration of the plane's structure. CAB predicted that all 221 who burned or suffocated would have survived had there been no fire. CAB said "had modern fire fighting and rescue equipment been on hand, an additional 17 lives probably would have been saved."[14]

There are a number of fire prevention features already required by FAA relating to hand fire extinguishers, cargo compartments, protection of electrical and hydraulic systems against fire, and extinguishing systems for the power plant. A new flame detection and suppression device has been recently developed which will virtually eliminate the possibility of lightning igniting volatile fuel vapors vented from fuel tanks. Improvements "under consideration" are: new container materials to keep fuel from escaping from ruptured tanks; use of emulsified or gelled fuel; fire reducing foam; smothering gases; explosion detectors and automatic cut-off valves.

There are more than 15 to 20 different plastic items used in cabin interiors in different amounts, some more or less toxic than others, as well as inflammable upholstery fabrics.

Materials contained in commercial airline cabins which release toxic gases upon thermal decomposition can cause modern airliners to become lethal gas chambers when afire. Tests run in mid-1966 by the Airline Pilots Association showed concentrations of hydrogen cyanide of at least 50 times the lethal level, and Cleveland fire tests established that the life of a passenger may be endangered by the presence of these toxic fumes even during the established 90-second escape period.

FAA's approach has been to develop some kind of means to protect the passengers from the smoke and toxic gases elicited from the burning materials rather than to regulate the use of materials. They have, therefore, developed a little bag which contains a bottle of compressed air which discharges when the bag is put on and will give up to 8 minutes of oxygenated air. It would seem that regulation of materials in future aircraft is well within the realm of reason and feasibility.

Evacuation

Since emergency evacuation demonstrations were first required of the airlines by FAA on December 11, 1961, in order to monitor the effectiveness and operational maintenance programs, there have been over 300 demonstrations conducted by air carriers and additional tests have been conducted by air carriers for their own benefit. The demonstrations have included the following types: 45% simulated aborted take-offs; 35% simulated gear-up crash landings; 20% ditching demonstrations.

In the demonstrations, at least 30% of the passengers must be females, at least 5% must be over the age of 60, at least 5% must be age 12 or under, at least 3 dolls must be carried to simulate infants, one-half of the exits on the aircraft are closed, and nighttime conditions are simulated.

Of the combined total of 250 take-off and gear-up crash landing demonstrations, 70 deficiencies were noted during 55 separate demonstrations. Of the 70 deficiencies noted, 59 involved slides and 11 were due to miscellaneous causes such as stuck cabin doors, jammed overwing exits, malfunctioning jump seats which blocked the exits, inadequate procedures or crew member training. Of the 58 ditching demonstrations, 22 deficiencies were noted on 10 of the tests. Twenty-one of the 22 deficiencies involved malfunctioning rafts or their stowage compartments. Only one involved lack of crew member training.

FAA emergency evacuation demonstration procedures have been under attack by those who say that the subjects used are "practiced" and not typical of the passenger type—such as stewardesses, professional actors, etc. FAA points to their requirements regarding the composition of the group, and in addition, they say that in evaluating an aircraft they use two kinds of tests—one with a stereo-typed individual to determine the minimum escape time for a given airframe and the second with a naive subject to simulate the actual operational time. It is undeniable that as long as the subjects know it is a test, they are inevitably primed to react in a certain way, and thus leeway in interpretation of the results is necessary.

FAA now requires that an aircraft be evacuated in 120 seconds or less. Many assert that this is unrealistic. FAA points to the fact that of the more than 300 demonstrations conducted by air carriers, approximately ⅔ of the timed demonstrations were completed in 90 seconds or less. In an effort to shore up regulations, as of October 24, 1967, the aircraft manufacturers were required to demonstrate that their designs are capable of evacuation of the maximum seating capacity through the exits on only one side of the aircraft within 90 seconds.

FAA now requires that for a minimum of 9 passengers there must be one flight attendant and that for as many as 149 there must be a minimum of 4 flight attendants. The requirement has been noted as absurd, because for higher density aircraft where the need for additional attendants might be greater, the ratio of flight attendants to passengers is 1 to 35, while on aircraft of lower density the ratio can be as low as 1 to 9. There is no doubt that among the crowded conditions on the larger long haul jet aircraft, a crew ratio of 1 to 35 is a questionable figure.

The demonstrations indicated that, more than any other item, ineffective slides were the cause of deficiencies in emergency evacuation procedures. FAA now says that improved inflatable escape chutes attached to

Footnotes at end of article.

the doors, designed to be more dependable and more rigid, are being developed and required.

Exits and seating have also been cited as factors in the fatality rate after crash. In the Boeing 727 Salt Lake City crash, passengers opened five of the six exits but they fumbled with three of these before getting them open—no one will ever know how many lives were lost because of the few seconds delay.

The high ratio of passengers to exits and the positioning of these exits can result in crowded aisles in attempts to escape. On the 113-passenger 720 which has only six exits, two are over the wing and partially blocked when seats are in their normal upright position.

Present FAA standards call for a certain number of exits per passenger, depending on the type of exit. It has been suggested that rather than require manufacturers to abide by this sort of formula, manufacturers should be required to demonstrate that an aircraft can be evacuated in 90 seconds and then have them develop whatever type of exits are necessary to implement this. This is especially of interest to those concerned with the coming of the jumbo jets and the number of exits which may have to be provided to evacuate the aircraft adequately. It may well be that the creative and innovative expertise of the aircraft industry can come up with better exit types and location given a stricter code of evacuation criteria by FAA.

FAA has regulations and minimum standards for seat spacing and aisle width. They are primarily based on the airline manufacturers' ability to demonstrate that the seating configuration allows for emergency evacuation in the prescribed time. As Mr. David Thomas, Deputy Administrator, FAA has said, "I quite agree that all seating arrangements are not comfortable, but it has been demonstrated that they may be evacuated, with part of the exits covered in a minimum time".[15]

It would seem that the interrelationships between seating, aisle widths, exit number and location, regulations as to hand luggage brought on board, distance of the flight should be the criteria for seating regulations rather than the relationship between the number of passengers and their ability to get out of an aircraft in a certain length of time. Again, the failure of a comprehensive systems management approach to air safety is evident.

Locating downed aircraft

Downed and missing aircraft are a crucial factor in the lethality rate of general aviation. Survivability for downed aircraft might be most directly related to the speed with which the downed aircraft can be found and the ability of pilot, crew, and passengers to carry through survival procedures.

In the last five years (1962–1967) there were 60 aircraft in the continental U.S. and Alaska which were missing and have never been found. In the continental U.S. between 1965–1967, 32 aircraft were missing for more than three days and 40 were missing for a period of from one to three days. These aircraft "emergencies" are not limited to mountainous areas, large bodies of water or sparsely settled areas.

In fiscal year 1966, the Air Force flew 57,585 hours in Search and Rescue operations at a total cost of $59,224,142 ($112,808 per person) and claims to have saved 525 persons as a result of these operations. In search operations, however, the Civil Air Patrol (Air Force) in 1967 had two accidents with three lives lost; in 1966, two accidents with no lives lost; in 1965, three accidents with one life lost. In test missions in 1965, practicing the procedures for rescue, they had five accidents with two lives lost.

Footnotes at end of article.

Recently it has been suggested that all small aircraft be required to carry a device called the DART (Downed Aircraft Rescue Transmitter) which transmits a locator beacon which can be picked up by a suitably equipped search aircraft. The device costs only $200.

VII. AIRPORT REGULATIONS

Quite aside from the aspects of air safety involved in technical traffic control systems (see Section VIII) and in airport construction and equipment (see Section IX) there are three aspects of airport operations which require in-depth attention: Carrier scheduling; runway congestion; and noise abatement.

Carrier scheduling

Departure and arrival schedules which are approved by the Civil Aeronautics Board increase traffic and add to the complexity of traffic control at major airports.

In New York, for instance, 67 flights are scheduled to leave the airport between 7 and 9:30 a.m. Thirteen flights are scheduled to leave at precisely 9 a.m. alone. (See Chart 11). In 1963, FAA conducted a study of New York air traffic between 5 p.m. and 7 p.m. to illuminate the complexity of the delay and congestion problem, and one of their findings was that airline scheduling contributed significantly. Between 5 p.m. and 7 p.m., for instance, at Kennedy, there were 10 departures scheduled on-the-minute at 5 p.m. and six on-the-minute at 5:30 p.m., yet only two in between. Of 21 departures scheduled during this hour, 16 were scheduled in two minutes. At 6 p.m. there were 12 departures scheduled on-the-minute; at 6:30 p.m., there were five departures on-the-minute. Of 30 departures scheduled between 6 p.m. and 7 p.m., 17 were scheduled in two minutes.

Thirty-seven and five-tenths (37.5) percent of the total weekly departure traffic is scheduled during 3.3 percent of the total time. In fact, at current major hub airports, there are as many arrivals scheduled for the same minute.

With such departures scheduled, according to the FAA, "delays would occur were there no other contributing factor." [16] Travel across the Atlantic indicates the same thing. On July 11, 1967, at 11:30 p.m., of 85 scheduled aircraft, 82 were eastbound to Europe, only three were westbound.

General aviation constitutes a large portion of traffic at our commercial airports, but it is an even greater portion during the all-important peak hours. According to surveys made in 1965, however, 23 out of the 30 general aviation movements during the peak hour at Kennedy were to make airline connections, only seven were to conduct local business. (See Chart 12).

FAA has not in the past interpreted its role of protector of air safety in terms of regulating aircraft scheduling, although air traffic is increasingly becoming a factor in promoting a safe airways system. In hearings before a Subcommittee of the Committee on Government Operations, House of Representatives, April 1966, when asked if CAB routinely inquires of the FAA what the impact of additional scheduled flights might have on traffic control, Mr. David Thomas said that they did not.

According to a staff study prepared by the Systems Research and Development Service of FAA in November, 1967, flattening of schedule peaks could significantly reduce delay. (It is typical that the concern was primarily expressed in terms of passenger convenience rather than passenger safety.) Reducing demand peak operations per hour from 8% to 7% for 600,000 operations per year, for instance, could reduce delay by 42%; reducing demand peak from 8% to 6% could reduce delay by 58%. (See Chart 13).

Restricting the use of large airports by general aviation would definitely reduce delay, but raises the question of defeating feederlines and "hub-service." Commercial aviation in the end will be restricted in growth if general aviation cannot supply the link which it now provides. That general aviation which is not relevant to commercial traffic, however, is another question, although it rarely causes congestion problems because most pleasure flying pilots prefer not to use busy airports.

Alternative suggestions to restricting the use by general aviation of large airports include: construction of shorter, parallel runways; the establishment of separate radio frequencies; separate approach and departure routes and altitudes; dissemination of better and more accurate information by FAA in the Airmen's Information Manual to enable general aviation to utilize airports more safely and effectively; improvement of existing reliever airports to permit all weather operations; and improvement of ground transportation facilities from these airports to the downtown area. All of these suggestions relate to relieving delay; none would appreciably relieve congestion.

Other scheduling procedures which might be considered to relieve congestion are limiting airport use in accordance with traffic flow direction and the functionalized airport concept. Concentrating traffic flow direction would decrease the amount of airspace sharing, crossovers and devious vectoring around nearby airports, but it would increase traffic concentration in one lane thus increasing holding patterns and concentration of traffic in one airspace. Functionalized airports will result in more efficient utilization of airports and system facilities and augment safety by permitting segregation of aircraft performance characteristics, but it would greatly complicate connecting passenger traffic.

Runway congestion

To the extent that traffic congestion approaching an airport can be reduced by more efficient, but not less safe, landing procedures, those procedures should be amended. A number of areas need study.

Reducing the spacing between aircraft is a hotly contested issue between pilots, controllers and the FAA. The three-mile present radar separation standard came about quite arbitrarily many years ago—so arbitrarily that it jumped 15% when the U.S. adopted the nautical miles terminology. The present three-mile standard normally provides ample time to get the No. 1 arrival off the runway before the No. 2 aircraft is committed to land. Lowering the spacing for same-speed aircraft from 3 to 2 nautical miles would reduce the landing interval from 1½ to 1 minutes.

The crux of the issue is that airspace separation should be evaluated in terms of the type of aircraft performance rather than solely on the basis of runway occupancy constraints. Such constraints are already in existence by the procedure requiring that the preceding arrival either be off the runway before a landing clearance is given or have reached a minimum distance from the landing threshold. For instance, the time interval for a long haul four-engine jet from the point of commitment to the time it exits the runway is about equal to the time interval required to maintain three miles longitudinal separation on final approach. A small aircraft, on the other hand, with lower approach speeds, takes much longer to travel the three miles than the time required to land and clear the runway. Thus the gain in capacity from reduced radar spacing increases as the proportion of small aircraft increases. The gain is also greatest at airports where arrival capacity is less than departure capacity as departures are generally not affected by reduced radar spacing.

Current procedures give arrivals priority over departures. A strict first-come first-served treatment of arrivals and departures is not possible because an arrival once sequenced to final approach must have priority

to use the runway. Thus every time a large jet arrives, it preempts a departure up to 60 seconds. Because of this, it would be most beneficial to get a sequence of two or more spaced arrivals in order to reduce as much as possible this preempting of runway use.

Speed class sequencing can also help to increase capacity. Whenever a slow aircraft follows a fast aircraft, an excessively long approach interval is produced. One way to reduce the fast/slow interval is to reshuffle the landing sequence many minutes ahead of time using the air traffic control computer in order to minimize the number of fast/slow pairs.

Reducing runway separation criteria between parallel runways would enhance capacity. Existing Air Traffic Control procedures specify that a departure from any runway cannot be released in front of an incoming arrival unless at least two nautical miles separation exists, whether arrival and departure are on the same runway, or on parallel or non-intersecting runways. Approaches to runways separated by less than 5,000 feet must maintain at least three miles airspace separation. This criterion applies whether runway separation is 400 feet or 4,000 feet. A revamping of criteria according to separation could increase capacity. The 5,000 foot standard was arrived at without the present controller monitoring system in mind.

At airports where there are a number of runways being used, mixing large and small aircraft on the same runway reduces capacity. Ideally it would be beneficial to have separate independent runways for large and small aircraft, but this is usually impossible. One study indicated that a mix of 60% long haul four-engine jets, 20% F-27 type aircraft, and 20% between these two can increase capacity of IFR landings by from 5 to 11 percent, and VFR capacity by from 11 to 16%.

Prodded by the President's September 20th letter to DOT requesting Secretary Boyd to tighten up on air traffic safety, the FAA has come up with a new traffic segregation plan for high density terminals. Starting with the premise that the safest traffic environment is one in which all traffic is separated by ATC—but recognizing that in our busiest terminal ATC cannot possibly control everything that flies—the FAA concept would establish special controlled airspace zones around certain designated primary airports. Only controlled traffic would be allowed within these special zones.

Comments on the plan have been varied—among them that the plan did nothing to meet the nation's requirement for additional traffic capacity and merely increased the complexity of the air system, geometi and controller workload. On the other hand the system has been working well in Atlanta and it is one of the few measures which can be started immediately under the present constraints on funds and personnel.

Noise abatement

Though no crash has been directly blamed on noise abatement procedures, at least one American 707—which plunged into Jamaica Bay and killed all 95 aboard in 1962—would have had a better chance if the pilot had been allowed to climb away fast and straight. Says Pilot Harry Orlady, a 25-year veteran with United: "Noise abatement procedures force you to fly as close to danger as you dare to. You don't have much margin for error." [17]

NASA concluded after a study of noise abatement procedures that guidance equipment, aircraft capability, and high pilot workload are limiting factors in using steep approaches for noise abatement—a procedure now sometimes used.

A major problem is competing jurisdictions. The New York Port Authority maintains it has a right to regulate aircraft noise on take-off procedures because the plane is on Port Authority property—that is, the airport. However, once the plane is airborne, jurisdiction passes to the FAA which has control over the aircraft until it sets down at another airport at which time another local regulatory unit takes over control. For this reason, the Port Authority refuses to prescribe noise restrictions for landing operations. The FAA declines to set engine noise levels for landings (except through approach patterns) referring to the jurisdiction of the Port Authority, the difficulty of obtaining accurate measurements, emergency margins of safety, preferential runways and structural limitations of aircraft.

The mechanics of noise abatement procedures can be explained in terms of procedures at Kennedy which require that when the aircraft reaches an altitude of three hundred feet, the Captain is required to make a twenty degree turn to the left and reduce the power of his engines (which reduces noise). "Boxes" which record the noise level are strategically set around Kennedy and record any level of noise greater than 103 PNdb (Perceived Noise decibels). In the first eight months of 1967, of the 98,443 take-offs at Kennedy, 690 involved noise violations.

The safety factor which is involved is that the speed at which the plane is flying when it is required to make the turn and reduce power (200 mph) is a marginal speed to keep the plane aloft. Captain Vernon Lowell in his book says that 250 mph is a safe speed in a heavily loaded plane, that 200 mph is less than the required minimum in case two engines fail, and given the altitude at which it occurs, it is not enough to recover from a possible stall.[18]

The irony of the procedure is that as now practiced it may actually *increase* the noise level. After the aircraft passes the noise recording point, power is again applied in concentrated quantities, thus increasing noise levels along certain paths in that area.

Another procedure which is used at some airports for noise abatement is the preferential runway system. Implementation is usually through an Operations Letter by the FAA which designates the runways by order of preference under certain wind conditions. Exceptions are made when in the judgment of the pilot the use of the preferred runway will jeopardize safety or when, in the opinion of the Tower Supervisor, a hazard could be created. Visual markers such as beacons and other visual guidance to the runways are provided to help keep the pilots on appropriate course.

Theoretically the approach profile should not be as noisy as the departure profile, as the latter is basically full-power while climbing for altitude. On the other hand, slow, dragged-in approaches which are often necessitated by the acceptance of a high speed aircraft behind a low speed aircraft, require use of flaps, configuration with gear, spoilers and power to compensate for speed; all of which means noise.

Solutions to the noise problem which are consistent with safety include restrictions on night operations, increased visual and non-visual glide slope angles and delayed acceptance into the final approach sequence. The FAA is currently developing instrumentation to permit quieter approaches beyond three miles from the airport. If the results of the current study show that two-segment approaches meet adequate levels of safety, then the installation costs for airborne instrumentation necessary to achieve the resulting two-segment approach noise benefits would be approximately $2,000 per aircraft. (At those airports not presently equipped with terminal DME installations, a $50,000 ground facility would be necessary.)

A more promising solution to the noise abatement problem would be found in the design of the jet engine. Noise was accepted as a necessary evil in the early military turbojet engines from which civil jet engines descended, but now an attempt can be made by government and private industry to design jet engines from the very beginning calling for less energy to be wasted on noise and exhaust. An ineffective compromise in the meantime is the establishment of acceptable noise levels—requiring a high degree of technical skill and elaborate facilities for the development of such criteria, the tedious chore of measuring the noise characteristics of each aircraft operation, and the difficulty of enforcing the procedure.

A final area of safe solution for the noise abatement problem is land use, including extending runways, planting rows of pine trees to absorb noise, adopting zoning laws, greater concern to future airport site selection—and, of course, sacrificing passenger "convenience" to both passenger safety and the hearing comfort of populated areas through utilization of existing airport facilities farther from urban centers.

VIII. THE FEDERAL AIR TRAFFIC CONTROL AND NAVIGATION SYSTEMS

The present air traffic control and navigation system is valued at $1.25 billion and requires about a half-billion dollars annually to operate and maintain. During fiscal year 1966, the FAA obligated approximately $54.4 million for the procurement and installation of new facilities and equipment of all types in the Federal airways system. Of this amount, $7.8 million was for projects undertaken at the request of other Federal agencies (the military services predominantly) and local or State governemnt.

Navigation

Navigation facilities aid a pilot in directing his aircraft to his destination. Such equipment is independent of attempts to control the flight of an aircraft by air traffic controllers.

The first essential in navigation is for the pilot to be able to find his destination, another airport. Conspicuous markings, lights, etc., were the first devices used. In addition to visual means, the simplest form is a nondirectional beacon from a radio station transmitting its identity in a dot-dash code. The aircraft can use a direction finder radio to "home in" from any direction. This technique is now obsolete and is only found in remote locations.

The best current available means for locating an airport is with a Very High Frequency Omnidirectional Radio Range (VOR) station. This station provides 360 courses radiating like the spokes of a wheel, and with the proper airborne receiver, a pilot can fly any selected course to or from the station. As of June 30, 1967, there were 318 VOR stations. A similar military system (TACAN) is also available for properly equipped aircraft.

The standard means of navigation between airports along the airways is the VORTAC station, which makes up the fundamental navigation system in the United States. VORTAC combines a VOR for civilian use with a TACAN station which provides at very high frequencies an omnirange facility used by military aircraft and a distance measuring system used by both civilian and military aircraft. As of June 30, 1967, there were 566 VORTAC stations. Supplementing VORTAC and principally in remote locations are 62 of the now obsolete low frequency ranges and 304 homing beacons.

The future offers three types of improved navigation equipment:

The integrated Doppler-inertial-stellar-radio navigation system with central digital computers, presently installed on all TWA fleet carriers and all of the PAA DC–8 fleet, (as of April, 1966, this constituted perhaps 60% of the total fleet which operates across the Atlantic); Doppler equipment is reported to have a standard deviation of 12.2 miles;

A more sophisticated ground reference navigation system, particularly the VOR–DME–TACAN, which combines a very high frequency omnirange with distance measuring equipment;

Synchronous satellites which offer international air carriers an improved communications link.

Air Traffic control—its use

Air traffic control is a "service provided for the purpose of keeping aircraft safely separated while operating in controlled airspace, which can include taking-off and climbing, en route, and approaching and landing at air terminals." Control is exercised by direct contact between pilots and air traffic controllers.

Not all airspace is presently under control. The actual air traffic control is divided into air route traffic control centers (ARTCC) which handle the airplane from point to point en route and the airport traffic control towers (ACTCT) which handle them at the terminal area during landing and take-off. As of June 30, 1967, there were 28 ARTCC's, 309 ATCT's and 65 combined station/towers (CS/T). (See Chart 14).

There are some areas, usually surrounding the busiest terminals, where all aircraft entering that area must come under the control of the air traffic controllers.

When flying in adverse weather conditions less than 3 miles lateral visibility and/or less than a 1000 foot ceiling) or when flying above 27,000 feet (an area populated exclusively by jets), the aircraft is required to fly under Instrument Flight Rules (IFR). In order to fly under IFR, a pilot must be licensed for this special type of flying and the aircraft must be equipped with properly calibrated instruments. All aircraft flying under IFR must be under the control of the air traffic controllers.

When the weather conditions permit, or when not flying above 27,000 feet, a pilot may take the option to fly under visual flight rules (VFR). This "see and be seen" concept means that aircraft separation and collision avoidance are the responsibility by law of the pilot.

A summary of control and flight rules follows:

Conditions	Flight rules	Subject to air traffic control
Above 27,000	IFR required	Yes.
All areas—bad weather	do	Yes.
Nonrestricted areas in good weather.	Optional VFR or IFR	No. Yes.
Restricted areas in good weather—heavy traffic areas.	Optional VFR or IFR	Yes. Yes.
Restricted areas in good weather—highest priority traffic areas.	IFR required	Yes.

One principle area of debate has been the continued use of VFR flying. Much of the criticism is based on the conclusion that VFR flying causes accidents. Some suggest that this is an inaccurate conclusion, based on the misconceptions that all air carriers are jets flying constantly at 300 mph thereby generating instantaneous closure rates, and that most flying occurs around crowded airports. In reality, Federal Air Regulations require that airplanes flying in opposite directions above 3,000 feet must fly with vertical separation of 1,000 feet (jets with vertical separation of 2,000 feet), which means that only if they are going in the same direction can they be at the same altitude. The relevant closure rate then, is the difference in air speed between the overtaking airplane and the one being overtaken, not "instantaneous". In addition, at low altitudes, regulations impose speed restrictions on jet aircraft, VFR, many contend, is still a workable concept within the rules of its operation, though its applicability may diminish in the future as the types of aircraft change.

The question of mixing VFR and IFR landings at certain unrestricted airports is still vital.

Air traffic control—equipment

The first air traffic control was simply a matter of signaling to the pilots when they were in sight of the airport. This process remained crude until ground-air and later air-ground radio communications were feasible. This basic system in terms of procedures and control has not changed fundamentally in 20 years, though it has been improved and electronic supplements have been added to the system so that a top-notch crew in a tower such as Chicago O'Hare International can maintain an an-

nual rate of one operation every 70 seconds with peak rates of perhaps one every 30 seconds (using parallel runways).

Voice Communication is maintained by RCAC (peripheral communications installations) which provides coverage to the periphery of the designated control area (usually an area around an airport) by which the pilot and air traffic controller talk directly. In 1966, 361 airports were equipped with RCAC installations.

Positioning is determined by radar, an electronic device that, in its primary form, locates an aircraft by transmitting radio energy pulses toward it and timing the echo's return. Reflected on the cathode-ray tube of a radar console, the echo, called a "blip", furnished the controller with the actual position of the aircraft. Primary radar is distinguished from the radar beacon system (or secondary radar), the latter dispensing with the echo and making use of a radio transmitter/receiver (interrogator) on the ground and a radio receiver/transmitter (transponder aboard the aircraft. When radio pulses transmitted by the interrogator are received by the transponder, they trigger transmission of a reply in the form of a distinctive signal which is received at the site of the interrogator and identifies the aircraft. (It does not identify altitude). The radar beacon system is more sophisticated and is being more extensively used. Presently 532 air carriers (and all new equipment) are fitted with transponders, all military have transponders, and general aviation has 4,000. General aviation equipment is not required to be fitted with transponders. FAA estimates that it would cost $147 million to equip the total fleet, commercial and general with transponders (radar beacon)—$20 million for air carriers, $44 million for general aviation, and $30 million for military.

There are numerous types of radar equipment all of which are designated to affect an approach controlled from the ground. The ground controller communicates instructions to the pilot giving direction, distance, and elevation along a fixed approach path to an airport.

Presently the equipment is sophisticated enough to affect an automatic landing up to 1,600 feet visual range (200 foot ceiling and ½ mile visibility). In some places, automatic landing can be used at 1,200 feet.

As David Thomas said in April, 1966: "It will be several years before you will be able to buy a ticket on a plane that lands without visual reference, though we will be doing it on a test basis within a year."[19]

Presumably air traffic capacity increases as the equipment enables landing the all visibilities. Radar sophistication includes the following:

1. Long Range Radar (LRR). This is a radar of approximately 150-mile radius used by air route traffic control centers to control air traffic between terminals. As of June 30, 1966, 89 airports were equipped with LRR.

2. Airport Surveillance Radar (ASR). This is a short range radar system which maintains constant surveillance over aircraft at the lower levels of flight, normally within a 30-mile radius of an airport. The altitude coverage ranges from 10,000 to 30,000 feet. As of June 30, 1966, 81 airports were equipped with ASR.

3. Airport Surface Detection Equipment (ASDE). This is radar that shows the movement of aircraft and other vehicles on the ground at an airport.

4. Instrument Landing System (ILS). This is a facility based on radar in the vicinity of an airport which radiates direction and position signals to approaching aircraft. The signals are received on an instrument in the aircraft and alert the pilot to any deviation from the safe approach path to the correct touchdown point on the runway. The signals can be fed directly to the autopilot for automatically controlled approaches. It is usually supplemented by a high-intensity approach light system, and normally the two installed together can permit approaches at 200-foot ceiling and ½ mile of forward visibility. As of June 30, 1966, 257 airports were equipped with ILS. At the same time, 223 airports were equipped with an approach light system with sequence flashing (ALSF).

5. Precision Approach Radar (PAR). This is radar used by traffic controllers to "talk" a pilot on final approach down a prescribed path leading to the runway. The military uses the devices extensively but the airlines prefer to treat it only as a monitoring and emergency facility. As of June 30, 1966, 27 airports were equipped with PAR.

6. Military Radar Approach Control Facility (RAPCON or RATCC). This is a military radar station that controls arriving and departing IFR traffic at Air Force and Navy bases. At certain locations RAPCON's and RATCC's are operated by FAA personnel. As of June 30, 1966, 36 airports of all types were equipped with RAPCON or RATCC.

7. Alphanumerics. This is a "bureaucratic" name for a sophistication of the read-out on the radar scope. Instead of lots of light spots and blips, each one is tagged with as much information as the accompanying computer equipment can digest. Indianapolis Air Route Traffic Control Center established alphanumerics in a device called SPAN which is now being moved to New York. Atlanta used a limited read out showing altitude and identity in a test program called ARTS.

Regardless of how sophisticated radar equipment becomes, it is limited by runway capacity and air traffic control procedures. Radar can organize and sequence the traffic under adverse visibility conditions, thus creating a safer system, but safe clearance distances are greater in bad weather and traffic still slows down to half the rates used in clear weather. In weather restrictions in the New York area, for instance, the actual airport acceptance rate can be reduced from 120 movements (the acceptance rate under good weather conditions) to 40 or 50 in weather restriction conditions. Transponder assisted radar makes the controller's job easier.

Technologically, the air traffic control system is still largely manual despite the increased use of computers. Navigation aids, voice communications, radar beacons, and "alphanumeric tags" on radar scopes are all improved tools for the manual control of traffic and will enhance system performance. But use of computers to aid in directing traffic has been notably absent to date.

A very small beginning has been made in the form of an approach spacing computer. This present trial taking place at the FAA's National Navigation Facilities Experimental Center is demonstrating how a computer can aid a controller in computing vectors and in assigning speed control in order to space flights more accurately on final approach. Use of computers in the more complex decision-making areas of control will provide broad opportunities in regulating and determining en route traffic patterns; in determining airport development plans; in acquiring and disseminating weather information; in coordinating intermodal transportation; in finding solutions to air space use; in examining and controlling the interrelationship of radar control with clearance limits, altitude and aircraft capability; and in analyzing terminal area bottlenecks.

An adjunct to future controlling systems will be an airborne collision avoidance system (CAS) to detect and analyze potential collision threats, then to tell the pilot what evasive action to take if a collision threat does exist. The device is not intended to substitute for air traffic control, but to provide for safe separation if, for any reason, the air traffic control system's separation does not fulfill its role or if the aircraft is flying under visual flight rules. Research and development has been somewhat successful in gaining the knowledge necessary to develop such a device, and Stuart Tipton said in 1967 that "a practical CAS now appears to be within sight."[20] The SST will be the first aircraft to incorporate a CAS from the beginning. It is hoped that the day is not far away when synchronous communications satellites will be utilized to exchange information between plane and ground automatically—akin to the telemetering principle common in space technology. In 1964, airline industry initiative started a program to make this goal a reality. Today it has grown into one of several major experiments in NASA's ATS–1 project. The project has the participation of seven airlines, valuable help from manufacturers of aircraft and airborne electronics equipment, and technical management from Aeronautical Radio, Inc.—the airline industry's own communications company.

Inevitably all air traffic systems must begin and end at an airport. Like a chain, the air traffic control system is only as strong as its weakest link. In aviation the weakest link is the saturation level of the system—under a variety of weather and control conditions. As an airport approaches its saturation level, safety is reduced.

There is also a financial cost of airport saturation. Based on 1960 figures by the Civil Aeronautics Board, the cost to the airlines due to airport crowding was $21,117,060 due to cancelled mileage and $48,890,385 due to delayed flights (15 minutes) for a total of over $70,000,000 per year. A more recent survey by United Research Incorporated forecast the average cost per diversion and cancellation for U.S. air carriers in 1965 and 1970 as $2,140 and $2,760 respectively.

Chart 14 itemized the predictable delays at major airports as they reach saturation. These are the statistics of convenience, but they imply a similar growth in tragedy.

A national airspace system

To meet the airspace system crises, FAA has undertaken "long range planning" under the program title of NAS, National Airspace System. Stage A proposes to spend $212 million from fiscal year 1966 and prior to 1970. (See Chart 15). This will fund a configuration of 15 en route air traffic control systems.

FAA reassessed the plan in 1966 to determine whether the proposed funding schedule will produce an operating improved air traffic control system in the shortest possible time. Their review indicated that fund availability is not, at present, the controlling factor:

"The production capabilities of the electronics industry, the time required to manufacture computer programs, field installation problems and the requirements for evolutionary phased implementation affect the implementation schedule to a greater degree than the funding schedule."

However, money and FAA planning may have more to do with the state of the program than the above statement suggests. FAA, for instance, is presently redirecting their terminal area air traffic control program. Previous plans called for Chicago, Los Angeles, Washington, Oakland, and New York to be equipped with a sophisticated and expensive TRACON "M" (Terminal Radar Approach Control) system involving the digitizing of all radar returns, replacements for all displays, reconfiguration of IFR rooms, etc. The first TRACON "M" installation scheduled for Chicago during 1970 had a price tag of $8.5 million.

The TRACON "M" plan has now been replaced with a new modular (building block) automation plan which is far less costly per facility. It is envisioned that the $8.5 million, plus additional monies yet to be appropriated, will be spent to provide alphanumeric identity and altitude readout capability and certain other operational capabilities at 61 of the 117 busier radar equipped airports. The new system is known as "ARTS–3" (Automated Radar Traffic Con-

Footnotes at end of article.

trol System). The group of airports affected handles about 90% of all airline passengers and about 70% of all IFR operations.

It is envisioned that ARTS-3 can eventually evolve into a highly sophisticated level of automation. Additions to the system might include the capability to—

Display identity and other flight data in association with primary radar returns;

Perform approach sequencing;

Permit the integration of additional radar sources into a single display system;

Provide weather contouring; and

Offset data blocks automatically to prevent overlaps.

A limited ARTS program, showing altitude and identity on the radar scope has been tested at Atlanta. A similar system called SPAN was established at the Indianapolis Air Route Traffic Control Center and has since moved to New York.

There are some serious questions to be raised by the program now to be implemented by NAS. One is cost. It takes a tremendous amount of computer equipment to make alphanumerics work—to take the beacon code data, make it suitable for transmission over telephone lines, sort it out, reassemble the information, attach it to the radar return, and display it in the form that the controller wants. David Thomas, in testimony before a Subcommittee of the Committee on Government Operations, in 1966, said that "each center will have from $15 to $20 million worth of electronics to just make alphanumerics work." [21] This figure is almost twice the estimates ($8.5 million) for TRACON "M" which was abandoned because of cost.

Can the equipment justify the cost? Atlanta Controller Dwayne B. Carlson says that there are weaknesses in the ARTS system—"changes in headings are not as quickly detected and precipitation and other clutter is more pronounced;" [22] but he thinks it is here to stay and is an "improvement". Some ask whether such a huge expenditure benefiting so few airports with such little improvement is the best approach to upgrading the airways system. Should the whole National Airspace System be devoted to 117 airports? As with the National Airport Plan (see Section X, Airport Construction and Use), the NAS is based on the rationale of passenger volume as the criteria for need when, in fact, a safe airways system is not solely the province of the busy airport.

In addition, the NAS is less a design of a safe airways system, than it is an identification and tally of a series of airports which need more equipment. NAS reflects limited imagination in gathering all the resources, in connecting all the components, in projecting the course of technology and in developing a comprehensive structure to fit the growth of safe and efficient use of the airways.

Stuart G. Tipton, President of the Air transport Association, suggests that 292 control tower services, 421 radar installation facilities, and 337 instrument landing systems are needed to equip adequately the 526 airline-served airports. As of now, only 105 of the airports served by airlines have radar, only 234 have control tower services, and only 189 have any instrument landing system at all.

CHART 14.—NUMBER OF MAJOR AIR NAVIGATION FACILITIES OPERATED/FUNDED BY FAA AT END OF FISCAL YEAR 1966 AND 1967 [1]

Major facility	Number		
	June 30, 1967	June 30, 1966	June 30, 1965
Approach light system with sequence flashing (ALSF)	234	223	215
Airport surveillance radar (ASR)	83	81	76
Instrument land system (ILS)	265	257	250
Precision approach radar (PAR)	26	27	29
VOR (including TVOR) [2]	318	362	457
VORTAC	566	517	396
Flight service station (FSS)	333	333	333
International flight service station (IFSS)	12	12	13
Peripheral communication installation (RCAG)	375	361	357
Air route traffic control center (ARTCC) [3]	28	28	29
Airport traffic control tower (ATCT)	245	233	217
Combined station/tower (CS/T)	59	65	67
Long-range radar (LRR)	89	89	83
Military radar approach control facility (RAPCON) or RATCC; figure includes center approach control	36	36	40
Airport surface detection equipment (ASDE) [4]	8	4	11

[1] Figures shown include only facilities installed and/or maintained or operated with FAA funds; omitted are a small minority of military and/or non-Federal facilities that are part of the common civil-military air navigation and air traffic control system but not funded by FAA.
[2] Many of these facilities are being converted to VORTAC's.
[3] Figures include all centers outside as well as within the contiguous 48 States.
[4] Figures exclude San Francisco facility, which will be operated during the winter months only.

CHART 15. *NAS stage "A"*

Fiscal year:	*Million*
1966 and prior years	$86.1
1967	16.0
1968	33.2
1969	38.5
1970	38.3
Total	212.1

Our estimate indicates that the $212.1 million will fund a configuration of 15 en route air traffic control centers. The first center to be completed with the NAS Stage "A" system will be at Jacksonville, Fla. Our installation schedule indicates that initial operating capability for the system at Jacksonville should be realized during the third quarter of fiscal year 1968. With respect to the other centers, the following installation schedule is furnished:

Center No.:	*Initial operating capability*
2	3d quarter, fiscal year 1970
3	4th quarter, fiscal year 1970
4	4th quarter, fiscal year 1970
5	1st quarter, fiscal year 1971
6	2d quarter, fiscal year 1971
7	2d quarter, fiscal year 1971
8	2d quarter, fiscal year 1971
9	4th quarter, fiscal year 1971
10	4th quarter, fiscal year 1971
11	4th quarter, fiscal year 1971
12	1st quarter, fiscal year 1972
13	2d quarter, fiscal year 1972
14	3d quarter, fiscal year 1972
15	3d quarter, fiscal year 1972

IX. AIRPORT EQUIPMENT, CONSTRUCTION, AND FINANCING

The FAA cited airports/airways as a related factor in 6% of the air carrier accidents between 1960 and 1964 and 4.7% of general aviation accidents between 1960 and 1966. In a real sense, of course, the figures might be dramatically higher if they related to those accidents which were available if adequate airport facilities existed.

The number of airports or landing areas in the United States has leaped from 1,782 in 1930 to 10,126 as of December 31, 1967. (See Chart 16). These can be divided into three basic groups of about equal number:

	Percent
Publicly owned (3,830)	38
Privately owned, open for public use) (3,056)	30
Privately owned (not open for public use) (3,231)	32

Therefore, 63% or 6,895 airports are open to public use. This total includes seaplane bases, heliports, and military fields shared with civilian traffic, but excludes those military fields which allow civilian emergency use only.

In the short span of one year, from January 1965 to January 1966, the number of airports in the U.S. receiving scheduled airline jet service increased from 70 to 111. Based on recently announced equipment orders of scheduled carriers it is estimated that by 1970 an additional 234 airports will require the capacity to receive jet aircraft in scheduled airline service. The tremendous growth of small jet aircraft in general aviation also contributes to the need for updated safety criteria for airport design, construction and maintenance.

RUNWAYS AND OTHER AIRPORT FACILITIES

The list of airport facilities which need attention is long:

Only 223 (of 10,126 in 1967) airports had flight service stations. This is a facility which furnishes pilots with up-to-date preflight and in-flight weather information and flight following service—and which initiates search and rescue operations for overdue or unreported aircraft. The station also relays notices to airmen concerning any conditions that might affect the safety of the flight. FAA maintains 12 additional international flight service stations.

Airfield lighting systems need to be improved and extended to a large number of fields which do not have any lighting systems at all. Of the 9,566 airports on record with FAA as of 1966, only 2,878 had runway lights. (See Chart 17.)

More *exit taxiways* and improved configuration can reduce the hazard of taxiing across active runways and provide a significan reduction in aircraft delays.

Most airports have inadequate fire-fighting equipment, despite the fact that CAB studies show that fire after a crash is generally more likely to be fatal than the crash itself. Teams of two or more crash rescue helicopters are on duty at more than 75 Air Force bases around the world, but no civilian airport in the U.S. has a crash rescue helicopter team of its own.

Not only should towers be built at the more than 3,400 publicly owned airports without control towers, (only 307 airports have them), but existing towers have to be improved to allow for adequate controller views of the airfields and for up-dated facilities.

The FAA was well into a $20 million program to build about 77 air traffic control towers. In 1961, Congress directed FAA to

finance and build its own towers (formerly airport owners provided the structure). Unfortunately the program has not been fiscally responsible, and has provided few towers. In August 1963, FAA estimated construction costs of towers of Type 0 (five sided) at $180,000 but by 1966, 25 towers had been built at an average cost of $298,000 apiece. Conventional four-sided towers cost about $200,000 apiece, and as Type 0 has no known functional value over the conventional type, GAO was advised that no more such towers were to be constructed.

The most obvious and crying need, however, is in runway improvement. Of the 9,673 civil and joint use airport runways on record in 1966: 5,955 are under 3,000 feet; 1,743 are 3,000–3,999; 725 are 4,000–4,999; 586 are 5,000–5,999; 181 are 6,000–6,999; 112 are 7,000–7,999; 71 are 8,000–8,999; 50 are 9,000–9,999; 250 are 10,000 feet or over.

This means that only 483 have the approximate 7,000 feet of runway length required for most safe jet operations. Most of these, of course, are among the 709 air carrier airports.

The results of some overruns are more disastrous than others, of course, but the potential is evident: a Vanguard overrun at London in 1965 killed 36; a Convair 240 overrun at Tokyo in 1964 killed 20; a 707 overrun at Orly in Paris in 1962 killed 131. The following overrun accidents occurred in a single six week period:

November 1, 1967, a Pan American 707 skidded off the end of a runway at Logan International—one hurt.

November 2, 1967, a Seaboard World DC–8 rolled off the end of the runway at Kennedy International—none hurt.

November 5, 1967, a Cathay Pacific DC–8 crashed into the harbor on take-off from Hong Kong and broke in half—one killed.

November 6, 1967, a TWA 707 aborted a take-off at Cincinnati and rolled off the end of the runway and burned—11 injured; one subsequently died.

December 3, 1967, a Pan Am 707 ran off the runway at London Airport and got stuck in the mud—none hurt.

On April 5, 1964, there were reported three overruns in New York in a 12-hour period; two at Kennedy and one at LaGuardia.

The causes of overruns vary; brake failure; asymmetric thrust reversal; water, slush, or ice on the runway; power failure on take-off; and other factors. But the Airline Pilots Association feels that the overrun problem stems less from pilot error than from a failure to give the pilot an adequate safety margin by making the length of the runway commensurate with the type of aircraft, the load or weight of the aircraft, the conditions of environment (weather and altitude) and landing pattern procedures of the area.

Runway extension will increase safety; so will clearing the runway of obstacles. The Society of Automotive Engineers Journal, April 1966, says that "obstacles surrounding the sides and ends of runways were the major contributing factor in take-off and landing accidents of commercial aircraft in which fire was involved. It is estimated that 79 percent of the fire fatalities could have been avoided if the runway and overshoot areas would have been cleared of obstacles."[23] Accident statistics continue to increase due to lack of clear runways, and overrun and underrun zones—free of ditches, correctable irregularities, houses, wires, unnecessarily strong approach light fixtures, etc. It is interesting to note that at NAFEC—FAA's experimental center—the approach end of the runway has an adequate underrun area which is greater than the 10 percent of runway length recommended by the Airline Pilots Association in 1956.

Cost can be decreased and effectiveness increased if runways are strengthened according to use. Based on average strength of existing runways, it is estimated that 20 percent of the 234 airports receiving jet traffic in 1970 will require a three-inch overlay on approximately 95,000 sq. yards of pavement for BAC–111 and DC–9 operations. A high stressed runway costs $1,000 per linear foot, and an inexpensive low stress runway costs $10 per linear foot. Short landing areas for light aircraft do not need the benefits of a high stress $1,000 per foot runway.

Parallel runways add significantly to the capacity of an airport in visual flight rule weather, but the magnitude of increase in instrument flight rule weather depends on whether or not the operations on one runway are controlled independently from operations on the other. A single runway in IFR can land about 35 aircraft per hour or 40 mixed operations (landing and taking-off); the capacity for close parallel runways (a separation of less than 3,500 feet) is about 50 for IFR and for runways separated by more than 5,500 feet, 70 operations per hour. Additional close parallel runways will not increase the IFR capacity unless simultaneous instrument approach is provided—with it facility capability can be increased to about 140 operations per hour.

Compacted shoulders along the sides of runways provide a margin of safety similar to those along the sides of highways. Airports have been closed for extended periods of time due to one or both of the wheels of a large transport bogged down in the mud near the side of a runway—this type of accident is usually free from direct fatalities, but may result in extremely adverse safety conditions if traffic build-up is a result.

For some years the British have successfully reduced skidding of military aircraft landing on wet runways by having small grooves cut across these runways. Recent work by NASA has contributed greatly to our understanding of the causes of skidding and how grooving reduces skids. In 1966, the airlines began discussion with U.S. airport officials with the aim of having from three to five runways grooved so that the effects of grooving could be evaluated under climatic and operational conditions found in this country. More detailed studies are now in progress.

Airport certification

The Civil Aeronautics Act authorizes the Administrator to inspect, classify, and rate any air navigation facility as to its suitability and to issue certificates for any navigation facility. But the act does not require the issuance of Federal certificates to airports, nor does it make it unlawful to operate an airport without a certificate. As far back as 1953 the report of the FAA's Doolittle Committee, "The Airport and Its Neighbors", advocated: "The Civil Aeronautics Act should be amended to require that certification shall be issued for the operation of airports used in interstate commerce. Such certification should define the standards for safe operation and proper maintenance and should be revoked if the standards are not met."[24]

The Airline Pilots Association has long advocated Federal airport certification which specifies minimum standards of runway lengths, runway surfaces, obstruction-free approach and circling patterns, adequate runway markings and lighting, safe, maintained runway overrun and underrun areas, adequate and properly maintained fire fighting equipment and trained fire fighting crews, adequate snow removal equipment and procedures, positive control of airport vehicular traffic and airport zoning regulations. Capt. John McDonald, a United Airlines pilot has said, "because it does not certify airports, the FAA does not require them to have fire fighting equipment. . . . A lot of airports do not even have a bucket of sand and yet air traffic is authorized into those airports."[25]

What seems equally important is that airport certification be tied with the kind of aircraft which can operate at that airport, or the way an area in which aircraft may operate at the airport.

Most important of all, however, is the simple need for federal certificators for an airport with reasonably well defined standards on which that certification is based. In the absence of such a procedure the location and development of airports will remain a local political football where the debates between convenience and safety too often will be resolved according to the predictable but inexplicable passion of the moment for convenience.

National airport plan

The Federal Airport Act of 1946, Public Law 377, 79th Congress, Sec. 4, states that:

"In order to bring about . . . the establishment of a Nation-wide system of public airports adequate to meet the present and future needs of civil aeronautics, the Administrator is authorized . . . to make grants of funds to sponsors for airport development . . ."

Airport development is further defined in Sec. 1(3) to mean "any work involved in constructing, improving, or repairing a public airport . . ." and "any acquisition of land . . ." Sec. 3(a) further instructs the Administrator to "prepare and revise annually a national plan for the development of public airports," taking payments on a matching basis. The annual authorization and appropriation has always fallen short of the demand, and the amount available in any one year has never exceeded $75 million. In 1968, for instance, the Administration received 778 requests for aid totaling $339.3 million but only $70.2 million in matching funds for grants were provided by the Federal Government, less than a quarter of the amount requested. During the 1950's, Federal assistance was available for both terminal area development and runway construction, but since 1961 the only items eligible have been those related to safety, such as runway and taxiway construction, land acquisition, and the purchase and installation of safety devices such as high intensity, in-runway lighting.

Since its inception in 1947, the Federal grant program has contributed about $1 billion to the almost $6 billion investment made by State, local, and Federal Governments in public airports of the national airport system. The National Association of State Aviation Officials notes that "it is a popular misconception that under the present Federal aid to airport programs the cost is divided 50 percent Federal, 25 percent State, and 25 percent local. The Federal government only participates within the limits of predetermined priorities in selected items of development."[26] A comparison of airport and highway aid programs in fiscal year 1965 indicates how miniscule the Federal airport development effort is. FAA grants-in-aid totaled $74,000,000 while the Bureau of Public Roads grants totaled $3,924,143,000; FAA approved 460 projects while BPR approved 7,839. The Budget Bureau has consistently recommended reduction in airport expenditures.

The first National Airport Plan (NAP) in 1947 embraced 4,431 airports (of which 2,550 were proposed new ones) and the estimated cost of development was $985.8 million. Twenty years later the NAP still lists 4,106 locations (of which 887 are proposed new airports) and the estimated cost of development is $1.3 billion. In the intervening period 6,199 projects went into 2,006 airports for a total Federal grant expenditure of $890.1 million (to 1965).

Out of those 2,006 airports receiving aid in 1965, 716 or 35.7% took $744 million or 86.3% of the money, an average of $1,039,000 per airport to serve air carriers primarily. Six-hundred and seven million dollars or 70.4% of that money went into 240 trunk airline airports or an average of $2,530,000

Footnotes at end of article.

per airport. One-hundred and thirteen million dollars or 13.7% of the money was distributed among the remaining 64.3% or 1,290 airports, at an average grant of $91,473 per airport.

The 1966 Federal Aid Airport Program allocated funds on about the same distribution basis as previous programs: 73.5% for air carrier airports, and the rest for general aviation airports (13.5% for reliever airports as provided for in a $7 million a year set-aside in the 1961 extension of the Federal Airport Act.)

Thus, the FAA has spent 90% of the money originally envisioned and given aid to only 45% of the airports originally envisioned. The Aircraft Owners and Pilots Association charges that "it has given a lot of projects costing a lot of money to a few airports and neglected the development of a 'national system of airports' which requires something more than a few big terminal airports at major metropolitan hubs." [27] This growing concentration of air carrier airports and the mushrooming of non-air carrier airports is creating a serious gap in the system. There are some 9,600 airports in the U.S. used by general aviation; the airlines serve only about 600.

Air service to the remaining 9,000 is solely general aviation, and "one airline alone has estimated that 30,000 of its passengers last year connected at the major airports by air-taxi or other general aviation aircraft." [28]

In hearings held in August 1967 by the Aviation Subcommittee of the Senate Commerce Committee, a full discussion focussed on the concept of the "hub" as the determining factor in the National Plan. The "hub" concept was perceived by the FAA to relate aviation needs to population density. The simple fact is that it is unknown whether population caused the concentrated number. Using the "hub" premise, the FAA oversaw a dramatic reduction in the number of air carrier airports.

As a result of these hearings, the FAA redefined its criteria for preparing the list of locations and airports to be included in the new NAP for fiscal years 1969–1973. The new criteria are based on the principle of "need" of a community for air transportation in relation to a "national interest." Such national interest is assumed when one or more of the following conditions exist: (1) requirement for scheduled airline passenger service; (2) a substantial degree of non-local aviation activity; (3) lack of other modes of transportation; and (4) a local economy dependent upon air transportation for its contribution to the Gross National Product.

Airports included in the NAP are broken down into two main functional categories:

1. Airports to accommodate airline service which include: airports presently receiving airline service which need increased facilities; new or supplemental air carrier airports for areas in which a high degree of aeronautical activity indicates need; replacement airports where existing airports cannot be expanded to meet projected traffic; and regional airports to serve two or more communities where such is considered a feasible solution to meet long-range needs.

2. Airports for general aviation which include: those which are an integral part of a metropolitan area airport system; "reliver" airports serving to divert general aviation traffic from a congested airline-served airport; airports where total annual aircraft operations are in excess of 60% of the capacity of the airport and include at least 30,000 annual operations; airports where air-taxi service is provided on a regular basis throughout the year with at least two flights a week; airports which serve the business community interests if there is evidence of considerable use by based aircraft which is essential to the well-being of the area served; airports where there is evidence of inadequate access to another NAP airport by at least 10 aircraft owners or when owners would otherwise be at least 30 minutes ground travel time from the nearest adequate airport; airports where access to a recreational area or facility indicate extensive use by visitors; airports where a community may be isolated due to lack of adequate surface transportation.

Development criteria for airports is determined by analysis of the forecast of aeronautical demands and includes the type of aircraft expected to use the field, the frequency of use and "mix," the transportation role of the airport and its environmental relationship to the community it serves. The runway length, width, and strength determination are designed on the basis of the most critical airline aircraft anticipated within the next 5 years at the particular location for airline-served airports. For general aviation, determination is by basic utility for safe landing and take-off of a representative sampling, general utility to handle all general aviation aircraft with the exception of transports and business jets, and larger general utility to service transport-type aircraft and business jets.

Considerations of airfield lighting, clear zones, apron areas, taxiways, second runways, heliport and sea plane facilities are also included in the plan.

By these criteria the plan calls for new air carrier airports at 25 locations by 1980, 147 general aviation airports designated as "reliever", STOL (Short Take-off and Landing) ports as the need arises estimated at 25 in the New York-Washington corridor and on the West Coast at a cost of $5 billion.

These criteria appear to suffer from the same difficulty of the earlier plans—inattention to the needs of a total system and concentration on a few areas.

Even if sufficient funds were available, it is questionable whether the National Airport Plan as now envisioned is the structure adequate to ensure the greatest potential growth and development of a safe air system in the U.S.

The National Association of State Aviation Officials (NASAO) for instance, charges that "the present plan is little more than a list of anticipated airport construction projects." Arvin O. Basnight, Associate Administrator of FAA said, "This plan produces some very useful information. It identifies the composition of the national network of airports and those developments recommended at each location . . . . (the) plan identifies needed airport developments, but projects are limited to the eligibility and availability of Federal and local funds." [29] If this interpretation is indeed the essence of the "plan", it falls far short of what is needed to create a quality aeronautical system. A plan to be successful must not only identify, but create and shape the system, then devise the means to implement it. It must also be relevant to all other aspects of the system—airspace traffic and route facilities, all transportation needs of the population, land use planning, weather systems, personnel availability, research and development programs, and the type of aircraft being produced and utilized.

E. Thomas Burnard, Executive Vice President, Airport Operators Council International, Inc. said that:

"Historically, the airport planner has been the last to know what the characteristics of new aircraft will be as they relate to the airport . . . the Federal government published its airport runway criteria changes (for jets) just 30 days before scheduled jet service began." [30]

The Aircraft Owners and Pilots Association takes a realistic view when they suggest that Federal funds will never be adequate to fill all the needs, and therefore, that priorities must be established as part of the plan. They disagree with the present priorities which concentrate funds at airports with a "significant volume of commercial air traffic" because this ignores the fact that other airports are needed to complete the system. They list priorities in the following order: (1) purchase of land and initial development to public airports to complete the National Airport Plan; (2) provision of improvements for airport facilities; (3) provision of improvements to relieve congestion at major airports; (4) provision of Category I (see Section IV) capability at airports without any instrument capability; (5) improvements to provide additional runway and ramp capacity at existing airports.

The problem of financing

In hearings before the Aviation Subcommittee to the Committee on Commerce, United States Senate, August, 1967, most witnesses agreed that by the end of 1973 an additional $3 billion must be invested in the National Airport System by local, State and Federal governments and another $3 billion will be required by the end of 1975, making a total estimated investment over the next 8 years of $6 billion—$5 billion of this amount is for air carrier airports. (See Chart 18). This will require the expenditure of as much money over an 8-year period as has been expended in total during this century for development of the National Airport System.

The figures above are accurate but may be somewhat misleading. In fact, State, local, and Federal governments may have spent close to $6 billion to date, but given the fact that almost two-thirds of the airports in the U.S. are privately owned, this is no where near an accurate estimate of the expenditure to date, or the needs of the future. In addition, the fact that Federal expenditure has been limited to certain facets of airport development further dilutes the figure of estimated need. Finally, air carriers themselves invest about 7% of their capital ($400.1 million in 1967) in buildings and ground equipment and another $418 ($14.3 million or 78%) in flight equipment some of which is for navigation and safety equipment. (See Chart 19).

The present FAA 5-year plan for fiscal years 1967 through 1973 estimates the Federal share of this development alone would amount to $1.53 billion. This does not include matching funds from State and local governments for runway needs, nor the amount that must be spent for passenger handling facilities, nor money which will be required for the installation of airport control towers, instrument landing systems, terminal area radar, en route traffic control centers and parts of the National Airways System which are funded 100 percent by the Federal government out of general funds. Air carrier airports make up only 13% of the projects, but account for $5 of the $6 billion funds. Thus the same trend as in the past continues—concentration on development of a few large airports to the possible detriment of a "system".

Allocation of the funds would include about 23.2% for land acquisition, 38% for paving, 25% for site preparation, 5% for lighting, 1.8% for safety buildings, and 7% for miscellaneous.

There have been various ways suggested to help finance the huge investment which will be needed.

1. Federal Airport Loan Funds. The Federal government would extend long-term low interest rate loans for airport development.

2. Federal Airport Loan Guarantee Programs. This program would be structured on the Federal Housing Administration approach, whereby the sponsor would be the local government and private financing would be sought with the Federal government acting as a guarantor.

3. Federal Airport Grants. For some time, a large share of Federal transportation grant money has been allocated to highways. This

Footnotes at end of article.

90–10 highway formula may not longer be practical when viewing the needs of the airports; priorities should be reconsidered.

4. Increased User Charges. Highways offer ample precedent that user charges are an appropriate financing tool.

5. Head Tax. There are several alternatives possible through the use of a head tax. A Federal head tax of $1.00 per passenger could be charged at the time of purchase of a ticket with the funds deposited in a trust fund and distributed on a need basis. A like charge could be made for each ton of cargo. Or the airports themselves could impose the tax and use funds to maintain, improve, or expand their facilities (though this would probably not channel the funds to the most needy airports).

6. Local Bonds. Local government has rightfully carried a substantial share of the costs of airport development through general obligation or revenue bonds, and though this source is probably insufficient for the total program, they should continue to be utilized.

At the present time the airport trust fund, similar in nature and operation to the successful highway trust fund, has the greatest support. Trust fund financing would provide a reasonably certain amount each year enabling airport operators to plan their capital investments with greater care and prudence. From the Federal government's standpoint, its share of airport development cost would no longer be a direct drain on the Treasury or on the general taxpayer. Possible sources of revenue for the trust fund are head tax, an annual appropriation into the trust fund to reimburse the fund for military use of civil airports (FAA currently states that ⅓ of their budget supports military operations), ticket tax, fuel tax (on jet fuel as well as regular), annual license fees both for general aviation and air carriers, rental fees for use of terminal space by U.S. Customs Department, and user fees.

Whatever the means of financing, it must be equitable between general aviation and commercial aviation interests. There has been a great deal of criticism that general aviation has not paid its fair share. A look at the record, however, does not bear out these accusations. For example, in Rockford, Illinois the airport which is served by one commercial airline, receives 10 percent of its airport income from the airline, 60 percent from general aviation and the remainder from concessions. General aviation pays substantial fuel taxes (6¢ a gallon) while jet fuel is not subject to a Federal tax. General aviation is also responsible for the development of the 6,296 (1967) privately owned airports in the U.S.; only half of these are used exclusively for private aircraft.

The fuel tax, which is the only direct tax paid by the airlines (ticket taxes are absorbed by the passenger), is taxing general aviation more than the airlines, which is equitable, if contributions are compared with the number of aircraft using the system.. On the other hand, the total airline contribution ($244 million in 1969) compared with the total private aviation ($8.3 million in 1969) does not seem inequitable in view of the Federal contribution to commercial airport development rather than general aviation airport development.

X. THE FEDERAL ROLE IN THE ADMINISTRATION OF AIR SAFETY

The major Federal administrative agencies involved in civil aviation operation are the Federal Aviation Administration (FAA), the Civil Aeronautics Board (CAB), the National Transportation Safety Board (NTSB), and the Department of Transportation (DOT).

The interrelationship between these different agencies is at times elusive and the lines of authority since the creation of the Department of Transportation in 1968 have yet to be clearly drawn.

The National Transportation Safety Board (NTSB)

The NTSB was created by the Department of Transportation Act of 1966, Public Law 89–670 and is housed within the DOT structure for operating and administrative purposes only, reporting directly to the Congress annually. It consists of five members (no more than three of the same political party), appointed by the President with the consent of the Senate for terms of five years. The NTSB's main functions in relation to aviation are to determine the probable cause of civil aircraft accidents (a function formerly performed by the Civil Aeronautics Board) and to review on appeal the suspension, amendment, modification, revocation, or denial of any certificate or license issued by the Secretary of the Department of Transportation or by the Administrator of the Federal Aviation Administration. The organization in NTSB which investigates accidents is the Bureau of Aviation Safety.

The National Transportation Safety Board is charged with the responsibility of determining the probable cause of all aircraft accidents in the U.S. involving civil aircraft, a duty it may not delegate. It may delegate the investigation function; and it does in certain categories of light plane accidents.

In addition to determining the cause of transportation accidents, the NTSB is also authorized to:

Make recommendations to the Secretary or Administrators concerning rules, regulations, and procedures for the conduct of accident investigations;

Arrange for the personal participation of members or other personnel of the Board in accident investigations conducted by the Secretary or Administrators in such cases as it deems appropriate;

Insure that in cases in which it is required to determine cause or probable cause, reports of investigations adequately state the circumstances of the accident involved;

Make recommendations to the Secretary which, in its opinion, shall tend to prevent transportation accidents and promote transportation safety.

The organization in NTSB which investigates accidents of civil aircraft is the Bureau of Aviation Safety. The Bureau maintains eleven field offices, located throughout the country, staffed by from three to ten investigators. The field offices investigate general aviation accidents and the lesser accidents to air carrier aircraft and give administrative assistance to the investigations of major air carrier accidents.

In its Washington offices, the Bureau has a staff of investigators specializing in meteorology, metallurgy, structures, aircraft systems, electronics, aircraft maintenance, piloting, powerplants, flight and voice recorders. The Bureau has a total complement of 184 employees comprised of 52 field investigators, 55 investigators in Washington plus administrative and clerical personnel.

The NTSB investigative procedure employs the "specialty group system" concept whereby one of the Board's experienced investigators is dispatched to the scene where he is briefed on the known circumstances of the accident after which he appoints several specialty groups who often sub-contract part of the fact gathering and reporting operation.

Most of the governments of the world now have established accident investigation staffs, policies, and procedures; and the vast majority, with minor modifications follow the basic Investigator-in-charge, specialty group approach. The International Civil Aviation Organization with headquarters in Montreal and supported by over 100 nations, including the United States, has for many years now been the instrument through which accident notification, investigation, and reporting has been standardized on a near world-wide basis. The "bible" of these functions is Annex 13 to the Convention on International Civil Aviation.

Prior to 1963, the Bureau's investigating arm was made up of a combination of personnel from one or more field offices and from the Washington office. After the onsite portion of the investigation, during preparation for the public hearing and later in the analysis and final report phases, there was a degree of continuity lost in some areas of endeavor and duplication of effort in others. Therefore, in 1963, the so-called Team Concept came into being whereby four Supervisory Air Safety Investigator positions are established in the Washington office to provide for Investigator-in-Charge on a rotating assignment basis. On Friday of each week a "Go-Team" is established on a standby basis made up of one of the Investigators-in-Charge (IIC) and investigators in the several specialty areas, an Assistant IIC for Airworthiness and an Assistant IIC for operations.

The team which proceeds to the accident site for conduct of the investigation remains a unit, operating as a team, insofar as possible, throughout the field investiagtion, public hearing, analysis, and drafting of the Board's Aircraft Accident Report. The Bureau has sufficient personnel to staff four such teams in most of the specialty areas, but in some areas such as air traffic control, flight recorder and weather, it has been and still is necessary for specialists to serve double and triple duty from team to team.

Criticism has been directed toward the practice of admitting organizations whose functions, equipment, or service is involved to participate actively in the fact-finding phase of the investigation because of the danger of diluting the objectivity of the investigation. The Bureau has apparently not found this generally to be true. On the contrary, the Bureau cites two advantages to this practice of admitting participating parties:

It permits a rapid and natural flow of information to the participating organization leading to early, coordinated corrective action in many areas of design, manufacture, and operation of the aircraft and its components, thus enhancing future safety.

The government realizes a reduction in the cost of each investigation. It contends it would be impossible for the Bureau to maintain a staff large enough to contain up-to-date knowledge of all the models of aircraft and their many systems.

However, some have been critical of the Board's procedure by claiming that interested parties should be allowed to participate in the analysis phase as well, indicating that the NTSB, to the degree it inevitably must pass judgment on its sister governmental operations risks losing objectivity in its conclusions. Here the Board and the Bureau believe that analysis is, in fact, a process of cause determination, a function which the Board is not permitted under law to delegate, that it would seldom be possible to get absolute agreement of all parties, and that the Bureau's trained and experienced staff is the most eminently qualified to analyze accident data and should do so in a completely unobstructed atmosphere.

In view of the elaborate investigations which the NTSB structure suggests, it is remarkable that to date there has been little evidence that information gleaned from the investigations has been helpful in preventing further aviation accidents and promoting air safety.

The lengthy investigations have been able to placate the public and provide an image that "something is being done," but it is a fact that it usually takes two years for the NTSB to release a report which means that the conclusions reached usually are outdated before they are released.

One important question is the relationship between the NTSB and the FAA. Formal relations occur only when FAA provides a coordinator for the investigation team that the NTSB appoints to determine the cause of an aviation accident, when the FAA initiates corrective action as a result of information gleaned from an investigation, and when an appeal is made due to the denial of a certificate or license by the FAA.

FAA approves the operating manual, issues licenses, qualifies mechanics, installs and checks navigation aids, declares new aircraft airworthy, and reviews pilot qualifications on a semi-annual basis. As qualified and as fair as the NTSB may be in its procedures, the fact remains that not once since October, 1958, has the NTSB (or its predecessor at CAB) found the FAA to be the probable cause of an airline accident. On at least two occasions, the CAB accused the FAA of being a "contributing factor" in post-1958 accidents, but neither involved fatalities.

One example of an NTSB report which simply ignored relevant factors relating to FAA personnel was issued on September 11, 1968, and covered an aborted take-off (and resulting crash) of a TWA jet from the greater Cincinnati airport on November 6, 1967. All 29 passengers and 7 crew members escaped from the plane; 11 were treated for injuries; and one passenger died from injuries four days later.

A Delta Airlines jet had landed and while taxiing slipped off the runway into a muddy area where it was positioned perpendicular to the runway, with its aft section only seven feet from the runway, and with the idling jet engine sending its exhaust from the tail directly across the runway. While the Delta jet appeared to be taxiing clear of the runway, the TWA jet was cleared for take-off by the FAA controller in the tower. Before the TWA plane started, the controller saw that the Delta plane was still surprisingly close to the runway, and he inquired of it: "Delta 379, you're clear of the runway, aren't you?" The Delta response was: "Yeah, we're in the dirt though." The controller then advised the TWA plane that the Delta plane was clear of the runway and cleared the TWA take-off.

As the TWA plane passed the Delta plane, the latter's jet exhaust caused sufficient noise and yaw in the TWA jet to cause the first officer who was at the TWA controls to believe that there had been a collision and to attempt to abort the take-off despite the fact that he was beyond the safety point to do so. As the pilots worked to stop the plane it rolled 275 feet beyond the runway to the brow of a hill, became airborne for 67 feet, landed further down the hill and came to rest straddling a highway 421 feet from the end of the runway. Despite a fire, evacuation was prompt and orderly.

The NTSB finding of cause is reprinted here in its entirety:

"The Board determines that the probable cause of the accident was the inabiltiy of the TWA crew to abort successfully their take-off at the speed attained prior to the attempted abort. The abort was understandably initiated because of the first officer's belief that his plane had collided with a Delta aircraft stopped just off the runway. A contributing factor was the action of the Delta crew in advising the tower that their plane was clear of the runway without carefully ascertaining the facts, and when the fact their aircraft was not a safe distance under the circumstance of another aircraft taking-off on that runway." [21]

The finding of probable cause had not one word to say on the actions of the FAA control tower—even though it was the tower's ultimate responsibility and no one else's to determine whether the runway was or was not cleared and safe—even though it was visibly ascertainable that the Delta jet was much less than 100 feet from the runway, the distance which aircraft preparing for take-off must "hold" in order to keep the runway clear—even though a control tower's job is to control not to rely upon the casual judgment of others who are not in a distinctly better position to judge than the tower—and even though it surely is the tower's responsibility to resolve all questions of doubt on the side of caution. The failure of self-criticism in the government's report seems all the more serious, when it is realized that while the Delta jet with engines idling remained perpendicular to and only off the runway by seven feet, and while one TWA plane was aborting its take-off, the tower without pause immediately cleared a second TWA jet to land on the same runway.

Finally, it should be noted that the report of this crash, where the facts were readily attainable, did not appear until ten months later. The findings of the need for new regulations on runway clearance could have been made in five minutes.

The Civil Aeronautics Board (CAB)

The Civil Aeronautics Board was created by Title II of the Federal Aviation Act of 1958, Public Law 85–726, but was really just an extension of the Civil Aeronautics Authority already in existence by the 1938 Civil Aeronautics Act. The Board consists of five members appointed by the President with the consent of the Senate for terms of six years. CAB is an independent agency whose main function is the fostering of air commerce. To this end CAB awards routes and regulates fares. The law specifically gives CAB the power to regulate "air transportation in such a manner as to . . . . assure the highest degree of safety . . . .", which certainly makes regulation of aircraft schedules in accordance with safety standards well within its jurisdiction. CAB had the additional function of investigation of aircraft accidents until the 1966 Department of Transportation Act transferred this function to the NTSB.

As the air congestion problem grows, it becomes clear that there is a connection between route awards and fares and the operation of the civil aeronautical system, the jurisdiction of FAA. It could well be that the concept of CAB is a hangover from previous legislation and original Federal involvement in civil aviation, that it is now outmoded, and that such a function would be better served as an integrated part of the development of a safe air system under FAA.

The Federal Aviation Administration—Its responsibilities

The major function and responsibilities of operation and development of the air system are given to the FAA by Public Law 85–726, the Federal Aviation Act of 1958. At that time the FAA was an independent agency, and remained so until Public Law 89–670 moved the FAA within the new Department of Transportation in 1966.

The Federal Aviation Administration is headed by an Administrator who is appointed by the President with the consent of the Senate. The Administrator is not bound by the decisions or recommendations nor the approval of any other organization created by Executive order, but reports directly to the Congress. The main function of the FAA is the operation and development of a safe civil aeronautical system.

The Federal Aviation Act of 1958, Public Law 85–726, grants large powers and a broad jurisdictional authority to the Federal Aviation Administration for the establishment and operation of civilian aeronautics in the U.S. Specifically, some of the areas are as follows:

Sec. 305.—"development of civil aeronautics and air commerce in the United States and abroad."

Sec. 306.—"consideration to the requirements of national defense, and to commercial and general aviation. . ."

Sec. 102.—"development of an air-transportation system . . . the regulation of air transportation . . . promotion of safety . . ."

Sec. 307—"supervision of air traffic and provision for air navigation facilities. . . ."

Sec. 309—"no airport or landing area . . . shall be established . . . unless reasonable prior notice thereof is given to the Administrator . . . so that he may advise . . ."

Sec. 310—"providing meteorological service. . ."

Sec. 312—"The Administrator is directed to make long range plans for and formulate policy with respect to the orderly development and use of the navigable airspace . . . landing areas . . . airways . . . radar installations . . . facilities."

Sec. 601—"duty to promote safety . . . by prescribing standards of . . . design of aircraft . . . inspection . . . service of airmen . . . rules and regulations."

Sec. 602—"issue airman certificates . . ."

Sec. 603—"issue type certificates . . . production certificates . . . airworthiness certificate."

Sec. 604—"issue air carrier operating certificates . . ."

Sec. 605—"inspectors who shall be charged with the duty of making inspections (maintenance) . . ."

Sec. 606—"inspect, clarify, and rate any air navigation facility."

Sec. 607—"the examination and rating of civilian schools giving instruction . . . repair stations."

The FAA is given further authority under the Federal Airport Act, Public Law 79–377, "to provide Federal aid for the development of public airports", specifically.

Sec. 3—"Administrator is hereby authorized and directed to prepare . . . a national plan for the development of public airports . . . take into account the needs of both air commerce and private flying . . . the probable technological development in the science."

Unfortunately, the FAA has not interpreted its role as broadly as the powers delegated to it allow. Repeatedly, the FAA has seen its jurisdiction to extend only as far as a narrow interpretation of "air safety" allows. Thus, while former FAA Administrator General William F. McKee said that "our basic responsibility is safety in aviation" [22] and saw FAA authority to manage the navigable airspace, air traffic control system, air navigation facilities, certification and licensing system, enforcement program, and administration of airport grant-in-aid program, at the same time, FAA, has not interpreted its role in "air safety" as power to regulate air carrier schedules, airport certification standards, airport development plan, and the direction of growth of civilian aeronautics. It is difficult not to conclude that the FAA has defined "safety" less from a vantage point of lives saved than of a compromise with the cost-benefit economics of commercial aviation. Jurisdiction to impose stricter standards and codes and to develop and implement a plan of safe air management is clearly present to the extent which FAA wants to utilize it.

The FAA has not interpreted its role to include regulating traffic at airports by amending existing airline schedules. Historically in awarding routes, the Civil Aeronautics Board has prescribed minimum flight frequency between whole metropolitan areas, not maximum flight frequency between specific airports. Only in the last two or three years has the Civil Aeronautics Board awarded new routes on the condition that airlines serving them even land at specified airports. The airlines claim the exercise of the power of regulating flight frequency so specific airports would be tantamount to expropriating private property. The question is not a legal one; it is whether the FAA wants

Footnotes at end of article.

to use the power it has and in this instance risk alienating the airlines. As traffic congestion mounts and delays increase, the airlines themselves will be the losers if changes do not occur. In this fear, several airlines at the encouragement of TWA President Tillinghast, have recently entered into discussion to coordinate their air schedules, but the attempt has thus far proved futile.

The FAA has not interpreted its role to exercise responsibility in airport development over State and local governments. One of the grave difficulties in developing a safe and rational airport system has been the lack of defined responsibility between local and Federal government. The FAA has claimed that it does not possess the whole responsibility. In testimony before the Committee on Interstate and Foreign Commerce of the House of Representatives on March 8, 1967, Mr. Oscar Bakke, Director, Eastern Region, FAA said: "The Agency not only does not possess the whole responsibility, I doubt very much, sir, whether we possess the primary responsibility. In this respect we can only assist local and State governments." [33] As a result of FAA's failure to interpret the airport systems development as critical to "air safety" and to exercise the responsibility it has to the fullest measure, within 50 miles of the Empire State Building there exist some 1,300 separate political jurisdictions which in some manner have the capability of participating in the development of aviation facilities—but not one of the jurisdictions has *the* responsibility and it ends not being exercised at all.

The FAA has not interpreted its role to include coordination of the various Federal agencies in the development of aviation facilities. Such development has been dispersed among, for example, the Department of Housing and Urban Development, the Bureau of Public Roads, the National Aeronautics and Space Administration and the Department of Health, Education and Welfare.

The FAA has not interpreted its role to include adequate planning for the orderly development of the civil aeronautical system. Such responsibility is specifically delegated to it in the Federal Aviation Act of 1968, Sec. 102. Bill Gale, in his article in the *Providence Sunday Journal* of November 26, 1967, entitled "Many Midair 'Incidents' Go Unreported" wrote: "The FAA has allowed the air traffic control system to become undermanned, underequipped, and undermaintained. It has allowed "controller expertise' to make up for deficiencies." [34] Likewise, Senator Peter Dominick stated that: "The problems are not with personnel but with inferior planning at the top levels." [35]

The recent Administration did not prod FAA to do its job. The White House in 1965 announced the formation of a Presidential task force on the problems of airport development. Senator Jacob Javits has charged that "the membership of the task force was secret, the goals of the task force were secret, and the report which allegedly went to the White House was secret." [36] With the failure of the FAA and the Presidency to come up with any concrete plan for action, the Senate Aviation Subcommittee of the Committee on Commerce of the U.S. Senate conducted a series of hearings in August, 1967 on the "maintenance of an Adequate Airport System" which concluded in a Senate Report and plans to hold more hearings. Later, the Department of Transportation conducted a report on airway modernization and in January, 1968, the press reported a briefing where "certain officials told of the Department's plans to seek some legislation sometime in the Spring." [37] It never came.

The relationship between the Congress and the FAA has always been cordial but remote. The FAA has tended to ask what it thinks it can get, and its unaggressive and unimaginative policies have never stirred the ire of the appropriators.

The Aircraft Owners and Pilots Association has charged that Congress itself has been negligent in its role in civil aviation development. "The fashion in which the Federal Airport Aid Program was changed and administered without effective correction from Congress indicates to us a critical failure in legislative oversight . . . The Congress and the Executive have both studiously avoided establishing objective standards for the measurement of safety." [38]

Perhaps the reason is that Congressional committees do not have the technical staff assistance to cope with the intricacies of the program; perhaps the legislative committees abdicate too much of the responsibility of oversight to the appropriations committees as is indicated by the substantial differences between what is authorized and what is appropriated; perhaps the committees merely need to be more demanding of compliance with legislative direction. Whatever the reason, Congress has not taken as active and responsible a role in aviation affairs as the present state of aeronautics suggests is desirable.

The Federal Aviation Administration—Its efficiency

The cost of administration per employee between FAA and the Bureau of Public Roads in 1965 was almost equal ($13,110—FAA, and $12,434—BPR). (See Chart 20). But there is a marked difference in the efficiency at dispensing grants in aid on either an administrative cost ("dollar of grant per dollar of administrative cost"—$7.77—FAA, and $83.89—BPR) or position basis ("dollars of grant per position"—$101,902—FAA, and $1,044,210—BPR). A substantial part of the FAA Airports Service administrative cost is composed of incomparable overhead burden allocated running to 25–30%. But even with the adjustment on this score, the difference appears more than can be justified, according to the Aircraft Owners and Pilots Association.

In 1967, FAA employees numbered 42,354. This means that there were 2.5 active aircraft per FAA employee, 13.0 active pilots per FAA employee. Working with a 1968 FAA budget expenditure estimate of $892,010, FAA cost per active aircraft (omitting the SST) is $7,144 and FAA cost per active pilot (omitting the SST) is $1,394. These figures may indicate the reason why FAA has been charged with being "an over-controlled bureaucracy," and a "management monstrosity."

Though the method of procurement policy has been relatively free of criticism, the category of procurement policy has from time to time been the object of criticism. As of June 20, 1967, the FAA owned a total of 101 planes, about the same size as the fleet of Delta Airlines, with an inventory value of $46,000,000 and a yearly maintenance cost of $14.5 million in 1967. The list includes large aircraft like the Boeing 720, the Boeing 727, the DC–9—planes that cost as much as $4,000,000 apiece, as well as a number of executive-type aircraft like the Beechcraft Quenn Aires, and the Lockheed Jet Star—planes that cost about $1,360,000 apiece. These planes are used for calibrating and checking the navigational aids installed near airports, for "job performance" (a category which has been vaguely defined), and for training purposes. Congressman Fletcher Thompson of Georgia has charged that the FAA fleet is too large; that FAA personnel who hold pilot rating, but whose jobs are not as pilots, have been using the aircraft as a means of continuing their pilot skills; that the theory that the FAA must have one of each type of aircraft for training purposes is questionable; and that some aircraft like the Convair 880 Model M which FAA owns has no purpose because it is the only one of its type in the world today. He also states that "GAO states that it was 'unable to obtain complete information on all aircraft because the agency does not have a uniform cost reporting system for its aircraft operations'." [39]

Senator Peter Dominick reported in 1967 that FAA had spent $267,000 in the Pacific Region "which could not be justified or could be justified only partially by conditions existing at the time of the procurement" [40] while needed weather equipment was not procured. FAA has made a significant breakthrough in the method of procurement in the area of research and development contracting which deserves special note. It put a clause in the contract which allows that if the product has a commercial application and the company makes sales as a result of this, the company has to give FAA a royalty on their sales. In essence, FAA gets its money back for research and development as Chart 21 indicates.

Engineering trade-offs which in essence increase comfort or some other factor at the expense of safety have long been an accusation toward the aviation industry, FAA and NASA policy alike. Former FAA Administrator McKee has said: "The primary mission of FAA is aviation safety. It is not our policy to trade-off other performance advantages to the detriment of safety." [41] The Administrator of NASA has said: "NASA's role is to provide valid technical data from which trade-off studies can be made by other agencies with confidence, to assist in proper interpretation of these data, and when requested, to comment on the technical validity of arguments used to arrive at regulations." [42] Yet, Stuart Tipton, President of ATTAA says: "The basic responsibility for the safety of their operations rests with the airlines. Consequently the ultimate resolution of such trade-offs as are available also rests with the airlines. However, unlike the case of other forms of transport, the government long ago decided to regulate safety and aviation in detail and thus must take some responsibility in trade-offs." [43] The airlines contend that trade-offs are the responsibility of FAA; NASA contends that it can provide suggestions as to how FAA can evaluate trade-offs; and FAA says that trade-offs do not exist. In fact, one of the most biting criticisms to date of FAA has been levied against the utilization of the cost-benefit ratio concept: "Critics say the agency has gone too far—the agency says it is just trying to save the taxpayer's dollars." [44]

CHART 20.—COMPARISON OF AIRPORT AND HIGHWAY AID PROGRAMS, FISCAL YEAR 1965

	FAA	BPR
Grants in aid	$75,000,000	$3,924,143,000
Administrative costs	$9,649,000	$46,727,000
Positions	736	3,758
Projects	460	7,839
Ratios:		
Dollar of grant per dollar of administrative cost	$7.77	$83.98
Dollars of grant per position	$101,902	$1,044,210
Dollars of grant per project	$163,043	$500,592
Administrative cost per project	$20,976	$5,961
Administrative cost per position	$13,110	$12,434

XI. RESEARCH AND DEVELOPMENT

There are significant gaps in the aeronautical research and development effort which could weaken the entire fabric of the aviation system if attention is not immediately focused on them.

1. A Comprehensive Plan for Aeronautical Research and Development: A single national plan for aeronautical research and development does not exist. The Federal government's policy is a composite of the separate policies of various agencies and committees. As a result, research and development has touched components of the aeronautical system piece by piece, with little or no attention to how the components—equipment, personnel, weather, the funding commitment of the Nation—interact. An efficient and safe air system is dependent upon an accurate analysis of the entire fabric as well as upon a prediction of what the needs of the system will be in order that the proper hardware can be developed.

The National Airspace System is not the answer, as it is addressed only to increased input of already existing systems equipment—more towers, more runways, more airports. Entire areas directly related to the system—e.g., general aviation—have been ignored.

A specific mechanism is needed to act as the focal point for the development of a more comprehensive and better coordinated aeronautical research and development policy.

2. General Aviation Research and Development: Insufficient attention has been given to the aeronautical area identified as "general aviation." Smaller aircraft operations and private aviation is a growing segment of aeronautical operations and is becoming an essential part of our national transportation system. Little research is being done on general aviation and the problem of traffic control, the inter-mixture of general aviation operations with large commercial aircraft, and improving utility and safety of these aircraft flown by less experienced pilots.

3. Technological Utilization and Transfer: A purposeful effort to transfer space technology and military technology (the bits and pieces of know-how, not just packages of equipment) needs to be initiated. Teams of competent technical people are needed to identify, evaluate, select, and apply technology from the space and military programs for transfer to and utilization in civil aviation.

4. Pilot Training for the SST: Electronic simulators that reproduce faithfully the performance, visual and aural cues of aircraft in flight have long been a cornerstone of airline pilot training and will be even more important in preparing for the supersonic transport. Stuart Tipton says, "manufacturers of flight simulators, airline training experts, NASA, and FAA officials should join forces now to develop a simulator that meets airline training requirements and FAA regulator requirements to perform the maximum amount of SST qualification and proficiency training." [45]

5. Weather Information Systems: More basic knowledge is needed about weather phenomena as well as its prediction, interaction with aircraft, and communications advisability systems. This will be particularly important in relation to the SST, general aviation safety, satellite weather systems, all-weather landing systems, and the vexing phenomenon of clear air turbulence.

6. Cargo: Little research has been done on cargo handling systems, cargo capabilities of new aircraft, cargo potential and predicted volume. This will probably be the area of most intense growth in the aeronautical operations systems in the near future.

The Report of The Committee on Aeronautical and Space Sciences, United States Senate, May, 1966, listed a number of other areas in which research and development will be vital for future advancement:

Service to more cities and between fringe areas to separate cities;

Efficient short-haul transport;

Guidance and control improvements to aid commercial and general aviation pilots;

Better over-water communications and navigation aids;

Lower cost and less frequent maintenance;

Better use of airspace through efficient traffic control and scheduling;

Decreased capital and direct operating costs through improvement in aerodynamic and propulsive efficiency;

Decreased perceived noise and pollution levels;

Passenger comfort, including effects of circadian rhythm due to rapid time zone changes.

The role of the Federal Government

The Federal Government from the very beginning has been involved in the development process of the transportation industries, from the early post roads and land grants to railroads to today's Northeast Corridor project and the supersonic transport.

Although many Federal agencies are involved in some form of aeronautical research and development, no single agency plays the lead role in planning. As a result, the structure of aeronautical research and development is highly fragmented.

The leading groups which plan and oversee aeronautical research and development are:

Federal Aviation Administration (Department of Transportation)

National Aeronautics and Space Administration (National Aeronautics and Space Council) (Office of Science and Technology)

Department of Defense.

It has been suggested that the Bureau of the Budget might be considered the dominant, though indirect force, in shaping policy because of its control over the funds for aeronautical R & D. Or it might be the President as he decides who will participate in planning. President Johnson tended to use the Space Council, the Office of Science and Technology, and even special committees to achieve his aims. In any case, an overall Federal architecture to effect quality comprehensive planning is lacking.

The Federal Aviation Administration has been given broad statutory authority by the Federal Aviation Act of 1958, Public Law 85-726 in the field of research and development.

"SEC. 312(a) The Administrator is directed to make long-range plans for and formulate policy with respect to the orderly development and use of the navigable airspace, and the orderly development and location of landing areas, Federal airways, radar installations, and all other aids and facilities for air navigation. . . .

"SEC. 312(b) The Administrator is empowered to undertake or supervise such developmental work and service testing as tends to the creation of improved aircraft, aircraft engines, propellers, and appliances.

"SEC. 312(c) The Administrator shall develop, modify, test, and evaluate systems, procedures, facilities, and devices as well as define the performance characteristics thereof, to meet the needs for safe and efficient navigation and traffic control of all civil and military aviation except for those needs of military agencies which are peculiar to air warfare."

Federal Aviation Administrator, William F. McKee has interpreted this statutory authority as follows:

"The FAA role is to *identify* the research and development needs for the system we operate and to do the testing and application research in the development of our system, including our regulatory work, and to identify for NASA the aeronautical areas where we believe more R & D can be profitably undertaken." [46] (Emphasis supplied.)

As a result, the Federal Aviation Administration has one major research facility involved primarily in aircraft operational problems, (The National Aviation Experimental Center, Atlantic City, N.J.) but it has no aircraft development facilities and relatively few scientists and engineers.

Such interpretation of the FAA role has led to the FAA spending about one-third as much as NASA and about 3 percent as much as the Department of Defense in aeronautical research and development. (See Chart 22). FAA spent about $20 million between 1960 and 1965 on research and development. About 85% of the FAA research and development effort goes into the design, development, and testing of equipment to improve the interface between aircraft and ground environment; the other 15 percent of the budget is spent for aviation safety and aeromedicine. (See Chart 23). In addition, the proportion of the FAA budget devoted to research and development has always been low (about 5 percent) and the proportion is declining. (See Chart 24).

The majority of the in-house research and development work of the Federal Aviation Administration has been conducted as a part of the Civil Aeromedical Research Program which is conducted by FAA at the Civil Aeromedical Institute in Oklahoma City. There a staff of 30 professional scientists supported by 90 paramedical personnel produced more than 200 scientific reports in the 1964-66 period. A listing of a few of those which have made contributions to the body of information vital to air safety is instructive as to the scope of the effort:

Footnotes at end of article.

1. Tests of the durability of some 37 different items of safety equipment in crash testing.

2. Tests to evaluate the injury potential of present day commercial airline seats.

3. Biomedical evaluation of air traffic controllers, which showed that ATC personnel do physically differ in body size and physical measurements as a group and therefore provided a basis for improved design of workspace area, equipment, and placement.

4. Study to determine what can be predicted about the adequacy of present pilot experience and regulatory requirements, and how future safety and human factor problems can be anticipated in time to take corrective action with the new generation of jet executive aircraft soon to be available to general aviation pilots.

5. Study leading to recently tightened rules on passenger emergency evacuation requirements of airlines.

6. Biomedical assessment of stress and fatigue in pilots.

7. Evaluation of turbulence on air crews.

8. Effect of simulated altitude on binocular fusion time in young men: (A slower reaction time of people at altitude may be significant when a pilot's gaze is changed from the instrument panel to the sky and vice versa).

9. Effects of age on binocular fusion time.

10. Effects of commonly used (tranquilizers) drugs on aviation personnel.

11. Effects of dieting on performance of air crews.

12. Study of vertigo incurred in air crew by rotating beacons or sunlight on propellers.

13. A study to examine the optimum work schedules at ATC facilities.

14. Examination of the effect of scheduling disruption in the physiological day-night cycling upon proficiency and health of air crew members.

15. Controller selection analyses which resulted in new selection procedures and aptitude tests which more accurately assigned individuals to training sections and thus improved the output of training courses.

16. Studies to ascertain the performance gap necessitated by using masks due to decompression.

17. Development of a new ATC "System Error" reporting system, evaluation of training procedures and techniques, and appraisals of operating procedures at field installations.

18. Consultation in ionizing radiation and other aspects relative to aircrew and passenger safety in the supersonic transport.

19. Study of the effect of blood, alcohol, altitude, and drugs on pilot performance.

20. Development of fire prevention techniques to allow passengers to get out of a crashed aircraft.

FAA contracts out the major portion of aeronautical research and development to other government agencies like NASA or the Defense Department or attempts indirectly to stimulate research in the aircraft industry by tightening requirements, suggesting areas that need improvement, and sometimes by doing the initial phases prior to the later development and implementation by industry.

The Space Act of 1958 placed the responsibilities for research programs in both space and aeronautics in NASA. NASA's work has been mainly in basic research and in fundamental investigations that will lead to long-range improvements rather than provide immediate solutions to current problems. Some studies pertaining to aircraft safety are done in its research centers or other research laboratories by contract.

NASA's final decision on the distribution of its aeronautical research and development funds is dependent upon the needs. Of the total NASA budget, the amount of money devoted to aeronautics has been consistently less than 2 percent. During the period 1962–65 $5,753,000 of the NASA aeronautics research and development budget was spent on safety programs. In this same time period $2,963,000 was spent to develop a flying simulator to be used in one of the most basic aircraft safety program areas, i.e., research on aircraft flying qualities.

Some examples of NASA projects related to air safety are: research on the operating environment; gust load effects on structure; runway skidding; fire hazards from lightning; flight dynamics; aerodynamic stability; pilot as a control mechanism; SST simulator; air-ground-air satellite communications; propulsion and engine noise; clear air turbulence; sonic boom.

In 1969, aeronautical research will continue in V–STOL, subsonic, supersonic, and hypersonic technology in support of civilian and military aircraft development. Increased emphasis will be placed on research in noise reduction.

The Department of Defense spends more money in aeronautics than all other Government agencies combined. As Chart 22 indicates, fiscal year 1967 expenditure estimates for aeronautics at $1.2 billion for DOD, $103 million for NASA, and $43 million for FAA.

The problem is deciding how to make the DOD aeronautics program more useful to civil aviation without compromising military requirements. Unfortunately, this may not be possible if the predictions of NASA Administrator James E. Webb are correct:

"As we look forward into the future, we see a growing divergence between the requirements for civil and military aircraft systems . . . With the changing nature of military aviation reducing the number of commercially usable concepts being proven through development, a civil aircraft technology must be established at a level of confidence which is acceptable for the investment of private capital." [47]

The interrelationship between FAA, NASA, and DOD has been a pragmatic progression of communication links created as the need arose. Most contact among these agencies has been through the Aeronautics and Astronautics Coordinating Board co-chaired by the DOD and NASA where the largest amounts of funds are involved. The obvious weakness is that the Department of Transportation is not represented. The connecting link between this body and DOT has been through a NASA-FAA Coordinating Committee whose overall purpose has been more to avoid duplication than to develop policy. As special areas of interest have arisen where coordination and cooperation between various Federal agencies was needed, interagency committees have been set up on an *ad hoc* basis. For example, NASA alone participates in 27 committees involved with one aspect or another of aeronautics with one or more other Federal agencies or other groups. Needless to say, the sprawling nature of this structure and its momentary involvement with issues is not conducive for long-term and comprehensive planning and development.

Suggested solutions to this problem have been either to improve existing communication links, or to create a new structure entirely.

Advocates of retaining (and improving) the existing structure cite the following points:

1. The Department of Defense aeronautical research and development results might be made more directly available to civil aviation through the creation of a DOD technology utilization program similar to the one at NASA. For example, DOD might offer its unclassified information to NASA, and NASA, through its own technology transfer program could release the information to industry.

The Aircraft Owners and Pilots Association representative in hearings before the Committee on Aeronautical and Space Sciences, U.S. Senate in January 1967 said that Defense aeronautics programs should be coordinated from the outset because there is no valid reason why defense-type aircraft must be extensively modified to meet civil airworthiness standards. The FAA Administrator agreed and said that he believed that if they were in close contact with DOD in the early stages of the development of a system, they would be able to avoid some duplication in systems development.

The Air Transport Association of America spokesman disagreed. It was his opinion that requiring more coordination of defense aeronautics programs with civil aircraft needs at the outset only compromises the military capability of the resulting aircraft without making it suitable for civil use. He did agree that within the limits of national security, civil aviation should be kept fully informed of technological advancements from military research and development.

2. It has been suggested that NASA's approach of supporting mainly basic research in aeronautics is too limited in scope and therefore its definition and commitment should be enlarged. In the hardware demonstration phase of aeronautical research and development the willingness to take risks in order to make new advances is becoming a critical part of the aviation environment, and only through the Federal government or through collective arrangements of government and industry can adequate amounts of risk capital be developed. Stuart Tipton called for such an enlargement of effort when he said: "of the ten research and development areas listed in our statement of January 26, at least eight either require new research and development or acceleration of present efforts." [48]

3. Another suggestion simply advocates a redefinition of NASA's responsibilities. One approach is that in the field of basic research, NASA and its advisory committees should choose and support aeronautical projects, but in the field of advance development projects should be selected for support only after extensive consultation between agencies such as DOT, DOD, FAA, NASA, and the user industries.

4. It has been suggested that NASA be given a specific assignment for research in aeronautical safety. There were two distinct opinions—one from industry and one from government. The Administrator of the National Aeronautics and Space Administration said that NASA should not be given a specific safety assignment: "We are doing a good deal of work in safety now . . . I think that it would be quite hard to improve on the relationships between the agencies where safety is involved." [49] The FAA Administrator agreed and said, "I do not believe that it is necessary or desirable to give NASA a specific assignment." [50]

5. Another suggestion is that FAA be represented at the Aeronautics and Astronautics Coordination Board. Dr. John S. Foster, Jr., Director, Defense Research and Engineering, testified before the Committee on Aeronautical and Space Sciences, U.S. Senate:

"I agree that there should be a convenient procedure whereby the aeronautical activities of the DOD and NASA can be presented for exchange with the FAA and in the future the Department of Transportation . . . The Aeronautics Panel of the Aeronautics and Astronautics Coordination Board is the group most heavily engaged in coordinating the activities of the two agencies which are likely to encompass any areas of interest to the FAA. Even though the preponderance of the activities of this Panel are of primary interest to NASA and DOD, I believe it might be useful for the FAA to have a representative at the Aeronautics Panel meetings." [51]

6. Dr. Edward C. Welsh, Executive Secretary, National Aeronautics and Space Council, advocates DOT representation on the

Footnotes at end of article.

Aeronautics and Space Council requiring an amendment to the National Aeronautics and Space Act.

The other approach to possible improvements in the Government's part of the process of aeronautical research and development advocates the designation of a Federal lead agency in aeronautical research and development and the organization of aeronautics as a separate program in the U.S. budget.

The desirability of one organization becoming the focal point for coordinating the Nation's aeronautical research and development is not free from divergent views. The Administrator of the National Aeronautics and Space Administration said: "My own view is that it would be very, very difficult for one intelligence to encompass all of this and attempt to do a job of coordination." [52]

The Executive Secretary of the National Aeronautics and Space Council said: "It makes good sense for NASA to join with FAA on the civilian side and to join with DOD on the military side," but "it would probably be an inefficient use of the FAA's time and DOD's time to have each in on all the examination and discussion of the aeronautical issues of the other." [53]

Alan S. Boyd, first Secretary of the Department of Transportation, argues: "It has been suggested that there be a separate agency created to direct all the research efforts of the aeronautical research and development effort . . . but I would like to see if the P-P-B (Program-Planning-Budgeting) approach within the Department of Transportation cannot solve the problem." [54] Secretary Boyd, however, cited two obstacles to his own solution—first, the difficulty in finding people with the competence to do that sort of planning, and second, the objectives are much more difficult to establish in the civilian economy than in the Defense Department where P-P-B has become a standard tool in the development of weapons systems.

The role of private industry

Most of the aeronautical research and development is performed in profit-making organizations today. (See Chart 25). Funding is provided largely (65.6 percent) by the Department of Defense; and most of the R & D is defense-oriented. Company funded research has the purposes of obtaining new business and backing up on-going production work. No authentic subdivision of this funding is available, but because Government production contracts often have a built-in research and trouble-shooting factor, it might be inferred that much of the $300 million in private industry R & D is directed toward ultimate application in civil aviation. The scientific and engineering talent, and most facilities of private industry are quite adequate when given the task to perform. An example of how the FAA and industry work together in a program of air safety, is provided by the Aerospace Industries Association, (AIA)—an association of aircraft industries producers in their "Crashworthiness Development Program." In this instance the development program was contingent upon the enactment by FAA of certain regulatory changes. AIA/FAA coordination planned during the program so that as major tests or decision milestones were reached, program progress could be monitored. AIA submitted test reports and proposed wording for regulatory changes to the FAA in each technical area; AIA proposed incorporation of the necessary hardware to comply with the suggested regulation changes on all new jet transport aircraft.

The objectives of the AIA Crashworthiness Development Program were improvements in the state-of-the-art as it applies to aircraft crashworthiness and the determination and evaluation of new and improved methods, equipment, and design characteristics that would substantially increase the passenger's chance of survival in an aircraft accident. The areas to be covered in the 12-month development program were: (1) fire resistant materials; (2) fire-suppression systems and smoke and fume protection; (3) emergency lighting and exit awareness; (4) evacuation improvement.

The problem of the role of private industry is the old one—from the source of the funds comes the mentality that guides their use. Today the Federal government provides 73% of the money for aircraft industry research and development. To the extent that research and development is a product itself, useful for decision making in public purpose missions, this percentage is understandable. But many opportunities in civil aeronautics could be approached without any Federal backing. Thinking that a military requirement may come along to pay for or accelerate a certain improvement is a faulty basis for policy planning. Industry leadership is needed to preserve as much of a free enterprise environment as possible, as well as to lend another viewpoint in the definition of goals and the direction of effort.

Various ideas have been suggested to goad private industry into increased participation. One is to consider providing incentives and disincentives so that the industry will continue to advance its capability to meet opportunities. Some of these might be: (1) making new technology economically available for incorporation into aircraft; (2) progressive governmental procurement policies; (3) instituting regulatory measures that require upgrading aircraft; (4) tax credits for research and development; (5) providing for the prototype construction of aircraft and systems financed with funds obtained from the general public rather than from the U.S. Treasury (by sale of development bonds to the public with the Government guaranteeing repayment of the investment in the event of default).

The role of the universities

Prior to World War II, the university research programs were primarily geared to the needs of graduate students and the interests of individual members of the staff. After the war there were changes: Federal laboratories or research centers were built and continuously funded by the government but managed by a university; the university-sponsored laboratory became principally supported by government contracts.

Control of university research is much looser than that exercised over industry. It depends importantly upon the ambitions or interests of the researchers, though the requests for grants tend to appear where the dollars are.

Besides providing much of the basic work in concepts, techniques, devices and materials, the university scientists extend their usefulness through government committees and advisory boards such as the Von Neumann Committee, the Air Force Scientific Advisory Board, and the FAA Technical Advisory Board, and through consultation agreements with industry.

In addition there are many private organizations which lend their efforts to the pursuit of air safety development. High among them is the Flight Safety Foundation, Inc., an independent, non-government, non-profit organization which devotes its entire effort to the improvement of air safety. It functions as an "Air Safety Information Interchange," working closely with manufacturers in the production of all types of aviation products. It also sponsors some independent research through one of its divisions in Phoenix, Arizona.

The SST

Finally, it might be well to recognize what motivates the U.S. government to heavy commitments in R & D. As *Fortune* Magazine said in the February 1967 issue relating to the SST: "there seems little doubt that the U.S. will proceed eventually with an SST—not, however, as the world's richest and most advanced nation asserting technological leadership, but more as a country engaged in a program conceived as an economic defense against the threat of a superior new product from abroad." [55]

Our purpose is not to question the military or economic or political or scientific or psychological motivations which may justify or be used to justify the appropriation of massive R & D funds for the SST. Our purpose is at once to point to the opportunities and problems which will flow from that technological advance and to suggest that it is ludicrous to deny 10 percent as many funds to research the means by which we might safely manage the technology it signals—to say nothing of the need to manage safely the technology in use.

The SST will use a Boeing design for the air frame and a General Electric concept for the engines. Ironically, the 18-month delay caused by President Johnson's order in 1965 for 18 more months of design competition pushing the completion date until 1974 (the Concorde 1971), permitted a drastic overhaul of U.S. designs and the evolution of a probably superior plane. (See Chart 26).

The SST will probably: be able to carry more passengers to and from Europe in a year than six Queen Marys (350 per trip); draw Asia as close in time to the U.S. as Europe today (speed of 1,780 mph); be so big (six feet longer than a football field) that the pilot will sit 175 feet ahead of the main landing gear; behave so much like a missile—requiring about 220 miles to make a 180° turn—that computerized inertial navigation will probably be necessary; fly so high (64,000 feet on the average) that a special watch will be needed on solar radioactivity to signal the pilot to descend to denser atmosphere during periods of dangerous intensity; and dwarf other aircraft in revenues and work capacity.

FAA estimates that the program will require an investment of some $4 to $4.5 billion before the first SST can be delivered to an airline. In 1961, Congress appropriated an initial $11 million for exploratory research; $1.1 billion is expected to be expended on advanced design, construction and flight test of two prototypes; $2.8 to $3.3 billion more will be needed for such costs as certification, tooling up and accumulating inventories; manufacturers hope for some additional help in the production phase, all of which is expected to boost the government's investment to $4 billion.

Boeing estimates an SST market running as high as $50 billion by 1990; 26 U.S. and foreign airlines have paid deposits of $11,400,000 to reserve 114 "positions in the quest for the American SST (though these are not binding). Market estimates are that 300 to 400 planes could be sold at a production cost of $26–$37 million per plane at 300 planes.

A Boeing study projects free world air travel in 1974 at a "possible" 500 billion passenger miles, which would mean a "travel glut so bad that there would be a 2-hour wait for runway clearance." [56] One expert estimates that the average passenger would be willing to pay an additional $8 for each hour saved of travel time, all of which leads to the conclusion that there would be adequate demand for such an aircraft.

Besides the expense, the sonic boom has created the other public area of controversy around the SST. The SST will create a "carpet" of thunderclaps beneath its flight path, which is an inescapable by-product of forcing any large, heavy object through the air at speeds greater than the velocity of sound (Mach 1). The sonic boom is an abrupt change in air pressure, interpreted by the

Footnotes at end of article.

ear as a startling noise and by structural materials as a force which may, if the intensity of the boom is high enough, exceed their strength.

Boeing says the SST can be limited to 1.5 psf (pounds of pressure per square foot) at cruising speed and altitude (60 to 70 thousand feet), or 2 psf while accelerating to cruise speed, meeting present FAA requirements. "The issue is whether booms of that magnitude will be annoyance enough to lead to a ban on supersonic flights over populated areas." [57] (It would be possible to eliminate the boom by flying the plane at subsonic speeds over population centers, though this would boost seat-mile operating costs so much it could apparently be done profitably only on short segments.)

The experts' consensus is that sonic boom is not a deadend problem, since there is good evidence suggesting that continued research can solve the problem, if given the financial support it deserves. (NASA fiscal year 1967 expenditure for sonic boom was $1.7 million).

The SST contracts include a requirement to implement and maintain a formal system safety program. The group responsible for safety management is responsible for identifying safety hazards, keeping up on current aviation safety development, establishing subcontractor safety requirements, and monitoring suppliers' designs and tests to ensure compliance with General Electric, Boeing and Government standards.

Safety will be insured by establishing safety evaluation criteria and utilizing failure mode and effect analyses of subsystems and component designs in order to identify and classify real or potential hazards and operationally critical failures, singly or in combination.

Areas of safety improvement already identified and being worked on include the following:

1. In order to provide the pilot with better visibility during the take-off and landing modes than he has today, the SST will provide a movable nose fairing.

2. More powerful engines and design refinements using aerodynamic direct lift control systems, to effect better pitch response and controllability, will, we are told, make the SST safer in the take-off and landing phases than today's jets.

3. Four separate and independent air conditioning and pressurization systems will be provided in order, we are told, to insure an absolutely failsafe cabin situation.

4. To assure integrity of the pressure shell the dimensions of titanium structure and thermal cycling in testing have been added as well as a thorough and massive effort to validate material selection.

5. Solar activity and the resulting radiation hazard is being studied by the Committee on Radiation Biology Aspects of the SST, a joint FAA/NASA/Air Force research project.

6. Flight characteristics that will permit the SST to fit into the normal air traffic control procedures and patterns are being studied with a flight simulator at NASA's Langley Research Center linked with the air traffic control simulation facilities at the FAA's National Aviation Facilities Experimental Center at Atlantic City.

An official FAA publication tells us that "the entire cost of the formal system safety program effort will be paid for many times over in the prevention of just one SST accident." [58] A sensitive person would probably find the prospects inherent in that statement as horrifying as the statement is true. And it certainly is true, given the fact that "just one SST accident" would risk the lives of more pasengers than the mid-air collision of 3 or even 4 of the largest commercial jets now in service. Of course, the SST seating capacity will seem small compared to the Boeing 747 (490 passengers) and the Lockheed L-500 (750–1,000 passengers) which will precede it into service.

Regardless of the position one holds on the wisdom of the government's sense of priorities in underwriting the costs of developing the SST, it is an undeniable fact that this plane is not only the symbol of America's mastery of aeronautical technology—the SST is also a symbol of America's concern for air safety.

VISIT OF PRESIDENT AND FIRST LADY TO SAIGON

(Mr. ADAIR asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ADAIR. Mr. Speaker, the visit of the President and the First Lady to Saigon is an inspiration to the entire free world. The very fact that the Frst Lady can visit orphans and the sick and wounded in a city that only a short year ago was under siege is ample proof of American gains during that period.

It should lend renewed confidence to American and South Vietnamese fighting men, and should also give second thoughts to the North Vietnamese and to those who insist the Communists are invincible.

In addition, the courage and concern of the First Lady in accompanying her husband and in visiting the wounded casts a lustre on the White House.

Americans can take deep pride in the leadership of the President and the compassion of the First Lady.

NATIONAL FOREST TIMBER SUPPLY ACT

(Mr. WYATT asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WYATT. Mr. Speaker, yesterday at Seattle, Wash., the Western Governors' Conference concluded its 1969 annual meeting. The chief executives of 13 Western States, including Washington, Oregon, California, Montana, Idaho, Colorado, New Mexico, Arizona, Nevada, Utah, Wyoming, Alaska, and Hawaii, met to examine regional and national public issues.

Among those issues was the effective management of our natural resources, including public timber.

After a full hour of careful discussion by all of the Governors with Edward P. Cliff, Chief of the Forest Service, of the U.S. Department of Agriculture, and other noted timber management authorities, the conference unanimously endorsed the general policy stated in the National Forest Timber Supply Act of 1969 as presently written and urged its immediate enactment into law.

This act, H.R. 12025, which I have the honor of cosponsoring, will provide the means for the Forest Service to apply modern management techniques to the vast commercial timber holdings in its care and afford assurances that the wood fiber needs of the Nation will be met.

The significance of this unanimous action by this distinguished body of public servants is that they are all directly concerned, and the States they represent are the principal source of the softwood lumber and plywood required to meet our national housing goals. The resolution adopted by the conference took cognizance of the fact that the Nation faces a desperate need for housing, particularly for low- and moderate-income families, and that

softwood lumber and plywood are the basic materials for meeting that need.

It further noted that 60 percent of the total national softwood timber inventory is on national forests, largely concentrated in the West.

Relying upon Chief Cliff's own testimony that the yield on certain national forests can be increased by as much as two-thirds, and understanding that intensive forest management can be practiced without impairing other forest values such as recreation, fish and wildlife, grazing and watershed, the Western Governors' Conference took its forthright stand.

I am heartened by this new evidence of the soundness of this proposed legislation in the public interest. My own district lies in the heart of these Pacific Coast States which have the highest concentration of commercial forest land and the highest proportion of lands where intensive management can materially increase productivity. Under present restraints of policy and funding, the national forests will be unable to realize the substantial benefits which will accrue to the Nation from application of modern forestry methods to these fertile forests.

The direct concern of the Western Governors in this public business is wholly understandable. The West has 57 percent of the growing stock and 72 percent of the sawtimber in the entire Nation. These States also contain 86 percent of the total softwood sawtimber which can provide the lumber and plywood necessary if our people are to be adequately housed.

The National Forest Timber Supply Act of 1969 is, therefore, directly pertinent not only to the fulfillment of our national housing goals of 26 million units in the next decade but to the realization of the tremendous untapped potential for improved growth and harvest on these public lands.

The passage of the National Forest Timber Supply Act is of critical concern to the Governors and people of the Western States, because 79 percent of the national forest lands covered by the act lie within their State boundaries. It is of critical concern to the rest of the Nation, because without its passage we will never be able to achieve the housing goals we set in the Housing and Urban Development Act of 1968.

I commend the Western Governors' Conference for its wisdom in adopting the resolution and submit it for the RECORD:

III. NATIONAL FOREST TIMBER SUPPLY ACT OF 1969

Whereas the western states and the nation face a desperate need for housing, particularly housing for low and moderate income families; and

Whereas wood products, primarily of softwood species, continue to be the basic materials for residential construction; and

Whereas 60 percent of the nation's softwood timber inventory is on national forests, and concentrated in the western states; and

Whereas the yield from the national forests can be increased by as much as two-thirds by intensive forest management without impairing other forest values such as recreation, fish and wild life, grazing and watershed; and

Whereas the National Forest Timber Supply Act establishes policies and provides funds to improve timber production, while insuring that other multiple-use values of the national forests are protected;

Now, therefore, be it resolved that the 1969 Annual Meeting of The Western Governors' Conference in Seattle, Washington, endorses the general policy as stated in the National Forest Timber Supply Act of 1969 as presently written and urges its immediate enactment into law.

WHEN IS A SURPLUS NOT A SURPLUS?

(Mr. WYATT asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. WYATT. Mr. Speaker, the time has come to ask, "When is a surplus not a surplus?"

The answer is, that a surplus is not a surplus when you include in the operating budget funds you cannot spend.

Mr. Speaker, it is time to set the record straight about the so-called surplus. It is a phony surplus.

Our major trust funds—the highway fund, the social security fund, and others ended the fiscal year with an $8 billion surplus. Which is fine. But the Treasury tells us that our total surplus was only about $3 billion.

This means that, no matter how you add it up, you come up with about a $5 billion operating deficit.

No, Mr. Speaker, the budget was not balanced in fiscal 1969. Instead we went $5 billion deeper into debt. The publicity unfortunately generated during the past week has given many people the impression that fiscal 1969 ended with a $3 billion surplus. Everyone in the United States should know that in real terms we ended with a $5 billion deficit.

The President is determined this will not happen in 1970. I, for one, intend to help him in his efforts to give us the balanced budget we need if the fight on inflation is to be successful.

ADDRESS OF RICHARD KLABZUBA ON AIRLINE FARES AND EARNINGS

(Mr. SISK asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SISK. Mr. Speaker, on April 21, 20 Members of Congress filed a complaint with the Civil Aeronautics Board requesting, among other things, a general rate hearing plus the suspension and investigation of a number of fare changes then being proposed by five airlines. On May 8, the Board announced that it had decided by a 3 to 2 margin to suspend the proposed changes and institute an investigation as to their lawfulness.

As part of our complaint, we proposed a cost-value oriented formula using a time-distance approach to ratemaking. Since this approach is inherently more amiable to airline operations, the Members' formula eliminates many of the acknowledged inequities in the present fare structure on a more rational, fair, and just basis.

For example, our formula is designed to take into consideration the many varying characteristics of the different markets such as their composition of vacation, pleasure, and business travel, their elasticity of demand or probability of pricing certain services—particularly the short-haul traffic—out of the market, their state of market development, and density of traffic.

Density of traffic and elasticity of demand are especially important to the commercial success of any airline venture. Historically I am informed that the bulk of airline passenger traffic has been concentrated within the shorter distances. As a result, the demand for air travel has generally shown a tendency to decline with distance. This in turn has been demonstrated by the airlines in a need for a larger proportion of discount fares in the long-haul markets to attract business, and less of an ability to attain as high load factors on long-haul nonstop flights.

This fact, of course, has meant that a greater percentage of long-haul traffic must be served with multistop and connecting flights. On the other hand, the higher occupancy rates achieved using these multistop and connecting services has been, and will continue to be partially offset by a greater amount of circuitry and a higher proportion of interline transfers, both of which tend to dilute a fare's actual yield.

With regards to this latter point, I believe it is important to point out that the Members' formula does recognize the fact that the net yield to the carrier is a more significant indicator of the prevailing price level and airline revenues than the fare per se. It does this with not just one, but three different elements: the load factor, value adjustment, and time-distance factors.

The value adjustment factor, however, is really the key element. First, it compensates for the increased dilution usually encountered in long-haul markets from the social and commercial requirement for more common-rating and prorating of fares between airlines. Next, of course, there is the purely commercial need for a greater variety and number of discount and promotional fares to bring in customers as the unit price per sale increases. And finally, the variations in yield caused by the changing distribution of longhaul traffic between nonstop and multistop services.

From a cost standpoint, Members' formula is also designed to compensate for the higher costs now being incurred in some congested areas by adjusting the fare according to the actual cost differential being experienced in each particular market. Consequently, it does not arbitrarily penalize traffic in different city pairs of the same size or at similar mileage intervals where no such congestion is being experienced.

The Member's formula is geared to

facts—not assumptions nor presumptions. It measures the cost differential by individual markets, and by degree of congestion in that market, rather than any arbitrary grouping.

Furthermore, the Members' formula is designed to give separate attention to changes in out-of-pocket costs for such items as labor, materials, fuel, landing fees, and other services not accompanied by improvements in productivity, as well as to changes in the rate of return required to provide an adequate return to investors in whatever is the prevailing money market. No other formula so far put forward by either the carriers or the CAB has offered the investor this type of protection.

In other words, unlike all other proposals, the Members' formula provides guidelines for fare changes where justified by changes in the cost and value of a service, density of traffic, or dilution of the fare.

Recently this formula was put to the acid test for the first time. In a presentation to a group of Wall Street analysts, Mr. Richard W. Klabzuba applied the Members' formula to 22 of the top airline markets in the United States, and one "hypothetical" airline. In his talk, Mr. Klabzuba first observed that the airlines financial need for increased allowed earnings is just and reasonable, and that rising cost of labor, materials, and other services has not been, and probably could not be, off-set by increased productivity. On the other hand, when he turned his attention to capacity or sales side of the formula, he stressed the need for our airlines to raise their load factors in order to reduce the cost per seat sold, and the economic waste caused by conjestion, overscheduling, and overcapacity.

The full text of Mr. Klabzuba's remarks follows:

AN AIR FARE PROPOSAL—ITS IMPACT ON EARNINGS

(By Richard W. Klabzuba)

It is indeed a pleasure to be with you again to discuss the possible impact of the events of recent days upon the future earnings potential of our domestic airlines.

As you are probably well aware, twenty Members of Congress and five airlines are now engaged in an adversary proceeding.[1] And, as you have so astutely surmized, I am allied with these Congressmen in an advisory capacity. It is in this latter position that I come before you today—to discuss with you, as representatives of the investors' interests, the issues involved in this case, and to seek your advice and counsel as to the recommendations which should be made to these Congressmen in the pursuit of this investigation.

There is no point in reviewing the events leading up to this investigation; they are already well documented in great detail in the complaint, answers and Board order. Rather, let us devote our time to the issues involved, to the proposals which I plan to make to the Members of Congress, and to the impact of these proposals on carrier earnings.

First, however, let me clarify one point: the revenue-hour is not a formal issue in this proceeding. At this time, the two principal issues appear to be load factor standards and Board procedure.

Second, I want it clearly understood at the outset that the primary objective of the recommendations which I plan to make to the Congressmen will be to improve net earnings and cash-flow by (1) widening the operating- and profit-margins in some cases, (2) increasing load factors and (3) reducing the cash operating costs and overhead per seat *sold* or passenger carried.

As in the past, I will continue to put the public interest, investor and consumer, first. Which is exactly why I am here today—to inform you as representatives of the investors of these recommendations and *to get your comments and suggestions.* We have established a line of communications which I would like to keep open during the critical days ahead. For my part, you may be assured that your views, favorable and unfavorable, will be made known to the Representatives.

Turning now to those recommendations themselves, they will of course be based in part upon the revenue-hour approach and the cost-value oriented formula incorporated in the Congressmen's complaint. As I informed you the last time I was here, it was my inability to accurately project earnings (on a mileage basis) which initially sparked my interest in this problem. I still cannot project earnings accurately and consistently on such a basis, and know of no one else who can.

In formulating these proposals, the first step was to determine exactly what the need of the air carriers is for revenue sufficient to enable them (under honest, efficient and economical management) to provide adequate and efficient airline service.[2] Since earnings, profit and net-income are all determined by their relationship to costs,[3] and the Board has repeatedly held that "rates must at all times be reasonably related to costs," [4] it makes eminently good sense to begin by determining (A) what the relationship should be between profit and cost, and then (B) what are the costs.

Starting with the relationship, it must first be noted that the Board has already fixed the income element as approximately a 10.5% rate-of-return on investment.[5] However, as many of you who have been faithfully following my recent discussion of this issue are aware, I am not in total agreement with the present approach—specifically, the fact that it does not recognize changes in the market price of capital. Therefore, for the purpose of these recommendations it is my intention to use a higher rate-of-return which will reflect about an 11% increase since 1960 in the security cost of equity and new debt capital.[6] I feel the result reached using this approach is more fair and reasonable to the investor.

Second, as previously observed in the *General Passenger Fare Investigation*, the margin-of-return and rate-of-return are mathematically related by and through the rate of capital-turnover.[7] Hence to establish a relationship between rate-of-return and cost, it is necessary to first fix a rate of investment or financial structure turnover. In the case at hand, a 1.2 financial structure turnover, or 1.4 investment-turnover, is utilized. Considering debt service as an operating expenditure, the resulting equation produced a 13% operating-margin (earnings on sales *before* taxes), or a 15% mark-up on costs.

Finally, regarding the operating expenses, the latest published data of the Civil Aeronautics Board was used,[8] with debt service being added in as an operating cost.

You may recall that the last time I appeared before this distinguished group of working analysts, you were given a schedule of the revenue requirements for various classes of aircraft. I would like to bring that schedule up to date.

Two quick observations: First, operating costs have risen during the last year and a half for various and sundry reasons which we need not explore here. Second, in accordance with the return formula just outlined, it is necessary to reduce the operating-margin from 20% (including debt service) to 13%, excluding debt service. This is the main reason why the changes are so relatively small; I was purposefully more liberal last time.

Anyway, using about a 13% operating-margin or 15% mark-up, it now appears that a 2-engine prop-jet requires $460 to $500 per hour; a 2-engine jet, $950 an hour; a 3-engine jet, $1,200 to $1,250 per hour; and a 4-engine jet, $1,600 to $1,650 an hour. The two 3-engine wide-body jets may need something in excess of $2,250 to $2,500 an hour plus, while a guess on the 747 is probably more than $3,000 to $3,400 per hour. Unless cash operating costs are brought under control, it may become necessary to apply a surcharge on these aircraft just to break-even.

One again, the revenue required per passenger-hour to attain these or similar levels will vary depending upon differences in operating philosophies between carriers, seating configurations, density of traffic, load factors, and value-of-service. Which of course brings us to an extremely important part of the equation: the need in the public interest for adequate and efficient airline service at the lowest cost in the sense of the lowest fare—and therefore the issue of load factors.[9]

If there is any one issue which is going to be fought tooth and nail in this investigation, my guess it is this one—load factors.

Why? Because the relationship between cost, price and load factors underlies the whole area of airline profitability, and Members of Congress in their complaint have specifically requested the Board to take load factors into consideration in determining the just and reasonable fare.[10]

As far as you are concerned as financial analysts, the main thing at stake in the load factor issue is the possibility of a major shift in operating philosophy, with the principal emphasis shifting from production or capacity to sales . . . and from revenue to earnings.

Our scheduled airlines are engaged in what Edward Chamberlin refers to as "monopolistic competition". Since this is something different from pure competition or pure monopoly, revenues are governed by different factors. Under monopolistic competition, sales are limited by (1) price, (2) service, and (3) the advertising and sales effort, so that depending upon demand and costs, earnings are determined by adjustments in price, service or selling costs, or a combination thereof.

In addition, a distinction is drawn between the concept of "competitive prices" and "competitive profits". The monopoly element produce higher rates, *but not greater earnings* because the competitive element tends to bring about greater costs. To quote Mr. Chamberlin, "Competition, in so far as it consists of a movement of resources into the industry, reduces profits to the competitive level, but leaves prices higher to a degree dependent upon the strength of the monopoly element. Competitive profits, then, never mean competitive prices under monopolistic competition, for the demand curve is never tangent to the cost curve at its lowest point." [11]

In this regard, it is no industry secret that the airlines have traditionally considered business travel as their primary market. Nor that they consider this market to be price inelastic. As a result, their primary efforts to improve earnings have logically been in the direction of adjustments in service and selling costs, rather than price adjustments.

Footnotes at end of article.

"More and more is price competition evaded by turning the buyer's attention towards a trade-mark, or by competing on the basis of quality or service (or by advertising . . .).[12]

Nevertheless, as the Supreme Court has so eloquently pointed out, it is not the theory but impact of the rate order which counts.

It is rather obvious that the power and effect of today's intense airline competition is not producing low air fares—the recent wave of applications for rate increases attest to that. Instead, competition has resulted in over-capacity, over-scheduling, low load factors, smaller operating-margins, and numerous extra ancillary services such as private clubs, gourmet dining on certain flights, five abreast coach seating, etc.

In its now famous staff study, the Bureau of Economics noted at page 70, "(T)hat the fare level affects the volume of service offered by the several carriers in the market and that a fare set well above cost, based on a reasonable load factor, may contribute to the operation of excessive capacity and resulting inefficient use of resources. The data developed in this study suggest that long haul jet coach fares are quite high in relation to cost of service at even the relatively low load factors prevailing in the transcontinental markets. The latter suggests that excess capacity is being provided in these areas. It is reasonable inference that the high level of long haul jet coach fares at least tend to support such overscheduling which in turn creates a need for a higher fare level than would otherwise be necessary."

In their complaint of April 21, the Congressmen pointed out to the Board that TWA's passenger load factor between San Francisco and New York during the calendar year 1966 was 43%, and 46% in 1967. The load factors for the other two principal carriers in this market were: American, 52% and 46% respectfully; United 38% and 45%.

In the larger Los Angeles-New York market, the results were considerably better: American had a 58% load factor both years; TWA raised its load factor from 46% in 1966 to 53% in 1967; with United doing about as well, climbing from 40% to 45%.[13]

On the other hand, it must be remembered that dollarwise these are two of the most lucrative markets in the United States. Together they probably account for 4 to 5 percent of our total domestic passenger-miles. On a revenue-hour basis, the percentum of course would be smaller.

The point, however, is simply this—in two of the most lucrative markets in the U.S., where the number of competing lines has remained unchanged and a strong rivalry between carriers contributes to one of the fiercest and most competitive markets in the world, the airlines themselves continue to compete on the basis of adjustments in service and selling costs, not low fares—with the result that the overall load factor for the group was little better than that experienced by our local service airlines in the least lucrative markets.

By the way, 1966 was a relatively good year, one of the two in the last decade when the airlines' return exceeded the allowable 10.5% standard.

Low load factors obviously have an adverse affect on cost and fare levels, and consequently are not in the best interest of consumers. Their adverse impact on investors, however, is frequently overlooked. Low load factors associated with high utilization tend to dilute earnings by spreading them over a larger operating base; increase current-liabilities at a more rapid rate than other source of funds, thereby making the airline more vulnerable financially to short-term demand fluctuations.[14]

In other words, the total effect of the present fare policy can be said to be "unjust and unreasonable" because the result reached is adverse to the vital interests of the consumer and investor.

To correct this situation, it is my intention to suggest to the Members of Congress that they continue to press the Board to establish certain load factor guidelines in setting fares. Specifically, that in markets averaging more than 3,000 passengers per day,[15] a load factor of 70% be used as the standard; in markets larger than 250 to 500 passengers per diem, depending upon the size of equipment normally assigned, a 60% load factor seems reasonable. In the other markets less than 250–500 passengers per day, it may be necessary to adjust the load factor standard somewhat downward to provide an adequate minimum frequency of service; i.e., 3 to 4 flights per day.

With regards to frequency of service, the foregoing load factors should permit the carriers to proffer a minimum of 30 to 40 frequencies per day in the larger markets using todays equipment, and 12 to 17 flights per-day with wide-body aircraft. Enough in other words to assure the public adequate service and viable competition between carriers.

Finally, of course, the inherent advantages of air transportation to the user, and the effect of rates upon the movement of traffic (value-of-service), must not be overlooked, at least in the United States where they are statutory standards.[16]

Some traffic is price inelastic, others are not, so that discounts which increase traffic and raise load factors should be provided. Furthermore, the degree of price elasticity tends to shift from market to market, being greater in long-haul markets than short-haul services. Consequently, base fare levels have to be adjusted accordingly. This is accomplished with the "value adjustment" element.

In the recommendations at hand, an 85% value adjustment (or 15% discount) is used for most short- to medium-haul services. An 80% adjustment, or 20% overall discount, is used for the longer services to allow for a greater proportion of pleasure travel and greater degree of circuity in travel.

Given the foregoing, it appears that a just and reasonable level of fares in the sixty percent load factor markets should be $22.50 per passenger-hour where the value adjustment is 85%, and $24 per passenger-hour where there is an 80% value adjustment.

Where the load factor is 70%, an incentive should be proffered to the carrier because of the greater productivity, larger risk and lower fare. Granting such an incentive in the range of 11 to 12 percent, it appears that on high-density routes fares should be $20 per passenger-hour with an 85% value adjustment, and $22 per passenger-hour with the larger 80% adjustment.

In the case of high-density economy or thrift-fare services, where few discounts are proffered other than children's fares, a 90% adjustment seems more reasonable, so that the base fare should be $18.50 per passenger-hour.

These fares should yield an average revenue of about $19.20 per passenger-hour at 60% load factors; $16.75 at the 70% load factor. The gross earnings will be about $2.40 to $2.50 per passenger-hour, with a net of $1.20 to $1.25 before investment and other tax credits. In other words, an adequate and consistent level of earnings that will enable the airlines to compete vigorously for capital funds in the open market without any need to resort to changes in accounting techniques to bolster results.

The internal cash generation, or cash-flow, will be somewhere between $2.60 and $2.95 per passenger-hour, with a return on investment (the Board's test of reasonableness) ranging from $1.50 to $1.60 per passenger-hour.

The return per mile will of course vary depending upon the block speed of the aircraft. Unfortunately due to the numerous variations in operating characteristics, block speeds do not at all times vary uniformly with mileage, so a specific yield per mile by mileage-blocks has no reasonable value. It is worthless data. Nevertheless, because some of you might find the return per mile by block speed increments of some limited use for comparative purposes, I have included them in the hand-out.

If you use this schedule, use it with a great deal of caution. Remember, you cannot use the data on a cumulative or average basis—it has value only for a *specific* block speed. It has no relevance to length of haul; e.g., since United's flight time between New York-Washington is about the same as that between San Francisco-Los Angeles, it needs about the same revenue per passenger, regardless of the difference in mileage.

Returning to the revenue-hour basis, where an aircraft is leased, it appears the leasing payments will range from $2.80 per passenger-hour at a 70% load factor, to around $3.40 at 60%, leaving a net-earnings, cash-flow and return on investment of between 55¢ to 60¢ per passenger-hour.

To give you a "feel" for these fare levels from another angle, I have applied them to 22 of the top 25 markets in the U.S. in 1967 in terms of number of passengers airlifted.[17] The number of passengers have been increased by 28% per market to reflect a 13% per year traffic growth.

Please note, you are not being quoted just a fare or its potential revenue—you are being handed its projected level of *earnings, cash-flow, service on debt* (interest plus principal, the latter computed at one-half of the annual depreciation allowance) and *lease payments*. The leasing payments were included because, among other things, the degree of leasing has a material impact on earnings, cash-flow and debt service.

This is the kind of evidence I will suggest the Members of Congress offer the Board. It is the kind of evidence I would expect the carriers to come forth with too, so that the Board will be able to render an enlightened, intelligent, business like decision that protects your interest.

Some of the fares in the schedule are equal to those now in effect or proposed. Many are less. Others may be greater. Where the fares are the same, I shall recommend its approval. Where the hourly fare is greater, I shall suggest the Congressmen move for its adoption just the same as when it is lower.

Your attention is invited to another fact. If you used the 50% load factor rate with an 85% value adjustment—the $27 per passenger-hour fare level—and multiplied it by 5⅓ aircraft-hours, you will come up with a $144 fare. The present transcontinental fare is $145. Thus you can see that the projected reduction in some fares is primarily attributable to the adjustment in the level of service, or load factors, not the ratemaking formula. The revenue-hour equation, a *cost-value oriented formula*, merely explains what is going on . . . and what specific corrective action should be taken.

Second, you will observe that this $27 fare level does not produce any greater earnings,

Footnotes at end of article.

cash-flow, etc. per available seat-hour than the $22.50 level. It just requires more seat-hours, more aircraft-hours, and a greater cash expenditure to provide the same amount of service.

In its order granting suspension of the fare proposals, the Board observed "Another significant aspect of an unnecessary increase in unused capacity is the corresponding growth in investment and fixed charges." *High fare levels produce larger investments.* Large investments can mean greater potential dilution in earnings per share when traffic turns sour, reduce appreciation when the market turns around.

On the liability side of the Balance Sheet and Income Statement, larger fixed charges narrow the margin of safety, while greater cash costs associated with over-scheduling increase current-liabilities, thereby increasing short-term financial hazards and lessening the chance of turning revenues into earnings.

Higher fares are not in the consumers' interest. Are they in the investors' interest if they cannot be turned consistently into earnings?

It should also be noted that there seems to be some difference of opinion at the Board with regards to this question of over-capacity. The Chairman seems to feel there may be some excess capacity, while Member Adams has specifically not associated himself with respect to certain statements regarding equipment purchases or excess capacity.[18]

Who is right? Probably both gentlemen.

The Chairman is correct with respect to the long- and medium-haul routes where the yield per hour is high. Member Adam's opinion, however, is equally valid; there probably is not too much excess capacity in the short- and medium-haul markets where the yield per hour is lower. Two opposing views, yet both are probably equally right. Please observe again, however, you can only really arrive at the reason for this conclusion on the revenue-hour basis.

To give you yet another "feel" for these fare levels and their impact on earnings, this time from an investor viewpoint, they have been applied to the 1969 fleet of one of the Big-4 carriers . . . United. For the purposes of this demonstration the following two operational parameters were used in addition to the presumption of a 60% load factor; utilization of aircraft on-hand, 2,800 hours per annum (7⅔ hours per diem); aircraft delivered during 1969, one half the annual rate or 1,400 hours per annum.

The results: Gross earnings of $162 million on sales of $1,348 million, with an after tax profit before investment and other tax credits of $81 million. Assuming 19 million shares of stock to be outstanding, the earnings per share comes to $4.26.

Thus you have now been given an air fare proposal and its impact on earnings in five different ways—by available seat, by passenger, by aircraft-class, by market and by carrier—on both a mileage as well as hourly basis, plus per share. As the song says, "Who could ask for anything more?"

In support of their recent proposals, the airlines have repeatedly asserted that it is generally known and accepted in the air carrier industry that there is an urgent need for additional revenues because, among other things, the carriers' rate-of-return has been alarmingly low and now shows every indication of being lower than had been expected last February. According to C.A.B. statistics, only twice during the last decade has the industry's return exceeded the allowable 10.5%, and it has never reached that level on the basis of a 5-year weighted average.

While it is true the Supreme Court has said that a public utility is entitled to such rates as will permit it to earn a return equal to that being made on investments in other business undertakings attended by corresponding risks and uncertainties, the Board does not have the power to arbitrarily hold up earnings to some fixed level, for the Court has also held "It cannot be said that a corporation is entitled, as of right, and without reference to the public, to realize a given percent upon its capital stock."

For this reason, even though I may be personally sympathetic to the carriers' need for greater earnings, I do not believe that an airline can demonstrate to the Board, the Members of Congress, an Administration trying to fight inflation, nor the farepayer himself, the justification for increasing its earnings by way of a rate increase when it has not even sold 55 to 60 percent of its production during the best years in the most lucrative market in the United States. They just are not going to buy that argument!

From what has just been said, it may appear that I am being critical of management, but I am not. Before you criticize management look at the facts.

Monopolistic competition and a fixed return both discourage economy and efficiency. Independently, each is a powerful deterrent to efficiency. Fuse them together with a spice of licensing restrictions and you unleash a potent new destructive economic force which, like an A-bomb, is capable on inflicting untold economic and social devastation on society.

It is the combination of these forces working upon management, rather than undisciplined management action, that has brought us to the financial crises we face today. It is the combination of these forces which must be harnessed for the benefit of the investor and consumer, instead of his destruction. This can come only from recognition of the *cause* of the effect, followed by enlightened, intelligent, well-informed, totally objective and unbiased regulation.

In summary, it is my opinion that there will be no general fare increase this year. There may be some selective increases where the yield per hour is not sufficient, at reasonable load factors, to enable the carriers to provide adequate and efficient service at a fair profit. There will be increasing pressure to improve load factors in order (1) to lower the cost per seat *sold* even though this will probably temporarily increase the cost per available seat,[19] (2) to reduce the economic waste of our resources—aircraft, airports, airways[20]—and most important of all (3) to enable the nation to get more productivity out of its public expenditures, a matter which is at present of vital interest to the Administration and Congress who are pressed for funds, looking for ways to curb inflation, and trying to hold down taxes . . . especially since such improvements in load factors can lower fares and improve earnings to investors.

Like other men before me, I too have a dream, one which can become a reality later this year. It is simply this: any man or woman can fly round-trip to anywhere in the continental U.S. for an excursion fare of $200 or less, whether that be from Presque Isle, Maine to San Diego, or Key West to Aberdeen, Washington. That John Q. Public, traveling at his own expense can go anywhere and back in the *entire* United States (with the possible exception of some outlying points in Alaska) for no more than $400. One nation, one people, without regards to race, creed or *location*. And may be, just may be, such a sales oriented attitude as the "continental-100" and "national-200" will be as financially rewarding to the air carriers as the $1 phone rate has been to the communications carriers.

Gentlemen, that's it. I have done my thing. I have had my say. Now, how say you?

[19] "(V)iewed as a cost problem, it is evident that trimming flight assignments over long-haul routes would tend to produce the greatest cost savings per flight removed. . . . Measured in dollars, the economic waste will continue to increase if scheduling continues

as it has in the past." Ronald E. Miller, Domestic Airline Efficiency, The M.I.T. Press, Cambridge, Massachusetts (1963), p. 134.

[20] "1. In general, the *greater* the total demand between city-pairs, the greater the absolute amount of overscheduling. 2. In general, the *smaller* the intervening distance between city-pairs (i.e., the shorter the route), the greater the amount of overscheduling. . . . 1. The most competitive routes always exhibit a great deal of overscheduling; the more competitive the route, the worse this overscheduling becomes." *Ibid.*, 108, 109.

TABLE 1.—*Relative revenue requirements for various types of aircraft equipment per aircraft hour flown, U.S. Domestic Services*

Equipment type:	*Yield required per aircraft-hour*
2-engine prop-jet	$460 to $500
2-engine jet	$950
3-engine jet	$1,200 to $1,250
4-engine jet	$1,600 to $1,650
3-engine wide-body jet	$2,250 to $2,500
4-engine wide-body jet	$3,000 to $3,400

TABLE 5.—*Price and earnings paradigms for U.S. domestic air carrier service by carrier, 1969 projected fleet of United Air Lines*

Operating revenues	$1,348,000,000
Gross earnings	$162,000,000
Net earnings before investment and other tax credits	$81,000,000
Cash-flow	$179,000,000
Return on investment	$105,000,000
Shares of stock outstanding	19,000,000
Net earnings per share	$4.26

TABLE 2.—PRICE AND EARNINGS PARADIGMS FOR U.S. DOMESTIC AIR CARRIER SERVICE BY AVAILABLE SEAT-HOUR AND PASSENGER-HOUR

	Dollars per revenue-hour			
		Per passenger (load factor)		
	Per seat	50 percent	60 percent	70 percent
Operating expenses	$10.00	$20.00	$16.70	$14.35
Operating margin	1.50	3.00	2.50	[1] 2.40
Statutory revenue need	11.50	23.00	19.20	16.75
Rate level required after value adjustment for circuity and promotional discounts:				
80 percent adjustment		29.00	24.00	22.00
85 percent adjustment		27.00	22.50	20.00
90 percent adjustment				18.50
Estimated average yield per unit:				
Revenue	[2] 11.50	23.00	19.20	16.75
Gross earnings	[2] 1.50	3.00	2.50	2.40
Net earnings (at 50 percent)	[2] .75	1.50	1.25	1.20
Cash flow (internal cash generation)	[2] 1.75	3.50	2.95	2.60
Return on investment (CAB test)	[2] 1.00	2.00	1.60	1.50

[1] Includes $0.25 per passenger incentive for lower rates than 60 percent load factor; that is, 11 to 12 percent lower fares.
[2] Yield per seat greater at 70 percent load factor fares.

TABLE 3.—PRICE AND EARNINGS PARADIGMS FOR U.S. DOMESTIC AIR CARRIER SERVICE BY PASSENGER-MILE ACCORDING TO BLOCK SPEED

	Dollars per revenue-hour and mile per passenger						
	Load factor 50 percent		Load factor 60 percent		Load factor 70 percent		
Value adjustment for circuity and discounts	80 percent	85 percent	80 percent	85 percent	80 percent	85 percent	90 percent
Rate per passenger-hour	$29.00	$27.00	$24.00	$22.50	$22.00	$20.00	$18.50
Rate per mile at block-speed of—							
200 miles per hour	.145	.135	.120	.113	.110	.100	.093
300 miles per hour	.097	.090	.080	.078	.073	.067	.062
400 miles per hour	.072	.068	.060	.056	.055	.050	.046
500 miles per hour	.058	.054	.048	.045	.044	.040	.037

TABLE 4.—PRICE AND EARNINGS PARADIGMS FOR U.S. DOMESTIC AIR CARRIER SERVICE BY MARKETS, 1969

Market	Blocktime hours	Load factor percent	Value adjustment percent	Jet coach fare	Excursion fare	Sales (millions)	Gross earning (millions)	Cash flow (millions)	Debt service (millions)	Lease payment (millions)
New York–Boston [1]	0.84	70	85	$17	$26	$43.9	$6.0	$6.3	$2.4	$0.7
New York–Washington [1]	.97	70	85	20	30	41.9	5.7	6.0	2.3	.7
New York–Chicago [1]	2.00	70	85	42	63	74.1	10.1	10.6	4.0	1.1
San Francisco–Los Angeles	.97	70	90

SUCCESS OR FAILURE—NEIGHBORHOOD DEVELOPMENT PROGRAMS

(Mr. BUTTON asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. BUTTON. Mr. Speaker, I have today introduced H.R. 13271 which seeks to give the city of Schenectady, N.Y., in my congressional district, more time to win Federal approval for its neighborhood development program. This would be accomplished by safeguarding substantial credits in excess of $2 million generated by construction of school facilities in the NDP project area.

Schenectady's NDP application has received approval in the New York Regional Office and is now awaiting review and evaluation here in Washington. But, Mr. Speaker, a very serious time problem exists with respect to approval of this application. The problem was not created by the application itself, but by the city's good-faith reliance on the ability of the Department of Housing and Urban Development to fund neighborhood development programs. HUD last year urged many cities, Schenectady included, to convert their renewal programs to NDP, and they did convert. They converted their programs and then HUD froze all NDP grant approvals after April 30, 1969. In other words, Mr. Speaker, had Schenectady gone ahead with its original plans and not applied under the new NDP, which was said at the time to be sufficiently funded, the city presumably would not be in this predicament of possible loss of these considerable credits—conditioned, of course, on later approval of its NDP application.

Mr. Speaker, the city's share of the cost of this program depends upon the use of these credits developed as a result of the construction of the Martin Luther King Elementary School and the modernization of the Steinmetz Junior

High School. Construction of these two schools began on August 1, 1966, so that the credits will expire today, August 1, 1969. Without these credits, little possibility exists of the essential renewal work proceeding inasmuch as Schenectady's financial resources are barely sufficient to meet current operating costs. Because of this inequity, Mr. Speaker, something must be done to preserve these credits if the program is improved at a later date.

Interest and enthusiasm for this project in the community are at a high level. It is extremely important, Mr. Speaker, that the Congress face the crisis of our cities. If we hold out hope one day and retreat the next, residents in our deteriorating, older, core cities of the Nation will continue to view with suspicion the Federal Government's sincerity in providing better environment and a new life for many of its citizens.

It is my understanding that there are up to 20 cities throughout the Nation which are facing similar loss in credits which will also impair their renewal plans.

Mr. Speaker, Schenectady is not alone in this problem. Since H.R. 13271, the bill I introduced today, is designed to only assist Schenectady with its long-term neighborhood development program, I would urge other Members of Congress to join with a similar measure affecting cities similarly situated. Or, better yet, Mr. Speaker, the Housing Subcommittee of the Banking and Currency Committee might consider some general legislation, when it next meets in executive session, that would cover all these cities which have lost or will lose credits. Such action by the committee would cure the administrative problem resulting from changeovers from renewal to neighborhood development programs.

Perhaps a 1-year extension of the 3-year period in the case of any community facing loss of credits would be an equitable solution. In any case, Mr. Speaker, something must be done.

At this point in the RECORD, Mr. Speaker, I include the contents of H.R. 13271.

H.R. 13271

A bill to permit expenditures in connection with certain schools in Schenectady, New York, to be counted as local grants-in-aid to federally assisted urban renewal projects and neighborhood development programs in Schenectady

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the date of the commencement of construction of the Martin Luther King Elementary School and the Steinmetz Junior High School in Schenectady, New York, local expenditures made in connection with such schools shall, to the extent otherwise eligible, be counted as local grants-in-aid for federally assisted urban renewal projects and neighborhood development programs in Schenectady that will be served by such schools.

WARSAW UPRISING DAY AUGUST 1, 1969

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. ROONEY) is recognized for 20 minutes.

Mr. ROONEY of New York. Mr. Speaker, today we are privileged to join with the membership of our patriotic Polish-American societies in commemorating one of the greatest acts of heroism to be recorded in modern history. Today marks the 25th anniversary of the Warsaw uprising.

Few times in history have the enslaved and oppressed people of a country given such an heroic account themselves in such a valiant fight as did the thousands of citizens of Warsaw in an effort to free themselves of the Nazi rapists and butchers who held them in intolerable subjugation.

With a sudden and impassioned zeal of patriotic fervor Polish men, women, and children with full realization of the overwhelming odds against them rose up en masse against their oppressors. For 63 days they fought the Nazis with every conceivable weapon which they could acquire, hoping to dislodge the overlords from their beloved capital. If this goal were achieved, they hoped Poles throughout the Nation would join in a massive revolt.

For 2 months the streets were daubed with patriots' blood as day after day courageous Poles gave their lives to attain freedom.

So it was that more than 200,000 of these heroic people perished at the hands of the Nazis while Russian Communist troops stood by and saw them die.

It should not be said that these noble fighters died in vain. Their valor and their dedication to a precious ideal gave new heart to the fighting forces of the Allies and new courage to all the people mobilized to halt the Nazi waves of terror and bring an end to the reign of suffering and horror which the mad Fuhrer had launched.

How tragic it is that once the Nazis had been overcome and the people of Poland regained some of their freedom that all too soon they would find themselves once more being ruled by an alien power and deprived of all self-determination.

Mr. Speaker, the people of Poland today need the help and sympathetic understanding of every American. They need our help to see them through one painful experience after another. Even though there have been some social and economic improvements which they have attained in spite of the Kremlin's domination of their lives, the Polish people are far from content with their false leaders and the existence which they are forced to endure.

The hunger for freedom by every Polish patriot can never be sated by the rule of aliens no matter how tolerant or benign that rule might be—which it is not. The thirst for complete independence cannot be slaked by occasional palliatives or partial concessions.

No, Mr. Speaker, for centuries the people of Poland have kept the spark of liberty glowing even in the face of prolonged and bitter adversity. Because of this great love for freedom which antedates our very existence, and because of the great help given by Polish patriots to the attainment of our own freedom, we must not let the Polish people down in their present tragic hour of need. We must join with all Polonia throughout this country to do our utmost to bring to Poland a measure of that freedom for which the citizens of Warsaw fought so gloriously.

NEED FOR WAGE-PRICE GUIDEPOSTS

The SPEAKER. Under a previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 20 minutes.

Mr. REUSS. Mr. Speaker, I have prepared for introduction today H.R. 13278, a bill to reinvigorate wage-price guidepost policy the Nixon administration has rejected.

The recent steel price increase and other price increases in copper, nickel, zinc, and aluminum in the past several months will, unless rolled back, lead to another round of price increases in everything from automobiles to safety pins.

Yet the Nixon administration stubbornly sticks to its doctrinaire position, contradicted by every fact of economic life, that monetary and fiscal policy is alone enough to fight inflation.

My bill directs the Council of Economic Advisers to prepare wage-price guideposts "after full consultation with representatives of business and organized labor." A three-man price-wage stabilization board is then "to study actual or imminent price and wage behavior inconsistent with the guideposts, to hold public hearings on their justification, and to report to the Government and the public whenever such price or wage behavior in fact threatens economic stability together with its recommendations for action."

Restrictive fiscal and monetary measures are appropriate and effective for controlling price and wage behavior caused by overall excessive demand, but may be ineffective with respect to individual price and wage behavior, particularly in industries with large firms or unions. My bill provides a mechanism for bringing to bear an informed public opinion in order to restrict such price or wage behavior when it threatens national economic stability by causing inflation.

The text of H.R. 13278 follows:

H.R. 13278

A bill to amend the Employment Act of 1946 to bring to bear an informed public opinion upon price and wage behavior which threatens national economic stability

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

DECLARATION OF POLICY

SECTION 1. The Congress hereby declares that a new mechanism is needed to carry out the aims of the Employment Act of 1946 to promote maximum employment, production, and purchasing power (which includes the concept of reasonable price stability). Restrictive fiscal and monetary measures are appropriate and effective for controlling price and wage behavior caused by overall excessive demand, but may be ineffective with respect to individual price and wage behavior in industries with large firms or unions. This Act provides a mechanism for bringing to bear an informed public opin-

ion in order to restrain such price or wage behavior when it threatens national economic stability by causing inflation.

DETERMINATION OF PRICE-WAGE GUIDEPOSTS

SEC. 2. (a) Section 4(c) of the Employment Act of 1946 is amended by striking out the period at the end of paragraph (5) and inserting a semicolon, and by adding at the end thereof the following new paragraph:

"(6) to transmit to the joint committee not later than January 20 of each year price-wage guideposts which would, if observed, achieve noninflationary price and wage behavior. Such price-wage guideposts shall be arrived at after full consideration of probable productivity increases, and after full consultation with representatives of business and organized labor."

(b) Section 5(b) of the Employment Act of 1946 is amended by striking out "and" at the end of paragraph (2), by striking out the period at the end of paragraph (3) and inserting a semicolon, and by adding at the end thereof the following new paragraph:

"(4) to review the price-wage guideposts transmitted to it by the Council. If the joint committee determines that such guideposts are not appropriate to their purpose, it shall promptly report to the Senate and House of Representatives a bill or resolution setting forth appropriate price-wage guideposts. The price-wage guideposts transmitted to the joint committee by the Council shall take effect upon transmittal, and shall remain in effect until such bill or resolution is enacted, or until superseded by the Council. Any bill or resolution relating to price-wage guideposts shall be referred to the joint committee. Such bill or resolution shall be eligible to be reported to the Senate by the members of the joint committee who are Members of the Senate, and to the House of Representatives by the members of the joint committee who are Members of the House of Representatives."

DETERMINATION OF PRICE-WAGE BEHAVIOR INCONSISTENT WITH GUIDEPOSTS

SEC. 3. (a) The Employment Act of 1946 is amended by adding at the end thereof the following new section:

"SEC. 6. (a) There is hereby created in the Executive Office of the President a Price-Wage Stabilization Board made up of three distinguished citizens recognized for their devotion to the public interest, who shall be appointed by the President, by and with the advice and consent of the Senate. The President shall designate one of the members of the Board as Chairman.

"(b) It shall be the duty of the Board to study actual or imminent price and wage behavior, particularly in industries with large firms or unions, inconsistent with the price-wage guideposts; to hold public hearings where necessary on such actual or imminent price or wage behavior which threatens national economic stability; and to report promptly to the President, the Joint Committee, the Council and the public any such price or wage behavior which does in fact threaten national economic stability, together with findings and recommendations on action in the public interest to be taken by the President, the Congress, or the parties concerned.

"(c) For the purposes of carrying out its functions under subsection (b) above, the Wage-Price Stabilization Board may administer oaths, and require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memorandums, papers, and documents as the Board may deem advisable. The provisions of sections 102 through 104 of the Revised Statutes of the United States (2 U.S.C. 192–194) shall apply in the case of any failure of any witness to comply with any subpena or to testify when summoned under authority of this section.

"(d) To enable the Board to exercise its powers, functions, and duties under this Act, there are authorized to be appropriated such sums as may be necessary."

PUERTO RICAN CONSTITUTION DAY

The SPEAKER. Under a previous order of the House, the gentleman from New York (Mr. RYAN) is recognized for 10 minutes.

Mr. RYAN. Mr. Speaker, I wish to extend hearty congratulations and good wishes to the people of the great Commonwealth of Puerto Rico on the occasion of the 17th anniversary of their attainment of self-government which took place July 25. In celebrating Puerto Rican Constitution Day, we commemorate far more than the constitution which went into effect on July 25, 1952, making Puerto Rico virtually autonomous. That event—made possible by the enactment of U.S. Public Law 600 of the 81st Congress—a landmark in Puerto Rican history, saw the emergence of "a new political mutation"—in the words of Luis Muñoz Marín—which is the distinctive contribution of the Puerto Rican Commonwealth whose status "as a free and associated state or community is a new dimension", according to Carl J. Friedrich, "in Federal Government." Here was created a self-governing community established by a mutually agreed-upon compact, a contractual relationship defining the conditions of freedom and self-government in terms which admit of no change without mutual consent. Whatever the future may hold, the Commonwealth ideal as enunciated by Governor Muñoz in 1950—"a union of peoples which increases the freedom of peoples"—will remain as an inspiring example of enlightened public policy.

The attainment of self-government was itself the result of a process closely bound up with the extraordinary social and economic development of Puerto Rico over the past several decades—an era of "peaceful revolution" with far-reaching consequences for other developing lands throughout the world. To a remarkable extent this peaceful revolution was directed and led by one man, Muñoz Marín, a brilliantly effective innovator in a transitional society. Combining in his person the values and traditions of both Puerto Rico and America, he was able to develop and strengthen the self-confidence of his people in ways both impressive and lasting. The achievement of commonwealth status in 1952 represented the fulfillment of his aspirations for autonomous status after many years of effort. As early as 1929 he spoke of that "vision of opulence" which had come to the people of Puerto Rico and the growing gulf between "what they—the people—have and what they can imagine." He thus addressed himself to the need for a decent standard of living for all, and by 1938 had virtually a single-minded emphasis on popular welfare—land reform, education, health, and economic development—in a land traditionally beset with poverty, disease, misery, and ignorance. His dedication to commonwealth status reflected his belief that Puerto Rico—if it continued in association with the United States—could become a cultural bridge between North America and the Latin America community. The advantages of a common market and common citizenship with the United States, as well as of fiscal autonomy, were held to outweigh the status of independence. He has lived to see Puerto Rico virtually transformed from the depressed "stricken land" of Gov. Rexford Tugwell's famous book to a condition of prosperity unprecedented in its past, under a unique status.

From the beginning, the story of Puerto Rico—discovered by Columbus in 1493, a year after his more famous voyage—has been inextricably bound up both with Europe and mainland America, foreshadowing its special relationship in later history to the United States and the Hispanic cultural world. The antecedents of constitution day are to be found in the relationship of Puerto Rico to the kingdom of Spain, a relationship extending back in time to the first Spanish settlement in 1508 by Ponce de Leon, the discoverer of Florida. The mercantilist policies of the Spanish Crown were repeated by a decree of 1815, which resulted in the promotion and growth of colonization: from 221,000 in 1815 the island population grew to 330,000 by 1832. In 1870 Puerto Rico was recognized as a Province of Spain with the right to elect deputies to the Cortes, a constitutional advance withdrawn in 1874 due to changing political conditions in Spain. However, under the constitution of 1876, Puerto Rico received the Autonomous Charter of 1897 which granted a large measure of autonomy and local self-government, including a bicameral, elected Parliament which met for the first, and only, time in the fateful year of the Spanish-American War, 1898. To a large extent, the charter of 1897 was the result of vigorous leadership on the part of Luis Muñoz Rivera, father of Muñoz Marín and often referred to as the "George Washington of Puerto Rico."

The coming of the Americans, in July of 1898, marked the end of Spanish rule which had lasted over four centuries. By the Treaty of Paris in 1899, Puerto Rico—which, mercifully, had witnessed only 3 weeks of actual fighting—was ceded to the United States. A wholly new dimension thus entered Puerto Rican life, and the subsequent history of the island is one of cultural conflict and synthesis. At first there was a policy of all-out Americanization by the military, and subsequent civil, administration, leading to inevitable stress and strain. The ensuing crisis in culture has been sensitively portrayed by Henry Wells in his recent study, "The Modernization of Puerto Rico."

Congress early recognized the need for the development of self-governing institutions, however, and in 1900 the Foraker Act established minimal forms of self-government—popular election to the lower house in a bicameral legislature; the upper house, the Governor, the judiciary, and so forth, all were to be appointed by the President of the United States. The act was widely resented in Puerto Rico. Nevertheless, it marked the first step in a 50-year process of evolution culminating in plenary self-govern-

ment in the Commonwealth Act we now commemorate.

In 1909, under the Olmsted Act, the War Department was given the supervision of Puerto Rican affairs. Significantly, Muñoz Rivera was eventually designated as the first Resident Commissioner. In large part through his efforts, the Jones Act of 1917 further extended self-government—including a popularly elected senate—to the island, affirmed the Bill of Rights as a part of the organic statutes, and granted American citizenship collectively to all who wished to claim it. Appointment of the Governor and his cabinet, as well as the supreme court, was reserved to the President. In 1947, the Jones Act was amended to permit election of the Governor, and cabinet, with the auditor and supreme judiciary only still appointive. Luis Muñoz Marín became the first popularly elected Governor, reelected regularly until 1965. In 1950, the Resident Commissioner, Antonio Fernos Isern, introduced legislation for a constitutional convention—confirmed by referendum in 1951.

In July of 1950, President Truman signed Public Law 600 of the 81st Congress, which set into motion the procedures leading to formal Commonwealth status, July 25, 1952. That status was sustained in the plebiscite of 1967—often called "the election everybody won"—in which 60.5 percent of the voters supported that status, 38.9 percent voted for statehood, and 0.6 percent for independence.

The evolution of political self-government, symbolized by the observance of Constitution Day, should be viewed against the background of economic and social development during the past half-century or more. American presence, from 1898 on, brought about a dramatic broadening of public education, a vast expansion of the sugar industry, and the beginning of a comprehensive public health program. As a direct result of the decrease in the mortality rate, paradoxically enough, unemployment steadily rose. The need for industrial development became acute. The result was "Operation Bootstrap", fathered by Luis Muñoz Marín in the 1940's in the hope of creating a modern, industrial society with a diversified economic base, as against the underdeveloped agricultural society of 1920 with its one- or two-crop economy. Lacking significant fuel or mineral deposits and limited by a relatively small land, Puerto Rico possessed one great attribute—its people.

Through the efforts of the Fomento, the Puerto Rico Economic Development Administration, and the genius of Muñoz Marín, the face of the island was transformed. Creative leadership called forth the energy, the initiative, and the adaptability of the Puerto Rican people. In 1968–69 alone, over 551 new factory projects—with the promise of 42,000 new jobs—were begun, 11 percent more than in 1967–68, and 75 percent more jobs. Personal income has risen from about $118 a year in 1940 to some $1,200 today. There are today over 1,500 Fomento factories with over 100,000 employees. The gross national product rose by 11.2 percent in 1967 alone, over 1966. Puerto Rico today is the fifth largest market for U.S. goods. There seems little doubt that the rate of euonomic growth and industrial development will continue at least into the 1980's without interruption—barring external crisis.

The level of education has also been transformed. Only 16.6 percent of the population was literate in 1899. Today, however, some 90 percent of all children between the ages of 6 and 18 attend public schools. Public health and education together have increased the life expectancy to approximately that of the United States—70. A burgeoning professional bureaucracy and the proliferation of voluntary associations also symbolize the advent of modern civilization. To a large extent, the progress of industrialization has been made possible by the special tax incentives and aids, together with the absence of Federal taxes, which are part of the fiscal autonomy provided by commonwealth status.

The future of commonwealth status appears clouded in the opinion of many observers, despite the benefits of common citizenship, currency, defense, and trade as well as various Federal tax exemptions. The absence of complete mutuality; for example, in trade relations, and the lack of any voting representation in American elections are felt keenly by an increasing number who, sensitive to certain inequalities and paradoxes of the present system, yet are anxious to retain American help during the crucial years of transition which lie ahead. Broadly speaking, there appear to be three alternatives confronting the island: First, full statehood, the desire of increasing numbers; second, independence, the desire of a distinct minority at present; and third, commonwealth status. The last might be conceived as leading to either of the first two. Probably, however, common citizenship with the United States should be seen, realistically, as an intermediate step toward statehood or some form of ultimate association not yet perceived. The election of Gov. Luis A. Ferre in 1969, an outspoken proponent of statehood and the first statehood-minded Governor, may be taken as indicative of the present direction. Close and continued association with the United States represents the desire of an overwhelming majority, regardless of the disputes surrounding the present status.

Constitution Day, 1969, is a convenient watershed from which to survey the past and to look in hope toward the future. The traditional heritage of Puerto Rico—her Hispanic culture with its ideals of respeto—respect—and dignidad—dignity—of personalismo—personalism—and individuality—belong to a proud and ancient people, blessed with an island home of surpassing beauty, linked in a hundred significant ways with Europe and Latin America as well as with the United States. Aspects of this culture, such as its fatalism, and its tendency to disvalue the empirical and the pragmatic, have come into conflict with the more aggressive North American culture and its emphasis upon wealth, well-being, skill, group activity, and the like. In this clash of culture may we not see an opportunity for mutual influence and enrichment. Both have much to offer. The humanism associated with the ideal of the hidalgo is still a vital force in Puerto Rico: we recall that Luis Muñoz Marín was widely known as el Vate—the bard—for his early poems, while Governor Ferre is himself a distinguished patron of the arts, having founded the Ponce Museum of Art.

Certainly Puerto Rico is changing. Yet the pattern of change has not appeared to destroy the underlying vitality of her tradition, her language, and her culture, which all make her an integral part of the Latin American community. At the same time she faces grave problems, which demand bold responses and new programs. Some 10 to 13 percent of the labor force is still unemployed, a problem especially severe in the rural towns. The "new life" program of Governor Ferre has recognized the need for a "successful way to be collectively generous" beyond the traditions of private, personal generosity. The presence of the first woman ever to hold a cabinet post also marks the pace of change in a land once dominated by machismo—male superiority.

There is, in summary, a real sense in which Puerto Rico is a test case for our American democracy. Hitherto, the dominant cultural patterns in our society has presumed to absorb and to assimilate divergent cultures—with varying degrees of success. Now we are confronted with prideful Spanish-speaking people, freely and intimately associated with our Nation as citizens and, indeed, present on the American mainland in ever increasing numbers, no longer a special presence only in the Southwest, but more and more a major national community. Puerto Rico and her people may yet teach us all the lesson so finely expressed by Luis Muñoz Marín in his advocacy of Operation Serenidad. He said:

> To remind us that man is man and not just a consumer, a society in which Operation Serenity has been successful, would use its economic power increasingly for the extension of freedom and knowledge rather than for multiplication of goods in hot pursuit of a still more vertiginous multiplication of wants.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. ANDERSON of California), to revise and extend their remarks and include therein extraneous matter:)

Mr. REUSS, for 20 minutes, today.

Mr. RYAN, for 10 minutes, today.

Mr. GONZALEZ, for 10 minutes, today.

Mr. ROONEY of New York, for 20 minutes, today, to revise and extend his remarks and to include extraneous matter.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. MADDEN and to include extraneous matter.

Mr. DADDARIO and to include extraneous matter.

(The following Members (at the request of Mr. MILLER of Ohio), to extend their remarks and include additional matter:)

Mr. HASTINGS.

Mr. MCEWEN in 10 instances.

Mr. GUBSER.

Mr. STEIGER of Wisconsin.

Mr. KEITH in two instances.

(The following Members (at the request of Mr. ANDERSON of California), to extend their remarks and include additional matter:)

Mr. PREYER of North Carolina.

Mr. ROONEY of New York.

Mr. LONG of Maryland in three instances.

Mr. CORMAN in five istances.

Mr. FRASER in two instances.

Mr. DADDARIO in five instances.

Mr. GRIFFIN in two instances.

Mr. BURKE of Massachusetts.

Mr. CHARLES H. WILSON.

Mr. GONZALEZ in two instances.

Mr. HELSTOSKI in two instances.

SENATE ENROLLED JOINT RESOLUTION SIGNED

The SPEAKER announced his signature to an enrolled joint resolution of the Senate of the following title:

S.J. Res. 85. Joint resolution to provide for the designation of the period from August 26, 1969, through September 1, 1969, as "National Archery Week."

ADJOURNMENT

Mr. ANDERSON of California. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 23 minutes p.m.), under its previous order, the House adjourned until Monday, August 4, 1969, at 12 o'clock noon.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. COLMER: Committee on Rules. House Resolution 509. Resolution for consideration of H.R. 9951, a bill to provide for the collection of the Federal unemployment tax in quarterly installments during each taxable year; to make status of employer depend on employment during preceding as well as current taxable year; to exclude from the computation of the excess the balance in the employment security administration account as of the close of fiscal years 1970 through 1972; to raise the limitation on the amount authorized to be made available for expenditure out of the employment security administration account by the amounts so excluded; and for other purposes (Rept. No. 91–412). Referred to the House Calendar.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDERSON of California:

H.R. 13269. A bill to amend chapter 3 of title 38, United States Code, in order to provide for a veterans outreach services program in the Veterans' Administration to assist eligible veterans, especially those recently separated, in applying for and obtaining benefits and services to which they are entitled, and education, training, and employment, and for other purposes; to the Committee on Veterans' Affairs.

By Mr. MILLS (for himself and Mr. BYRNES of Wisconsin):

H.R. 13270. A bill to reform the income tax laws; to the Committee on Ways and Means.

By Mr. BUTTON:

H.R. 13271. A bill to permit expenditures in connection with certain schools in Schenectady, N.Y., to be counted as local grants-in-aid to federally assisted urban renewal projects and neighborhood development programs in Schenectady; to the Committee on Banking and Currency.

By Mr. DADDARIO (for himself and Mr. MOSHER):

H.R. 13272. A bill to establish a national policy for the environment and to establish a Citizens' Advisory Committee on Environmental Quality; to the Committee on Science and Astronautics.

By Mr. FRASER:

H.R. 13273. A bill to amend section 312 of the Housing Act of 1964 to eliminate the provision which presently limits eligibility for residential rehabilitation loans thereunder to persons whose income is within the limits prescribed for below-market-interest-rate mortgages insured under section 221(d)(3) of the National Housing Act; to the Committee on Banking and Currency.

By Mr. HASTINGS (for himself and Mr. SMITH of New York):

H.R. 13274. A bill to amend the Social Security Act to establish a national program of income maintenance payments to needy individuals who are aged, blind, or disabled and Federal-State programs of public assistance to all other needy individuals and families, to provide grants to States for services to all needy individuals and families, to strengthen Federal support of the State medical assistance programs, and for other purposes; to the Committee on Ways and Means.

By Mr. HENDERSON:

H.R. 13275. A bill to amend title 39, United States Code, to exclude from the U.S. mails as a special category of nonmailable matter certain obscene material sold or offered for sale to minors, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. HICKS (for himself, Mr. MEEDS, and Mr. PELLY):

H.R. 13276. A bill to amend the Tariff Schedules of the United States with respect to the rate of duty on whole skins of mink, whether or not dressed; to the Committee on Ways and Means.

By Mr. MONTGOMERY:

H.R. 13277. A bill to amend the Food Stamp Act of 1964, as amended; to the Committee on Agriculture.

By Mr. REUSS:

H.R. 13278. A bill to amend the Employment Act of 1946 to bring to bear an informed public opinion upon price and wage behavior which threatens national economic stability; to the Committee on Government Operations.

By Mr. MILLS:

H. Res. 510. Resolution authorizing the printing of additional copies of a basic report (pt. I) accompanying the Tax Reform Act of 1969; to the Committee on House Administration.

H. Res. 511. Resolution authorizing the printing of additional copies of a supplementary report (pt. II) accompanying the Tax Reform Act of 1969; to the Committee on House Administration.

SENATE—*Friday, August 1, 1969*

(Legislative day of Wednesday, July 30, 1969)

The Senate met at 11 o'clock a.m., on the expiration of the recess, and was called to order by Hon. JAMES B. ALLEN, a Senator from the State of Alabama.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Hear and help us, Eternal Father, to appropriate the promise of Thy word: "They that wait upon the Lord shall renew their strength." When times are tense and nerves are taut, when the body is weary and the going is hard, help us to know that "the Eternal God is our refuge and underneath are the everlasting arms." So may we lean upon the arms which support and strengthen us hour by hour that we may love Thee and serve Thee, and by loving and serving Thee minister to the needs of this Republic. May the words of our mouths, the meditations of our hearts, and the motives determining our deeds be acceptable in Thy sight, O Lord, our strength and our Redeemer. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., August 1, 1969.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. JAMES B. ALLEN, a Senator from the State of Alabama, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. ALLEN thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Journal of the proceedings of Thursday, July 31, 1969, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, at the conclusion of the remarks of the distinguished Senator from Connecticut (Mr. DODD), there be a brief period for the transaction of routine morning business, with statements therein limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

AUTHORIZATION TO PRINT IN THE RECORD QUORUM CALL NO. 57

Mr. MANSFIELD. Mr. President, if the distinguished Senator from Connecticut will allow me a minute or so, I ask unanimous consent that Quorum Call No. 57, which was taken on July 17, 1969, during the closed session of the Senate, be printed in the RECORD of today, for the convenience of those who keep records of attendance and voting records of Senators. No question of security appears to be involved in revealing the names of Senators who were present. This request has been cleared with the minority leader and the Senator from Mississippi (Mr. STENNIS), as well as the President pro tempore.

There being no objection, the quorum call was ordered to be printed in the RECORD, as follows:

[No. 57 Leg.]

Aiken	Goodell	Moss
Allen	Gore	Mundt
Allott	Gravel	Murphy
Anderson	Griffin	Muskie
Baker	Gurney	Nelson

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

JACK BELL, WASHINGTON NEWSMAN

Mr. MANSFIELD. Mr. President, I should like to express my regret at the passing, in a sense, of Jack Bell, from the Washington political scene. He is not going away; he is just shifting from one base of operations to another. It is my understanding that he is going to become a columnist for the Gannett newspapers. I am delighted with the news. I hope that his columns will extend far beyond that initial endeavor.

Jack has been a newspaperman's newspaperman. He has been analytical, he has been cynical, he has been critical, he has been kind, and he has been understanding—and that combination makes a good newsman.

So to Jack we bid a fond farewell from his present position as the chief political writer for the Associated Press on the Hill, and a fond hello to him on the basis of the new position he is going to undertake and the new responsibilities which will be his.

He is a great and a good newsman. I am delighted that he is not leaving us and is staying close at hand. I wish him well in his many years ahead.

Of his successor, Walter Mears, I want to say that a fine newsman has been chosen to succeed Jack Bell. I am delighted that Walter is going to head the political bureau in Washington. In assuming this position he stands in his own shoes. But, I must say the e is a good deal of Jack Bell in Walter Mears, too. So to Walter Mears, congratulations and hello.

Mr. DIRKSEN. Mr. President, will the Senator yield.

Mr. MANSFIELD. I yield.

Mr. DIRKSEN. Mr. President, Jack Bell is really a student of our form of government and a student of the American political system, in the broadest sense of the word. He found time away from his duties as a top man with Associated Press to do a very excellent, scholarly book that he called "Splendid Misery." He took the title from a statement that was once made by Thomas Jefferson about the Presidency. Jefferson referred to it as the "spendid misery." Mr. Bell's book dealt with the Chief Executive and with that office, and it was a tremendous contribution to the literature in that field.

He has been an equally keen observer of the legislative scene over a long period of years and undertook, of course, to call them as he saw them. I always enjoyed the banter that I had with him, day after day and year after year, at the meetings in the Press Gallery which followed the minority part luncheon on Tuesday every week. To me, that was at once an informative, a delightful, and a rather challenging experience; and there I think I got to know Jack Bell better than I had at any other time.

He is in every sense a great reporter, and he goes to an excellent newspaper setup—namely, that of the Gannett chain. I am sure his columns will be stimulating. They will be incisive; sometimes they will be trenchant; sometimes they will carry a few barbs. But we will understand fully that all that will come out of the expertise, the wisdom, and the background that Jack Bell accumulated from the time he was in the Senate Gallery. So I wish him well.

We think often that a man retires to the bliss of retirement, but that will not be the case with him. He leaves one employer; but I have an idea that in assembling information and material for his column, he is going to be infinitely busier than he ever was before.

I discovered, when they wished a column off on me—partly at the instance of the Senator from Arizona (Mr. FANNIN)—that I got into the toils of the Los Angeles Times syndicate; and I know what it is to sit around and drool and puzzle and look at a blank wall, wondering what the column would be for that week.

So Mr. Bell, if he is going to do a daily column, is going to be thinking long and loud about the things that ought to go into it. Perhaps here and now I ought to make a public offer to him that if he gets into difficulties, he can weep on my shoulder, as a fellow columnist, and perhaps I can give him a few ideas. I wish him well.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. DODD. I yield.

Mr. STENNIS. Mr. President, I wish to join in the compliments that have been paid to Jack Bell with respect to his professional capacity, professional integrity, and fine qualities. He certainly has been of service to the Senate, to Congress, and to the people.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH, AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The ACTING PRESIDENT pro tempore. The Chair lays before the Senate the unfinished business, which will be stated.

The ASSISTANT LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Chair recognizes the Senator from Connecticut (Mr. DODD) for not to exceed 1 hour.

MORALITY, ARMS CONTROL AND THE NATIONAL SECURITY: THE CASE FOR THE ABM

Mr. DODD. Mr. President, over the past 6 months there has taken place in our country a historic debate on defense policy.

The specific question at issue is whether or not we should deploy the Safeguard anti-missile-defense system proposed by the President.

This debate takes place under the shadow of the so-called balance of terror which has been spawned by the nuclear era.

Winston Churchill described this balance of terror in these dramatic terms in a speech which he made in the House of Commons in 1953, as follows:

> I have sometimes the odd thought that the annihilating character of these agencies may bring an utterly unforeseeable security to mankind. It may be . . . that when the advance of destructive weapons enables everyone to kill everybody else, nobody will want to kill anyone at all.

It is a commentary on the awful time we live in that the peace of the world has become dependent on the state of mutual nuclear terror which has characterized Soviet-American relations for the past 15 years or more.

We are obliged to rely on this balance of terror as the surest guarantee against annihilation, until that distant day in the future when agreements are reached abolishing these weapons of mass destruction.

There is general agreement that the peace of the world would become far less secure if this balance were ever to become unbalanced as a result of a major technological breakthrough by one side, in either offensive or defensive weapons.

This, essentially, is what the debate over the Safeguard ABM system is all about.

The Soviets have for more than 5 years now been deploying an ABM system around Moscow, and are carrying on an intensive program of continuing research in this area.

And the question has quite naturally arisen whether the United States can afford to be any less well defended than the Soviet Union.

The issue of whether or not the United States should deploy an antimissile defense system has been debated not only by Congress, both in committees and on the floor, but in the columns of our press, in the academic community, in our high schools, and even in our elementary schools.

It is questionable whether any issue of public policy has ever been discussed by so many people and with such intensity.

In a statement issued on April 7, 1969, the Public Affairs Committee of Freedom House in New York warned that "there is a grave danger that the debate over the ABM may become primarily emotionalized or politicized . . . ."

From the mail that I have received in my office, I am afraid that the condition against which Freedom House warned has become very widespread.

Attitudes have become set.

Minds have become closed.

The process of rational discourse seems to have ground to a halt.

Instead, many of the participants in the debate display a disturbing tendency to assume that their side has a monopoly of knowledge, wisdom, and integrity, and that the other side is acting out of some sinister motivation.

Among other things, an effort has been made in certain quarters to characterize the debate on the ABM as a conflict between conservatives and liberals.

Nothing could be further from the truth.

The fact is that there are conservatives and liberals on both sides of this question; and to pretend otherwise only serves to confuse the issue.

It is my hope that the excesses which have characterized the ABM debate in the public domain will not be reflected in the closing debate in the Senate of the United States.

For all of us know that, like so many other problems of our time, the ABM is an issue over which men of equal intelligence and integrity can sharply disagree.

And no matter how committed Senators are at this stage of the discussion, they will, I hope, examine the record of all the testimony and all the debate, conscious of the grave importance of the decision.

Much of the argument is highly technical. This is so particularly in the case of the arguments over the possible effectiveness of the ABM, the possible effectiveness of confusion devices, and whether or not the Soviets can achieve a first-strike capability by the mid-1970's.

When men who have devoted their lives to science and technology can disagree so profoundly on these issues, I feel that it would be presumptuous for a layman to pretend to any final opinion.

Indeed, I feel that the entire debate has been bedeviled, on the one hand, because of the tendency of politicians and laymen to speak like scientists, and, on the other hand, because of a tendency on the part of our scientists to speak like political experts.

The 17th century English scientist, Robert Hooke, once admonished his fellow natural scientists that they should strive to—

> Improve the knowledge of all natural things . . . by Experiment, not meddling with Divinity, Metaphysics, Moralls, Politicks, Grammar, Rhetoric, or Logick.

But Robert Hooke notwithstanding, many of our scientists today seem to feel that the discipline to which they submitted themselves in achieving expertise in their own specialities somehow qualifies them to also act as political experts.

I have not been able to find a counterpart of Robert Hooke's admonition, addressed to politicians playing the role of scientists.

But I must say I have been impressed by the dauntless confidence with which so many of my lay friends have bandied about technical estimates and calculations, and offered summary conclusions on highly complex matters where the experts themselves are split down the middle.

I intend to confine my own argument to certain observations that are not dependent on technical expertise, and on certain basic estimates in the field of foreign policy where my personal experience over the years does qualify me, I believe, to speak with some competence.

After weighing all of the evidence, I have arrived at the conclusion that the Safeguard ABM system should be supported.

It should be supported in the interest of peace, because a limited ABM system on both sides will make peace more secure by giving both sides the ability to protect themselves against accidental firings or attacks by any new nuclear powers.

It should be supported in the interest of arms control because the mutual possession of anti-missile-defense systems would create a climate more conducive to agreements limiting the number of weapons of mass destruction.

It should be supported in the interest of our national security because the protection of our deterrent force protects the American people in the most basic way by reducing the possibility of thermonuclear war.

It should be supported for political reasons, because the entire course of Soviet conduct, especially in recent years, including the massive buildup of thermonuclear weapons by the Kremlin, points to the conclusion that we are entering a period of continuing crisis in which the lack of an ABM system could only serve to encourage Soviet challenges and adventures.

Above all, it should be supported on moral grounds because it is infinitely better to build defensive weapons, designed to protect and save life, than it is to build aggressive weapons, designed to harm and destroy life.

THE SOVIET ATTITUDE TOWARD ABM

There is absolutely nothing in the Soviet literature that would bear out the charges of the critics that the deployment of Safeguard would be regarded by the U.S.S.R. leaders as an escalation of the arms race.

On the contrary, the Soviets, because they believe in a balanced mix of offensive and defensive weapons, have a much more rational attitude toward antimissile defense than we do.

Essentially they take the stand that defensive systems are not provocative and that they are stabilizing, not destabilizing. Indeed, Soviet spokesmen have made some of the most effective arguments for the ABM.

When Prime Minister Aleksei Kosygin at a London news conference in February of 1967 was asked if the Soviets' antimissile system was not a new step in the arms race, he replied:

> It seems to me that the system that protects against an attack is not a factor in the arms race. On the contrary, it is a factor that reduces the possibility of the destruction of the people.

This position has been spelled out in much more detail by other spokesmen for the Soviet viewpoint. For example, an article written several years ago by a Soviet strategic writer, Maj. Gen. N. Talensky, said.

> Antimissile systems are defensive weapons in the full sense of the word: by their technical nature they go into action only when the rockets of the attacking side take their flight paths, that is, when the act of aggression has been started. The advantage of antimissile systems in the political and international law context is that their use is caused by an act of aggression, and they will simply not work unless an aggressor's rocket makes its appearance in flight over a given area. There will be no difficulty at all in deciding who is he aggressor and who the attacked.
>
> It is obvious that the creation of an antimissile defense merely serves to build up the security of the peaceable, non-aggressive states. The creation of an effective antimissile defense system by a country which is a potential target for aggression merely serves to increase the deterrent effect and so helps to avert aggression. It is said that the international strategic situation cannot be stable where both sides simultaneously strive for deterrence through nuclear rocket power and the creation of defensive antimissile systems. I cannot agree with this statement either. From the viewpoint of strategy, powerful deterrent forces and effective antimissile defense system, when taken together,

substantially increase the stability of mutual deterrence.

Such statements, together with the fact that the Soviet Union has been deploying its own antimissile system for more than 5 years now, effectively demolishes the argument that the Soviets would regard the building of an ABM on our side as a provocation.

I note, parenthetically, that none of the critics has yet suggested that the Soviets would be willing to dismantle their own ABM system if we should decide not to deploy one of our own.

In fact, unless I have missed something, none of them has even suggested that we raise this point in the forthcoming arms control negotiations with the Soviet Union.

Indeed, it would be difficult to think of any approach more calculated to get the Russians to put up their backs.

For such a proposal would really wreck any conference on the limitation of nuclear arms.

And it is not just that the Soviets would insist that the ABM is a purely defensive antiaggressive device, which the Americans need not fear and on which there can be no compromise.

Even if the Soviet leaders were completely satisfied about American intentions, they would still want their ABM system as a protection against Red China. And for this they certainly cannot be blamed.

Before going on to deal with some of the more controversial aspects of the ABM and with some of the other arguments that have been made against it, it would be useful to review certain things which the Safeguard system could almost certainly do or which it would have a very good chance of doing.

THE ABM AND ACCIDENTIAL MISSILE FIRINGS

The Safeguard ABM and an equivalent installation in Russia would reduce the danger of accidental thermonuclear war by giving both sides the capability to deal with an accidental missile firing.

The probability of an accidental missile firing or of a firing by unnerved or psychotic commanders on either side is low.

Some of the critics of ABM have argued that the chances of an accidental firing are indeed so negligible that we can ignore this possibility altogether. I do not agree with them.

No one knows for certain whether the chance of an accidental missile firing through technological failure is one in a million or one in 50 million each year. But it is a disturbing thought that, if there is a one in a million chance that there will be an accidental firing in any given year, then, over a 20-year period, the odds would be reduced to one in 50,000. And if the number of existing missiles, worldwide, were to be doubled or tripled over the coming decade, then the odds would be reduced by just that much again.

We take fire insurance on our houses on the basis of odds that are not very dissimilar from this.

Besides, there would probably be a much higher chance of an accidental missile firing by Red China or some other new nuclear power, because it is unlikely that such powers will build into their offensive missiles the highly sophisticated and very expensive safety controls that are built into American and Soviet missiles.

Moreover, the danger of an accidental missile firing due to human failure is even greater than the danger of an accidental firing due to technological failure.

Consider a situation in which there has been a continuing crisis between the two superpowers, and both sides have for months had their nuclear forces in a state of maximum alert.

Such a situation would inevitably produce a cumulative nervous strain on both sides; and under such a strain it is conceivable that even the most rational and carefully selected group of commanders might crack and act without authorization. So let no one say that we can completely ignore the possibility of an accidental firing.

If, one day, Kosygin were to call the President on the hot line to say that there had been a terrible accident and that an SS–9 was headed toward New York City, the President of the United States, in the absence of a Safeguard system, would have only two choices:

First, he could let the missile destroy New York City without retaliation, writing the affair off as an accident; or

Second, he could order a retaliatory strike against Moscow—which would almost certainly result in all-out thermonuclear war.

What a dreadful position the President of the United States would be in if these were the only choices open to him. But the choice need not be this limited.

For, if we had the Safeguard system, then the President would have a third option: He could simply order the missile shot down.

Even the harshest critics of the Safeguard system do not deny its technical capability to deal with a single incoming missile or with a small salvo of missiles.

The challenge of the critics relates to Safeguard's ability to deal with a saturation attack.

If the Safeguard system could accomplish nothing more than this one thing, that is, protecting the world against the possibility of thermonuclear war by accident, the system would be worth every penny of what it costs.

And so long as offensive thermonuclear missiles exist, it is clear that the world will be a much safer place if both sides carry this kind of insurance for themselves.

As the senior Senator from South Dakota pointed out in his very able statement in support of Safeguard deployment, the cost of this insurance over the coming year would average out to roughly $4 per year for every man, woman, and child in the United States. In terms of what it insures us against, the Safeguard system is just about the cheapest insurance buy on record.

SAFEGUARD AND RED CHINA OR OTHER NUCLEAR POWERS

The Safeguard system, and its equivalent in the Soviet Union, would provide a high degree of protection against the possibility of an attack by Red China or by some new nuclear power, or "*n*th" nation, as it is called in the jargon of nuclear politics.

Just about everyone is prepared to agree that the Chinese Communist leaders are aggressive, irrational, and unpredictable, and that their anticipated missile arsenal could constitute a danger, for ourselves and for the Soviet Union, by the midseventies. By that time, it is estimated, the Chinese Communists will have some 15 to 20 ICBM's.

Moreover, we cannot rule out the possibility of some other psychotic dictator somewhere in the world secretly or openly developing a few nuclear weapons for use against us or other nations.

Many scenarios have been written by strategic experts on the possibility of a Red Chinese nuclear confrontation with the United States.

In one of these scenarios, several missile-carrying submarines, which the Chinese are known to be building, surface off the American west coast and fire a demonstration missile, either against an unpopulated target or else against a small city.

This is accompanied by an ultimatum: Either we agree to withdraw all support from Taiwan, South Vietnam, Thailand, and Korea, and withdraw all air and naval units from the Far East at once, or else Chinese missiles will annihilate Los Angeles, San Francisco, Portland, San Diego, and other major population centers on the west coast.

The ultimatum would also say that the Chinese missiles would fire immediately if American missiles were directed against the Chinese mainland or against their submarines.

Now it is true that we have the power to wipe out Red China, or at least to wipe out all of its major population centers.

But would a President of the United States want to invoke this power, knowing that it would result in some 10 to 20 million American dead and the devastation of half a dozen major American cities?

Without Safeguard, the President would have no alternatives but to accept the Chinese Communist terms or to press the thermonuclear button.

With Safeguard, the President would have a choice which would enable him to reject such an ultimatum.

There is another scenario involving the Chinese nuclear capability that has been drawn by experts on the area.

Technologically, the Chinese Communists will almost certainly be capable of striking, or threatening to strike, their neighbors in Asia, and even the U.S.S.R., before they are capable of attacking or threatening the United States.

Our main problem, therefore, may turn out to be whether or not we will honor the nuclear guarantee implicit in the Nonproliferation Treaty if New Delhi or Tokyo should receive a Chinese Communist ultimatum to "do so and so or we will blast your cities off the map."

If both the United States and the Soviet Union possess missile defense systems, they would be in a far stronger position, psychologically and diplomatically, to deal jointly or separately with any such aggressive action in Asia by Red China.

SAFEGUARD AND THE POSSIBILITY OF AN UNIDENTIFIED ATTACK

There is a special type of "nth" nation attack that must also be a reason for concern and that is the possibility of an attack from an unidentified source.

Such an attack could take the form of a short-range missile launched from the ocean bed or from a submarine or a ship.

Clearly, if a missile of unidentified origin impacted on an American city, it would create an immediate danger of war.

The President would have no way of knowing for certain whether the missile was fired by the Soviet Union or Red China or Castro Cuba or some other anti-American dictatorship.

But meanwhile, the destruction of one of our metropolitan centers would put him under tremendous pressure to take some action.

The Russians, even if they had not fired the missile, would inevitably develop a nervous trigger finger because, in the uncertain situation thus created, they would have to fear a possible retaliatory strike by the United States.

In such a situation, the possibility of thermonuclear war between the Soviet Union and the United States could not be ruled out.

This scenario may seem rather farfetched. But the experts are agreed that it is a possibility that we cannot ignore.

It is, for example, not inconceivable that the Chinese Communists might seek to launch such an unidentified missile attack on the United States for the purpose of promoting a crisis between ourselves and the Soviet Union.

Here again, if we had Safeguard, we would at least have a good chance of dealing with an unidentified attack by one or several missiles from an offshore position.

Without it, we would have to sit by passively and take the blow, or strike back with massive retaliation, perhaps against the wrong country.

THE ABM AND ARMS CONTROL

By stabilizing the situation as described above, the possession of a limited antimissile defense by both sides would also create a climate more conducive to the negotiation of effective agreements in the field of arms control and disarmament.

There is an additional reason for believing that antimissile defense systems on both sides would be good for future arms control and disarmament talks.

The arms control talks of the 1970's will turn largely around the question of limiting or reducing the number of offensive missiles.

If we achieve an agreement, we will always have to worry about Soviet cheating: First, because it can be taken for granted that they will never agree to inspection, and, second, because of the virtually unbroken record of Soviet cheating and violation of treaties.

If the Soviets were to cheat on such an agreement and get away with it, it could lead to disaster.

If, for example, both sides were to agree to cut back to 100 missiles, but if the Soviets in fact only cut back to 500, this would put us at an almost fatal disadvantage in any confrontation.

If, on the other hand, we had a Safeguard ABM system in existence to protect our arsenal of 100 missiles, we would still have to worry about Soviet cheating, but we would not have to worry as much.

The Soviets, on their side, would have no reason to worry about American cheating, no matter how much they might pretend to do so.

They know that it is virtually impossible for us to cheat because ours is an open society; while they have been able to develop the art of cheating to an all-time high because theirs is a completely closed society.

In the absence of antimissile defense systems, arms control measures by the two superpowers might be risky and destabilizing.

With missile defense, the same arms control measures would be less risky and, to that degree, more acceptable to both sides, and stabilizing.

WILL SAFEGUARD WORK?

As I have said, I would consider it presumptuous to attempt a technical evaluation of the ABM's effectiveness in dealing with a saturation attack. However, I do agree with two commonsense rules for laymen outlined by one of our top defense experts, Mr. Robert C. Sprague, in his testimony on the ABM before the Senate Armed Services Committee.

These are the rules:

Rule No. 1: In assessing the potential of any important new field of technology involving new processes or systems—*half the scientists, or at least a large fraction, are usually wrong.*

Rule No. 2: If a significant percentage of scientists agree, or sometimes if only one or two agree, that something new can be done—it can be.

The validity of these rules have been borne out repeatedly in the postwar period.

The many scientists who said an H-bomb could not be built were wrong, while the minority who said that it could be built were proved right.

The many scientists who said that the Polaris submarine system was technologically impossible were also wrong.

And the incredible success of our moon program, similarly, has given the lie to the negative predictions made by many very able scientists when the project was first broached.

In this connection, I note that Dr. Jerome Wiesner, the chief scientific critic of the Safeguard program, was also one of the most vocal critics of our moon program.

According to a recent article in the Washington press, former NASA Administrator, James E. Webb, was so disturbed by the vehemence of Wiesner's opposition that in July 1962 he called in his assistant, Joe Shea, and said to him:

Jerry Wiesner's in a highly emotional state. He thinks Lunar Orbital Rendezvous is the worst mistake in the world. We'll be risking the lives of the astronauts—everything. Get over there and see him.

The article said:

Shea whipped over to the White House and found Wiesner "screwed up into the ceiling." Shea talked for almost 2 hours, but at the end of it all found Wiesner still completely unconvinced.

It has been claimed that we will never know if the Safeguard will really work against a saturation attack, because it is obviously impossible to conduct a test simulating a saturation nuclear missile attack.

On this point they are completely right. For that matter, we have never tested our Minuteman or Polaris missiles systems under battle conditions.

But the important thing is that the Kremlin, too, will have no way of knowing just how effective the Safeguard system would prove against a Soviet surprise attack.

American technological opinion may be divided on the ultimate workability of the Safeguard system. But the Soviet planners, apart from the fact that they tend to have an enormous respect for American technology, would have to err on the side of crediting the Safeguard system with a higher rather than a lower capability.

Because Safeguard would complicate Soviet calculations, because it would inevitably raise further questions in their minds about the feasibility and the advisability of a first strike, to this extent Safeguard would act as an additional deterrent to the possibility of thermonuclear war.

Although no one can know for certain how effectively Safeguard would function if it were ever put to the final operational test against a saturation attack, there can be no doubt about its political and psychological effectiveness.

In this vital sense, Safeguard would work.

It would not by itself constitute a guarantee against nuclear war or against a Soviet first strike. But it would substantially reduce the possibility.

THE SAFEGUARD SYSTEM AND OUR RESPONSE TO A SOVIET FIRST STRIKE

President Kennedy, in his message to Congress of March 28, 1961, clearly repudiated a first strike by the United States:

Our arms will never be used to strike the first blow in any attack. We are not creating forces for a first strike against any other nation. We shall never threaten, provoke or initiate aggression—but if aggression should come, our response will be swift and effective.

I believe that no free democratic nation will ever engage in a first strike with nuclear weapons against another nation because of the moral and political restraints that govern the action of democratic leaders.

We cannot be so certain, however, about the restraints that govern the actions of the rulers of imperialistic, totalitarian societies. Nor can we be cer-

tain about the restraints that will govern the actions of the various psychotic dictators who are bound to hold power or come to power in a certain number of other nations over the coming decades.

Nor is there any reassurance to be found in a reading of Soviet military doctrine, because the fact is that their military doctrine, with its emphasis on flexibility, devotes serious attention to all possible options, including the option of a first strike.

Soviet military writings do not actually employ the term "first strike." Instead, they discuss the first strike in Aesopian terms. One commonly used formula talks about "frustrating the designs of the imperialists," before they can launch their missiles.

I want to make it clear that I do not say that the Soviets are planning a first strike against the United States.

But I do contend that this is a possibility which cannot be ruled out.

This much is conceded by some of the severest critics of the Safeguard project.

For example, Dr. George W. Rathjens of MIT, a leading opponent of the ABM, said on June 22:

> I have never denied that by the late 1970's the Soviet Union could, if it wished, have a capability to destroy nearly all of our Minuteman force in a pre-emptive attack.

There is general agreement between the experts that if a first strike ever comes, it will take the form of an all-out attack designed to destroy, or virtually destroy, our Minuteman force, our Polaris submarines as well as our bombers. It would make no sense for the Soviets to launch a first strike against our cities and leave our deterrent missile force intact, because if they did so, they would be inviting a response that would completely obliterate all of their population centers.

Since the possibility of a Soviet first strike cannot be ruled out, it is also important to consider what options would be open to the President of the United States if he one day received an emergency call informing him that 500 Soviet SS–9's had taken off for the United States, targeted against the ICBM complexes in the Midwest.

If we had no ABM system defending his deterrent force, the President would have only two options in the case of such an attack. He could either sit back and let the Soviet missiles obliterate our Minuteman ICBM's, perhaps hoping that our Polaris submarines will be able to survive; or else he could empty his missile silos in a retaliatory strike against Soviet cities as soon as he received the first radar warning that the Soviet missiles are in flight.

A decision to empty our missile silos before the Soviet first-strike salvo reached its targets would, of course, automatically bring a second wave of Soviet missiles directed against American cities; and the mutual holocaust which we seek to avoid would be upon us.

If he had a Safeguard ABM system, however, the President would have an alternative to the holocaust button. And this would be true even if 50 percent of our missiles were knocked out, because 500 American ICBM's would be more than enough to devastate the Soviet Union. In fact, the consensus of the experts is that it would be suicidal for any nation to attempt the first strike unless it was certain that it could knock out roughly 90–95 percent of its adversary's strategic missile force.

Coming back to our scenario, if the President had a Safeguard ABM system, he could then decide to wait out the Soviet strike, until he received information on which Soviet silos have fired their missiles and which Soviet missiles remained in reserve. Then, when he ordered our missiles launched, he could target them not against Soviet population centers but against the enemy's remaining strategic forces.

If we could succeed in destroying or largely destroying the enemy's strategic reserve, a mutual holocaust would have been avoided and the stage would be set for negotiations that would, at the very worst, assure us of a draw.

In contemplating the contingency of a Soviet first strike, therefore, it is of the greatest importance that we provide the President of the United States with some alternative other than surrender or the holocaust button.

To date, the Safeguard system is the only alternative that has been suggested which makes sense.

THE ALTERNATIVES TO SAFEGUARD DEPLOYMENT

A number of alternatives to the initial Safeguard deployment proposed by the administration have been suggested in the course of the present debate.

None of them make any sense to me.

For example, it has been suggested that instead of deploying an ABM system we could, if the Soviet buildup warrants it, deploy more Minuteman or more Polaris missiles. Some have even suggested the possibility of doubling our strategic strike force.

I am opposed to this proposal, because I think we have somehow got to bring an end to the piling up on both sides of these terrible aggressive weapons of mass destruction.

I am also opposed to it because I believe that such a step would really be provocative and would therefore increase the danger of thermonuclear war.

It has also been proposed, that, as an alternative to Safeguard, we empty our missile silos against Soviet cities at the first sign of attack.

I find this proposal even more appalling than the proposal that we increase our ICBM force. In fact, it smacks frighteningly of Dr. Strangelove.

This is not a formula for defending the United States; it is a formula for mutual annihilation.

Another proposal which has been submitted in amendment form is that we limit the Safeguard program to research, development, and testing; and that, rather than installing any radars now at the projected operational sites in North Dakota and Montana, we instead build certain prototype radars at our Kwajalein test range. This amendment is currently before us for consideration.

I am opposed to this proposal on three grounds.

First, it would result in greatly increased costs if we ever decide to deploy Safeguard, because then our entire additional investment in the Kwajalein installation would be wasted.

Second, according to knowledgeable estimates, it would result in a delay of more than 2 years in the deployment of Safeguard, and time now is so precious that we cannot afford to squander it in this wanton manner.

Third, as Prof. Albert Wohlstetter, one of this country's leading strategic experts, has pointed out, a satisfactory testing of the entire system could not be carried out at Kwajalein.

In order to test the effective operation of Safeguard, we not only have to test interactions among the many components of the ABM system but also between the Safeguard system itself and other elements of our national defense.

This can only be done by deploying the various components in their intended environment in Montana and North Dakota.

In his testimony before the Subcommittee on International Organization and Disarmament Affairs, and in subsequent conversations which I had with him, Dr. Edward Teller hammered away at the essential argument that only by a comprehensive test of the entire Safeguard system with its various components and in its intended environment, would we be able to iron out the bugs in the system and determine just how effective Safeguard can be made.

In the absence of such an initial deployment, Dr. Teller holds, we will be voting for ignorance in an area where we cannot afford to be ignorant.

The Russians, he points out, do not suffer from the handicap of ignorance.

Dr. Teller further pointed out that in the period before the limited test ban treaty, the Russians tested an ABM with a live nuclear warhead against an incoming missile.

Since then, they have deployed an extensive ABM system around Moscow.

Furthermore, they are pursuing a vigorous program of refinement with a third generation of ABM missiles which have a "loitering" capability.

Now Dr. Teller is a man whose testimony deserves some attention because it was thanks to him, more than to any other single person, that we were able to run a neck-and-neck race with the Soviets in the development of the H-bomb.

The United States exploded its first hydrogen test device on November 1, 1952, in "Operation Ivy." But this was not a deliverable device.

Our first deliverable weapon was not exploded until March 1, 1954, in "Operation Castle."

Meanwhile, in early August, 1953, the Soviets had staged their first thermonuclear explosion, which, according to our intelligence, did involve a weapon capable of delivery.

It was thanks only to a massive effort and to the inherent superiority of American technology that we were able to pull ahead of the Soviets in thermonuclear weapons over the following years.

As we approach a decision on ABM, let us not forget what might have happened if the Russians had beaten us to the H-bomb.

THE POLITICAL CONTEXT

The distinguished junior Senator from Washington (Mr. JACKSON) has made the point that it is impossible to reach sound judgments on ABM or on other aspects of the national defense budget if we do not have a clear conception of the nature of our Soviet adversary.

The Senator's argument on this point is unchallengeable. Without such an understanding, we would be attempting to make our judgments in a political and intellectual vacuum.

The Senator from Washington was responsible for a remarkably profound article on the subject of Soviet policy which appeared in the June issue of Reader's Digest. He added to this presentation in the speech which he made in support of the ABM of July 9 on the floor of the Senate.

The conclusions to which he has come coincide completely with my own.

As Senators know, I have addressed myself in this Chamber repeatedly to the subject of Soviet policy.

I believe that the achievement of a true detente, involving a total cessation of cold war activities, should be a prime objective of our foreign policy.

I cannot, however, accept the judgment of those who hold that such a detente has already been achieved.

I have pointed out that if a detente really did exist, one should be able to find some evidence of this in the record of Soviet pronouncements and actions, but that the evidence is nowhere to be found.

I have also said that it makes no sense to talk about the existence of a detente in a decade that has witnessed the suppression of the Hungarian revolution; Khrushchev's Berlin ultimatum; the Communist seizure of Cuba; the Cuban missile crisis; and Soviet involvement in the Laotian uprising of 1961–62, in the Vietnam war, and in the Tricontinental Conference of Revolutionary Parties in Havana.

Nor does it make sense to talk about a detente against the immediate background of the Soviet invasion and occupation of Czechoslovakia and the promulgation of the Brezhnev doctrine, under which the Kremlin has claimed the right to intervene in any so-called Socialist country if the Communist dictatorship there is threatened.

THE STRATEGIC BALANCE

Nor are prospects for the future rendered any more reassuring by the record of Soviet reaction to the unilateral limitations which we placed on our strategic arms in the mid-1960's.

Acting on the advice of some of the ivory-towered scientists who now are in the forefront of the fight against the ABM, we closed down a number of our nuclear weapons reactors, froze the number of our Polaris submarines at 41 and the number of ICBM's at 1,054, decided not to proceed with a new heavy bomber, and deliberately refrained from deploying a ballistic missile defense.

At that time it was taken as a matter of dogma that the Soviets simply desired to achieve nuclear parity with the United States and that it would be in our national interest if the Soviet Union achieved an "assured destruction capability" because this would reduce the Kremlin's concern over American intentions and make for a more stable situation.

The chief prophet of this policy was Dr. Jerome Wiesner, and his chief disciple was former Secretary of Defense McNamara.

When Wiesner and McNamara spoke about parity, they appeared to have in mind numerical parity in strategic weapons.

However, "parity" is a complex concept that does not lend itself to simple definition.

As Secretary Laird has pointed out, the relative size, or megatonnage, of the weapons on both sides is also a matter that has to be taken into consideration: and here the Soviets have a distinct edge over us.

Population concentration is another factor that should be considered in any calculation of "parity." And here, because of our much greater concentrations, we are at a distinct disadvantage compared to the Soviets. In fact, as Secretary Laird stated, 200 Soviet missiles would take just as heavy a death toll in this country as 1,200 American missiles would exact in the Soviet Union.

In terms of their ability to inflict damage on the United States, the Soviets unquestionably passed the point of parity a long time ago.

The achievement of numerical parity by the Soviets would, in fact, give them an enormous strategic advantage instead of simply strategic parity.

This is something that should have been obvious all along, even to the untutored layman. But, despite this, Wiesner and McNamara held to their belief in the protective potential of numerical parity in strategic weapons.

It was also taken as a matter of dogma that once the Soviet Union achieved "parity" it would automatically taper off its missile production, and the stage would thus be set for meaningful talks on arms limitations. This is not happening.

The Weisner-McNamara doctrine will be recorded historically as a double tribute to the good intentions of its originators and to their capacity for self-delusion.

Three years ago, in July 1966, when our own ICBM strength had already been frozen at the arbitrary figure of 1,054, the Soviet Union had 250 ICBM's.

Today, according to hard intelligence, the U.S.S.R. has some 1,250 ICBM's in addition to a force of 700 medium-range ballistic missiles and some 550 sea-launched missiles.

No one in the United States and no one in our intelligence community and no one in the Pentagon ventured to predict in 1966 that the Soviets would add 1,000 ICBM's to their missile force over the ensuing 3-year period.

Had anyone ventured such a prediction at the time, he would have been assailed as an extremist kook or a warmonger by the apostles of the myth of the detente.

THE INTELLIGENCE GAP

Our satellite reconnaissance enables us to know how many missiles the Soviets have deployed or are deploying at any given time. But when we attempt to determine at what rate the Soviet missile assembly lines are operating or what their production quotas are for the coming period, uncertainties inevitably arise.

I know that Secretary of Defense Laird ran into a lot of flack when he suggested that the Soviets might have a force of 2,500 ICBM's by the midseventies.

But if the Soviets continue to produce ICBM's at the 1966–69 rate, then simple arithmetic points to the conclusion that 4 years hence their ICBM force will in fact total 2,500.

Conceivably an order may come through from the Kremlin to close down the lines because the Soviet leaders now feel that they have "a sufficiency" of nuclear weapons.

On the basis of past experience, however, I consider it far more likely that the Soviet missile assembly lines and armament factories and shipyards and submarine yards will continue to function at the high level of recent years, until the Kremlin has achieved the marked and unmistakable superiority in offensive weapons which is their proclaimed goal.

There has been a lot of loose talk about the so-called "intelligence gap"; that is, about the gap that supposedly exists between the intelligence estimates presented by Secretary Laird and those officially prepared by the Board of National Estimates.

My own reading of the record is that, despite the very sharp questioning to which Secretary Laird and Mr. Richard Helms were subjected in their joint appearance before the Foreign Relations Committee, their testimony failed to disclose the existence of any basic conflict.

Certainly, there was no conflict of any kind over the rapid buildup of Soviet strategic strength, because this is something that is based on "hard" intelligence.

When it comes to estimates of Soviet intentions, however, there is admittedly a lot of guesswork involved. In this area there is apt to be a difference of emphasis between those responsible for gathering intelligence and those responsible for defense policy, for the simple reason that our policymakers must prepare for the worst contingency rather than for the best contingency.

I think it pertinent to point out in this connection that our intelligence community has erred far more frequently on the conservative side than otherwise in their estimates of Soviet capabilities and intentions.

In fact, the American intelligence community, although it has performed well in certain situations, has not been impressive when estimating the intentions and plans of our adversaries.

It failed to give us forewarning of Pearl Harbor, the consequences of which are familiar to everyone.

It failed to warn our Government of the impending North Korean Communist attack on South Korea; and, at a slightly later stage, it failed to warn General MacArthur of the impending invasion of Korea by 1 million Chinese.

It failed to predict accurately either the Soviet A-bomb or the Soviet H-bomb. In both cases the estimates were that it would take the Soviets much longer to develop these weapons than actually proved the case.

In 1956, it failed to alert us to the Soviet invasion of Hungary.

In 1957, it was completely without advance information on the Soviet sputnik.

Over the ensuing years, our intelligence community lapsed into one of its very rare periods of overstatement when it advised the Eisenhower administration that there was a massive missile gap between the Soviet Union and ourselves.

Today it has been documented that the so-called missile gap was a Soviet-engineered hoax, and that our intelligence community fell for phony information put out by Khruschev for the purpose of intimidating us.

In more recent years, conversely, its estimates of Soviet intentions regarding the size of Soviet ICBM forces have turned out to be woefully conservative.

In the period immediately before the Cuban missile crisis, the advance consensus of the intelligence professionals was that the Soviets would not tempt the fates by deploying nuclear missiles in Cuba. And, despite warning signs which many of our lay experts took seriously, they were also disposed to discount the possibility that the Red Army would invade Czechoslovakia to depose the Dubcek regime.

The late Senator Robert F. Kennedy, in his book, "Thirteen Days," had this to say about the performance of our intelligence community during the Cuban missile crisis:

> No one had expected or anticipated that the Russians would deploy surface-to-surface ballistic missiles in Cuba.
>
> No official within the government had ever suggested to President Kennedy that the Russian build-up in Cuba would include missiles . . . The intelligence community, in its national estimate of the future course of events, had advised him—on each of the four occasions in 1962 when they furnished him with official reports on Cuba and the Caribbean—that the Russians would not make offensive weapons available to Cuba. The last estimate before our meeting of the 16th of October was dated the 19th of September, and it advised the President that without reservation the U.S. Intelligence Board, after consideration and examination, had concluded that the Soviet Union would not make Cuba a strategic base.
>
> It pointed out that the Soviet Union had not taken this kind of step with any of its satellites in the past and would feel the risk of retaliation from the United States to be too great to take the risk in this case.

This estimate of September 19, I want to note, was after the first missiles had already been landed in Cuba.

All this is not so much a matter of criticism as it is a lament.

But I dwell on this point because, on the record, it is demonstrably true that our intelligence community has not been realistic, much less extremist in its appraisals of the intentions and capabilities of our adversaries.

I know, too, that it is an exceedingly difficult task to gather intelligence having to do with the policy and intentions and future production schedules of a closed totalitarian society.

And it is better that our intelligence community shun alarmism and concentrate on hard information rather than speculating over Soviet intentions.

Nevertheless, in attempting to weigh the contingencies that may confront us over the coming years, it would be well to bear in mind that, over and over again, the Soviet performance in the field of armaments has either surprised us completely or substantially surpassed our estimates.

There seems to be some difference between our experts over whether or not the Soviets have already achieved nuclear parity with the United States. What is certain, is that if the Soviets continue to build up their nuclear forces at the rate of recent years while the United States stands still, the Soviet Union at a very early date is bound to achieve a substantial numerical superiority in nuclear missiles, on top of the marked superiority they already enjoy in total megatonnage.

THE JUSTIFICATION FOR PESSIMISM

If my own outlook is on the pessimistic side, it is because pessimism is indicated by the entire history of the postwar period.

The one lesson that emerges from this record, as I read it, is that if one assumes the worst about Soviet intentions, he will almost never go wrong.

In applying this rule of thumb, I have on a number of occasions found myself taking stands that were considered unpopular and which brought me a good deal of adverse editorial comment at the time. But almost invariably and unfortunately it has turned out that my apprehensions were right.

I do not like to talk about myself. I do so only because I know of no other way of making this point.

When Castro took over Cuba, there was a widespread tendency in our press and in our State Department and in Congress to regard him as some kind of non-Communist agrarian reformer, or Robin Hood, with whom we could and should continue to do business. Editorial brickbats flew when in mid-1959 I said that the evidence pointed to the conclusion that Castro was bent on establishing a total Communist dictatorship in Cuba and converting Cuba into bastion of Soviet power in the Caribbean.

But then Castro announced to the world that he was, in fact, a Communist; and a short while later our blundering and naivete were rewarded by the Cuban missile crisis.

When we entered into the moratorium on nuclear testing with the Soviet Union, I took the floor of the Senate repeatedly to warn that the moratorium was a trap because we were, in effect, giving the Soviet Union a total test ban treaty without inspection of any kind.

I referred to the moratorium on several occasions as "the most egregious act of bipartisan folly in American history."

It was a solitary and unpopular stand.

But then, in August 1961, with our own nuclear technology completely inactivated, the Soviets resumed atmospheric testing. And when the analysis of these tests were completed, it turned out that we had lost the estimated 3-to-4 year lead in nuclear technology which we had previously enjoyed.

The Soviet action was denounced as a betrayal of trust by the President, by Congress, by the press.

But it still amazes me that anyone expected the Soviet Government to behave any differently than they did behave in this situation.

More recently, I recall that I was one of the handful of people in Congress or out of Congress, who, last summer, warned that the Soviets were getting ready to invade Czechoslovakia.

The view was considered an alarmist one at the time. But in this situation, unfortunately, the alarmist view again turned out to be the correct one.

So let us be careful this time.

THE OUTLOOK FOR THE FUTURE

Let me now venture another prediction.

I do not hold that limited agreements with the Soviet Union are impossible.

On the contrary, I believe strongly that, despite all the difficulties, we must continue to seek agreements, no matter how limited, in the field of arms control and in every other area.

I supported the partial test ban treaty, and it pleases me to know that my resolution of May 27, 1963, which was cosponored by 33 other Senators, has been widely credited with having played a role in encouraging this new approach to the test ban treaty.

But, while holding to the conviction that we must always be prepared to walk the extra mile, and more, in the difficult quest for peace, I fear that the coming decade will be one of grave and recurring crises. It will be an era during which the Soviets will continue to expand their challenge to the free world and to extend their power and their influence in North and Central Africa, in Latin America, and in Asia, and the massive Soviet missile and arms buildup of recent years will continue. Indeed, within a few years at the most, the unchallengeable evidence will persuade even the most wishful thinkers that the Soviets have achieved their goal of strategic weapons superiority.

When that day comes, many a Senator who will vote against the Safeguard ABM system at the close of the current debate, will have cause to rethink his vote.

It is impossible not to be alarmed by the prospect of having to deal with the Soviets in future crisis situations where they enjoy either parity, or worse still, a distinct superiority in nuclear weapons.

We were able to stand up to Khrushchev's Berlin ultimatum of November 1958, despite the flagrant manner in which he rattled his nuclear missiles, because we knew, and the Russians knew, that we possessed massive overall nuclear superiority.

In the Cuban missile crisis of 1962,

President Kennedy, in effect, delivered an ultimatum to the Soviet and Cuban Governments. He told them that if the Soviet missiles were not removed from Cuba, the United States would take the necessary measures in its own self-defense.

The Soviet Government was also informed that we would not permit the delivery of any more nuclear missiles to Cuba, and that if a nuclear missile were fired from Cuba at the United States, we would respond to such an attack in precisely the same way that we would respond to an attack from the territory of Soviet Union itself.

Confronted with this ultimatum, the Soviet leaders backed away from the brink and the Cuban missile crisis came to an end.

But we have to ask ourselves whether the Soviets would have backed down and whether President Kennedy would have dared to take the same brave line if it had not been for our very substantial nuclear superiority at the time of the crisis.

Since the Soviets played a very rough game of nuclear blackmail, even in the years when we had a marked nuclear superiority, there is every reason to believe that the Kremlin will use nuclear blackmail as a political instrument even more frequently and more brutally at the point where it achievcs parity or superiority in nuclear weapons.

THE QUESTION OF COST

The question of cost is important, but it is not central to the problem before us.

If the peace of the world and the survival of our Nation are at stake, then, clearly, cost is a matter of secondary importance.

But this does not mean that we can forget about cost.

Everyone is worried about the heavy costs of our defense programs. A tightening up of procurement and management procedure is long overdue. Hopefully, the blue-ribbon panel which has now been set up will bring about a great improvement in these procedures and practices.

To those who fear that Safeguard may wind up costing us astronomical sums of money, let it be remembered that what is involved in the bill now before us is the price of a 1-year deployment, costing some $800 million. And this is a small sum, compared with our overall defense budget.

And we will not be locking ourselves in to an entire program. For it will be reviewed at every stage, from the standpoints of cost and effectiveness and of the international situation.

And it makes no sense to say that, once committed to a program, we cannot cancel it. It is only necessary to recall the recent cancellation of the F–111 program on the basis of its disappointing performance and its excessive costs.

Where national survival is at stake, it is better to err on the side of over-insurance than on the side of under-insurance.

Today I have set forth the reasons which have led me, after careful thought, to strongly favor the deployment of the Safeguard antimissile defense system.

To summarize, I believe that the ABM should be supported because it is a moral weapon, a weapon for peace, a weapon that would greatly increase the chances of bringing an end to the arms race and of instituting some meaningful limitation on offensive nuclear weapons.

There is an unfathomable mystery to the rationale of those who call upon us to refrain from deploying an anti-missile defense system in the interest of future arms-control talks.

It would make much more sense for us in any arms-control talks not merely to accept the right of the Soviet Union to deploy an ABM system of its own, but to actually encourage the development of defensive systems as a preliminary to limiting the deployment of city-destroying missiles and MIRV's.

Rather than calling on the United States to abstain from deploying Safeguard, all those who seriously believe in arms control should be focusing their attack on reducing the awesome arsenals of offensive thermonuclear missiles.

Up to now, the Soviets have been a fearsome problem, as they have overwhelmed one country after another.

At this very hour, the Soviets lie in political siege of several free but weak non-Communist countries.

If the past is any guidepost for the future, then there is more trouble in the offing.

We face dark and troublesome days ahead.

Our very freedom is at stake; our very survival is in peril.

Let us remain strong and secure so that we will be free to lead the way to real disarmament and peace.

I take it for granted that every Senator will reweigh the evidence with the utmost care before casting his vote, knowing that the quality of our life and the quality of our national security and the maintenance of world peace are heavily involved in the outcome of this vote.

So I say we should give the President of the United States an alternative to pushing the holocaust button.

Obviously, the Safeguard ABM is not a perfect weapon. But it is the best our people have been able to devise.

What we have to do is to look at our adversaries in the world. They put up a defense system of their own; and it makes sense to me, sitting here with their missiles pointed at us, for us to have a missile defense system of our own.

I earnestly hope that we will not vote the ABM down, for if we do, we may live to regret it. I hope that we will vote, instead, to be strong and safe, and secure.

Mr. BYRD of West Virginia. Mr. President, will the Senator from Connecticut yield?

Mr. DODD. I yield.

Mr. BYRD of West Virginia. Were there not some scientists who said that the hydrogen bomb was impossible to build?

Mr. DODD. Yes; it was on this same basis that they opposed the H-bomb, saying that it was impossible to build. There were also many members of the administration and of Congress who said that the hydrogen bomb could not be built. Of course, they were dead wrong.

Some of the same scientists now, on the same basis, are telling us that the Safeguard ABM cannot be made to work and that it should not be deployed.

Of course there were a minority of scientists who said that the hydrogen bomb could be built and they were proven to be right.

There were scientists, I remind the Senator from West Virginia, who said that the Polaris submarine system was technologically impossible. Not very long ago they were telling us that. And they were wrong, too. Thank God we went ahead, and that we now have a Polaris system to protect us.

The incredible success of the recent moon mission is pertinent here also.

As the Senator from West Virginia knows, I serve on the Aeronautical and Space Sciences Subcommittee, where we were told that the Apollo program was impossible, that we were throwing our money away, that it could not possibly succeed, that we would never put a man on the moon, that the whole thing was ridiculous.

I am talking about scientists who took this stand. Now they are telling us the Safeguard ABM cannot be made to work.

Mr. BYRD of West Virginia. Let me ask the Senator, what would be our situation now if we had continued only with research on the hydrogen bomb, if we had continued only with research on the Polaris submarine, if we had continued only with research in connection with the moon shot?

Mr. DODD. Well, with respect to the hydrogen bomb, I shudder to think of what would have happened if we had not succeeded in developing it at the time we did. As it turned out, we beat the Soviet Union to it by only about 6 months.

If we had not developed the Polaris submarine system, I shudder again to think of what might have happened to us during those years.

With respect to the moon shot, I am confident that, if our adversaries had gone ahead and gotten there first, they would turn their accomplishments into some military advantage, to our great disadvantage.

The questions the Senator asks are well taken.

MESSAGE FROM THE HOUSE—ENROLLED BILL AND JOINT RESOLUTION SIGNED

A message from the House of Representatives by Mr. Bartlett, one of its reading clerks, announced that the Speaker had affixed his signature to the following enrolled bill and joint resolution, and they were signed by the Acting President pro tempore:

H.R. 13079. An act to continue for a temporary period the existing interest equalization tax; and

S.J. Res. 85. Joint resolution to provide for the designation of the period from August 26, 1969, through September 1, 1969, as "National Archery Week".

TRANSACTION OF ROUTINE MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senate will now proceed to the consideration of routine morning business.

The Chair recognizes the Senator from Ohio (Mr. YOUNG).

DAVE McNALLY TIES AMERICAN LEAGUE PITCHING MARK

Mr. MANSFIELD. Mr. President, for some time I have been intending to take the floor to express my commendation to a fellow Montanan, a young man by the name of Dave McNally, from Billings, Mont. Dave has been pitching for the Baltimore Orioles for a few years, and lately he completed his 15th victory for this season, with no defeats. If we add his two straight victories at the end of last season, Dave has a record of 17–0, which I believe is the way the baseball fraternity would refer to it.

Dave McNally is feeling no pressure. He is feeling no pain. But in his own words, he is feeling very lucky. What the 26-year-old Baltimore left-hander must be wondering, after running his record to 15–0, with a 4–2 victory over Kansas City on Wednesday night, is, "Just how lucky can I be, and just how long can this last?"

To use Dave's words:

No, I don't feel any pressure. I think probably I would feel it if I had pitched well in every game, but that hasn't been the case. I pitched badly enough to lose in six or seven games.

I know it has to end sometime, but I'm very happy to get this far, and I'm enjoying it. I'd rather be winning like this than losing but it's taken a lot of luck to do it.

McNally's number 15 put him in the American League record book alongside Johnny Allen of Cleveland. McNally, with two victories at the end of the 1968 season, tied Allen's mark of 17 consecutive triumphs over two seasons, set in 1936–37, and Allen's record of 15 straight victories at the start of a season, 1937.

Dave McNally is just one triumph away from the league mark of 16 successive victories in one season, set by four pitchers.

I know Dave McNally very well; I know his family extremely well. Those of us who come from Montana are very proud of what Dave McNally has been doing since first starting out in American Legion baseball and then graduating to the Baltimore Orioles. We want him to know that we are following every game with trepidation. We are hoping that his unbroken string of wins will continue through the entire season, because we know that even if Dave is lucky on occasion, he is an outstanding man in his own right.

We look upon him as a great Montanan. I look upon him as a close personal friend.

If Dave ever gets word of this, I just want him to know that there are a lot of us who may not see him at the stadium but who, nevertheless, are watching his every effort and wishing him every success.

AMERICANS SHOULD NOT BE DECEIVED

Mr. YOUNG of Ohio. Mr. President, Americans are entitled to know the facts regarding the much ballyhooed return of 25,000 of our combat troops from South Vietnam.

It would give me pleasure to report not only that 25,000 men of our Armed Forces had been returned home from Vietnam but also that at least 75,000 more combat troops would be returned to the United States from Vietnam before next December. Such a report would be contrary to the facts.

Furthermore, in view of President Nixon's recent statements in Thailand and Saigon, Americans have every reason to be gravely concerned that our fearful combat casualties in that undeclared, immoral, unpopular war in Vietnam will go on and on for many months. President Nixon should be reminded that he was elected because of his oft-repeated campaign statement that he had a secret plan to end the war in Vietnam. That plan is still his secret.

I am regretfully reporting the facts. On January 19, 1969, 2 days before Richard Nixon was inaugurated as President of the United States, there were 532,000 men of our Army, Navy, Marines, Air Force, and Coast Guard in Vietnam. Now, Mr. President, in view of reports issued from the Pentagon and from the White House, Americans have been led to believe that at this time the total men of our Armed Forces in Vietnam, 6 months following the time President Nixon was inaugurated, would be approximately 507,500. The fact is that on July 19, 1969, there were more men of our Armed Forces in Vietnam than at the time Richard Nixon became President. The total number of men in our Army, Navy, Marines, Air Force, and Coast Guard in Vietnam on July 19, 1969, was 535,500, whereas it had been 532,000 on the day before he was inaugurated.

On June 10, 1969, at the time President Nixon announced the withdrawal of 25,000 troops from Vietnam, the total number of men in our Army, Navy, Marines, Air Force, and Coast Guard in Vietnam was 537,500. On July 19, 1969, the total number was 535,000, or only 2,000 less.

Incidentally, I report that on the day President Lyndon Johnson left the White House January 20, 1969, the total of American Armed Forces in Vietnam, off the coast of Vietnam and in Thailand was 613,200. From that date to June 10, 1969, 2 days after President Nixon announced that 25,000 troops would be withdrawn from Vietnam, this total had been increased to 621,200. On July 19, 1969, more than a month after the announced withdrawal and after 6 months of the administration of President Nixon, 618,600 American servicemen remain in Southeast Asia.

It is with a feeling of sadness, Mr. President, that I make this factually correct report.

I am sure I express the feelings of many millions of Americans who are profoundly disappointed over the failure of this administration to make a sincere effort to withdraw at least 100,000 young Americans from the Vietnam quagmire.

Mr. President, during the week July 19 to 26 Americans killed and wounded in combat numbered 2,926; during that same period South Vietnam friendly forces—too friendly to fight—2,339.

ENROLLED BILLS SIGNED

The ACTING PRESIDENT pro tempore announced that on today, August 1, 1969, he signed the following enrolled bills, which had previously been signed by the Speaker of the House of Representatives:

S. 38. An act to consent to the upper Niobrara River Compact between the States of Wyoming and Nebraska; and

S. 1590. An act to amend the National Commission on Product Safety Act in order to extend the life of the Commission so that it may complete its assigned task.

EXECUTIVE COMMUNICATIONS, ETC.

The ACTING PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORTS OF COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the administration and effectiveness of work experience and training project under title V of the Economic Opportunity Act of 1964, Wayne County, Mich., Department of Health, Education and Welfare, dated July 31, 1969 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the effectiveness and administration of the Community Action Program under title II of the Economic Opportunity Act of 1964, Lake County, Ind., Office of Economic Opportunity, dated August 1, 1969 (with an accompanying report); to the Committee on Government Operations.

REPORTS OF A COMMITTEE

The following reports of a committee were submitted:

By Mr. McGEE, from the Committee on Post Office and Civil Service, without amendment:

S. 2754. A bill to amend subchapter III of chapter 83 of title 5, United States Code, relating to civil service retirement, and for other purposes (Rept. No. 91-339).

By Mr. McGEE, from the Committee on Post Office and Civil Service, without amendment:

H.R. 9825. An act to amend subchapter III of chapter 83 of title 5, United States Code, relating to civil service retirement, and for other purposes.

EXECUTIVE REPORTS OF A COMMITTEE

As in executive session, the following favorable reports of nominations were submitted:

By Mr. MAGNUSON, from the Committee on Commerce:

Lewis M. Branscomb, of Colorado, to be Director of the National Bureau of Standards;

Davie W. Oberlin, of Minnesota, to be Administrator of the St. Lawrence Seaway Development Corporation; and

Jacob L. Bernheim, of Wisconsin, Foster S. Brown, of New York, William W. Knight, Jr., of Ohio, Miles F. McKee, of Michigan, and

Joseph N. Thomas, of Indiana, to be members of the Advisory Board of the St. Lawrence Seaway Development Corporation.

Mr. MAGNUSON. Mr. President, from the Committee on Commerce, I also report favorably sundry nominations in the Environmental Science Services Administration and the Coast Guard. Since these names have previously appeared in the CONGRESSIONAL RECORD, in order to save the expense of printing them on the Executive Calendar, I ask unanimous consent that they be ordered to lie on the Secretary's desk for the information of any Senator.

The PRESIDING OFFICER. Without objection, it is so ordered.

The nominations, ordcred to lie on the desk, are as follows:

David M. Wilson, and sundry other persons, for permanent appointment in the Environmental Science Services Administration;

Philip J. Taetz, and sundry other persons, for permanent appointment in the Environmental Science Services Administration;

George A. Blann, and sundry other officers, to be permanent commissioned officers of the Coast Guard;

Dominic A. Calicchio, and sundry other Reserve officers, to be permanent commissioned officers in the Coast Guard;

Herman J. Lentz, to be a permanent commissioned warrant officer in the Coast Guard; and

George A. Blann, and sundry other officers, for promotion in the Coast Guard.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. McGEE (for himself, Mr. BOGGS, Mr. BURDICK, Mr. FANNIN, Mr. FONG, Mr. HOLLINGS, Mr. MOSS, Mr. RANDOLPH, Mr. STEVENS, and Mr. YARBOROUGH):

S. 2754. A bill to amend subchapter III of chapter 83 of title 5, United States Code, relating to civil service retirement, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. BIBLE:

S. 2755. A bill for the relief of Donal N. Callaghan; to the Committee on the Judiciary.

By Mr. McCLELLAN:

S. 2756. A bill for the general revision of the Patent Laws, title 35 of the United States Code, and for other purposes; to the Committee on the Judiciary.

(The remarks of Mr. McCLELLAN when he introduced the bill appear later in the RECORD under an appropriate heading.)

By Mr. NELSON:

S. 2757. A bill to provide for the control and prevention of pollution, deterioration of water quality, and damage to lands and waters resulting from erosion to the roadbeds and rights-of-way of existing State, county, and other rural roads and highways, and for other purposes; to the Committee on Public Works.

(The remarks of Mr. NELSON when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MONDALE:

S. 2758. A bill to amend section 312 of the Housing Act of 1964 to eliminate the provision which presently limits eligibility for residential rehabilitation loans thereunder to persons whose income is within the limits prescribed for below-market-interest-rate mortgages insured under section 221(d)(3) of the National Housing Act; to the Committee on Banking and Currency.

(The remarks of Mr. MONDALE when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. DODD:

S. 2759. A bill for the relief of Francesco Daniele; to the Committee on the Judiciary.

By Mr. STEVENS:

S. 2760. A bill to amend the Internal Revenue Code of 1954 to remove the limitations on the deductibility of expenses for care of dependents incurred to enable a taxpayer to be gainfully employed; to the Committee on Finance.

(The remarks of Mr. STEVENS when he introduced the bill appear later in the RECORD under the appropriate heading.)

S. 2756—INTRODUCTION OF A BILL FOR THE GENERAL REVISION OF THE PATENT LAWS

Mr. McCLELLAN. Mr. President, I introduce, for appropriate reference, a bill to provide for the general revision of the patent laws, title 35 of the United States Code.

On February 28 I introduced S. 1246 for the general revision of the patent laws. That bill incorporated the best features of several patent revision bills considered by the Subcommittee on Patents, Trademarks, and Copyrights during the 90th Congress. It also reflected a number of suggestions made during and subsequent to the subcommittee's hearings on patent law revision. Although the public hearings were completed last year, the subcommittee delayed action on this legislation at the request of the patent bar. Last winter, I indicated that if President Nixon determined that he wished to select a new Commissioner of Patents, I would further delay the reporting of a bill by the subcommittee until such time as the new Commissioner could review the various legislative proposals. The President did nominate a new Commissioner of Patents and I have met with him. Many suggestions made by the Commissioner have been included in the revised patent bill which I am introducing today.

This legislation has had a long history and can be traced back to a series of 30 studies on the patent system that were commissioned and published by the Subcommittee on Patents, Trademarks, and Copyrights. Following this review, the subcommittee concluded that "The objectives of the patent system are as valid today as at its inception," but "there has not been adequate adjustment of our patent laws and procedures to reflect changing conditions and to respond to the critical problems confronting the Patent Office."

President Johnson subsequently established the President's Commission on the Patent System which submitted a report on November 17, 1966, making 35 recommendations for the improvement of the American patent system. Most of the proposals made by the Commission would require legislative action to be implemented. Many of the recommendations of the Commission that required congressional approval were incorporated in the Patent Reform Act of 1967 that was submitted by the administration. During and subsequent to the subcommittee hearings, the Johnson administration made a number of suggestions for changes in the proposed legislation.

While certain of the Commission's recommendations engendered considerable opposition, the objectives sought by the Commission warrant the support of the Congress. Any general patent legislation must, therefore, be judged by the extent to which it achieves the objectives of the President's Commission and serves to ameliorate the problems of the patent system which were identified in the earlier reports of the subcommittee. In my judgment, the most important of these objectives are to raise the quality of U.S. patents, to shorten the period of pendency of a patent application from the filing date to final disposition by the Patent Office so as to accelerate the public disclosure of new technology, and to modernize the searching and examination procedures of the Patent Office so that it can more efficiently serve the needs of the public.

The quality of issued patents and the substantial deviation between the standards applied by the Patent Office and the Federal courts in determining the patentability of inventions has been explored in a number of the reports of the subcommittee. A recent survey indicates that during a 2½-year period 72 percent of the adjudicated patents were found invalid. During the period of this study not a single patent litigated in the eighth circuit, which includes Arkansas, was found to be valid. The most important recent Supreme Court decision on the patentability of inventions was the case of Graham against Deere in 1966. The Court declared:

> We have observed a notorious difference between the standards applied by the Patent Office and by the courts.

Of course, as Simon Rifkind, the co-chairman of the President's Commission, observed during the subcommittee hearings, part of the explanation for the different standards of the Patent Office and the courts is the ex parte nature of the proceedings in the office.

The Supreme Court again referred to the standard of patentability in its opinion on June 16 of this year in Lear against Adkins. Justice Harlan writing the opinion of the Court described the Graham decision as requiring a "demanding standard of invention." Three Justices in a separate opinion referred to the requirement that a patent applicant must meet the "exacting standards of the patent laws." The subcommittee in its 1967 annual report, approved by each of the current members of the subcommittee, stated:

> The Patent Office should be more vigilant in rejecting applications which do not meet the required standard. The issuance of invalid patents serves only to undermine the entire patent system.

Section 103 of title 35 is concerned with the conditions of patentability. The Supreme Court in the Graham case said:

> We have been urged to find in section 103 a relaxed standard, supposedly a Congressional reaction to the "increased standard," applied by this Court in its decisions over the last 20 or 30 years. The standard has remained invariable in this Court". The Subcommittee in its 1967 report stated "It does

not appear that it is necessary or desirable to enact additional legislation defining the standard of patentability. Rather, the Patent Office should more closely observe the existing requirements.

Congressional tinkering with section 103 could well sow the seeds of greater confusion, rather than promote the desired clarification. The nature and intent of any revision of section 103 should be carefully studied.

A review of the relevant judicial decisions at all levels of the Federal courts since the enactment of the Patent Act of 1952 does indicate some uncertainty as to the legislative intent, specifically, the correct interpretation to be given to section 103. Furthermore, the language in section 103 is general in nature and has resulted in a variety of judicial interpretations. Under these circumstances I have concluded that a clarification of section 103 is a desirable element of any program to improve the patent system. The bill which I am introducing today clarifies certain of the language currently in section 103, and includes several guidelines to assist the Patent Office and the courts in interpreting the required standard of patentability. It is not the purpose of the revised section 103 to lower the conditions for patentability which have traditionally been required by statute in pursuance of the limited constitutional grant of power to the Congress. The revised 103 should contribute to a reduction in the divergencies and uncertainties which have arisen in the various circuits and promote the orderly development of a consistent standard of patentability. It is to be hoped that these changes will result also in fewer reversals of Federal district court decisions by courts of appeals, and the giving of greater weight to the findings of those courts which have had the opportunity to hear the testimony and observe the witnesses.

In addition to the amendment of sections 102 and 103 enumerating the conditions of patentability, the presumption of patent validity in section 282 has been strengthened by providing that a party challenging the validity of a patent under section 103 "has the burden of establishing obviousness of the claimed invention by clear and convincing evidence." The protection of the public, therefore, requires that the Patent Office be vigilant in rejecting those applications which do not meet the standard of patentability.

Following the Supreme Court decision, the Commissioner of Patents in an address to the professional staff of the Patent Office referred to the language of the court:

> It is the duty of the Commissioner of Patents and of the courts in the administration of the patent system to give effect to the constitutional standard by appropriate application, in each case, of the statutory scheme of the Congress.

He instructed the examiners to "keep constantly in mind that the Supreme Court insists upon strict adherence to the requirement that the patents should be granted only for new, useful, and unobvious inventions, and the examiner must thus be so satisfied before allowing an application." It does not appear that the gap between the Patent Office standard and that required by the statute and judicial decisions has been reduced since the Graham decision and the directive of the Commissioner of Patents.

Section 102 of my bill provides that "an applicant shall be entitled to a patent on the invention defined in each claim of his application upon establishing by a preponderance of proof that the invention meets the conditions for patentability". As under present law, the applicant would file an application including the specification prescribed in section 112, describing the invention and distinguishing it from other inventions and from what is old. The specification must conclude with one or more claims particularly pointing out and distinctly claiming the subject matter regarded as the invention. It is anticipated that the Commissioner of Patents, pursuant to section 131(c), will issue regulations requiring applicants to cite any relevant patents, publications, and other prior art which the applicant considered in preparing his application, together with an explanation as to why the claims are patentable over the prior art, or if no specific relevant prior art was considered a statement to that effect and an explanation as to why the claims in such application are believed to be patentable. If the examiner determines that the application meets the conditions for patentability required by the statute, the application will be allowed and the patent issued. If the examiner is not satisfied that claims in the application are patentable, the application shall not be allowed unless the applicant establishes by a preponderance of proof that the invention meets the conditions for patentability as set forth in sections 102 and 103. Section 134 provides that an applicant may appeal from the decision of the primary examiner to the Board of Appeals.

The clarification of the conditions for patentability, the strengthening of the presumption of patent validity, and the placing of the burden on the applicant to establish by a preponderance of proof his right to a patent, in my opinion, achieves a fair balance between the rights of the applicant, and of the public.

The report of the President's Commission and various reports of the subcommittee have emphasized the desirability of facilitating an earlier disclosure of a new technology by reducing the protracted delays in the examination of patent applications. Virtually all of the recommendations made by the Commission to promote earlier public disclosure were vigorously opposed by the organized patent bar during the subcommittee hearings. Subsequently, the Patent Office advised the subcommittee that it would not be necessary at this time to undertake major statutory modifications of the examination procedure because the goal of a more rapid disposal of patent applications could be obtained by various administrative actions of the Patent Office. The Patent Office informed the Congress last year that it was its intention, commencing in fiscal year 1972, to reduce the pendency period of patent applications from the recent average of 30 months to 18 months. The new Commissioner of Patents in testifying before the Senate Judiciary Committee on May 2 assured the committee that he would take appropriate measures to implement this program. On the basis of the assurances made by the Commissioners of Patents, I have decided that no major surgery in the examination procedure is required at the present time.

A major recommendation of the President's Commission which was incorporated in the earlier versions of the bills which I have introduced would have provided for the repeal of section 104 of the current patent law which in effect discriminates against foreign patent applicants by precluding reliance on foreign inventive activities in establishing a date of invention. The Department of Commerce in a letter in 1968 to the chairman of the Committee on the Judiciary stated:

> Not only does this provision unfairly discriminate against foreign applicants, but it has been a source of considerable difficulty in our negotiations for international patent cooperation.

The Department of State advised me that the repeal of section 104 was essential to the attainment of the greater international cooperation in patent matters, which I have advocated for several years. The current administration has reviewed this subject and I have been advised by the Commissioner of Patents that the administration does not at this time favor the repeal of section 104 and recommends that our patent statute should, for the present, continue to bar proof of foreign inventive activities. I have, therefore, at the request of the administration, retained section 104.

The President's Commission in Recommendation No. 22 proposed the inclusion in the patent statute of language clarifying the licensing of patent rights, field-of-use restrictions and the doctrine of patent misuse. This recommendation was not included in the former administration's Patent Reform Act. During the congressional hearings, the Department of Justice opposed the Commission's recommendation. I have felt that the relationship between the patent and antitrust laws deserved careful consideration and with the change in administration I wrote to the Attorney General on February 28 asking for the current views of the Department of Justice. I received on June 10 a letter from Richard W. McLaren, Assistant Attorney General, Antitrust Division, stating:

> I strongly urge the committee not to incorporate Proposal No. 22 in any proposed patent legislation.

Mr. McLaren indicated that any necessary development or clarification of the law in this area could be obtained as part of the Department's antitrust enforcement program. He informed me that several cases have recently been filed and that others may be anticipated. No provisions on this subject are included in the bill.

Chapter 30, section 301 of the bill, restates the traditional interpretation that the Federal patent statute does not preempt contractual or other rights or obligations not in the nature of patent rights, imposed by State or Federal law on particular parties with regard to in-

ventions or discoveries, whether or not subject to title 35.

The Congress in 1965 passed legislation revising the patent fee schedule. After a lengthy study there was general agreement that between 65 percent and 75 percent of the costs of the Patent Office operations should be recovered by patent fees. The Johnson administration recommended that Congress authorize the Department of Commerce to set patent fees so that the Patent Office would recover between 65 percent and 75 percent of its costs. The Department of Commerce this year suggested that the adjustment of fees should be considered in separate legislation, and indicated that they would later transmit their recommendations to the Congress. My bill retains the present fee schedule and provides in section 41(e) that the Patent Office shall normally recover 65 percent of its costs. It directs the Commissioner of Patents to transmit his recommendations for adjustment of the fee schedule whenever the recovery rate consistently falls below 65 percent. The current Commissioner of Patents in testifying before the subcommittee in 1965 as the representative of the American Bar Association said "that something of the order of two-thirds of the cost of operating the Patent Office would be a reasonable total amount of fees to be collected."

Too frequently in the consideration of patent legislation, the inventor—especially the independent inventor—is the forgotten American. The subcommittee has received testimony from the American Society of Inventors. This organization has proposed certain amendments to the patent law, such as a statutory prohibition on an employer requiring the assignment of rights in inventions as a condition of employment, and a prohibition on challenges to the validity of a patent more than 5 years after its issuance. A particular cause of concern to inventors is the legal costs involved in obtaining and defending patents. At the request of the senior Senator from Pennsylvania (Mr. SCOTT), the ranking minority member of the subcommittee, the subcommittee has requested the American Patent Law Association, the National Council of Patent Law Associations, and the Section of Patent, Trademark, and Copyright Law of the American Bar Association to survey what legal assistance is currently available to indigent patent applicants and patentees, and to recommend what additional assistance, possibly with public funds, may be desirable.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2756) for the general revision of the Patent Laws, title 35 of the United States Code, and for other purposes, was received, read twice by its title and referred to the Committee on the Judiciary.

S. 2757—INTRODUCTION OF A BILL RELATING TO POLLUTION CONTROL

Mr. NELSON. Mr. President, I am introducing today legislation which would authorize Federal assistance to fight pollution caused by erosion of streambanks and roadbanks.

Each year erosion along the Nation's streams and rivers damages and destroys valuable land. Channels and lakes are altered or filled, fish and wildlife destroyed and water polluted. Erosion is nothing less than a form of vandalism of the American land that can and must be stopped.

Uncontrolled erosion is as expensive as it is destructive. Each year streambank erosion along 300,000 miles of the Nation's waterways destroys valuable land. The annual cost of removing sediment from channels, harbors and reservoirs is estimated at $250 million.

Each year we lose 500 million tons of soil from the banks of our streams and rivers. Unless preventive measures are taken immediately, we will see the rapid and substantial destruction of our beautiful rivers and streams.

In Wisconsin alone, 66,000 miles of streambanks are producing or have the potential to produce sediment. Twenty-four thousand miles of these streambanks have critical erosion problems. As much as 30 percent of the total sediment that pollutes streams, lakes, and reservoirs in Wisconsin comes from streambank erosion.

A study by the Department of Interior disclosed that erosion in the red clay area of northwestern Wisconsin has damaged valuable trout and recreational streams, discolored Lake Superior waters off the south shore of the lake and is damaging the lake's aquatic life.

Bank erosion control on large rivers is carried out by the Army Corps of Engineers. Although the Department of Agriculture provides some cost-sharing for streambank erosion control through the agricultural conservation program and the small watersheds program, it is impossible to undertake large-scale community erosion control projects. It is these extensive programs which can be carried out for the entire course of a river or stream which will be most effective.

The bill provides similar assistance for erosion control along the Nation's State and local highways, which needlessly destroys valuable land, defaces the landscape, causes excessive highway maintenance costs and pollutes many of our rivers and streams.

Roadside erosion control on the 875,000 miles of Federal highways is handled by the U.S. Bureau of Public Roads. Another half a million of city streets and roads are handled by municipalities.

This leaves some 2,125,000 miles of State and secondary roads—about 60 percent of the entire U.S. highway system—without adequate protection against roadbank erosion.

Studies have shown that silt losses due to roadbank erosion run as high as 356 tons per acre per year in parts of Wisconsin. An estimated 15 percent of the silt polluting Wisconsin's waters comes from this source.

Under this bill, the Secretary of Agriculture would be authorized to cooperate with counties and local conservation districts in furnishing financial and technical assistance in planning and installing erosion control measures. Cooperating States, counties, and local public agencies would bear at least one-quarter of the cost of control measures, with the exception of engineering costs. Those agencies would provide land, easements of rights-of-way and would be responsible for maintenance of the roadside measures.

Mr. President, to consider such measures of minor importance or to ignore them in the name of economy is to be irresponsible and shortsighted. It is only sensible and economical to care for our natural resources and to maintain our highways.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2757) to provide for the control and prevention of pollution, deterioration of water quality, and damage to lands and waters resulting from erosion to the roadbeds and rights-of-way of existing State, county, and other rural roads and highways, and for other purposes, introduced by Mr. NELSON, was received, read twice by its title, and referred to the Committee on Public Works.

S. 2758—INTRODUCTION OF A BILL TO AMEND SECTION 312 OF THE HOUSING ACT OF 1964

Mr. MONDALE. Mr. President, I introduce, for appropriate reference, a bill to amend section 312 of the Housing Act of 1964. The purpose of the bill is to eliminate the provision in the 1968 Housing Act which imposes an income limitation on the use of section 312 rehabilitation loans.

The section 312 program, first authorized in the Housing Act of 1964, affects property owners in urban renewal and code enforcement areas. It provides them with 3-percent direct loans to finance the rehabilitation of their homes and businesses.

In 1964, section 312 represented a shift in the emphasis of our renewal programs. No longer would the bulldozer be the main tool of urban renewal. Rather, the emphasis would be on conserving and rehabilitating as much existing housing as possible. Since 1964, the section 312 program has been refined and expanded by subsequent legislation. The Housing Act of 1968 contains several useful new provisions which remove certain restrictions on the use of the 3-percent loans. At the same time, however, the 1968 act also restricts loans for residential properties to persons whose incomes fall within the income ceilings of the 221(d)(3) below-market interest rate program.

The 221(d)(3) limits vary significantly from one community to another. In general, the income limits for a family of four are in the $6,000 to $8,000 a year range. Local housing agencies throughout the country are finding that this restriction, which is just now taking effect for the section 312 program, is seriously impeding the operation of many projects. The National Association of Housing and Redevelopment Officials estimates that 40 percent of all rehabilitation activity will be affected by the new limits. The Minneapolis Housing and Redevelopment Authority informs me that approximately 50 percent of the people who had qualified for section 312 loans before the passage of the 1968 act will no longer be eligible.

Under current HUD regulations, those projects which received HUD approval for planning or operation before August 1, 1968, are not subject to the restrictive income limits. However, the cutoff date in this regulation will benefit urban renewal projects more than it does code enforcement projects. Since renewal projects received Federal planning grants, the regulation excuses them from the income restrictions if the project has received HUD planning funds before the cutoff date. On the other hand, code enforcement projects do not receive Federal planning grants and therefore are excluded from coverage by the income limits only if the project is approved for operation by HUD before the August 1968 cutoff date.

Thus, in a community where an urban renewal project and a code enforcement project become operational at the same time, the property owners in one project area will be affected by the income limits while the property owners in the other may not be affected. The Jordan code enforcement project in Minneapolis, Minn., is an example of the confusion caused by this new regulation. The Jordan project was funded in May 1969. No Federal funds were received for planning, but the city had been involved with local residents in planning the project 2 years before the enactment of the 1968 Housing Act.

When local planning activities were initiated, Minneapolis housing officials announced that 3 percent rehabilitation loans would be available to all area homeowners. However, since the project was actually funded after the passage of the 1968 act, Jordan residents found that they could not qualify for loans if their incomes exceeded the 221(d)(3) limits. If the Jordan project had involved urban renewal—and urban renewal planning funds—rather than code enforcement—the income limits would not have applied.

Even more significant than these administrative problems is the impact that the income limits will have on our future efforts to preserve older residential neighborhoods in the central cities. Up to now, rehabilitation and code enforcement has been used effectively to strengthen "tipping point" neighborhoods—residential areas that are not yet severely blighted but that may deteriorate rapidly unless preventive action is taken. The section 312 program has been an extremely useful rehabilitation tool in these areas. But now the income limits mean that the Minneapolis homeowners with an average sized family and an income slightly above the 221(d)(3) limits—say $8,500 a year—will no longer be able to qualify for a 3-percent loan if he lives in a code enforcement area, even though he may be required to make extensive improvements to his property. A family in this predicament would certainly not be enthusiastic about staying in the neighborhood, since they would be forced to take out a conventional loan at 8 percent interest—and higher—to fix up an old house. Indirectly, then, the income limits will encourage the exodus from the central cities of the younger, stable families we most need to provide leadership in our "tipping point" neighborhoods.

Legislation to remove these limits has been endorsed by a number of officials and residents in my own State, as well as by such national organizations as the Conference of Mayors—League of Cities, the National Housing Conference, and the National Association of Housing and Redevelopment Officials.

The income limits have not improved the operation of our rehabilitation program in any demonstrable way. This unnecessary restriction should be removed as soon as possible.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2758) to amend section 312 of the Housing Act of 1964 to eliminate the provision which presently limits eligibility for residential rehabilitation loans thereunder to persons whose income is within the limits prescribed for below-market-interest-rate mortgages insured under section 221(d)(3) of the National Housing Act, introduced by Mr. MONDALE, was received, read twice by its title, and referred to the Committee on Banking and Currency.

S. 2760—INTRODUCTION OF A BILL TO AMEND THE INTERNAL REVENUE CODE RELATING TO WORKING MOTHERS

Mr. STEVENS. Mr. President, today I am introducing a bill to amend the Internal Revenue Code. My bill will allow parents to deduct the full cost of child care incurred as the result of working as a legitimate business expense.

In this day of spiraling costs of living, the limitations which prohibit women filing joint returns with husbands of combined incomes of $6,600 or more from deducting child-care expenses incurred as a result of working are not realistic. The present law imposes an inequitable tax burden on wage earners; particularly mothers, who pursue both a profession or trade and motherhood.

Certainly, the increased benefits to the family, derived from this income, should not be negated by an increased tax liability.

Mr. President, my bill will eliminate any limitations as to income level or amount of child-care costs that may be used as legitimate income tax deductions.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2760) to amend the Internal Revenue Code of 1954 to remove the limitations on the deductibility of expenses for care of dependents incurred to enable a taxpayer to be gainfully employed, introduced by Mr. STEVENS, was received, read twice by its title, and referred to the Committee on Finance.

ADDITIONAL COSPONSORS OF BILLS

S. 2422

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Indiana (Mr. BAYH), I ask unanimous consent that, at the next printing, the names of the Senator from Idaho (Mr. CHURCH), the Senator from Connecticut (Mr. DODD), the Senator from Indiana (Mr. HARTKE), the Senator from Hawaii (Mr. INOUYE), the Senator from Minnesota (Mr. MCCARTHY), the Senator from South Dakota (Mr. MCGOVERN), the Senator from West Virginia (Mr. RANDOLPH), and the Senator from Pennsylvania (Mr. SCOTT), be added as cosponsors of S. 2422, a bill to amend the Higher Education Act of 1965 to provide that the Secretary of Health, Education, and Welfare shall prescribe the maximum rate of interest for the students insured loan program.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2632

Mr. DOMINICK. Mr. President, on behalf of the Senator from Hawaii (Mr. FONG), I ask unanimous consent that, at the next printing, the names of the Senator from Oregon (Mr. PACKWOOD), the Senator from Utah (Mr. MOSS), the Senator from Arizona (Mr. GOLDWATER), the Senator from Nevada (Mr. BIBLE), the Senator from Wisconsin (Mr. NELSON), the Senator from New Jersey, (Mr. WILLIAMS), and the Senator from South Carolina (Mr. THURMOND), be added as cosponsors of S. 2632, authorizing and requesting the President to call in 1970 a White House Conference on Population Growth and Family Planning.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2722

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Wisconsin (Mr. NELSON), I ask unanimous consent that, at the next printing the name of the Senator from Idaho (Mr. CHURCH), be added as a cosponsor of S. 2722, to amend title II of the Social Security Act to provide a general increase of 25 percent in the amount of the benefits payable thereunder (with a minimum old-age benefit of $100), to provide for cost-of-living increases in such benefits in the future, to increase the amounts individuals may earn without suffering deductions from such benefits, and to amend title XVIII of such act so as to include eye care, dental care, hearing aids, and routine physical examinations within the services covered by the insurance program established by part B of such title, and for other purposes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDITIONAL COSPONSOR OF AMENDMENT

NO. 107

Mr. PROXMIRE. Mr. President, I ask unanimous consent that, at the next printing, the name of the junior Senator from Oregon (Mr. PACKWOOD) be added as a cosponsor of amendment 107 to S. 2546, the military procurement bill.

The amendment requires annual disclosures by former high-ranking civilian and military Pentagon employees who leave the Government and go to work for major defense contractors.

The PRESIDING OFFICER. Without objection, it is so ordered.

ENROLLED BILLS AND JOINT RESOLUTION PRESENTED

The Secretary of the Senate reported that on today, August 1, 1969, he presented to the President of the United States the following enrolled bills and joint resolution:

S. 38. An act to consent to the upper Niobrara River compact between the States of Wyoming and Nebraska;

S. 1590. An act to amend the National Commission on Product Safety Act in order to extend the life of the Commission that it may complete its assigned task; and

S.J. Res. 85. Joint resolution to provide for the designation of the period from August 26, 1969, through September 1, 1969, as "National Archery Week".

CONGRATULATORY MESSAGES FROM FOREIGN PARLIAMENTS ON APOLLO 11 MISSION

Mr. MANSFIELD. Mr. President, I have received congratulatory messages on the Apollo 11 mission from the Senate of France, the Senate of Belgium, and the Parliament of Vietnam.

I thank these bodies for their warm sentiments and ask unanimous consent that they be printed in the RECORD.

There being no objection, the messages were ordered to be printed in the RECORD, as follows:

TO SENATOR MANSFIELD:

On behalf of myself and my colleagues in the French Senate I wish to express our admiration to Armstrong, Collins and Aldrin and also to all those who have contributed to the complete success of the Apollo 11 mission which constitutes an unprecedented event in the history of humanity.

Signed by:

THE PRESIDENT OF THE SENATE, PARIS, FRANCE.

The Belgian Senate has followed with deep emotion and boundless admiration the prodigious exploit of the U.S. astronauts who have accomplished the most extraordinary conquest in world history and who have proven that the victories of peace excel by far the most beautiful military victories. I wish to express to you my congratulations and those of the entire Senate on this brilliant success that reflects the greatest credit on the courageous astronauts, the scientists, the engineers, the intellectual and manual workers of the great American nation which with its traditional nobleness made itself the messenger of all mankind. I wish to express my fervent wishes for the happy return of the gallant conquerors of the moon.

PAUL STRUYE,
President of the Senate.

JULY 25, 1969.

To Senator MANSFIELD:

We send our warm and friendly greetings on the success of the Apollo 11 mission. Please make known to the American people that we have communicated our happiness and best wishes on the total success of this mission in its contribution to world peace and to liberty.

Signed by:

PHAN HUY DUC,
Chief of the North American Parliamentary Delegation of Viet Nam.

POLLUTION OR BROWNOUTS

Mr. MUSKIE. Mr. President, yesterday I introduced the Intergovernmental Power Coordination and Environmental Protection Act—S. 2752—a bill designed to reconcile the needs of environmental protection and the generation of adequate supplies of electricity.

Lee C. White, the distinguished former Chairman of the Federal Power Commission, has proposed similar legislation, and his ideas and warnings were discussed in a July 30 article and a July 31 editorial published in the Washington Post. Echoing Mr. White, the Post noted in its editorial:

Congress has a responsibility to move ahead . . . with legislation both to protect the environment and to provide an adequate supply of electricity.

With each month the problem becomes more critical, reaching a point where blackouts or brownouts occur with increasing frequency in periods of normally heavy demand. The Intergovernmental Relations Subcommittee of the Government Relations Subcommittee of the Government Operations Committee will soon open hearings on the proposed legislation. I hope that all interested Senators will submit their views on this important legislation.

In the meantime, I commend the excellent article and editorial from the Post to the attention of the Senate and ask unanimous consent that they be printed in the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Washington (D.C.) Post, July 31, 1969]

MUST WE CHOOSE BROWNOUTS OR POLLUTION?

The recent power shortages in the Washington area and elsewhere in the East were no surprise to the Federal Power Commission. The retiring chairman of the FPC, Lee C. White, has been warning for some months that "brownouts" are inevitable unless the electric power industry and public agencies find some way of speeding the construction of generating facilities. Rationing of electricity, Mr. White has warned, may be the result.

Demands for power become enormous on hot days because of the widespread use of air conditioning. As an emergency measure it may be necessary for power companies to ask people to turn off their air-conditioning units (at the moment when they need them most), but this merely accentuates the urgency of a long-range solution. It is not merely a question of meeting maximum demands this summer, but also of preparing to cope with a phenomenal increase in the use of electricity. Current estimates are that by the year 2000 the United States will be using seven times the electricity that it consumed in 1965.

The industry is eager enough to provide the additional volume that will be needed, but it is no longer a question of merely selecting sites and building the essential generating plants. Some cities are limiting the type of fuel that generating plants may use to avoid further pollution of their atmosphere. There is much resistance to the location of power plants on rivers where they heat large volumes of water to the disadvantage of fish and other wildlife, and the building of gigantic power lines across the landscape encounters increasingly fierce opposition. The power companies have virtually asked for this opposition by the high-handed manner in which they have planned their plant locations and transmission lines in the past without public hearings and with little consideration for the resulting impact on the environment. Nevertheless, the public has an interest in an adequate supply of electricity as well as in an uncontaminated and uncluttered environment.

Mr. White sponsored legislation two years ago designed to give the FPC a larger role in determining the future of the industry. His bill would have required the power companies to disclose their construction plans in advance so that the impact on the environment could be adequately studied and discussed in the planning stage. In case of emergency it would also permit the FPC to override obstructions in local communities in the interests of the general welfare. While recognizing the need for adequate consideration for esthetic and environmental factors, this approach would permit the timely resolution of controversies so as to avoid future power shortages.

The coolness of the power industry toward this bill appears to have kept it in limbo. But the problem remains, and no solution is at hand. In a recent speech Mr. White predicted that the electric utility industry will come to Congress within two years asking for help in its efforts to meet the mounting demands for power. Meanwhile Congress has a responsibility to move ahead on its own with legislation both to protect the environment and to provide an adequate supply of electricity.

[From the Washington (D.C.) Post, July 30, 1969]

ELECTRICAL FAILURES: WHITE WARNS OF RATIONING

(By Robert J. Samuelson)

The outgoing chairman of the Federal Power Commission yesterday warned that the United States may eventually have to ration its electricity.

Lee C. White, leaving the commission after three and a half years, said at his farewell news conference that the country is moving "headlong into a situation where we may not have (enough) electric energy to go around."

The glum prediction came less than two weeks after major East-coast utility companies temporarily asked customers to reduce consumption to prevent a major power failure. The companies said that the combination of some plant breakdowns and high summertime use—especially for air-conditioners—had strained the system almost to capacity.

NOT ALARMIST

White said he was not trying to be an alarmist and hedged his forecast by adding, "I do not see it (rationing) in the near future."

Nevertheless, he repeatedly emphasized that power companies, in an attempt to expand their generating capabilities, are encountering the increasingly strong opposition of conservationists.

Consumption of electricity, he said, increases about 7 percent annually. That figure, compounded over a decade, means a doubling of output every ten years.

"We are now doubling pretty big bases," White commented.

UGLY SIDE EFFECTS

Conservationists object to many of the side-effects of new plants—large, unsightly transmission lines, air pollution, and thermal pollution (for atomic reactors, which must recirculate hot water into rivers and lakes).

White cited power projects in New York, New Jersey, Minnesota, and California that have been stalled by political and legal challenges of local groups.

"When the big units aren't generating, you've got big problems," he said.

Utility companies, White said, must adapt to the new concern for the "environment" by accepting more conservationists into corporate ranks.

White also promoted a bill authored by himself and fellow-commissioner Lawrence J. O'Connor. The bill, now pending before Congress, would empower new regional councils, composed of power companies and state and federal regulatory bodies, to coordinate power development.

Congress, he emphasized, must "provide a

mechanism whereby two social goals (more power and preservation of the environment) can be harmonized."

White will be replaced this Friday when John N. Nassikas, a Republican who recently served as the minority counsel for the Senate Committee on Commerce, is sworn in by Chief Justice Warren E. Burger.

White, a native of Nebraska, will remain in Washington and join a local law firm.

SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE REPORTS STRONG COAL MINE HEALTH AND SAFETY BILL

Mr. RANDOLPH. Mr. President, the Committee on Labor and Public Welfare has unanimously ordered reported a coal mine health and safety bill. It is a strong measure which will do much to improve the working conditions of miners in West Virginia and other coal producing States.

It is the most comprehensive and complex safety legislation presented to Congress in my experience since the first Coal Mine Safety Act of 1941 authorized a modest Federal role in this field of activity. I labored in the House for that 1941 action when a Member of that body. And it was on my motion in the committee yesterday that the new bill was ordered to be reported to the Senate.

Provisions of the measure to be brought before the Senate would bring into the coal mine safety law for the first time requirements for the control of dust in the air which miners breathe. Safety standards for operations in underground mines have been substantially expanded and strengthened; in fact, standards in provisions recommended by the committee are strict. Segments of the coal industry complain that all of the standards cannot be met in all of the mines. In connection with several of the standards, however, the committee version provides periods of time in which producers can make operations adjustments in order to be better able to comply.

This Congress, I forecast, will pass a coal mine bill this session, and I hope the ultimate legislation will emerge as authorization for a strong, realistic, and workable program to enhance miners' health and safety. This is of vital importance to tens of thousands of West Virginians and to many additional thousands of citizens of other coal producing States.

The costs of achieving better health and safety are high, and the cost burdens which would fall on the coal mine owners and operators to meet the requirements of this legislation would be heavy. Higher prices of coal and many other services and commodities probably would be residual developments.

Then, too, the Secretary of the Interior, the Director of the Bureau of Mines, and their subordinates, as well as the Surgeon General of the U.S. Public Health Service and his subordinates, would have assigned to them vastly expanded roles and responsibilities in their administration of new health standards and broadened safety requirements for both underground and surface coal mine operations. This would mean much larger appropriations for bigger Interior Department and Public Health Service operating budgets.

Our committee and its Subcommittee on Labor, on both of which I am the ranking majority member, started work on this legislation in February. In my long legislative experience, I have seldom seen a measure receive the degree of consideration that has been accorded to the bills which have been crystallized into the committee version now in the process of being reported. I attended every hearing and every executive session of the subcommittee and the committee, as did the diligent chairman of our subcommittee, Senator WILLIAMS of New Jersey. All committee members, under the able chairmanship of Senator YARBOROUGH of Texas, were interested and helpful.

CAMPUS DISORDERS

Mr. THURMOND. Mr. President, I wish to discuss a situation that has given me a great deal of concern in recent months; that is, the serious threat to our security presented by certain militant leftist organizations in this country. The most significant and frightening aspect of this problem is the fact that large segments of the population seemingly have more or less adjusted to the outrageous positions taken by these groups and thus have taken a "ho-hum" attitude toward their activities. It is well known that the human animal has extensive powers of adaptation to its environment, and that this ability has no doubt played a major part in helping him to become the most successful organism ever placed on this earth. But in this case, this important device could prove to be very dangerous indeed.

At one time, we were shocked and dismayed to find that any group could be so presumptuous as to actually take over a public institution by force and arms. Mr. President, such an event seldom is deemed newsworthy enough to make front page news. There was a time when anyone making anti-American statements was someone to be scorned. Individuals openly advocate revolution and give counsel on how to bring America to her knees. Such seditious statements are made daily with impunity and we close our eyes and ears and hope it will all go away. Men preach disobedience of any and all laws which one finds personally repugnant, yet some of these men are respected and honored at the highest levels of Government.

In order to bring this matter into a clearer perspective, let us imagine how the liberal press would react if suddenly all the militancy and arrogance came from the right instead of the left. Suppose members of the Ku Klux Klan or the various Nazi organizations began taking over public buildings and traveling throughout the country to foment dissatisfaction and generally stir up trouble.

Suppose they moved onto a college campus with the avowed purpose of closing it down; then they proceeded to occupy the administration building and held it with barricades and arms. Would we then hear from those liberals who have been so conspicuously silent on these matters? What if they urged people to refuse compliance with laws which they consider disagreeable or unduly restrictive? What if they organized crippling strikes to protest such compliance by certain corporations? Suppose they marched down the main streets of our cities wearing white sheets and Nazi armbands, yelling obscenities and carrying offensive signs. Would those affected be so hesitant to call in the police? Would some of my colleagues rush in to demand that their rights of assembly and petition be protected? Would the ACLU leap into the fray with their defense of all civil rights? Would movie stars stage benefits to raise money for the defense of these marchers? I doubt it, Mr. President, and I find this most inconsistent. I would like to make it clear at this point that, contrary to what certain columnists would have you believe, I hold no brief for groups such as I have used in this hypothetical example. I do not support extremists whether they be on the left or the right; but I do think we should consider what the reaction would be if "the shoe were on the other foot," and then wonder why such a reaction is not uniformly applied to all who deserve it.

Mr. President, we have adjusted—we have adapted ourselves to a climate of outrage; and while such a mental defense may salve our already overburdened minds which are assaulted daily with numerous other worries, it presents a serious danger in the long run—the danger of losing our country by default, by acquiescence.

Mr. President, let us not close our minds to these possibilities. We should try to be aware of what is being done to our country. We should look at our future through the eyes of those professional malcontents who would destroy us, for only then will we recapture the disgust and indignation we felt before our minds mercifully blocked it all out. Armed with this, and the patriotic fervor which is ingrained in us all, perhaps we will be able to reverse the alarming trends which now trouble our country.

WESTERN GOVERNORS' CONFERENCE RESOLUTION

Mr. MANSFIELD. Mr. President, it was my privilege on April 18, acting on behalf of the distinguished chairman of the Committee on Banking and Currency (Mr. SPARKMAN), to introduce the National Timber Supply Act of 1969, S. 1832. I am a cosponsor of this bill as are 14 other Senators.

The aim of the bill was to enhance the productivity of our national timberlands through the application of modern management techniques and thus guarantee the supplies of softwood lumber and plywood urgently required to meet the national housing goals of 26 million units established by the Housing and Urban Development Act of 1968.

I was most heartened, last evening, to learn that the Western Governors' Conference in annual session at Seattle, Wash., had unanimously adopted a resolution endorsing the general policy as stated in this legislation and urging its immediate enactment into law.

The significance of this action is that the citizens of the Western States not only face the urgent housing problems apparent in the metropolitan, medium-sized cities, and rural areas throughout the United States, but, perhaps, know

better than most Americans the direct relationship between adequate timber supplies and the production of softwood lumber and plywood needed to build dwelling units.

The Western States contain 57 percent of the growing stock and 72 percent of the sawtimber in the entire Nation. It is in these States where the harvesting and regeneration of our critically needed forest resource will largely be accomplished. These same States now contain 86 percent of the total softwood sawtimber essential for the production of lumber and plywood. Moreover, 79 percent of the national forest land which would be intensively managed under the proposed act is within the boundaries of these States.

The positive approach by the Western Governors to overcoming national housing deficiencies by efficient and productive management of our national timber resource, while providing for the protection and enhancement of other forest values, such as recreation, fish and wildlife, grazing, and watershed, is commendable.

I ask unanimous consent that the text of the Western Governors' Conference resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION FAVORING NATIONAL FOREST TIMBER SUPPLY ACT OF 1969

Whereas the western states and the nation face a desperate need for housing, particularly housing for low and moderate income families; and

Whereas wood products, primarily of softwood species, continue to be the basic materials for residential construction; and

Whereas 60 percent of the nation's softwood timber inventory is on national forests, and concentrated in the western states; and

Whereas the yield from the national forests can be increased by as much as two-thirds by intensive forest management without impairing other forest values such as recreation, fish and wild life, grazing and watershed; and

Whereas the National Forest Timber Supply Act establishes policies and provides funds to improve timber production, while insuring that other multiple-use values of the national forests are protected;

Now, therefore, be it resolved that the 1969 Annual Meeting of The Western Governors' Conference in Seattle, Washington, endorses the general policy as stated in the National Forest Timber Supply Act of 1969 as presently written and urges its immediate enactment into law.

GUN CONTROL NONSENSE

Mr. BENNETT. Mr. President, on Wednesday, July 30, the Washington Evening Star published an editorial appropriately entitled "More Gun Control Nonsense." It rightfully attacks the recommendation of the President's Violence Commission that some 90 percent of the handguns in America be confiscated.

I heartily endorse the editorial and again express my opposition to the registration or licensing of firearms.

Like the Star, I am firmly convinced that the only person who would register or voluntarily give up his firearm is the law-abiding American. We might as well ask all bank robbers to turn themselves in and all narcotic peddlers to appear at precinct headquarters as to ask criminals to register or voluntarily give up their firearms.

The Star does, however, support the approach advocated by several Senators, including myself, of stiff mandatory sentences for persons who use firearms in committing a felony under Federal jurisdiction.

I ask unanimous consent that the Star editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MORE GUN CONTROL NONSENSE

As an introductory note to this editorial comment, an item in the crime news is worthy of attention. On Monday there were 22 armed robberies in Washington. This brought the July total as of that date to 450, compared to 332 armed robberies in all of July of 1968.

In the face of this a task force of the President's Violence Commission (appointed by President Johnson) comes forward with a wacky recommendation. Its proposal is, except in a very small number of cases, that all Americans should be required to surrender any hand guns they own to the government.

Here is the task force's reasoning: This is the only way in which the United States can break "the vicious circle of Americans arming to protect themselves from other armed Americans." Now what does this really come down to? Even the task force, we suppose, would concede that criminals are not going to surrender their hand guns. So what they are saying is that no homeowner, to cite one example, should be permitted to keep a hand gun in his own house to protect himself, his wife, and his children against the night when some armed criminal might break into his home. Their argument is that home owners "may" seriously overrate firearms as a method of self-defense against crime. The "loaded gun in the home creates more danger than security."

This strikes us as blithering nonsense. How many members of this task force have been awakened in the middle of the night by a scream for help by some member of his family? Probably not one. But thousands of Americans are exposed to this dreadful experience every year. And in such a situation what is an unarmed householder supposed to do against an armed intruder? Hide under his bed, and never mind what happens to his family?

The major thrust of this soft-in-the-head report is that the requirement to surrender your hand gun, of which there are an estimated 24 million in the country, would reduce crime. This is absurd, for the criminals are not going to surrender their guns. A better and much more realistic way to deal with this problem will be found in legislation now being considered in Congress.

The intent of this legislation is to provide tough, really tough, mandatory penalties for criminals who use guns in the commission of a felony, such as rape, robbery or burglary. For a first offense the penalty generally favored would be a mandatory jail sentence in a federal jurisdiction, which includes Washington, of from one to 10 years. A judge would be forbidden to suspend this sentence or to make it run concurrently with the sentence for the primary offense. In case of a second offense, much stiffer jail sentences are proposed, and they should be written into law.

A similar bill passed the House last year, but was watered down in the Senate before becoming law. The argument then was that mandatory sentences deprive judges of discretion in imposing penalties. And so they would. But in one week at the time the watered-down bill was passed 17 criminals in this city were found guilty of crimes in which guns were used. In six of these cases, more than one-third, the judge imposed suspended sentences, which means that no jail terms were served for using a gun.

So we say let's make the sentences mandatory. And let's not deprive the law-abiding citizen of hand guns in his own home while the criminal element will remain armed to the teeth.

JOHN CROSBY: IMPRESARIO OF SANTE FE

Mr. MONTOYA. Mr. President, the Santa Fe Opera Co. is one of the wonders of the musical world. Since its first season in 1957, it has established and maintained a reputation as a major source of artistic creativity and innovation. American and world premieres of contemporary additions to the operatic repertory are standard procedure for this troupe of unexcelled standards.

This year's season is no exception. Tonight the company will give the U.S. premiere of "Help! Help! The Globolinks" by the well-known Italian-born composer, Gian-Carlo Menotti. Less than 2 weeks from now, on August 14, "The Devils of Loudon," the first opera of the newest talent of the European scene, the Polish composer Krzysztof Penderecki, is scheduled to have its American premiere at Santa Fe.

The man who has built the Santa Fe Opera Co. "from an experiment to an institution" is John Crosby. For over a decade he has proven himself capable of staging critically acclaimed productions and managing the company with equal competence. Tempering his creative drive with clear-headed objectivity, this remarkable gentleman has insured that the productions his group mounts are a perfect marriage of work and company.

Not even the fire in the summer of 1967 which destroyed the opera house could deter him. The season went on to its completion in the gymnasium of Santa Fe High School. At the same time, Mr. Crosby was working feverishly to transform the catastrophic end of the old Santa Fe Opera House into a new beginning. With the generous assistance of business firms from every corner of New Mexico, as well as donations and contributions from music lovers throughout the world, the Santa Fe Opera Co. opened its 1968 season in a new opera house, larger and finer than the old theater.

For the August issue of High Fidelity/Musical America magazine, Shirley Fleming has written an excellent profile of John Crosby and his accomplishments. The author demonstrates clearly how Mr. Crosby can delineate his purposes and methods with the precision of thought and word that is typical of an astute businessman. A good example of this is the account of why Mr. Crosby chose Santa Fe as the home of his fledgling venture in the 1950's. His reasons are unerringly accurate to those of us who know and love New Mexico's capital city.

He can tell you . . . that Santa Fe was picked as a summer opera site for four reasons: (1) it was a city "hospitable to the arts," very conscious of the culture of the Indians and of Spain and supporting six or seven museums to prove it; (2) it was never a flashy resort town, but appealed to families who might come and stay for a month in

the summer; (3) it is the southernmost cool city; (4) it is within reach of Houston and Dallas.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOHN CROSBY

(By Shirley Fleming)

John Crosby has probably been described as "elegant" by so many people that one hesitates to trot out the word, but it is unavoidable. The man who is the mastermind behind the Santa Fe Opera Company, which began its thirteenth season last month, is someone whom you couldn't imagine with his sleeves rolled up—though it is obvious that figuratively speaking they must be rolled up a good bit of the time. Only immense toil could achieve what he has achieved—moving "from an experiment to an institution," as he puts it—and if he looks like a board member of a blue-chip corporation, he can also delineate his purposes and methods with the precision of thought and word that is typical of an astute business man. He can tell you, for example, that Santa Fe was picked as a summer opera site for four reasons: 1) it was a city "hospitable to the arts," very conscious of the culture of the Indians and of Spain and supporting six or seven museums to prove it; 2) it was never a flashy resort town, but appealed to families who might come and stay for a month in the summer; 3) it is the southernmost cool city; 4) it is within reach of Houston and Dallas.

Ensconced in an immaculate town house in Manhattan's East Sixties, where the celebrations for Santa Fe go on all winter, John Crosby is more difficult to draw out on the subject of himself. But he will reveal that he is a Yale Music School man who studied conducting with Monteux and got close to opera at the Columbia Opera Workshop. He also admired the work of Leopold Sachse, a stage director at the Metropolitan and New York City Opera (and before the war, head of the Hamburg Opera Company), and it was with Sachse that he founded Santa Fe. "We became very keen on using young talent that was lying idle over the summer. The mid-Fifties were very different from the mid-Sixties in that respect. We talked of starting an opera company, and in 1955 I remember Bill Primrose, the violist, said 'go ahead and do it now.' It was really a professional beginning for me, as well as the company."

SETTING THE PACE

The 846-seat house was built, and the "idle talent" that first summer set the pace for things to come by plunging right into a world premiere—Marvin David Levy's *The Tower*. Since then the repertory has been probably the most consistently adventurous of any company in the United States, averaging a couple of world or U.S. premieres every season, the latter picked from the wide panorama of European offerings. Crosby is responsible, though he tends to play down his role: "A summer season at Santa Fe, contrary to popular opinion, is not John Crosby's list of favorite operas." Just how he and his board of directors come by the frequently brilliant choices (such as Berg's *Lulu*, given its first American performances in 1963, or Schoenberg's *Jacobsleiter*, last summer) is necessarily a little vague, but as Crosby puts it, "You try to keep *au courant*—who's doing what, who's singing what, who's conducting, who's writing." He is entirely candid about limitations, and recalls that after discussing with Schoenberg's widow the possibility of giving the American premiere of *Moses and Aaron* "it became evident to both of us that this was not for Santa Fe." (It was subsequently done by Sarah Caldwell's Boston Opera Company.)

NEW GROUND

Crosby is also quite clear about his company's role in breaking new ground onto which others can later venture, and he deplores the petty spirit of competition which is not unknown among local patriots surrounding various of the major companies. "I will be irate and distressed if I read in some newspaper again, 'why did we let Santa Fe beat us' to this opera or that. I think it's wonderful that operas can be picked up here and then done in other places, and if I were Mr. So-and-So of the X opera company I would damn well let John Crosby stick his neck out on something and see how it worked. It is important that these scores be produced and heard or they can't take their place in the mainstream. Perhaps we can afford to take chances—perhaps the stakes are not so high here . . ."

Although sales at the box office cover only one-quarter of the company's expenditure—and this figure will stand, Crosby says, "as long as we do contemporary repertory, use experimental scenery, have long rehearsal schedules, and make a 'festival presentation' out of the things we give"—foundation grants have materialized in sufficient force to keep the wolf from the door. (Even the destruction of the opera house by fire in the summer of 1967 was, amazingly enough, only a temporary setback; Crosby was on the phone raising money for the new building—successfully—literally before the smoke cleared.) And after being exposed for even a short time to the precision of Crosby's mind, one is inclined to take as understatement his declaration that "We run a tight ship—there's no fat on the budget." With three orchestra dress rehearsals for each opera, plus one "piano dress," it is scarcely surprising that expenses run as high as quality. Meanwhile, Santa Fe makes its contribution to the operatic world at large through its Apprentice Artist program, which gives about forty young singers a forty-hour-a-week season of hard work in learning all aspects of their trade. Some of them go into solo roles in the parent company, and over a hundred have spread out into major companies here and abroad.

What everybody is waiting for this summer at Santa Fe are the American premieres of Menotti's *Help! Help! The Globolinks* and Penderecki's *The Devils of Loudun*. Both are scheduled for this month, and Musical America readers will be hearing more of Mr. Crosby's "tight ship" very happily afloat.

PROPOSED DEPLOYMENT OF ABM SYSTEM

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the RECORD a statement prepared by the distinguished junior Senator from Tennessee (Mr. BAKER) and a news release issued by him relating to a poll of Tennesseans concerning the proposed deployment of the ABM system.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR BAKER

Recently I conducted a poll in my monthly newsletter pertaining to the proposed deployment of the ABM system. The results of this poll indicate that nearly 80 percent of Tennesseans are in favor of President Nixon's recommendations.

NEWS RELEASE ISSUED BY SENATOR HOWARD H. BAKER, JR.

WASHINGTON.—Nearly 80 percent of Tennesseans favor President Nixon's proposed deployment of the anti-ballistic missiles (ABM) system, according to a poll conducted by U.S. Senator Howard H. Baker, Jr. (R-Tenn.).

The results of the poll were announced today by Senator Baker.

From more than 2,000 replies in the poll, conducted through his monthly newsletter 79.3 percent said they favored the President's plan, 20.6 percent expressed opposition to it.

"Do you favor President Nixon's proposed ABM system?" was the question asked in the newsletter. "Yes" or "no" answers were requested.

"The only question involved at this time is whether the President's proposal is approved or rejected," Senator Baker stated in his newsletter.

A total of 2,105 replies were received. Of that number 1,627 voted "yes," and 424 voted "no."

In addition to those replying directly to the question 54 others wrote that they were not sufficiently informed to make a decision and "will rely on your judgment."

The newsletter goes to Republicans and Democrats in all 95 counties of Tennessee.

Baker has taken a lead in the U.S. Senate in supporting the President's proposal. At the time he took the opinion poll, Baker said, "While I am confident a majority of Tennesseans support ABM deployment, I am interested in the percentage and also in the views of those who oppose it.

"I respect the position of those against the ABM," he said today. "There are sound arguments on both sides of the question. I just happen to believe that the ABM proposal is the answer to the constant threat from our enemies. It is a defensive proposal, not an escalation of offensive weapons, and, in my judgment, will strengthen our hand in peace negotiations."

Many of the replies, on both sides of the issues, to the poll where highly emotional, commenting on their opinions at length, Baker said.

JOHN FRANCIS SONNETT

Mr. DODD. Mr. President, with deep personal regret, I mark the passing of John Francis Sonnett.

As a senior partner of Cahill, Gordon, Sonnett, Reindel, & Ohl, one of Wall Street's most renowned law firms, John Sonnett was an eminent and eloquent member of the American legal community.

As special assistant to Secretary of the Navy Forrestal and as Assistant Attorney General of the United States, Sonnett was a dedicated public servant whose illustrious career touched on many of the most vital issues of the last three decades.

With John Sonnett's death, I have lost a valued friend and a trusted counselor.

Mrs. Dodd joins me in extending heartfelt sympathy to Mrs. Sonnett and the Sonnett family.

INCOME TAX SURCHARGE AND THE NEED FOR TAX REFORM

Mr. KENNEDY. Mr. President, I fully support the provisions of the compromise bill passed yesterday by the Senate for extension of the income tax surcharge through the end of the present calendar year. I commend the distinguished majority leader and the distinguished chairman of the Finance Committee for their leadership in developing this highly satisfactory compromise. In light of the present circumstances, I believe that the compromise is well calculated to achieve our twin goals of bringing inflation under control and

achieving the earliest possible enactment of comprehensive tax reform.

Perhaps the most important single point that should be reaffirmed at this time is our intention to press vigorously for the enactment of comprehensive tax reform. I am especially pleased to note that the distinguished chairman and the Democratic members of the Finance Committee have given their assurance that a tax reform package will be reported to the Senate by the end of October. Indeed, in light of the extraordinary progress that is now being made in tax reform by the House Ways and Means Committee, I am hopeful that the present Senate schedule may be accelerated, so that we may be able to enact tax reform legislation for the benefit of all our citizens at an even earlier date.

The need for tax reform is obvious. In a brief but forceful letter to the editor published in yesterday's New York Times, seven of the Nation's leading economists pointed out that the inequities of our tax system become more acute at times such as today, when taxes are being raised. Public opinion is now rightfully aroused against the injustices of our present system, and I am confident that reform will prevail.

By yesterday's action, the Senate has shown its good faith and cooperation with the administration in carrying out a responsible fiscal policy in the war against inflation. I look forward to the early enactment of tax reform through the joint efforts of Senators, Representatives, the administration, and all other persons so vitally interested in the cause of tax justice.

Mr. President, I ask unanimous consent that the letter to the editor to which I referred be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times, July 31, 1969]

SURTAX SUPPORTED

As economists, many of us are concerned about inflation and support the tax surcharge and its extension as requested by the Nixon Administration. Many of us are also concerned about inequities in the tax structure and the urgent need for tax reform.

We believe that these two goals are not in conflict. Recent Congressional action extending the surtax withholding rate, but not the surtax rate itself, makes it possible to have serious discussion and legislative action on tax reform, and at the same time to provide responsible anti-inflationary fiscal policy.

When taxes are being increased, the injustices of the existing system become more acute, and therefore responsible public opinion is rightly concerned with the inequities of the present tax system.

In periods of stable or declining tax rates, reform is all too readily delayed, as in 1964, when public support melted away under the intense lobbying of economic pressure groups. Therefore we favor continuation of the surtax withholding rate for a period sufficient for Congress to consider and enact tax reform. [Editorial July 30.]

E. CARY BROWN, ARNOLD C. HARBINGER, WALTER W. HELLER, EDWIN KUR, WILLIAM D. NORDHAUS, JOSEPH A. PECHMAN, PAUL A. SAMUELSON,

Cambridge, Mass., July 28, 1969.

CBW NOT MORE HUMANE—NEED TO RATIFY GENEVA PROTOCOL OF 1925

Mr. PROXMIRE. Mr. President, in 1926 the Senate, despite the favorable report of the Foreign Relations Committee, referred the Geneva protocol of 1925, banning chemical and biological weapons back to the committee after a brief debate. That debate took place some time ago, and in view of the alarming proliferation of these weapons, it seems worth our while to reexamine the arguments used against them, to determine whether these arguments are as accurate now as they seem to have been then.

A major argument set forth against the Geneva protocol, was that poison gas was in fact a more humane weapon of war than conventional explosives. Senator Wadsworth, one of the protocol's most vocal opponents, stated that:

We have the information now complete, based upon facts that are incontrovertible, which indicates very, very clearly that, compared with other weapons used in warfare, gas is the least cruel, not only in its effect at the time of its use but in its after effects.

The Senator cited figures indicating that deaths due to gas in World War I were proportionately less numerous than those from other weapons.

Whether or not we agree that the chemical weapons available at that time were more humane than conventional weapons, Mr. President, the fact is that the state of the art and the state of the world have both changed since the time this argument was originally made.

The Senators debating the protocol in 1926 were speaking of gas weapons that pale in comparison with the ones we have developed since. We would be hard put to come up with casualty figures like those Senator Wadsworth cited when we have gases minute quantities of which kill instantly on contact.

At that time, too, the world had not seen biological weapons used in warfare and the Senators had no reason to conceive of the supervirulent weapons that exist today.

More important, Mr. President, not only have the weapons changed since the time this argument was made, but the context in which they are used has been drastically altered as well. Modern, worldwide war, in which noncombatants suffer heavily along with combatants, was nothing new to the Senators debating the Geneva protocol. But with the advent of nuclear arms—which these men did not foresee—has come the era of total war, in which there is no combatant-noncombatant distinction and vast numbers of people can be eliminated indiscriminately. The modern chemical and biological weapons and their delivery systems are very much a part of this warfare.

The senatorial opponents of the Geneva protocol in 1926 may or may not have been right in their time, Mr. President, but I submit that generally speaking today, the use of chemical and biological weapons is not more humane than conventional weapons.

This, as I hope to demonstrate in the future, is only one of a series of arguments used in 1926 that are inapplicable today. If these arguments are insufficient today, Mr. President, then the only obstacle to our approval of the Geneva protocol is our own apathy. And CBW is far too important a matter to ignore through apathy.

COAL MINE HEALTH AND SAFETY BILL

Mr. WILLIAMS of New Jersey. Mr. President, it is a proud moment for me to announce to the Senate that yesterday the Committee on Labor and Public Welfare by unanimous bipartisan record vote, ordered the strongest coal mine health and safety bill in the Nation's history reported to the Senate.

As chairman of the Labor Subcommittee, I will shortly be introducing a clean bill and an accompanying report. I hope that the Senate will be ready for action on the measure when it convenes after Labor Day.

It has been said that the Coal Mine Health and Safety Act is aimed at a relatively small segment of the industrial health and safety problem. In terms of the number of deaths and injuries each year this is true, in terms of the numbers of hard-working men who will be protected, this is true; however, in terms of the size of the problem we are attacking, and more importantly in terms of the debt we individually and as a nation owe to our coal miners, no statement could be more misleading. Day after day and year after year tens of thousands of men go down into the mines to bring forth the coal which provides the energy to heat our homes, to keep our wheels of industry spinning.

With its small numbers, coal mining had one of the highest fatality rates of any industry in the United States last year. The odds were 500 to one that a coal miner would be killed on the job. If the miner managed to survive the roof falls, the electrical hazards, the explosions, the fires, the mine inundation, he would go home at night knowing that with each breath he took in the mines, he was inhaling more and more of the deadly coal dust, more and more of these invisible particles of dust which cause black lung, which brings 20 years of breathlessness and ultimately death to thousands of our miners.

This bill not only is a hallmark for coal miners, it would represent a major victory for all workers.

Only 1 month ago, the Senate passed the Construction Safety Act which is now awaiting the President's signature. Later on in this session the Senate, I hope, will begin consideration of the omnibus Occupational Health and Safety Act, on which the Labor Subcommittee will soon begin hearings.

I am proud to be the sponsor of each of these three pieces of legislation. I am even more grateful for the opportunity, as chairman of the Labor Subcommittee, to be the floor manager for each of these three acts. Most important, however, I am honored to be a Member of the Senate and the Congress which has

recognized its obligation to protect the health and safety of America's working men.

I would certainly like to commend most sincerely the diligence and interest displayed by the chairman and my fellow members of the Labor and Public Welfare Committee during the deliberations on this bill. Their untiring efforts played a major role in reporting this historic measure.

LAKE SUPERIOR

Mr. NELSON. Mr. President, one of the key tests of our willingness in this country to deal with pollution problems is now underway for Lake Superior, the third largest body of fresh water in the world and the last pure Great Lake. A news report in The Trail, published by the National Audubon Society and the North Central Audubon Council, does a good job of putting the Lake Superior situation in perspective, and I ask unanimous consent that it be printed in the CONGRESSIONAL RECORD at the end of these remarks. As I have pointed out on a number of occasions, all sources of pollution of this lake could readily be dealt with if the Governors of Wisconsin and Minnesota would request the Secretary of the Interior to include intrastate pollution under the jurisdiction of the enforcement conference on the lake. Without such a step, there is a real danger that nothing will be done about major pollutants such as the 60,000 long tons of taconite tailings now being dumped into Lake Superior every day.

There being no objection, the news report was ordered to be printed in the RECORD, as follows:

LAKE SUPERIOR—"BEGINNING WRINKLES OF AGE . . ."

Lake Superior is showing the "beginning wrinkles of age". So said A. F. Bartsch at the water pollution enforcement conference in Duluth, May 13–15. Bartsch, director of the Pacific Northwest Water Laboratory, testified that Lake Superior is in the early aging process since its formation 12,000 years ago, and has "admirably withstood the pressures of time." He cautioned, however, that this greatest of the Great Lakes is not immune to the euthrophication (aging) process.

The conference, called by former Interior Secretary Udall, was one of the most controversial of such conferences conducted by the Federal Water Pollution Control Administration, largely because of the activities of one company. The company is the Reserve Mining Company at Silver Bay, Minnesota. The activity is the discharge of approximately 60,000 long tons of taconite tailings per day into Lake Superior. Evidence indicates that this pollutant, which can remain in suspension for long periods of time, reduces the abundance of fish food organisms and in so doing has a deleterious effect on the ecology of at least a portion of the lake.

Chairing the conference was FWPCA's new and youthful commissioner, David Dominick, who at one point disallowed new data that showed tailings in Wisconsin waters (which would have demonstrated interstate pollution), but later was forced to allow such data to enter the record for official consideration by the conferees from the water resource agencies of Michigan, Minnesota and Wisconsin.

A frightening point was made by Edwin Geldreich, of the U.S. Public Health Service, when he said that the minute taconite tailings could serve as vehicles for the spread of disease producing microbes, although evidence on this point is not complete.

Pollution by metals is an especially dangerous threat in Lake Superior because of the very soft water which seems to increase their toxicity. For this reason, concentrations which would allow life in other waters are not acceptable in Lake Superior warned Dr. Donald Mount, director of FWPCA's water quality laboratory in Duluth.

The conferees are now studying the testimony and will reconvene in executive session at a later date. One discouraging note in the conference: both the Minnesota Pollution Control Agency and the Minnesota Conservation Department turned out to be the chief apologists for Reserve Mining Company. This was perhaps balanced by an encouraging note: The Army Corps of Engineers does not propose to act on revalidating Reserve's permit until the results of the conference become available and definite recommendations are received from the Interior Department.

SENATOR SCOTT TESTIFIES BEFORE HOUSE SELECT SUBCOMMITTEE ON EDUCATION ON BEHALF OF AFRO-AMERICAN HISTORY AND CULTURE BILLS S. 14 AND H.R. 3295

Mr. CASE. Mr. President, on Monday, July 28, Senator SCOTT appeared before the Select Committee on Education of the House Education and Labor Committee in support of legislation to establish a Commission on Afro-American History and Culture (H.R. 3295 and S. 14). I cosponsored S. 14 when Senator SCOTT introduced it on January 15 of this year.

I ask unanimous consent that the testimony of Senator SCOTT on behalf of this proposed legislation be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR HUGH SCOTT, REPUBLICAN, OF PENNSYLVANIA, BEFORE THE SELECT COMMITTEE ON EDUCATION, HOUSE EDUCATION AND LABOR COMMITTEE, JULY 28, 1969

Senator SCOTT. Thank you, Mr. Chairman and gentlemen of the committee. I appreciate your kindness in calling upon me at this time. We seem to be at a point of indicating our various origins, and I may add that I am of Scottish, Welsh, Irish, English "infraction" and I find no longer any need for the defense of any of these minorities in the United States. I am not going to expend sympathy upon the Irish, because they have done very well in this country and they began by being policemen, keeping all the rest of us in order, and they moved from there to the highest of all possible posts which can be held.

I think the distinction has been well made by Dr. Wesley that the Negro's physical visibility is what has contributed so much to his relative political invisibility because he was the victim of decisions made as far back as the second of July 1776, when the drafters of the Declaration of Independence left out of that draft Mr. Jefferson's emotional and moving paragraph in condemnation of slavery, and in 1784, when the State of Virginia, by three votes, defeated Mr. Jefferson's provision in the draft of that constitution abolishing slavery in that State by 1800.

I think the history of suppression and history of disadvantage and inequality is all well known and is certainly to be found in many of our history books; but the history of achievement, contribution, and participation and the history of rising aspirations is not yet a part of that American history commonly taught at all levels in all of our educational institutions; and therefore I am pleased to appear today in support of the bill to establish a Commission on Afro-American History and Culture.

I may add that my first appearance before this committee was in 1943, where one of the members of the committee from Texas made the same arguments I have heard here today precisely. After 26 years I am overwhelmed by reminiscence.

This commission would be composed of 22 members appointed by the President who would be authorities on African-American history, American history, education, journalism, communications, and other related fields.

I was very encouraged last year by passage of this proposal by the House of Representatives and a subsequent favorable report by the Subcommittee on Arts and Humanities headed by Mr. Pell. The imminence of adjournment prevented the Ninetieth Congress from completing action on the proposals.

During the first month of the Ninety-first Congress, I again joined with the distinguished member of this committee Representative Scheuer in this effort by introducing in the Senate an identical bill, S. 14.

The void in recorded American history created by the inadvertent "conspiracy of silence" about the black American is now pretty well known. I have watched with growing pleasure some overt steps by our communications media and educational institutions to fill this void. For example, Newsweek magazine on June 30 featured on its front cover six black faces and its third report on the Negro in America since 1963. This latest report is entitled "Report from Black America."

As I look over the newspapers, I see advertisements of books responding to the "demand for Negro history." I see feature stories about historical landmarks made by black Americans such as the Frederick Douglass Institute here in Washington. I see a pictorial and easy portrait series entitled "They Had a Dream" in the Washington Evening Star, which digests the lives of little-known black Americans such as a celebrated conductor, Dean Dixon; a black Catholic Bishop, James Augustine Healy; an inventor, Elijah McCoy; B. O. Davis, Sr., a U.S. Army General; Bill Picket, the cowboy who invented the rodeo sport bulldogging, and many more.

There has been a great stirring within the academic community toward teaching black history—partly in response to student demands. Academic institutions such as the National Endowment for the Humanities and the American Association of State Colleges and Universities are rousing activity in the area of ethnic teaching and knowledge. Recently the Ford Foundation announced a series of grants to colleges and universities totaling more than $1 million for the development of Afro-American studies.

However, the May issue of The School Review, a University of Chicago Department of Education quarterly publication, contained an article by Professor Mark M. Krug which concluded that the role of the Negro in recorded American history is still "incomplete and often distorted." The time is ripe for national leadership to foster better understanding and knowledge of the black experience, heritage, and contributions to our total society.

I believe a Commission on Afro-American History and Culture, such as that proposed in the bill before you today, could coordinate intercultural programs of foundations, educational institutions, and the news media and help bring them to public attention.

Therefore, Mr. Chairman, I urge favorable action on H.R. 3295, which will establish a

Commission on Afro-American History and Culture to make a comprehensive study of all proposals designed to create better knowledge of the black experience and its influence on today's American society.

I would like to conclude with a plea that action on this bill and I hope action in the other body will likewise be motivated by bipartisan concerns.

The quiet whispers against legislation of this sort usually turn on the question of political advantage, and we might as well bring it to the surface and expose it. We can either admit or deny political advantage as our own convenience advises us. I can only say that when I came to Congress, the proportion of Negroes in my district was 1 percent, and my support of civil rights measures, beginning with HEPC, has been constant and I am proud of this.

To knock down any feeling that the bill is regional or political, I think the greatest possible cohesiveness from both sides of the aisle would offer this kind of legislation its best chance for adoption.

Therefore I think it is extremely important that all of us seek to avoid the sheer, stark outlines of political opportunism or of a person's seeking publicity for the sake of alerting one minority to the fact that there is concern for it.

The concern exists whether minorities are alerted or not. They do not need to be alerted. They were never more aware than they are today for the necessity for the elimination of those last areas of discrimination or those enclaves of apathy, those pockets of indifference which themselves contribute to the frustrations, and the frustrations in turn contribute to civic confrontations.

So I think what you are doing here is the laying of some bricks in the wall of the American determination to establish that what the Constitution said, what the Declaration of Independence said is truly being given an opportunity to enter the field of reality. Therefore, I am very pleased to support the bill and urge the favorable action of the committee. Thank you, sir.

PEACEFUL USE OF THE SEABEDS

Mr. HATFIELD. Mr. President, at a time when reductions are being called for in defense expenditures and the emphasis the United States is placing on matters of military procurement, the recent statement of the Defense Department before the Senate Foreign Relations Subcommittee on Ocean Space cannot be met with anything but dismay. The implication of Assistant Secretary Nutter's statement decrying a prohibition of the use of seabeds for other than peaceful purposes and labeling it as neither feasible nor desirable is that plans are already underway by the Defense Department for the expansion of defense facilities beyond the territorial waters of the United States.

Such a claim is not only appalling when the goal of the United States is being announced as one of peace, but it indicates an unwillingness on the part of our Nation to turn attention to the begging problems on the homefront at the abandonment of current levels of defense spending, and, with the Soviet Union, to establish a mutual agreement for the solely constructive use of the earth's one yet undeveloped resources.

In the United States alone $80 billion was spent last year on defense, while considerably less than that amount went to meet all domestic programs of our Nation. Health services remained wanting, housing inadequate, social security benefits insufficient, educational opportunities limited, transportation facilities crowded, pollution problems burgeoning, and natural resources unattended. Such an imbalance in resource allocation would seem to indicate that the last investment our Nation needs to consider is the expansion of military installations and fortifications to the world's seabeds.

It is my opinion that scrutiny needs to be given the proclamation of Mr. Nutter, and that of Gerard C. Smith, Director of the U.S. Arms Control and Disarmament Agency, who indicated at the May disarmament conference at Geneva that the United States would oppose the Soviet proposal to limit the use of seabeds exclusively to peaceful purposes.

Each day an estimated 10,000 people in the world die from undernutrition and malnutrition, while the Department of Interior conservatively estimates that the food potential of the sea can supply minimal animal protein needs for twice the present world population.

In addition to the protein potential of the ocean environment lies unrefined plenty in terms of petroleum, minerals, chemicals, and even possibilities for improved weather forecasting.

It is my firm conviction that the United States needs to re-examine its posture on the use of ocean resources. As inviting as the threshold to the moon is that beyond the shores of the world's continents, which through cooperative, international development could enhance the lives of men around the globe.

THE PESTICIDE PERIL—XXXVII

Mr. NELSON. Mr. President, a witness before Senator WALTER MONDALE'S Subcommittee on Migratory Labor revealed this morning that—

Fifty million pounds of a pesticide originally developed in World War II as a German Nerve Gas are being spread unchecked on America's farms and gardens. The result is that uncounted thousands of the nation's migrant farm workers, farmers and suburban homeowners have been fatally overcome or seriously disabled.

The testimony of Jerome B. Gordon, president of Delphic Systems & Research Corp., in New York City, adds a new dimension to the current controversy over the use of persistent, toxic pesticides. Farm workers are daily exposed to hard pesticides at levels believed to be hazardous to human health, yet efforts to protect them are virtually nonexistent.

Last fall the U.S. General Accounting Office reported there was little effective compliance action on regulations set by the Federal Insecticide, Fungicide, and Rodenticide Act, and there was no request for prosecution by the Justice Department in 13 years, despite the existence of repeated major violations.

The seriousness of the lack of enforcement of the few regulations we now have is alarming when reading reports in the November 1968 issue of Mayday of actual pesticide poisonings. In 1963 a heavy spraying of the pesticide parathion on a peach crop in California caused an outbreak of poisoning which resulted in one death and hospitalization for many others. It was eventually discovered that the real cause was the presence of a compound derived from parathion, but considerably more toxic which was carelessly identified simply as parathion. More recently, just in the past 18 months in California there have been six deaths among farm workers due to accidental pesticide poisoning.

And evidently, pesticide poisoning is not just limited to the workers. The California Department of Public Health last summer declared the local water supply in Delano unfit for the consumption of infants below the age of 6 months, because of the heavy presence of nitrate residues from the applications of fertilizer to the crops in the fields.

I ask unanimous consent that the press release issued by Delphic Systems & Research Corp. regarding Mr. Gordon's testimony and also the article from Mayday on pesticide contamination be printed in the RECORD at this point.

There being no objection, the press release and article were ordered to be printed in the RECORD, as follows:

"Fifty Million Pounds of a pesticide originally developed in WW II as a German Nerve Gas are being spread unchecked on America's Farms and Gardens. The result is that uncounted thousands of the nation's migrant farm workers, farmers and suburban homeowners have been fatally overcome or seriously disabled." This is one of several allegations made in a statement by worker safety advocate Jerome B. Gordon in testimony released today at a Hearing in Washington held by the U.S. Senate Sub-committee on Migratory Labor, headed by Sen. Walter Mondale of Minn.

The pesticides in question derived from German nerve gas research, are called organic phosphors and appear under such trade names as Parathion, Methyl Parathion, TEPP, and in less lethal dosages, as Malathion. They are first cousins, chemically, to the nerve agents GB and VX involved in the current chemical and biological warfare controversy.

The odorless, colorless liquid or powder form of the pesticide is so powerful that a minute amount—less than .00424 of an ounce, swallowed by a human is fatal in less than five minutes! Even under ideal conditions, continued cumulative exposure can result in disabling partial paralysis and mental debility.

Both the organic phosphor compounds and the war gas nerve agents GB and VX use the same "kill mechanism." They prevent the manufacture of enzymes which carry body "messages" controlling respiration. In other words, victims simply suffocate. Early symptoms include pinpointing of eye pupils, tightness in the chest, convulsions, paralysis and finally respiratory failure. Even more insidious is that less than lethal dosages of the pesticides have syptoms resembling the onslaught of an attack of flu!

Mr. Gordon further contends that the occupational and general health danger from insecticides such as Methyl Parathion, Parathion and Malathion could ironically increase in the future, with the probable banning of persistent insecticides such as DDT and DDD by many states and the federal government. To quote Mr. Gordon; "This bizarre situation is the product of an unwieldy and unresponsive federal and state pesticide regulatory program that has permitted the increased production and use of these deadly nerve agents, but has not subsidized the development of more selective and less toxic substitute pesticides by the U.S. agricultural chemical industry even in the wake of the pesticide crisis raised by the publication of

Rachel Carson's book, the "Silent Spring" in the early nineteen sixties."

"The situation is not helped any by the facts uncovered by pesticide researches of the existence of more toxic "frankenstein-like" compounds evolved from excessive and frequent application of organic phosphor pesticides. One of these derivative compounds, Paraxon has 2 to 3 times the toxicity of Parathion."

Citing specific instances of pesticide poisoning and government research findings, Mr. Gordon goes on to state that "we are not counting over one hundred thousand cases of pesticide poisoning and several hundred fatalities annually. This anomolous situation is the product of: a) the fact that physicians frequently mis-diagnose deadly Parathion poisoning as "flu"; b) persons directly affected by exposure to potentially fatal organic phosphor pesticide poisoning are least well informed about the potential hazards; c) pesticide poisoning is not a recordable occupational disease event in most states."

Major victims of this state of affairs, according to Mr. Gordon are the nation's migrant farm workers. "These people are prey to the most unspeakable of occupational health hazards—death through nerve gas asphyxiation, and yet they are unprotected by safety legislation in all states save California. They have no recourse to workmen's compensation medical and income benefits in almost two thirds of our country and they can't even inspect public records in states where they exist like California to ascertain whether existing pesticide rules have been violated." It is astounding to think that the U.S. Department of Agriculture spends over $132 million on pesticide-related research, while allocating less than $160 thousand annually for pesticide safety and not even include farm workers in any of the programs. It is almost beyond comprehension that within the highly subsidized American agricultural business that there is outright refusal on the part of embattled grape industry to "bargain" on control of pesticides in the fields with the grape workers.

"Part of the problem, Mr. Gordon suggests, is the non-think attitude of the Agricultural Chemical Industry. In their zeal to become a $3 billion industry by the mid-seventies, they have proliferated an uninformed agricultural service superstructure—signified by the appearance of pesticide "detail men" in major commercial growing areas in this country. The net result has been the proliferation of sales of less than effective but highly toxic pesticide formulations to applicators and users. This can be seen in the fact that average consumption of pesticides per farm acreage has trebled in volume over the period from the mid fifties to the late sixties. In the case of the highly toxic organic phosphor pesticide Parathion, this has resulted in an increase in production volume of 188 per cent over the seven year period from 1960 to 1967. Industry consultants expect this rate of increase to be maintained into the seventies."

Among the possible remedies recommended by Mr. Gordon in his testimony are the following:

1. A phased ban of the use of organic phosphor pesticides.

2. Federal subsidization of the development of new families of selective less toxic pesticides as substitutes for the broad spectrum organic phosphors.

3. A minimum of a ten fold increase in the funding of Department of Health, Education and Welfare Pesticide Research and Surveillance Programs from its present level of less than $2 million annually.

4. Enactment of a special workmen's compensation program for the nation's farm workers to provide adequate medical and income benefits to fill-in present non-existent protection against the hazards of work in the nation's fields and vineyards.

5. Revision of the existing federal pesticide regulatory legislation to shift the present responsibilities split between the U.S. Agricultural Research Service and the Food and Drug Administration into a proposed executive level environmental health protection agency.

6. The earmarking of Department of Defense C.B.W. defensive systems research and development and procurement funds to serve the dual purposes of protecting the nation against the very slim likelihood of chemical warfare attack and the nation's farm workers, farmers and suburbanites against the very strong possibility of pesticide poisoning of ourselves and our environment.

Mr. Gordon is President and founder of the New York-based policy research consulting firm, Delphic Systems and Research Corporation. Mr. Gordon has authored a number of articles on worker safety and health and collaborated in the preparation of one of the strongest versions of the Coal Mine and Safety and Health Act of 1969, co-sponsored by Rep. Ken Hechler of W. Virginia and Sen. Harrison Williams of New Jersey.

Mr. Gordon is a resident of Ossining, New York and a native of Lynn, Mass.

PESTICIDES: SLOW OR SUDDEN DEATH FOR CALIFORNIA FARMWORKERS

Three months ago a group of Cuban refugees escaped to the U.S. on a Soviet-built Antonov crop-dusting aircraft. When the plane touched down in Florida, it was immediately quarantined by Federal immigration and Florida State Health officials and returned to Cuba the following day. The passengers in the aircraft emerged retching and vomiting and were rushed to nearby clinics; they had been made ill by the noxious pesticide parathion that was all over the aircraft.

In 1965 twenty eight persons in San Diego, Calif., were poisoned by the pesticide diazinon which accidentally contaminated doughnut mix in a local bakery.

In 1967, in nearby Tijuana, Mexico, 17 persons were fatally poisoned and 300 were reported ill when parathion was carelessly spilled on a truck which was later used to transport confectionery sugar.

But the worst disaster from pesticide contamination of food occurred in Colombia last year: 77 people fatally poisoned, 146 were hospitalized and upwards of 600 were reported ill from flour contaminated by the traces of parathion spilled on the floor bed of a truck used to transport the flour.

On September 10, the U.S. General Accounting Office issued a report on regulatory enforcement of the Federal Insecticide, Fungicide, and Rodenticide Act. The substance of the GAO review was that there was little effective compliance action and no request for prosecution by the Justice Department in 13 years. "This was true," the GAO found, "even in instances where repeated major violations of the law were cited by the Agricultural Research Service [of the Department of Agriculture] and when shippers did not take satisfactory action to correct violations or ignored ARS notifications the prosecution was being contemplated." ARS conceded the truth of the GAO's charges.

As usual the GAO report was hardly noticed. Little action has been taken since Rachel Carson's *Silent Spring* raised important public health issues in 1964 and the chemical-agri-business bloc squelched them before fundamental, enduring reforms were developed.

While regulations exist in this country for registration, dosage limitations and residue tolerances, violations or misapplications can have tragic consequences reaching far into the lives of an affected people. Farm workers in California know this to be true:

In August and September of 1963 an outbreak of pesticide poisoning among 94 peach harvesters was traced to the residues on the foliage of the orchard in which they were working. The cause of poisoning was the amount of parathion applied and not the premature entry into the orchard by the harvesting crews according to the California Department of Public Health. (California law stipulates a waiting period between the application of a pesticide and crop harvest so that the chemical will have deteriorated to the point where residue on the fruit are within "safe" limits.) The final cause was determined to be the presence in the spray residues of a compound evolved from parathion alteration which was considerably more toxic than parathion; but it was identified by routine analysis simply as parathion. The mishap resulted in one death and lengthy hospitalization for many others.

It is difficult to work through bureaucracies for compliance of existing safety standards—and next to impossible to campaign politically for additional safeguards. A case in point is the recent experience of Cesar Chavez and his United Farm Workers. Over the past 18 months in California there have been six deaths among farm workers due to accidental ingestion of pesticides mistaken for water or wine. Some of the pesticides were improperly stored in empty plastic bleach containers. The bottles were either mislabeled—or the workers, many of whom cannot readily read or write English, misunderstood the labels. This is in spite of the fact that California State Safety Orders explicitly require farm operators to properly inform farm workers of hazards, even for workers who do not understand English.

This summer, as part of their organizing operations, the United Farm Workers Organizing Committee sent legal aides into the fields to get affidavits from the grape-pickers about specific instances of pesticide poisoning. The affidavits—as well as information in the application and use registers kept by the State County Agricultural Commissioner's office—would have revealed the extent of possible violations of State pesticide standards.

The information is presumably open to the public, and the Farm Workers requested access to the records through the Kern County Agricultural Commissioner. They were summarily informed they could not obtain access to such information; two hours after their appearance at the Commissioner's office an injunction was issued by the Kern County Court barring them from looking at the records.

A hearing is under way to determine the legality of that move on the part of the State agency.

Chavez's troubles are not limited to the effects of toxic pesticides on his workers, but also involve the pollution of the local water supply beyond the tolerance of even the most moribund suburbanites. Last summer, the State Department of Public Health condemned the use of the local water supply in Delano for the consumption of infants below the age of six months. The ground water supply—the major source of supply for the water system in the Delano area—is loaded with nitrate residues from the applications of fertilizer to the crops in the fields surrounding the Delano area. Nitrates are normally tolerable in the digestive systems of children and adults beyond the age of one year; but to infants below one year of age—and particularly to infants during the first six months of life—the residues are highly toxic.

AMERICAN BABY FOOD POISONS EUROPEAN INFANTS

Prof. Barry Commoner, of the Washington University in St. Louis, recently reported on the increasing incidents of nitrate poisoning uncovered by European public health officials among infants traced to the consumption of unrefrigerated American-processed baby food.

Chavez's people now are forced to purchase bottled water for their children. On an average income of $1,232 per year for farm

workers, buying bottled water—for which local public officials provide no funds—can be an intolerable necessity.

Large scale grass roots efforts aimed at controlling the spread and use of pesticides have met with something less than success in California. In 1964, a petition banning the use of most pesticides in California's agriculture failed by only a few thousand signatures to reach the ballot. The Brown administration—in the wake of the 1962 peach harvest debacle—tried to avoid the problem by appointing a commission to investigate and report on recommendations for regulating the use of pesticides. The Reagan administration has done nothing to expand significant control over the registration and use of pesticides in California; and Reagan may even dismantle existing machinery for doing the job.

In California, fruits and vegetables, not cheesecake on the silver screen or the esoteric production of integrated circuits for complex electronic gear, is the leading industry. Production of table grapes is a billion dollar industry. Over one hundred million pounds of pesticides—twenty percent of the nation's total—are used in California's agribusiness. Not so surprising, the agricultural industry has the highest occupational disease rate—over fifty percent higher than the industry in second place and almost three times as high as the average rate for all industries in the state.

Pesticide poisoning is high among the most serious causes of fatal and non-fatal occupational diseases. The number of doctors' reports involving pesticides and other agricultural chemicals have doubled since 1951 and in California have ranged from 800 to 1,100 reports annually. Over the ten-year period from 1955 to 1965 about one occupational death from pesticides has been reported for each 100 reports of occupational poisoning from these chemicals. The villains in these cases are the familiar family of phosphate ester pesticides—parathion, phosdrin and thimet, demeton and tetraethyl pyrophosphate (TEPP). The wonders of chemical technology have made the unit costs of these pesticides so cheap that, for example, $5 worth of parathion is sufficient to cause the death of seven thousand people if dispensed without proper controls.

The growth and use of pesticides in this country has been enormous. More than 650 varieties have been invented over the last quarter-century. These new chemical compounds, as well as several others, have been formulated into 60,000 trade names. About 59 percent of the pesticides used are insecticides, 15 percent fungicides, another 15 percent defoliants and herbicides, ten percent fumigants and one percent rodenticides. In contrast to many areas of the world, only one percent of all pesticides produced in the United States are used for control of diseases, such as malaria. By far the greatest use of pesticides in this country is in commercial agriculture.

While farm workers in California are exposed to considerable risk of pesticide poisoning, the most formidable record of occupational disease and injury is in the agricultural aircraft industry. Pesticides are applied by air to half of the acreage treated in California.

The complement of 1,000 agricultural pilots apply about 10 to 15 percent of the nation's pesticides, at a considerable price. One pilot is killed in an air accident for each million acres treated. In addition to having the highest fatal injury rate of any occupation in California, over half the disabling work injuries are due to pesticide poisoning. For most other industries the occupational disease injury rate is five percent or less of total work injuries. However, considering the amount of pesticides and other agricultural chemicals used by this group, the cost in occupational disease is considerably less than among farm workers and ground applicators who apply the other half of these chemicals.

The frequent victims of pesticide poisoning are children. In the period from 1951 to 1965, roughly 60 percent of the accidental deaths attributable to poisoning from pesticides in California were among children. The most frequent causes for this toll are the improper safeguards—in the private home or farm—for the storage of pesticides and the contamination of clothing by adults in the household or on the job who apply the chemicals. Two incidents drawn from the annals of the California Department of Public Health files are representative:

An 18-month-old child of an agricultural aircraft pilot was found at home in a state of acute respiratory distress, semi-conscious and with "pinpoint" pupils of the eyes. She was rushed to a local hospital and treated by a physician for severe organic phosphate poisoning. Fortunately, she recovered. On the morning of her illness, her father had come home after applying a highly toxic phosphate ester pesticide. He cleaned his boots with paper towels, threw them in a nearby wastebasket and put his boots in the bathroom. The child contracted the poisoning from either the boots or the paper towels.

A 4-YEAR OLD DIES IN 20 MINUTES

In the second instance, a group of families, with children, were picking berries on a farm. They were followed by a spray rig carrying a five gallon tank of TEPP concentrate. A four-year old girl sampled the can, which her older brother had opened. She died in twenty minutes.

Because of readily available supplies of pesticides for both commercial and private use, suicide and accidental deaths from pesticide poisoning is an increasing problem. While only 13 percent of pesticides are used in the home for pest control, 50 percent of all accidental deaths and suicides, traced to pesticide poisoning, are from non-agricultural uses of pesticides. For example, in just one of Florida's 67 counties there were eight accidental and five suicidal dealths from phosphate pesticide poisoning in 1963 alone.

California is better than most states in the regulation and use of pesticides; but the form of regulation leads to abuses by special interest groups that have severely weakened the national pesticide regulatory program and have blocked efforts to seek increased protection of farm workers.

The four-part regulatory structure consists of: a) registration or licensing of pesticide products; b) licensing of agricultural pest control operators; c) the registration and use, by permit, of injurious materials such as the highly toxic phosphate ester pesticide family; d) sampling of crops for pesticide residue inspection. As in the federal program and some other state programs, the responsibility for regulation of pesticides is in the hands of the Department of Agriculture and, in the case of California, the County Agricultural Commissioner.

GOVERNMENT IGNORES MOST PESTICIDE VIOLATIONS

With the exception of registration, testing and evaluation of specific pesticide products, the California program is effectively run by the County Agricultural Commissioner. For example, an agricultural pest control operator must register with the Commissioner in each county in which he does business and supply a monthly report of his operations in the county. The Commissioner also issues licenses for agricultural aircraft operators and administers special examinations for agricultural aircraft pilots. Most important, the Commissioner issues permits for the use by farm operators of chemicals registered by the California Department of Agriculture as injurious materials. These include the toxic phosphate ester family of pesticides and 14 other pesticides.

The State Department of Agriculture, to ensure quality control over application of pesticides, inspects and analyzes samples of fruits, produce and meats in wholesale marketing distribution facilities to check on pesticide residues on food offered for sale in the State. The U.S. Food and Drug Administration does the same thing in interstate traffic. Tolerances for pesticide residues used in California are the same as those developed by the Federal Food and Drug Administration.

These tolerance levels are set for the particular crop and practically none are developed for the foliage on which the crop is grown. The outbreak of pesticide poisoning among the 95 peach harvesters in California in 1963 was traced to excessive application of parathion on the foliage, *but not the crop.*

The effectiveness of this program of regulation by state and federal agricultural authorities has come under serious attack recently in a salient area—registration, evaluation and testing of pesticide products. Under the Federal Insecticide, Fungicide and Rodenticide Act, the U.S. Agricultural Research Service can take action to remove products from the market, cancel the registration of products and prosecute those who ship products that violate the law.

The GAO report last September detailed that Research Service's concept of "law and order" is for the benefit of pesticide industry. The report went on to show that of 2,751 samples of products tested and reviewed during fiscal 1966, 750 were found to be in violation of the law. Of these, 70 percent or 520 were in "major" violation of the law. In 1967, of 4,958 samples taken 23 percent or 1,147 were found in violation.

Part of the reason for the situation is the old complaint of fiscal starvation and bureaucratic passivity toward vested interests. The pesticides regulation division has a staff of about 150 of which 26 are field supervisors and 5 are supervisory inspectors. In fiscal 1968 the total budget of the agency was $3.6 million. By way of contrast, the California State Assembly appropriated and spent $20 million last year for agricultural research support for its state university and college system.

Obviously, federal and state agricultural agencies are oriented towards maximizing the productivity-increasing features of agricultural chemicals, generally, and pesticides, specifically. The fact that no research in the U.S. is currently conducted into the occupational health hazards of agricultural and industrial chemicals is indicative of the general lack of concern in the regulatory organization for worker interests.

A portent of the future direction of public policy in this area is the fact that the budget of the Bureau of Occupational Health of the California State Department of Public Health was cut by one-third as part of Governor Reagan's attempt to bring "efficiency" into government operations.

If a severe budget cut were not enough, the Bureau of Occupational Health was also in jeopardy of being legislated out of existence. The chief legislative analyst of the California State Assembly, Alan Post, uncovered the fact that the Bureau's existence was subject to legislative approval. Recently legislation has been introduced into the Assembly to rectify the anomaly before the Bureau's existence becomes an object of lobby pressure. This may seem like just another administrative oversight, but the Bureau is practically the only source of information on occupational disease and health hazards among farm workers for the United States. (California is the only state in the country where injuries among farm workers are counted and where farm workers are also covered by Workmen's Compensation.)

California is one of the few states to have developed safety standards for agricultural operations. The standards are administered by the Division of Industrial Safety of the State Department of Industrial Relations. Safety orders for injurious materials (as defined in Section 2461 of Title 3 of the California Administrative Code) cover four areas:

first, the provision of medical services by an employer engaged in commercial operation who uses toxic pesticides; second, decontamination of equipment; third, precautions for aircraft crop dusting and spraying; and fourth, standards for equipment used in both ground and air application of pesticides and other injurious agricultural chemicals. By far the most important of these for protection of the farm worker is the standard of medical supervision over application of pesticides. Even this is weakened, since control over recommendations and reports filed with the Division of Industrial Safety covering the determination of restricted activities for employees exposed to injurious materials, is under the employer.

Part of the pesticide problem comes from our failure to recognize that a problem really exists. Dr. Irma West, a leading champion of pesticide control among environmental health specialists, writing in *California Medicine* has summarized the issues involved clearly:

"Man has manipulated his environment on so large a scale that he has inadvertently invented and produced a multitude of the most complicated new problems ever to confront the health professions. Unfortunately, we have been slow to realize that plans for health and safety should be built into technological advances in the planning stages. By the time technical tools are in operation and their use results in undesirable and unexpected effects upon people and their environment, the best opportunity to minimize these effects efficiently and humanely is largely lost."

DEATH STALKS THE GARDEN

Thousands of home-gardeners have suffered peculiar "flu" symptoms after spraying their flowers and shrubs with a common form of pesticide. They rarely learn that they have been mildly "poisoned" by an organo phosphor compound. In more lethal strengths, the same chemical agent is used in "nerve gas," and can wipe out huge populations of men or animals in a few minutes. But despite the obvious hazards, very little is being done to control the widespread foreign and domestic sale of highly toxic pesticides; beyond that, the Army is continuing its secret tests of nerve gas as a weapon of mass annihilation.

Army experimenters had an unexpected windfall of data from the accidental exposure of several thousand sheep to air-sprayed nerve gas near Dugway, Utah. The chemical that killed these sheep also goes into the organo phosphors pesticides—such as the widely distributed garden product called Parathion. Until the end of World War II, Parathion itself was the favorite candidate for the standard nerve gas in the Army Chemical Corps' arsenal. Then the Army "liberated" the secret German nerve gas, "GB," and it won out over Parathion, for two reasons: it was easier to disseminate, and it would not so readily arouse public fears as would the use of a common pesticide like Parathion. "GB" was saved for people and Parathion relegated to weeds.

Both agents have the same toxicity: .2 milligrams per kilogram of body weight. Both use the same "kill mechanism": they prevent the manufacture of enzymes which carry body "messages" controlling respiration. In other words, victims simply suffocate. Early symptoms (the whole process can take less than five minutes) include pinpointing of eye pupils, tightness in the chest, convulsions, paralysis, and finally respiratory failure. If the dose is less than lethal, the symptoms resemble the onslaught of an attack of the flu.

Current hearings in Wisconsin into the environmental hazards of the chlorinated family of insecticides—the most notable of which is DDT—focus concern about the chemical "synergy" of simultaneous and continued exposure to different pesticides: there is some evidence that since both the organic phosphor pesticides and the chlorinated insecticides accumulate in the fatty body tissues, under certain conditions (such as malnutrition stress), genetic damage could occur.

In 1966 alone, over 55 million lbs. of organic phosphor pesticides were manufactured for use in US agri-business. The passage of the Federal Insecticide, Fungicide and Rodenticide Act and the public disclosures of pesticide abuses had indicated that some reduction or stabilization in manufacture and use would occur. But there has been a growth of 188 percent in the production of organic phosphor pesticides over the period from 1960 to 1966, as compared to an increase of 25 percent in the production of all classes of pesticides over the same period. Effective substitutes exist, such as the pesticide Malathion with 1/2,000 of the toxicity of the organic phosphors, and the price differential between the two is nominal.

In 1966 alone, U.S. manufacturers exported 59 million lbs. of organo phosphor pesticides to users overseas, the largest consumers being Canada and Mexico. Within domestic agri-business the big users are the commercial fruit-crop growers in California (the villains of the current United Farm Workers Organizing Committee confrontation with the California pesticide regulatory program), and the cotton producers in Mississippi and Texas. Together, they account for almost one-half of the acreage treated by pesticides annually in the US.

Federal and state governments subsidize the organo phosphor business through secret military chemical and biological warfare research, agricultural pesticide research and bio-chemical research. In fiscal 1967, a total of $70 million in unclassified pesticides research was funded by the Department of Agriculture and the Public Health Service. An equal amount is estimated to be spent on pesticide chemical research by private industry and state universities. Only $5 million is currently allocated for the support of research into the occupational and environmental health hazards of pesticides by the PHS.

In the legislative lexicon, pesticides are called "economic poisons," a euphemism devised by Congress and the Agriculture Department to distinguish between the purportedly beneficial nature of the potentially lethal stuff and "hazardous materials" generally. In fact, the "economic poisons" are specifically exempted from coverage under the Federal Hazardous Materials Act.

With well over 60,000 trade names of pesticides in existence, the job of industry surveillance and compliance with existing pesticide manufacturing and applications standards is virtually impossible. The response of the Johnson administration after the submission of the Scientific Advisory Council report on pesticides in 1965 was effectively to hobble the federal regulatory program.

Surveillance and regulatory functions were split between the Public Health Service and the Agricultural Research Service. The PHS Office of Pesticide Research has responsibility for conducting basic research on human and environmental health hazards of pesticide use and is also responsible for inspecting establishments involved with the formulation of pesticide chemicals. If that were not enough, the PHS is supposed to monitor areas of concentrated pesticide use in major commercial agricultural centers in this country. However, the fine Byzantine hand of the agricultural interests has made sure that the PHS cannot issue cease and desist orders. Violations are to be turned over to the Agricultural Research Service for disposition and prosecution. But the ARS hasn't filed a major violation prosecution with the Justice Department in the 13 year history of the Federal "rat and bugs chemicals" act.

That law contains some neat provisions to dissuade investigators from digging into the pesticide chemicals industry. Information on the production of synthetic organic compound pesticides is compiled by the US Tariff Commission, not Agricultural Research or Public Health. Further, information on the exact ingredients of specific formulations are not permitted to be disclosed by law, to protect "trade secrets."

SURTAX

Mr. BYRD of West Virginia. Mr. President, I voted against the surtax for the same reason that I voted against the surtax last year. I am against saddling the hard-pressed taxpayer with this heavy burden while the Federal Government continues to spend and spend and spend. It is not right to take extra money away from the people and then pump it into questionable programs which can be trimmed. In other words, I am against collecting more money just to spend more.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

SAFEGUARD AND NATIONAL PRIORITIES

Mr. MUSKIE. Mr. President, we are engaged in a debate, as we consider the Safeguard proposal, over national security—our capacity to prevent or survive an enemy attack—and national vitality—our ability to create opportunities for a more meaningful, rewarding, and healthy life for each of our citizens. The Safeguard system must be tested against each of these considerations if we are to make an intelligent decision on the deployment question.

We face this decision at a time when our instincts, both prudent and humane, point toward the need to stem the decay of American society and to reconcile the differences among us. For more than a generation, external challenges have sapped our energies and diverted our resources from building America, while the accumulation of grievances, dramatic social change, and rising aspirations have made our needs ever greater.

As a result, public facilities are outmoded and overwhelmed, the effort to help the poor and the desperate has faltered, and patience is wearing thin. The agony of continuing sacrifice in Vietnam has brought our people to the great-

est national anxiety and discord any of us has known.

These considerations are an important influence in this debate. They create pressures which prompt many Senators, of both parties, to differ from the administration on such an important matter of national security. The American people look to the Senate to provide balance and prudence in national security policies whch have so heavy an impact upon the resources which are available for all our urgent tasks.

In the period immediately following President Nixon's announcement, I expressed my doubts about the Safeguard system—doubts about the scope of the program, its justification, its feasibility, and its consequences for future strategic arms races and impending arms negotiations.

Those doubts have not been resolved in the course of this debate.

A question which finds the Senate so closely divided must, I suppose, be considered a close question.

Honorable and able Americans—within and outside the Senate—find themselves in disagreement on every critical issue which has been raised in this debate: Will the system work? Is it vulnerable? What is the thrust of Soviet weapons development? What are Soviet intentions? Which result in the Senate will contribute most favorably to the prospect of favorable negotiations with the Russians to limit nuclear weapons? What are the security risks associated with an "aye" vote? With a "nay" vote?

Each Senator, I am sure, has carefully considered each of these questions. Each Senator, I am sure, has concluded that the answers to these questions support the position he has taken. This Senator has found that the answers require a careful balancing of the arguments and available information.

Although the division in the Senate appears to be close, there appears to be much broader agreement on the wisdom of continued development toward a reasonable system to protect us against missile attacks. When and if it is needed.

Much of the debate over the ABM, therefore, has revolved around whether the nature of the foreseeable threat from the Soviet Union justifies going ahead now with deployment of this weapons system in its present form.

Though the weight of the evidence leads me to doubt that such circumstances are at hand, I believe most Senators are prepared to vote for authorization upon a proper showing of need.

For now, however, an impressive array of scientific skepticism about the Safeguard proposal, persuades me that it would be a mistake to go ahead with this program, at this time, and in this form. If there is well-founded doubt that the system can function effectively—while it distracts our efforts from other, more appropriate steps and provokes our adversaries to a defensive escalation of the arms race—deployment would be a serious mistake.

Safeguard is billed as a defense against a Soviet first-strike attack, but it depends on untested subsystems for logic and computing functions that may well fail against a massive sophisticated attack. Moreover, Safeguard's radars are critically susceptible to spoofing and its "eyes"—unshielded missile-site radars—"MSR"—could be blinded by a concentrated strike, leaving the Minutemen missiles wholly unprotected.

These questions raise doubts about the ultimate justification of Safeguard's technical worth and the wisdom of deploying the system in the light of such doubts. The committee resolves both questions in these words:

> It is prudent that any doubt on this question (its ultimate feasibility) be resolved in favor of confidence in the system.

In my judgment, such a benefit of the doubt resolution does not give proper weight to the risk that deployment will provoke a Soviet response based not upon our doubts but upon the assumption of maximum effectiveness of our system.

Moreover, such a benefit of the doubt resolution may freeze us into a technological solution to the problem which is not the best answer.

But, even if the system achieves the limits of its planned effectiveness, I am persuaded that the simple mathematics of United States-Soviet confrontation may make the effort futile; the Soviet Union could negate the incremental protection of Safeguard with a few months' production of offensive missiles.

It is possible, Mr. President, that at some time in the future, developments in the threat may make an ABM essential to protect our retaliatory forces. It is also possible that a limited deployment of ABM's could become an element of practical and stable big-power arms limitations.

And it is certainly possible that a credible and effective ABM can be developed, applying lessons our scientists are learning today.

It is for these reasons that I welcome the initiative of Senators HART and COOPER to authorize research and development of an ABM program that can work when and if it is needed, but that will not, because it is deployed prematurely, embroil the American people in costs and consequences we will regret. I intend to support their amendment, and I commend their effort to put ABM development in a posture consistent with the Nation's long-term needs, a program the majority of the American people can sensibly support.

II

There is what could be a tragic irony in the way in which the Safeguard program has been presented to the American people.

As cast by the administration, the ABM would serve to "safeguard" our Minuteman retaliatory forces. If the need were clear and this role could be assured, I feel confident that the Senate would not hesitate to follow the President's lead. But reality is far more complex than the administration's assurance would suggest, and the Senate must ultimately judge the strategic impact of the Safeguard system in the broader context of its effects in combination with other pending weapons systems.

The Soviet Union will see our ABM deployment in this perspective, and will make decisions about its own future weapons developments and the forthcoming arms negotiations in the light of how it perceives America's true intentions in the field of strategic armaments. The mysterious efforts of the Soviet's lunar vehicle to dog the heels of our Apollo 11 may well be fresh evidence that they do not take all our declarations at face value.

It is in this context—the role Safeguard will play in the overall strategic posture of the United States and the threatening direction our adversaries must perceive emerging in our strategic forces—that I find the administration's proposal constitutes, not a safeguard, but a provocative and possibly dangerous game. It is notable that while the word "provocative" is the President's own term, the denial of such intent in Safeguard deployment cannot escape being taken by others as a thin mask for profoundly disturbing threats to the balance of mutual deterrence.

In assessing the overall capabilities of our strategic forces, the Soviet Union will give attention not only to the Safeguard, but also to our ongoing programs for equipping retaliatory forces with multiple independent reentry vehicles—MIRV's.

The linkage between Safeguard and the MIRV's leads to a stark fact: by deploying a vastly expanded, hard-point strike capability along with an ABM area defense system, American retaliatory nuclear forces could be converted into a system suitable for launching a first-strike attack upon the Soviet Union, while minimizing retaliatory damage to the United States. I understand that that is not our intention.

I understand that is not our intention, and the Senate and the American people do not so regard our nuclear weapons development. Of course the President would deny that this is our intention—as he should—but, Mr. President, the Soviet military planners cannot escape looking at our weapons development in that way.

Specifically, with the expansion in the number of deliverable nuclear warheads and the significant improvements in accuracy of delivery stated as the objectives of MIRV programs, the United States could, barring significant expansion in the number of Soviet strategic targets, achieve the capability to wipe out a significant portion of the Soviet Union's nuclear strike forces. Meanwhile, although the Safeguard has been billed primarily as a local defense of U.S. Minuteman silos, it also is designed with a degree of area defense capability—pointedly described by Secretary Laird in his statement to the Armed Services Committee as "defense of the continental United States against the kind of attack which the Chinese Communists may be able to launch in the mid-1970's." This area defense would, by the same token, also serve to defend the United States against the weak retaliatory effort the Soviet might be capable of mounting after receiving a first-strike American attack.

I need not emphasize, Mr. President, the rather simple fact that the technical problems faced by an ABM in the role of backup to a first strike are far simpler than those the same system would face in meeting a sophisticated adversary's surprise attack. Safeguard's

credibility in a first-strike role, I regret to say, is far greater than its credibility as a protection for our defense forces.

In terms of what we all believe American intentions to be, the foregoing might seem hypothetical and farfetched; but in terms of what the Soviets may logically fear our intentions to be, the threat of an impending American first-strike capability, based on Safeguard and MIRV, could seem terrifyingly real.

The linkage between these two systems in the American weapons arsenal is by no means casual. On March 19, in his statement to the Armed Services Committee justifying Safeguard expenditures, Secretary Laird also sought funds for a significant acceleration in the develcpment of the Poseidon, a submarine-launched MIRV-carrying missile, for the express purpose of "enhancing its effectiveness against hard targets."

He said, at page 32 of his prepared statement:

> The increase of $12.4 million for the development of an improved guidance system for the Poseidon missile, will advance the IOC ("Initial Operating Capability") of the system by about six months. This development was started in FY 1968. The IOC, however, was slipped by about one year in connection with the FY 1969 expenditure reduction effort, and the level of funding provided in the original FY 1970 budget, $33.5 million, would have slipped it further. This is an important program since it promises to improve significantly the accuracy of the Poseidon missile, thus enhancing its effectiveness against hard targets.

Surely, Mr. President, we cannot expect the Soviets to ignore that development as it undertakes to evaluate the thrust of our weapons development.

In the Poseidon program, 31 submarines will each carry 16 missiles, each in turn carrying as many as 10 warheads, for a total of almost 5,000 deliverable weapons, from the Poseidon boats alone. These and other offensive systems available to the United States, including the more than 1,000 Minutemen we may also equip with MIRV's, would be more than a match for the 1,200 to 1,300 ICBM's the Soviets are anticipated to have deployed during the next few years.

In this context, Mr. President, the Safeguard is a destabilizing weapon, raising the risk of nuclear war rather than diminishing it. As the American MIRV nears perfection and the Safeguard nears deployment, we are reaching for a point of no return in the arms race. If the Senate authorizes the deployment of Safeguard, we may well be stepping across that point of no return.

III

On April 3, I noted the following dimension of the administration's Safeguard proposal:

> It is altogether possible, on the other hand, that the Administration is not, in fact, taken in by its own reassurance as to Soviet reactions. It may be that the Safeguard proposal is intended as a blunt challenge to the Soviets to come to the bargaining table and negotiate over strategic weapons, or else the United States will heat up the arms race, counting on our own superior technology to protect us if negotiations fail.

I submit, Mr. President, that this interpretation of our intentions is the logical one from the Soviet point of view, and interpreted as this kind of bluster, it has no rational justification.

One need not dwell on the lack of good faith such an American bargaining strategy would entail with respect to the forthcoming strategic weapons negotiations to which we and the Russians are both committed. What is more important is the lack of realism in assuming that negotiations with a proud and powerful country such as the Soviet Union might ever yield success when undertaken under the gun of crude threats, a lesson we should have learned in every arms control negotiation from the Baruch plan to the present.

For the Russians as for ourselves, national and ideological motivations and the high stakes of international competition compel the continuing commitment of resources to weapons developments at whatever level is thought necessary to insure national security and at whatever level a prudent estimate of the intentions of the other may indicate. As a result, if the talks fail, the prospects for negotiated arms controls will dim, unbridled arms competition will resume, and the stability of mutual deterrence will be destroyed.

It is equally unrealistic to assume that any reasonable purpose could be served by locking the Soviets into another round of fantastic spending competition for armaments. Ever since arms competition with the Soviets began in earnest 20 years ago, the superior resources and technological advancement of the United States, coupled with the geographical encirclement of the Soviet Union, have combined to keep the Soviets on the defensive in any arms competition.

But the fact that in years past we could afford more weapons than the Soviet Union and that we could build them with less strain on our resources is not relevant to future competitions. The demands on our energies and resources are now too great, and the costs of the phenomenal weapons systems of which Safeguard is the precursor are too high, to warrant the conclusion that the American people can afford future strategic arms races.

Mr. President, the needs of the American people are too urgent and too demanding to bank our future as a nation on the casual economic dividends that high and rising levels of defense spending have come to mean. We must recognize that in future arms races—even if we manage to keep the Soviets and all our other adversaries at bay without incinerating the world in the process—the costs and sacrifices the competition will entail are such that we, not they, will be the losers.

IV

To recognize the futility and the risk inherent in adventurous weapons development is only the beginning of the necessary effort to forge security policies that serve the Nation's best interests in a time of strain and transition, at home and abroad.

Arms sufficiency is the new watchword, and arms sufficiency is an apt watchword, but one that requires careful judgment. Together the President, the Congress, and the country must find ways in the months and years ahead to substitute good sense and prudence for uncontrollable gambits that lead only to blind and dangerous alleys. As we strive to end the war in Vietnam, we must never forget the lessons on the need for restraint that unhappy conflict teaches.

At the same time, we must also be mindful of the urgency and the extent of the Nation's domestic needs—needs which can overwhelm us just as surely as the threat of external aggression, unless we can find the wherewithal, the ingenuity, and the spirit equal to the challenges.

The grim chain of urban sprawl and rural decline, of individual poverty and social disorganization, of wasted resources and hostile environments will not be broken by a government which is indifferent, or a private sector which is inactive—or preoccupied with hunting the next arms contract.

The chain can be broken only if we set priorities, if we make a commitment to meet them, and if we organize ourselves to fulfill our commitments. I have indicated the priorities I would establish, and they are not the priorities of a fortress America. The priorities I would set are the priorities of men and women and children who have a right to enjoy for themselves the fruits of this world and to help insure the same right for others. The priorities we must set recognize the interrelationship of jobs, income, education, health care, housing, transportation, public facilities, recreation, and environmental protection in the balanced development of urban and rural communities.

These priorities will never be set or achieved so long as the United States is being bled by the continuing hemorrhage of spending on strategic armaments.

Mr. President, much attention is now being given to the consequences ending the Vietnam war will have on the funds which will be available for domestic programs. It has become common to speak for planning purposes of the revenue surplus resulting from the lessening of hostilities as a "fiscal dividend"—the measure of the flexibility in the Federal budget that would be available for other national needs as the result of the termination of special Vietnam costs.

In March 1967, President Johnson appointed the Cabinet Coordinating Committee on Economic Planning for the End of Vietnam Hostilities. Their report appears as an annex to this year's report of the Council of Economic Advisers. The committee, assuming early cessation of hostilities, forecast annual fiscal dividends rising to $22 billion in fiscal year 1972—funds available for spending on other priority programs or for tax reduction. While the calculation assumed the continuation of existing authorized military programs—including the Johnson administration Sentinel ABM—that $22 billion sum, less amounts returned to taxpayers in tax cuts, represents a basic ceiling in funds available for expansion of all Federal programs, military and domestic.

To the extent that new weapons systems are authorized, or existing authorized systems exceed their anticipated costs, the funds available for domestic

program expansion will be further reduced. Thus while $22 billion represents a basic maximum for domestic public purposes, a tax cut, weapon cost overruns, and additional weapons procurements will all squeeze that sum far below the maximum. If the costs of the war do not soon recede, of course, virtually no lessening of the budget squeeze can be anticipated. On the other hand, reduction of non-Vietnam military cost including the cancellations of all ABM deployment, would cause the fiscal dividend to be increased. There will be no fiscal dividend at all.

The fiscal dividend forecast by the committee, even assuming maximum availability, does not begin to match urgent demands for the rehabilitation and improvement of our society. For example, the report notes a $6 billion gap existing now between amounts the Congress authorized for fiscal year 1969 and the amounts the Congress has funded for domestic purposes. I ask unanimous consent that the table from the Coordinating Committee's report be printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 2.—*Estimated gap between amounts currently authorized and funded*

[Billions of dollars per year]

Program:	
Total full cost	6.0
Elementary and secondary education	2.0
Higher education	1.3
Housing and community development	.6
Water and air pollution control	.5
Crime control and prevention	.5
Area redevelopment	.5
Health training and research, etc	.4
Agricultural conservation and adjustment	.5

Source: Bureau of the Budget.

Mr. MUSKIE. The group also compiled a list of new programs "prominently and generally discussed recently as desirable to meet the needs of the Nation during the next several years," calculating their annual costs for fiscal year 1972—the year of the projected dividend. In many instances, the committee assigned dollar amounts far below the recommendations of the task forces or study groups from whose studies the programs were drawn. Even then, recognizing the list to be incomplete and inadequate, the Coordinating Committee reached a conservative total of almost $40 billion for these urgent needs, nearly double the maximum fiscal dividend estimated to be available. I ask unanimous consent that the committee's table, with explanatory footnotes, be printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 3.—*Illustrating new programs or major expansions of existing Federal civilian programs, fiscal year 1972 (derived from proposals of task forces and study groups)*

[In billions of dollars]

	Hypothetical expenditures
Total expenditures	39.7
Education	7.0
Preschool	1.0
Elementary and secondary	2.5
Higher	3.0
Vocational	.5
Health	3.8
Kiddie-care	.5
Medicare for disabled	1.8
Comprehensive health centers	1.0
Hospital construction and modernization	.5
Nutrition	1.0
Community service programs	.8
Jobs and manpower	2.5
Public jobs	1.8
Manpower Development Training Act	.5
Employment service	.2
Social security and income support	9.5
Unemployment insurance	2.0
Public assistance	4.0
Social security improvements	3.5
Veterans	.3
Economic, area, and other special development programs	2.2
Entrepreneurial aid	.5
Area redevelopment	.5
Rural development	1.0
Indian assistance	.2
Crime, delinquency, and riots	1.0
Violence and riot prevention	.1
Safe streets programs	.3
Rehabilitation of offenders and delinquents	.3
Prevention of delinquency and crime by special measures for delinquent-prone youth	.3
Quality of environment	1.7
Air pollution prevention and control	.1
Public water supply construction programs	.3
Water pollution control and sewage treatment	1.0
Solid waste disposal	.1
Natural beautification, environmental protection, and recreational development	.2
Natural resource development and utilization	1.4
Land and forest conservation	.2
Water resources and related programs	.5
Mineral and energy (excluding hydroelectric) development	.2
Natural environmental development	.5
Urban development	5.5
New cities	.5
Land acquisition and financial planning (suburban)	.5
Urban mass transportation	.5
Model cities	2.0
Other urban facilities and renewal	2.0
Transportation	1.0
Airway and airport modernization	.4
Rapid interurban ground transit	.1
Modernization of merchant marine	.2
Motor vehicle and transportation safety research and safety grants	.3
Science and space exploration	1.0
Post-Apollo space program	.5
Scientific research in oceanography, communications, social and behavioral sciences, and natural sciences	.5
Foreign economic aid	1.0

NOTES

Education. The preschool program, an extension of Head Start, would provide full-time preschool education for about 500,000 children. The elementary and secondary education funds would about double the Federal support in that area. The funds proposed for higher education would more than double current Federal support. The vocational education funds would raise Federal support about halfway toward the recommendation of the 1968 Advisory Council on Vocational Education.

Health. The "kiddie-care" proposal would provide health care for needy mothers and infants. Medicare offered to beneficiaries of social security disability insurance on a contributory basis would potentially reach 2.2 million persons in 1972. About 350 additional comprehensive neighborhood health care centers a year could be established for the amount shown. The added funds for health facilities would enable the Federal Government to double the rate of output of such facilities, in line with estimates of national needs.

Nutrition. Nutritional supplements for needy pregnant women, nursing mothers, and small infants account for about $200 million, while the remainder would allow a doubling of existing food assistance programs.

Community service programs. This would provide for expanded daycare centers for children of needy working mothers and for expansion of coordinated services through neighborhood centers.

Jobs and manpower. The funds for jobs in the public sector would permit expansion of about 500,000 jobs to provide public service employment for the chronically disadvantaged: this program would reinforce expansion in education, health services, and urban and area redevelopment. The increase in MDTA training would support expansion of the Jobs program and would reinforce efforts to lower unemployment while improving the Nation's price performance. It would also provide trained manpower for construction. The growth in employment service operations envisions strengthening, decentralizing, and computerizing manpower activities; developing a rural manpower service; and enlarging services to the disadvantaged.

Social security and income support. The unemployment insurance funds would provide for higher benefits, extended benefits during recessions, and aid to the unemployed through retraining and mobility assistance. The public assistance funds could permit revision of benefit standards and extended coverage, or the adoption of a modest new program of income aid with

objective standards. The added expenditure could fill as much as 40 percent of the current poverty income gap. Expansion of the WIN program would provide more job and training opportunities for welfare recipients. The social security expenditure could provide a higher minimum benefit for those dependent on social insurance benefits as the main source of income, and liberalization of eligibility requirements for disability insurance, as well as some general improvement in benefit levels.

Veterans. The higher priority recommendations made by the Veterans' Advisory Commission in March 1968 could be instituted with these funds.

Economic, area, and other special development programs. The entrepreneurial assistance program could help minority groups—so-called "black capitalism." Area redevelopment programs would assist growth centers in less populated areas, while rural redevelopment programs would concentrate on small communities, providing community facility development, special housing, and family farm assistance.

Crime, delinquency, and riots. Federal aid to State and local governments could be provided to help prevent violence and riots and permit a higher degree of Federal readiness to cope with such emergencies. The safe streets program funds would be used to work towards the objectives of the National Crime Commission with respect to strengthening the police and courts. Rehabilitation of offenders and delinquents would be pursued by intensive retraining and other services.

Quality of environment. Federal funds for pollution abatement may be required to enforce standards, investigate claims, or abate pollution caused by government or not readily attributable to particular private individuals. Assistance in expanding the Nation's water supply system would provide a small fraction of the $2.5 billion annual requirement over the next 10 years. Provision of more recreational areas near population centers would be made possible.

Natural resource development and utilization. Department of the Interior, Corps of Engineers, and Department of Agriculture programs relating to land, mineral, energy, forest, recreational, and other fields have large backlogs of useful projects, many already planned and authorized but held back for budgetary reasons.

Urban development. Metropolitan development assistance would support improved planning and coordinated advance land acquisition. Each of these programs emphasizes these requirements, whether in new communities, suburbs, or older central cities. The allowances represent only a fractional contribution to the reconstruction and development of the cities.

Transportation. Such expanded investments in the improvement of the principal elements of the Nation's transportation system would serve the objectives of economic development, safety, and national defense.

Science and space exploration. The allowances would permit the science and space agencies to fund some of the research opportunities not covered in the stringent budgets of recent years.

Foreign economic aid. This additional amount would help to meet growth targets in Southeast Asia and under the Alliance for Progress as well as to cover other aid requirements. Even this increase would leave our foreign assistance program below levels of a few years back.

Source: Bureau of the Budget.

Mr. MUSKIE. Even this conservative calculation of the additional resources we will need to spend at home does not provide much leeway in making a major dent in the problems of the poor, such as a negative income tax preserving adequate incentives, which the committee noted might require between $15 and $20 billion a year, or in providing sufficient employment to make a significant reduction in the numbers of Americans who cannot find jobs. Nor does it encompass steps to assist States and localities in meeting their mounting revenue needs from their increasingly inadequate tax bases—for which a revenue-sharing program of between $5 to $10 billion a year has been considered appropriate.

Mr. President, these are not small sums. They do not reflect small problems we can ignore. Together, these estimates, whether or not one agrees with them in detail, represent a conscientious effort to determine a level of "sufficiency" for a comprehensive approach to the nonmilitary problems facing America, a level of sufficiency which we must attain if we are to preserve our viability as a nation.

By contrast, the $6 to $7 billion pricetag assigned by the administration to the Safeguard system represents a far more valid measure of the relative significance of the ABM program, even assuming those systems costs have been fairly estimated, which many Members of the Senate have strong reason to doubt.

The true measure of the ultimate significance of the administration's Safeguard proposal lies in the likelihood of forcing the United States and the Soviet Union to higher and higher levels of arms competition, for which the costs forecast by Secretary Laird are only a very small downpayment. The cost of such an adventure must be counted in tens or even hundreds of billions of dollars, which the United States can ill afford to spend on engines of destruction.

I think these great figures estimating our domestic needs, and estimating the cost of an unrestricted arms escalation, pose the problem which faces us on the ABM issue in its stark magnitude. We cannot do both. At least, we cannot do both without the exercise of discriminating judgment. We cannot do both without exercising restraint, geared to a careful evaluation of the risks involved with any subjects which we consider in the development of weapons for our arsenal.

We must somehow take a reasonable risk to protect our national security abroad. However, we must do more than we now are doing—to eliminate the risks to our national security here at home.

Mr. PEARSON. Mr. President, will the Senator yield?

Mr. MUSKIE. I yield.

Mr. PEARSON. Mr. President, I commend the Senator from Maine for a reasoned discussion and speech today in support of the pending amendment. He developed at some length the effect that construction and deployment of ABM would have on the forthcoming arms limitation negotiations with the Soviet Union. And in that regard the administration, particularly the Secretary of Defense, strongly made the point that the decision to go ahead at this time is essential to their position as a bargaining point as they enter the negotiations.

I have constantly failed to understand really this point in the particular argument, because we have, as I understand the figures after hearings and the debate and otherwise, a superiority in strategic force levels. For instance, in ICBM's, we have about 1,054 to approximately 1,000 on the part of the Soviet Union.

With respect to the Polaris missile, in round figures we have an estimated number of about 656 or 660 to perhaps 77 by the Soviet Union.

With respect to the intercontinental bombers, we have in round figures about 650 to 150 operated by the Soviet Union.

In deliverable warheads, we have some 4,200 as against 1,200 by the Soviet Union.

We have superiority in numbers in all of these fields. They must know of our industrial might measured against theirs. They must have some appreciation of our technical skill, for in the time frame of 1 week we succeeded in putting a man on the moon, whereas they failed with an unmanned moon vehicle.

We are ahead of them in the testing of MIRV's today.

With our superiority in all of these fields, does the Senator agree with me that the argument that we must have an ABM simply because the other side has an ABM to be in a proper bargaining point in negotiations?

Mr. MUSKIE. Mr. President, I think the Senator has made a very excellent point. I agree thoroughly.

I would like to add an observation. It seems to me that one can speculate prudently or prooflessly about what the Soviet position may be at the negotiating table and what we might do to influence it favorably toward arms limitation.

We have concentrated, as we have debated what will be a strong negotiating position, upon the need to demonstrate to the Soviet Union that we have the strength because of our deployment of the ABM to caution them against permitting a continuation of the arms race.

It seems that what we need, if we are to negotiate successfully, is to convince them that we want a stabilization of the arms race, that we want to roll back the growing risk to the survival of mankind.

It seems to me, in other words, that the situation is something like this: There are two great military powers—we and the Soviet Union. Only if one of the two takes the initiative to move the other way from escalation of arms, do we have any chance to achieve that objective.

One of these two powers must take the initiative. One must be induced by the other.

It seems to me that the best way to make that initiative credible from the point of view of the other side is to take an initiative which carries some risks for us.

The road we seem to be choosing is to find a way to strengthen our arms to a point which will deter the Russians from trying to match it. I think we should try to encourage them to match us in taking risks in reducing arms. Of the two powers, the one most likely to take this kind of initiative historically, in the light of its belief in the tradition of humanism, is the United States of America.

I do not think delaying the deployment of an ABM system is an unacceptable risk. That there are risks or that

there are considered to be risks is evident from the debate on the floor. So, to the extent that there are, our initiative in refusing to deploy an ABM to me would add credibility to our recommendations to the Soviet Union that we mutually deescalate the nuclear arms race.

So, I agree with the Senator's argument, and I add this one of my own.

Mr. PEARSON. Mr. President, I thank the Senator. I notice also that the Senator dwelt at some length about the response on the part of the Soviet Union.

It is my understanding that the rules of the war planners, and rightly so, involve these concepts. The Senator from Virginia (Mr. BYRD) is in the Chamber today. He has sat with me in the Armed Services Committee and heard the same words and concepts spelled out. We always plan on a greater than expected risk. We always plan—and these are the rules by which our war planners govern themselves—on the worst possible case.

We always plan on the basis that our systems will not work as well as we expect and that the enemy's will work better than we anticipate.

We always plan on the basis of long lapse time between conception and deployment of a modern weapons system taking about 10 years.

Does the Senator suppose that the rules we apply are any different than those applied by the Soviet Union war planners, and that this in and of itself has an inherent action or reaction cycle which is more accelerated when we get a defensive—offensive switch back and forth?

Mr. MUSKIE. The Senator is right, of course. This involves one of the principal arguments in my remarks.

We have a tendency to think that if the enemy looks at us, he must, of course, recognize that our purposes are innocent, that we would never launch a first-strike attack and do not mean him harm. Unfortunately, that is not the way they read us. They are just as suspicious of our intentions as we are suspicious of their intentions. It will continue.

We are going to limit arms not because the other fellow thinks that we are nice guys, but because we are able to define the area of mutual interest which each decides is in his national interest.

The Senator is eminently right.

Mr. PEARSON. Mr. President, one other point. I note that the distinguished Senator from Wisconsin (Mr. PROXMIRE) wishes to join in the colloquy.

The Senator from Maine raises some question about reliability.

Aside from the reliability of the components, computers which have not yet been built, and the radars which have some vulnerability under attack—the Senator has been a student of this debate and of the RECORD—does he recall that at any time in the very excellent presentations made on both sides, any explanation has been made of how effectively we can deal with the subject of decoys, balloons, chaff, saturation problems, blackout problems, and the electronic jamming problem? Does the Senator find answers to those questions any place in the debate or any place in the RECORD before the Senate?

Mr. MUSKIE. I do not recall seeing it, and the answer has not been provided in any portion of the debate to which I have listened on the floor, either in closed session or in open session; nor has it been answered in any of the literature I have read which has been made available to me, rather generously, from both sides in this debate. I have not had a chance to read it word for word, but I have searched for that answer.

I understand, of course, the argument that has been made, I think very eloquently, by the distinguished Senator from Rhode Island (Mr. PASTORE), that at some point in the development of new technology you have to start putting the technology together and research the unanswered problems as you go along. I understand that.

Nevertheless, I think the Senator is absolutely right in the implication of the question he has put to me, that there are many unresolved technical problems seriously bearing upon its feasibility and its effectiveness which have not yet been answered. I think the supporters of the ABM proposition concede that.

Mr. PEARSON. I thank the Senator for a very valuable contribution at this time.

Mr. MUSKIE. I thank the distinguished Senator from Kansas.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. MUSKIE. I yield.

Mr. STENNIS. On the question the Senator has brought up about the blackouts, the jamming, and decoys, I can say with firm assurance, as far as I can go, that that is a problem that always shows up. It is a part of the picture concerning any kind of method involving a weapon, offensive or defensive. If we never had built the ICBM's—offensive weapons—until we were certain that we had all the problems solved that go with it in the same field, in reverse, we never would have one. If we are going to wait until all the problems are solved and everything is known with reference to an ABM, a defensive weapon—in that field, particularly—we will never have one, and no one else will. It is all a part of the process.

I do not pose as an expert in this field, but I have been on a subcommittee of the Committee on Armed Services and chairman of the Subcommittee on Military Construction during all the years that these missiles have been in process. The military construction came in in this way: You have to have those sites, and you have to have the research and development that involves those sites. Sometimes it is handled in a special way in that bill. We got this back in the days of the Nike-Ajax. That was the first little ground-to-air missile we had. We also got into the space field when Sputnik went up, and all those problems that went with it.

I know that uniformly we have these problems. I opposed the deployment of the ABM—what is now the ABM—years ago. We had a secret session. We have had many sessions in the committee over the years. The Senator from Kansas was a member of the committee for some time, and a very valuable member. I had always opposed the deployment until I was convinced that we had gone about as far as we could go, and I believe as far as we can go, with a weapon of this kind, until we really get down to the nub of things and take some steps forward that this very modest program now contemplates.

That brought me to the proposition as the Senator from Rhode Island has expressed it. He is the former chairman of the Joint Committee on Atomic Energy, and he really does know a great deal about this. We must make a start. It has been amazing, in the case of other missiles, how many problems have been overcome after the start, has been made. Men are surprised, and then they are disappointed, too, on the same subject of the many different missiles. I refer to men such as Dr. Wernher von Braun and others who are really capable.

I am glad to give the Senator a résumé of my experience in that field, without getting into the scientific part of it, because I do not try to master that.

Mr. MUSKIE. I appreciate the Senator's comments, and I will respond briefly myself, but first I yield to the Senator from Kansas.

Mr. PEARSON. Let me say to the distinguished chairman of the committee, the Senator from Mississippi, that I understand and agree that many of these problems today, scientific and otherwise, which are talked about as deficiencies of the system, probably will be cured in time.

As a matter of fact, the great advance we have been making in computers really gave great credibility to the so-called Sentinel-Safeguard, as distinguished from the other systems.

But some other scientific problems are involved here, which I am not qualified to discuss, which have nothing to do with the ability of American scientists to conquer problems, and they deal fundamentally with the laws of nature and the laws of physics. The very efficiency of the radar makes it susceptible to chaff which may be spread across the sky. The better the radar, the better it can be fooled by that particular device.

Blackout, as I understand it, is a result of an explosion or high or low yield atomic blast within the atmosphere, which creates—as its name implies—enormous blackout, perhaps with a diameter of 100 miles, lasting as long as 5 minutes.

These are things, it seems to me, to which even the genius of the American scientific community has not found an answer. As a matter of fact, some of the very efficiency of our own system gives us back greater problems.

I do appreciate the response of the chairman of the Committee on Armed Services. I know of no one who knows more about this field or who embraces it and brings it to the Senate with a greater degree of honesty and sincerity than my former chairman.

Mr. MUSKIE. Mr. President, may I add this to the comments made by the distinguished Senator from Mississippi.

First, I agree with the comments that have just been made by the Senator from Kansas. I do not know of a Senator who would bring a question to the floor more conscientiously, more thoroughly, and with more thoughtful judgment, than the Senator from Mississippi. I want him to know that.

But what is involved here is not simply

the question of whether, having decided to build a piece of technology—whether it is a weapons system or something else—we have reached the point where we can start putting it together and work out additional bugs from there on. If that were the only question, I would say, "Yes," let us start, and let us start the business of working on a piece of hardware as we undertake to answer the unanswered questions. But, in addition, these other questions are involved, which are not susceptible to precise measure: the effect of our deployment upon the arms race, the effect of our deployment upon the Soviet evaluation of the thrust of our weapons development, and the effect of our deployment on negotiations.

Then, there is my own fundamental belief that if we want really to put together a credible negotiating posture from the point of view of the Russians, I think it is more important to convince them that we want to roll back in weapons development than it is to convince them if they will not agree with us that we have the capacity to deploy an ABM. I think the first conviction is more likely to be persuasive upon them than the second conviction.

I can see that honest men can disagree on this matter, as they obviously do, and we appear to be divided about 50–50 here. However, it is my conviction that we must take an initiative that is clearly recognized and identified by the Russians as an initiative toward peace.

Mr. PROXMIRE and Mr. DOMINICK addressed the Chair.

Mr. MUSKIE. The Senator from Wisconsin has been waiting to be recognized for quite a while. I yield to the Senator from Wisconsin.

Mr. PROXMIRE. Mr. President, I wish to commend the distinguished Senator from Maine for a superlative speech. I am especially impressed by his presentation because I think we in the Senate, and I think people around the country during the last year or so, have recognized that he is a very careful man, very measured, and responsible, and unusually so.

For example, he indicated we are taking a risk in not going ahead with the ABM. Many of us might not share that feeling because we may be more impulsive and feel we are convinced on the basis of what we have seen and heard that the ABM will not work, that it is a waste, and that the decision is, therefore, easier. But the Senator from Maine was very careful in not taking that position. He said that it may work and that we may be mistaken in not going along with it, but that we have to take certain risks.

I think the Senator makes an extremely strong case in arguing on the basis of his own assumptions about the Soviet Union that they are more likely to negotiate an arms limitation if we do not go ahead than if we do.

Mr. MUSKIE. I wish to say something on that point which the Senator has brought out. The Senator has said "more likely." This is something more than agreeing to go to the negotiating table. When I speak of the likelihood, I am talking about the substance of an agreement. We have to be concerned with that, too.

It was argued on the floor of the Senate that last year when we voted on deployment, the Russians indicated they were willing to go to the negotiating table. That is not the whole story. What is their attitude when they get to the negotiating table? It would take a crystal ball to foresee what their attitude would be, and I do not know or claim to know what that situation would be.

Mr. PROXMIRE. I thank the Senator. The Senator's observation goes to the heart of the matter.

The other point I wish to make is one that I think has been overlooked in this debate and I refer to the question of recognizing priorities, and that we have to make these hard choices; that when we go ahead with ABM it has an effect on what we can do with regard to our domestic problems which are so pressing and urgent.

I think no Senator has been more concerned and done more constructive work in preventing pollution or has made a greater contribution in connection with the Federal-State relationship than the Senator from Maine. I think he is eminently qualified to recognize the urgency of those priorities. It is always difficult to say we will not move for a marginal weapons system at this time because certain domestic situations must be met. I think the Senator from Maine, in posing this problem with respect to priorities and reminding us we cannot have everything we want, has made a real contribution today.

Mr. MUSKIE. I thank the Senator.

Mr. President, I yield to the Senator from Colorado.

Mr. DOMINICK. Mr. President, I did not have the pleasure of listening to the entire speech of the Senator from Maine. However, I did enter the Chamber during the process of his colloquy. I wish to make a few comments in this regard.

First, with respect to the point made by the Senator from Kansas about technical difficulties that are involved, I wish to point out that a panel of four very fine scientists appeared before the Committee on Armed Services in a public hearing. I am not sure the Senator from Mississippi brought out this point. I know he has in the past. Two of these scientists were against the ABM system and two were for it. Each of them, in response to direct questions, said this was the very best available technical mechanism for a defense of this kind that had been or could be developed under present technology. That statement was agreed to whether they were for or against the ABM. All four of them said that.

With regard to the blackout situation, and I do not wish to get into a technical discussion on the situation, the system of arrangements of radar which has been contemplated under this system would avoid that particular problem and a great deal of work has been done in connection with it. So I would think that although there are problems, and no one doubts that there are problems, under the present methods of deploying the system most of the problems that have been brought out, or a good many of them, have already been foreseen and circumvented by the planners who worked on the system.

With respect to the comment by the Senator from Maine on the need to convince the Soviets that we want meaningful arms limitations, I do not think anybody in the Senate or anybody in the Congress would disagree with the Senator. I think we all agree on that point. I cannot think of a happier situation than a viable arms limitation agreement which is properly supervised. I think it would be enormously fruitful for the Russians, for us, and for the entire world.

However, I wish to recount a few things along this line.

In connection with the test ban treaty, or moratorium—it was not a treaty—we followed through and said we would not do any more high-altitude testing. The Soviets said the same thing, but when it became in their interest to do it in 1960 and 1961, they unilaterally violated this moratorium and put themselves in a technical situation which, having gone forward, they had an earlier start or solution on some of the technical problems the Senator from Kansas has been talking about.

Mr. MUSKIE. That did not involve an agreement.

Mr. DOMINICK. That did not involve an agreement. It was a joint unwritten moratorium by verbal acquiescence.

Mr. MUSKIE. The Senator mentioned "verbal acquiescence." What does the Senator mean?

Mr. DOMINICK. We had gone along for a period of 18 months under a statement publicly made by the President of the United States that we would not make any more high-altitude tests as long as the Russians did not, and they did not. As a matter of fact, when they broke this unwritten agreement——

Mr. MUSKIE. The President said something. Did the Russians respond in kind?

Mr. DOMINICK. Yes. There were verbal assurances from the Soviets at that time that they had no intention of going ahead with this either as long as we did not.

Mr. MUSKIE. I think the language is important. I do not know if the Senator is paraphrasing the Russian attitude or position. An intention not to go forward is different than an agreement not to go forward unless there is a unilateral intention not to do something or a bilateral agreement with somebody not to do something.

Mr. DOMINICK. We tried to convince them of the fact that we did not intend to go forward with any more of these testings and we would not do so even though it was important to all kinds of applications, space and otherwise, if we had gone forward with it. We said we would not do it. I am sure the Senator from Maine remembers that well.

Mr. MUSKIE. I do.

Mr. DOMINICK. The time they violated this agreement was when they were before the so-called Belgrade group, saying again that they were not going to do anything in the way of disturbing what was going on, while at that very time they sent up the high altitude missile.

Mr. MUSKIE. I understand. Whether we thought that hope was documented

by a binding agreement may be another question, but I am sure we all hoped, by the coincidence of two unilateral actions taken by the two governments involved, that we had achieved an end of testing in the atmosphere. I am sure there are clearer illustrations in history of violations of agreements by the Russians. I understand that. The question is whether, now, we are so inhibited by history and documentation from trying again to work out an understanding with the Russians.

Mr. DOMINICK. We were never inhibited by that, we should not be, and I hope that we never will be. That was the point. The point I am making is that the United States, over a period of time, has tried again and again to impress upon the Soviets that we are not happy with our arms buildup, that we are ready to limit it; that it looks as though we are getting somewhere, and then, all of a sudden, we shoot off on a tangent again.

Let me illustrate the particular situation that we are faced with on the ABM. The United States has proposed not to build any more land-based ICBM's. We have a gigantic number of launchers, which the Russians know about. We have not built any more. We have not built any more Polaris submarines. We have a large number of submarines, and we have not increased them or replaced them or replaced them as they get older. We have a declining number of manned bombers. We had hoped—against experience, I might say—but we had hoped that in recognition of this, the Soviets would also level off their production, but they have not done so in any one of those fields.

This would indicate to me that we have done our best to impress on them we would like to get to an agreement on arms limitation and reduction just as rapidly as we can, that we do not want a proliferation of our weaponry. If we could reach such an agreement we would be delighted to do so.

Mr. MUSKIE. May I ask, in response, How do we identify a point where it is clear to both sides that the reaction of one side on continuing an activity is not a reaction to what the other side did earlier? If we are going to look for the point, because each side has unilaterally taken such clear steps to limit its arms that the other side can be sure that there is no risk of escalation, then we will not need an agreement.

We had Polaris submarines long before the Russians, and they are now engaged in producing their own. I cannot recall at the moment whether the dates of the beginning of construction of their Polaris program were at the time we were developing the MIRV program, but it is conceivable, unless the dates suggest otherwise. I do not have them. Their Polaris program was a response to our MIRV program. Thus, we can debate this until the cows come home.

The other point I make is that the Senator may be right. It may be that what we have already done to stabilize our own nuclear weapons development will be sufficient evidence to the Russians of the credibility of our initiative to work out a meaningful agreement. But it may not, as well.

We have to decide this question, not after we understand what the Russians' willingness may be, but now.

I must say that I regard the debate to be on the Senator's side of this question of MIRV, that development and deployment of the ABM is more meaningful in respect to our defense posture vis-a-vis the Russians than the addition of more Minutemen, because the Senator has told us that the additional Minutemen are offensive missiles and are not the answer to the Russian threat. It is argued that the ABM is the answer. The Senator from Washington (Mr. JACKSON) made an eloquent speech to that effect in this Chamber that few of us were privileged to hear. So that I think with respect to evaluating the attitude of the Russians, what we do about the ABM may be more persuasive than what we have done to discontinue production of more Minutemen.

Mr. DOMINICK. The intersting fact about that is that Kosygin himself and other Soviet leaders have said they consider the ABM a purely defensive weapon, for the purpose of protecting their own citizens and our citizens from being killed, and not as a threat to the other side.

Mr. MUSKIE. I do not know why we should take their word on that, when we do not take their word on other things when it seems to suit our purpose.

Mr. DOMINICK. They have already deployed their ABM.

Mr. MUSKIE. I understood that they had discontinued it.

Mr. DOMINICK. That is not so. I had some colloquy on that with the Senator from Tennessee (Mr. GORE) just the other day.

Mr. MUSKIE. I would be happy to get the facts.

Mr. DOMINICK. I brought up the fact that they are continuing the construction of their ABM system. They are modernizing their present system and are also developing a new one.

Mr. DOMINICK. Mr. President, I ask unanimous consent to have printed in the RECORD an article published in the Chicago Tribune dated July 27, 1969.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORDS UNRELATED TO ACTIONS

All indications are that the Nixon administration and the Soviet Union are getting ready for negotiations, including a summit conference, on a broad range of problems, including strategic arms limitations.

Andrei Gromyko, Moscow's foreign minister, coupled a scathing attack on Red China with an appeal for "friendly relations" with the United States in his recent address to the supreme soviet. Recalling President Nixon's statement in his inaugural address that we are moving from a period of confrontation to a period of negotiation with the Russians, Gromyko said his government favored "wide-ranging" negotiations with the Nixon administration.

Hubert Humphrey, in Moscow, said Premier Alexei Kosygin talked to him "in some detail and with complete and utter frankness and candor" about world problems and urged him to tell President Nixon and the American people how much the Soviet Union desires "to work with the United States in the cause of Peace." Humphrey was almost as rapturous about Kosygin as the egregious Ambassador Joseph E. Davies was about Stalin in World War II.

This sudden access of euphoria, so soon after the recent tragic events in Czechoslovakia, is disturbing. It is reminiscent of the "spirit of Geneva" in 1955, only a year before Russian tanks crushed the Hungarians; of the "spirit of Camp David" in 1959, only a year before Khrushchev insulted President Eisenhower and torpedoed the Paris summit conference and three years before he put nuclear-tipped missiles in Cuba; and of the "spirit of Glassboro" in 1967, only a year before the Russian invasion of Czechoslovakia.

With recurring armed clashes on their frontiers with Red China, which could lead to a major war, the Russians naturally would like some temporary accommodation with the United States that would assure its benevolent neutrality. Having bamboozled the United States with a so-called gentlemen's agreement against atmospheric nuclear tests, which they broke by testing monster warheads, and with a test-ban treaty which now forbids us to test similar weapons; having jumped into the lead in over-all offensive missile strength, and having deployed an anti-ballistic missile system, the Russians now would like to bind the United States with an arms limitation treaty that would prevent us from catching up.

We hope President Nixon will keep these considerations in mind when he enters into negotiations with the Russians. There is danger that they will be persuaded, by all the unreciprocated concessions we have made to the Communists in our efforts to end the war in Viet Nam, that we want peace at any price and can be pushed around.

Dean Acheson, former secretary of state, was a high priest of the "trust Stalin" cult during and after World War II, but he was disenchanted by bitter experience. He learned, as he has written, that the Russians use conferences and the forms of negotiation as "an instrument of war."

Acheson, as quoted in a recent Senate report on the soviet approach to negotiations, says the notion that "there is no alternative to negotiations with the Russians . . . is, of course, silly. For if there is no alternative, and if the Russians will only negotiate, as is now the case, on their own terms, then there is no alternative to surrender. But plainly there is an alternative, which is by action to change the attitude of the other party. . . . Action is often the best form of negotiation."

The soviet concept of diplomacy was best expressed by Stalin: "Words must have no relation to actions—otherwise, what kind of diplomacy is it? Words are one thing, actions another. Sincere diplomacy is no more possible than dry water or wooden iron."

O, but the present Russian leaders are different, it is said. Robert Conquest, a distinguished English author and student of Russian affairs answers that argument in the same Senate report:

"Russia is now ruled by a faceless group, almost all of whom took the first moves in their careers in the great purge of 1936–38. Kosygin went up in four steps, from shop manager in a Leningrad factory to minister, in about two years. This was at a time when the Leningrad Communists were being slaughtered on an even larger scale than elsewhere. And so it was with Brezhnev and Kirilenko in the Ukraine, where there was three survivors of the 102-man local central committee."

To have been promoted in those days was a sign of active complicity in Stalin's crimes. Conquest writes. He describes the Lenin-Stalin-Malenkov-Khrushchev-Brezhnev suc-

cession as a "dynastic disaster." And in the last two years, he adds, "we have seen an increasingly swift process of re-Stalinization." Even the long-discredited "short course" history of the Communist party, an embodiment of the Stalin myth, has been rehabilitated by the Brezhnev-Kosygin regime.

Such is the character of the present Russian rulers, who are so anxious, we are told, to work with the United States in the cause of peace.

Mr. PEARSON. Mr. President, will the Senator from Maine yield, so that I may address a question to the distinguished Senator from Colorado?

Mr. MUSKIE. I am happy to yield.

Mr. PEARSON. As the Senator has returned to the Chamber, recognizing that he has been here all during the session, we were debating and discussing the point made by the able Secretary of Defense as to authorizing the construction and deployment of the ABM system as a bargaining point as we enter into the talks that are contemplated with the Soviet Union.

Does the Senator from Colorado hold a similar view as to the ABM and say that it is essential as a bargaining point to go ahead with it at this time?

Mr. DOMINICK. I do not know that I would want to put it in those words. I should say that it is an important bargaining point; I do not say it is an essential bargaining point, no.

Mr. PEARSON. I asked the Senator that question because a point has been made and developed a number of times that we must have an ABM because the Russians have an ABM. The Secretary of Defense, in his own words, made it an essential bargaining point. The reason I address this question to the Senator from Colorado is that it was the distinguished Senator himself who first warned about and watched and studied the Russian deployment of a FOB system. Long before it was announced, the Senator from Colorado was doing some studying in this field. The testing of the fractional orbiting bombardment system did go forward, and the Russians have such a system today.

Mr. DOMINICK. That is correct.

Mr. PEARSON. It has been our judgment that the United States should not build or construct or deploy a FOB system. Does the Senator think that the United States should perhaps build an FOB system today because the Soviet Union has one, because if we do not have one and we enter discussions with the Russians, perhaps we would be in a weakened position?

Mr. DOMINICK. No, I do not think so at all. I hope we will never develop a FOB system.

The PRESIDING OFFICER (Mr. EAGLETON in the chair). Does the Senator from Maine yield the floor?

Mr. MUSKIE. Yes.

The PRESIDING OFFICER. The Chair recognizes the Senator from Colorado.

Mr. DOMINICK. Mr. President, I merely wish to finish the colloquy.

It seems to be that the FOB system which has been developed by the Soviets is designed either to attack our airfields, which can also be done with submarine launchers, or by air bombers; or for use as a city destroyer, which is something that gives me cold chills. I hope the United States will never develop a weapon which is aimed to strike against cities only.

Mr. PEARSON. Would the Senator from Colorado agree that perhaps the Soviet utilization of that system would be to negate any effectiveness that an ABM system would have?

Mr. DOMINICK. No, I would not. I have a deep reluctance to have us forego the deployment of an ABM system, if for no other reason than to give the President another button to save us from an accidental or an unauthorized launch in the middle 1970's, whether it be by the Soviet Union, the Chinese, the Egyptians, or whoever it might be at that point. I just cannot see putting ourselves in a position where the only alternative we would have would be to wreak a holocaust.

Mr. PEARSON. I thank the Senator from Colorado.

WORLD REFUGEE PROBLEMS

Mr. KENNEDY. Mr. President, refugee problems seldom dominate the headlines but the troubles of our time are taking a growing toll in the flight of people from conflict and oppression. All over the world, people are on the move.

In a recent series of nine articles, the Christian Science Monitor described today's vast movement of the homeless, the many governmental and private efforts being made to help them, and the continuing need for even greater efforts in behalf of our suffering fellow man. Because I feel these articles will be of considerable interest to Members of Congress and others, I ask unanimous consent that they be printed at this point in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, Apr. 23, 1969]

HELPING HOMELESS: WORLD DOES CARE

(NOTE.—The world's refugee problem is one of the biggest stories of the space age. Millions of people are either on the move or leading restricted lives in camps. A vast proportion have little if any idea of the future. This account, the first of a nine-part series on the world's refugees, sets the scene as viewed from Geneva.)

(By Carlyle Morgan)

GENEVA.—Suddenly by thousands, or gradually a few at a time—that is the way political refugees come about.

Right now, nearly 20 years after leading governments thought the post-World War II refugee problem was all but finished, there are still 2½ million such people setting out, awaiting further directions midway in their journeys, or being repatriated or resettled.

Though confined to this planet, this is one of the space age's biggest stories.

"We need not wait for an invisible invasion from outer space. Our environment is already being changed by a sort of invisible invasion from within."

The speaker is an "old hand" at one of the world's oldest yet newest problems—the burden that millions of homeless, stateless refugees place on the world's conscience.

In scope and even in essence the problem of political refugees has recently been changing, almost unnoticed. Certain of their needs remain the same. But areas of concentration and major currents of refugee movements across the world have altered radically from what they were only a few years ago.

The awakening to the long-term need, and the international efforts to aid the refugees, have built up to a cause on earth that is as big as the conquest of outer space.

The crux is a spacious regard for the rights of men, women, and children to be safe from political, religious, or racial persecution.

This right is being buttressed by international agreements and accepted as a duty of national governments and international organizations.

It promises to be a powerful and enduring force. This appears certain because of the scope of the problem—and because emerging new nations and the demands for change in older ones have been generating refugees as fast as or faster than they can be resettled or repatriated.

Two and a half million—that is as many refugees as there were 10 years ago.

They inhabit boxlike houses and frail tents in refugee camps. Or, with their families, the more fortunate ones crowd ships for faraway places, board chartered airplanes for their old homelands—or perhaps for new ones.

WHO ARE THEY?

Their names pack the files of offices scattered over a large part of the world, where experts record where to, where from, skills, languages, backgrounds, and causes of displacement.

But who are the refugees?

Certainly in this century they have had remarkable origins. The movement included a million Russians fleeing from the 1917 revolution into Western Europe or wandering from Siberia into China, Mongolia, and Manchuria.

Soon afterward Armenians were fleeing the Turks—and many Turks sought resettlement within new national borders when their birthplaces were placed under Greek control.

Jews in the 1930's sought safety from their wouldbe exterminators in the Nazi Reich.

After World War II southeastern Europeans waited in Paris for restoration of freedom in their homelands.

In 1948 the emergence of Israel heralded hundreds of thousands of new refugees. There the problem is as great as ever.

Farther east there has been the steady post-1949 stream of Chinese fleeing the mainland to Hong Kong and Macao.

Then there was the 1956 Hungarian crisis and the Algerian turmoil of the late 1950's and early '60's—both producing refugees.

To the dismay of an astonished world came the flight of many Czechoslovaks following the 1968 Soviet invasion.

And in Africa today there are thousands on the move from one country to another. But the hapless caught in the Nigerian-Biafran conflict are not classified as refugees in an international sense since they are confined to their country.

For international experts the word "refugee" has acquired a distinct meaning. It is defined as a person forced to leave his own country for a political, racial, religious, or some other social reason not judged to be criminal.

Felix Schnyder, former United Nations High Commissioner for Refugees, said of the problem:

STANDING ARRANGEMENTS FOR AID

"Of all the various types of evil which man inflicts on man, the suffering of refugees persecuted for reasons of race, religion, nationality, or political opinion has, throughout history, been among the most cruel and persistent . . . reaching a monumental and tragic climax in our own 20th century."

A leading UN legal specialist on refugees, Dr. Paul Weis, has pointed out that "while the refugee problem is as old as history, international action for refugees started only after the first world war when the Bolshevik Revolution brought in its train a problem of refugees numbering 1 million persons."

This action has established the rights

of refugees in international practice and has provided food and shelter for them.

Today a network of verbal and tacit international agreements makes the world a safer place for refugees. It helps to give them legal and social status.

The UN has made strides from League of Nations days. The league's refugee operations were undertaken for specific problems, such as the Russian refugees and those fleeing Nazi Germany.

Except for the Middle East problem, the UN has been able largely to generalize its approach to refugees.

Wherever refugees originate they are covered by standing UN arrangements for aid. The UN has also been able to "depoliticize" the aid. Its help carries with it no judgment on the policies of states which produce the refugees. The states have begun to understand this and are becoming increasingly cooperative.

This trust is part of the basis for today's worldwide movements of refugees. But it follows from this that detailed accounts of their odysseys are usually sheltered from unnecessary publicity.

Privacy regarding countries of origin and of destination is dictated by political and diplomatic need. And it helps to ensure the personal safety of individual refugees and families.

The rights of refugees—the willingness of governments to let them go from their homelands and of others to receive them in transit or as permanent residents—have developed slowly.

To give wide publicity to the name of a country from which refugees are moving, for example, could cause that country to close its borders to the outflow. East Germany did so when it built the Berlin wall.

MIGRATIONS REPORTED IN GENERAL

Also risky is to name the countries receiving refugees. It can give the appearance that the countries are critical of policies in countries from which the refugees fled. In extreme cases this could lead to charges that receiving countries were conniving with agitators.

One of the vital rights of refugees is that presenting themselves at borders of neighboring states without fear of being turned back. For thousands this can mean the difference between life and death, authorities say, or between freedom and unjust and indefinite imprisonment.

Despite the need for official discretion about today's migrations, these can be reported and charted in general terms. Their most striking feature is the recent, little-known shift in the refugee problem from Europe to Africa, while the Middle East refugee situation remains much as it has for the past 20 years.

In the Middle East 1½ million Palestinian Arabs are still living (some observers say virtually "rotting") in refugee camps. Authorities who care for these refugees provide food, shelter, clothing, some education, and work training. But in the Middle East the refugees are "caught." They are waiting for a political solution of the Arab-Israeli crisis to return them to normal living.

Africa is the next largest—and newest—problem. There some 850,000 are on the move. The number, however, does not include those fleeing from the dangers of war in Nigeria.

The concentrations seen in Europe after World War II no longer exist. Millions have been moved from there to the United States, South America, and Australia. Many thousands were resettled in Europe as permanent residents or citizens. The International Refugee Organization (IRO) moved a million from Europe before its operations ceased in 1950.

This does not mean Europe is no longer an important area in the world refugee problem.

"This would soon become evident," a high official in refugee work says, "if the Intergovernmental Committee for European Migration were to cease moving refugees through Europe to lands where they can find permanent homes."

No longer an area of concentration, Europe today would appear on a world chart of the migrations as a vast landing stage. Refugees flow to it from Eastern Europe. They also move across the Mediterranean from the coast of North Africa.

From Europe migrations flow out to Canada, some toward the United States, and larger currents to South America and Australia.

Refugees from Fidel Castro's Cuba make one of the more curious ripples among these broader currents. The Cubans are heading for the United States, but many now go by way of Spain. There they wait admission to the United States under the quota system.

Another concentration is Hong Kong. An influx a few years ago added 1 million to its population. Since then some—just how many is not precisely known—have moved into other Asian regions, or overseas. But most have stayed and are cared for by the Hong Kong authorities.

There are Chinese refugees in Macao and thousands of Tibetans in India and Nepal. (Some Tibetans are even farther from home in another mountainous state, Switzerland.)

Wars in Korea and Vietnam produced many thousands of homeless. But they remain, like the Biafrans, within national borders and do not count technically as international refugees.

Unnoticed by most of the world, political refugees have been changing in appearance. On the average they have darker skins than the refugees of yesterday. They are on the run from dangers less well understood by Western peoples.

"However," says an official who seeks to know as much about refugees as does anyone else in the world, "this refugee who looks at first sight so different that many of you don't even recognize him—he is the same man."

CONTINUING NEEDS UNDERLINED

That is the view of the current UN High Commissioner for Refugees, Prince Sadruddin Aga Kahn. The High Commissioner's work reflects the great change in the refugee problem. The new challenge focuses in Africa because of sudden changes of government, the emergence of new nations with unstabilized regimes, and rebellions in some areas still under colonial rule.

When he says that today's refugee is the same as yesterday's, Prince Sadruddin is underlining the refugees' continuing needs for legal protection, for recognized status in the country giving him asylum, for aid with passports or other documents.

But he is speaking just as emphatically of the refugee's need to become a part of the community where he finds safety, to become a productive member of the community, and be assured of a future there for himself and his children.

In the Middle East, where refugees' futures depend on settlement of the Arab-Israel conflict, the problem is the responsibility of the United Nations Relief and Works Agency. It is one of the UN's specialized agencies, with headquarters in Geneva.

When possible, the UN High Commission for Refugees (UNHCR) seeks permanent solutions of refugee problems in league with other international agencies.

These solutions also are helped by programs negotiated by the UNHCR with separate governments. They aid not only refugees but local populations with whom refugees hope to settle.

For example in Africa, the settlement of many refugees depends on programs for basic economic development in sparsely populated regions. Without this the regions could not provide food, shelter, or jobs, and there would be no established communities in which refugees could make their homes.

As UN experts explain, a refugee in Africa may flee across an "artificial" border set up by some past colonial government which cuts right across tribal borders. On the other side of the "colonial" border he often finds a "distant cousin" or other members of his tribe waiting to give him "traditional hospitality."

One result is that great numbers of such refugees may flow into an area unable to support a big increase in population. The inhabitants may be poor and already bearing heavy burdens.

The sudden presence of refugees impoverishes the local population even more. So UN-aided programs must provide immediate help. They must offer food and shelter for refugees and a means to enable them and the local population to produce larger and earlier harvests.

When these aims succeed, as they often do, the local peoples as well as the refugees gain permanent benefits. In some cases the arrival of refugees has obviously been to the advantage of the local population because of the international aid that followed.

So the UNHCR, termed "nonoperational" under its mandate, nevertheless is credited with arranging some of the most notable operations in the refugee field.

It gains from close cooperation with the Intergovernmental Committee for European Migration.

ICEM is not a UN agency. It started in 1951, largely on American initiative. It has moved more than 1½ million persons out of Europe, in addition to the million moved earlier by the IRO. The ICEM is "Western" in that it began as an agency to move refugees from Eastern Europe.

Another aid is the United States Refugee Program, which helps defectors and refugees from Eastern Europe.

Voluntary groups give indispensable service, though sometimes within limited fields because of religious or racial connections. Jews, Protestants, and Roman Catholics are all represented in these efforts:

The World Council of Churches, the International Catholic Migration Commission, and the United Hias Service play big parts. The International Committee of the Red Cross is another leader as are the League of Red Cross Societies and its sister organization, the League of Red Crescent Societies (Muslim). The American Friends Service Committee and the Save the Children Federation add their resources. An almost endless list of voluntary organizations indicates the extent of the work.

They help refugees to train themselves in countries of asylum so as to migrate to countries that need them as permanent residents.

Meanwhile, the ICEM supplies cheap travel and makes loans to migrants. And the UNHCR watches over their rights until they have secured social status or citizenship in the countries of their choice.

All these agencies help to lead the refugee home, amid what is described by some as "the century of the homeless man." Sometimes "home" is a new place. But often it is back in the land from which he has fled.

"Voluntary repatriation," as this is termed, is often the most desirable of all solutions, say the experts. This becomes possible when the refugee has lost his fear of going home. His country, even perhaps under a new and revolutionary government, accepts him on the understanding that he is not returning to overthrow the government by illegal means, or to agitate against it.

Such repatriation returned nearly 200,000 Algerian refugees who had fled into Tunisia and Morocco during the Algerian war for independence.

EXTENSIVE SKILLS BUILD UP

While the flow of refugees continues, a vast political, legal, diplomatic, economic, and psychological "know-how" has accumulated for their benefit among authorities and experts whose job it is to help them.

"It is a career of discovery," says the UN's Dr. Thomas Jamieson, speaking of his own and others' long experiences in the work. Dr. Jamieson, one of the classic figures on the refugee landscape, says this discovery needs to be shared by more of the world. Especially, he adds, by the "rich Western world," which he says needs to realize how much is yet to be done and how much more money is required.

UN horizons are broadening. Sixty-seven of its member nations support the UNHCR financially. But the agency budget is very small, and half the organization's time goes to raising money.

Prince Sadruddin is working toward financial support from all UN members, even if some can give only small or "symbolic" amounts.

It is not enough, in his view, that only about half the members give funds. He would like to see the big powers—even the United States—do more for the UNHCR.

Alongside the big shift of emphasis from Europe to Africa, a change in attitudes of the UN's Communist states has been welcomed. These two are probably the most significant developments of the whole refugee picture in the past three years.

They may, moreover, be interlocked. The change in the Soviet attitude has coincided with the growth of African needs.

Communist politics in the "third world" of which Africa is a part may help to account for this. But to some extent so may the East-West détente.

Politics aside, here is one of the more hopeful changes in a world which still produces political refugees as fast as or faster than it increases its means for solving their problems.

TWO MILLION REFUGEES: A KEY TO THE MIDEAST CRISIS

ARAB STAND

(By John K. Cooley)

BEIRUT, LEBANON.—At the heart of the conflict between Arab and Israeli are about 2 million displaced people.

Nearly a million Arab Palestinians fled Palestine during the Arab-Jewish fighting that attended Israel's creation as a state in 1948.

Year after year, the rolls of refugees, nourished in body by international charity, but in spirit only by hope of return to their lost homes, grew larger.

In the tented camps, the shacks, and the prefabricated houses, or in the comfortable dwellings of the more fortunate, "home" was somewhere else—in the towns and villages from which the refugees had fled.

In June 1967, tragedy struck again. Israeli armies swept across West Jordan and parts of Syria and Egypt. Nearly a million more people fled or were driven from their homes in the six-day Arab-Israel war or during the hostilities that followed it to the present day.

Since then, a new force is stirring among the refugees.

"Why," asks a young university graduate, now receiving military training in a camp of the Palestinian guerrilla organization Al Fatah, "should we fritter our lives away in useless dreaming or brooding, living from the handouts of the Western world's guilty conscience? It's much better to be living, and fighting, for our return home."

For the past year, the refugee camps have been losing their young and able-bodied inmates of both sexes.

No longer refugees

"So you see," the university graduate adds, "we aren't refugees any more. We are people, with an ideal and a country to fight for."

The country, he will tell you, is Palestine—a new Palestine where neither Jews nor people of any other religion will rule the others. The ideal is a coexistence of Moslem, Jew, and Christian in a secular state. "And we are ready to fight for generations, if we have to, to achieve it," the young man says.

Since 1948, United Nations agencies, most governments including that of the United States, churchmen, historians, and humanitarians have appealed to Israel to permit the return of the Palestinians—or at least allow them a choice, as stipulated in many UN resolutions, between return and fair compensation.

Israel's reply, as repeated last year by Defense Minister Moshe Dayan, has been, "There just isn't room." The bitter Arab comment on this is that morality has been sacrificed completely to expediency, and that Israel's Western friends, especially in the United States, simply do not care.

Since 1948, fewer than 100,000 Palestinians, under "family reunion" and "special-urgency" categories, have been permitted to return. In Israel, they and 300,000 others who never fled, live a life as second-class citizens. Those in West Jordan, Gaza, Syria's Golan Heights, and Sinai are obliged to live under a regime of military occupation, where retribution for resistance activity, real or suspected, is often swift and ruthless.

Family history cited

One family history, among hundreds of thousands of others, speaks eloquently. George S., once a well-to-do shopkeeper in Lydda, fled with his family in May, 1948, when trucks of the Haganah, predecessor of Israel's present army, rolled into Lydda's main street and ordered them to go.

Haunted by the fate of Deir Yassin, an Arab village where Israeli spokesmen later admitted they had, on April 10, 1948, killed about 250 Arab men, women, and children who had offered no resistance, George S. and his family moved to Nablus.

There George S. built a useful existence. His two sons went to school and also helped him to farm a small plot of land.

When war struck again, the family lost nerve. This time they were not forced out, but after hearing of the Israeli destruction of the Arab villages of Emmaus, Yalu, and Beit Nuba, they fled before the Israeli armies arrived. They felt betrayed by the Arab armies and their leaders.

Very essentials needed

On the way to the East Bank of Jordan, their little daughter, Laila, was killed in an Israeli air attack. With no relatives or close friends to turn to in Amman, George S., his wife, and his two sons at first lived in a tented camp in the Jordan Valley.

Then, in the fighting of February, and March, 1968, they were forced to flee for the third time. Today, George S. has found part-time work near his camp on the outskirts of overcrowded Amman. His wife grows and markets a few vegetables.

And both sons have joined the guerrillas of Al Fatah. One has been to Lydda—where an Israeli dentist now lives in their old home.

After June, 1967, the 175,000 Palestinians who became refugees for the second time since 1948, and most of the 350,000 newly displaced from the occupied zones needed, in the words of Laurence Michelmore, commissioner-general of the United Nations Relief and Works Agency for Palestine (UNRWA), "the very essentials of physical survival": food, water, shelter, blankets, clothing.

Jordan, the country hardest hit by the newest refugee influx, ironically also is the country which had successfully absorbed the most refugees before June, 1967. Palestinians were granted full Jordanian citizenship. The economy was thriving; hard work and effective use of United States and other foreign aid had raised the annual growth rate to 11 percent.

Before the June, 1967, war, 724,000 refugees were registered in Jordan for UNRWA rations and services, such as schooling. Since the exodus of June, 1967, and the following months, this figure has risen by at least 20,000—but many thousands more were not on any official ration rolls.

Close to 300,000 registered refugees remain on the West Bank. About 500,000 UNRWA registered persons and another 237,500 registered with the Jordan Government are on the East Bank. These include close to 40,000 from Gaza who fled to East Jordan before King Hussein's government decided to close the Jordan River bridges to them in July, 1968, because, it felt, the Israelis were trying to empty Gaza at Jordan's expense.

UNRWA now assumes alone the total responsibility for food distribution among East Jordan refugees. Assisted by voluntary groups like the Near East Council of Churches, the Save the Children organization, the Quakers, and the Mennonites, it provides medical, schooling, and various self-help services. Most recently, the guerrilla organization, Al Fatah, has provided one school, two clinics, and one hospital, run by its own personnel.

More funds sought

Some 10,000 prefabricated houses of metal, and asbestos board, for 15,000 families are being erected now to replace tents, blown away or destroyed in many camps by winter rain, wind, snow, and mud, or forced to move by fighting.

UNRWA is trying to scrape together more funds—it lacks $3.8 million of its $42.5 million 1969 budget, and has had to shorten food rations—for more prefabs. In the words of one UNRWA official, "they provide at least a decent minimum of shelter, warmth, dryness, and privacy."

On the West Bank UNRWA's basic services recovered fairly quickly from the June war. "In general," UNRWA said in its last annual report, "the cooperation between UNRWA and the Israel authorities continued to be effective."

But Israeli authorities have kept the formerly large refugee population in the Jericho area camps down to a few hundred families. UNRWA has repeatedly said that "its capacity to help will be much greater if," in accordance with the Security Council resolution taken in July, 1967, "the inhabitants who fled are allowed to return to the places where they were living before the hostilities and where UNRWA's installations and facilities already exist."

Urgent task in Syria

The most urgent task in Syria since June, 1967, was caring for 17,500 Palestinian refugees and about 100,000 Syrian ones from the Israeli-occupied city of Kuneitra and the nearby Golan Heights, which Israel already is colonizing with its own settlers.

Some refugees found shelter or rented quarters in Damascus. But about 8,000 moved into tented camps near Damascus and Deraa, in southern Syria. UNRWA and the relief agencies sought, as they did in Jordan, to alleviate the worst suffering with stoves, bedding, concrete floors under the tents, and other basic camp improvements. Food rations were augmented last winter with hot meals and extra-protein foods for children.

The 100,000 Syrian refugees are being cared for by the Syrian authorities and the Near East Council of Churches (NECC). Yoon Gu Lee, executive secretary of NECC, supervised construction of new housing units and delivery of emergency supplies.

"The Syrian authorities," he says, "have matched everything we have done many times over. This was help that really made a difference."

Lebanon's fairly stable, though slowly growing, 1948 Palestinian refugee population of about 170,000 emerged from the June war with the least new difficulties. Though Lebanon was not involved in land fighting with Israel in June, 1967, a few thousand

Syrians and others took shelter from fighting in the Marjayoun area of southern Lebanon. Local people and authorities care entirely for them.

Nationality acquired

Though Palestinians cannot legally work in Lebanon, about 20,000 refugees have acquired Lebanese nationality since 1948 and have become more or less integrated into Lebanon's free-enterprise economy.

An authoritative official source estimates that between 70,000 and 90,000 others, never registered with UNRWA, have, by one means or another, obtained Jordanian passports and so are entitled to work permits under the same conditions as other foreign residents of Lebanon. Despite this, a shantytown peopled by Palestinians—1948 refugee families—is one of the most disconcerting sights greeting a foreign tourist driving in from Beirut airport.

Perhaps hardest hit has been the Gaza Strip. This is the last remnant of British-mandated, pre-1948 Palestine. It was under Egyptian military rule from 1948 to 1956, and again after the Suez war in 1957 until Israel occupied it in June, 1967. Economists estimate it could support about 60,000 people without outside help.

Instead, Gaza had to cope with nearly 400,000 refugees by the time of the June, 1967 war. This figure is now down to about 308,000.

"There is no doubt," says a leading European official of one of the relief agencies "that the Israelis are following a conscious policy of emptying the strip of Arab inhabitants. Everything, from subtle persuasion to force, is being used to reduce the camp population."

Those in the Jabaliya camp, in northern Gaza, have been especially affected because of heavy Arab guerrilla and resistance activity in and around it.

Homes destroyed

More than 240 individual houses, Israeli sources admit, have been blown up in Gaza since June, 1967, a practice also followed in the West Bank and Jerusalem as a reprisal for real or suspected aid to guerrillas. UNRWA and other agencies have had to add hundreds of thousands of extra dollars to their budgets to provide basic services for these newly homeless and unemployed people.

Above and beyond the extreme bitterness of feeling in Gaza and the concentrated suffering there, impartial observers feel that the strip's population will have to be drastically reduced in any peace settlement, if ever it is to be viable.

The least publicized of Middle East refugees are about 350,000 Egyptians moved inland from the Suez Canal bank towns, heavily shelled in intermittent fighting from July, 1967 until the present. The Egyptian Government and religious relief agencies care for them.

Schools assisting

One small Egyptian village of 7,000, Oum Kinen, received 1,000 such refugees. Yoon Gu Lee reported that its people "gave 120 rooms free of charge, gave work to 97 people out of 150 able-bodied men; and quite a few people with skill began their business in the village, like shoemaking, carpet manufacturing and carpentry."

UNRWA cannot help these Egyptians, who depend on the U.A.R. government, the Roman Catholic organization, Caritas-Egypt, and the NECC. UNRWA does care for about 3,000 Palestinian residents displaced from Gaza and Al-Arish, in Sinai, since 1948 and the Suez War of 1956.

UNRWA's school system has sent hundreds of thousands of Palestinian youngsters into useful lives. During the school year 1967–68, UNRWA operated 446 elementary and preparatory schools—some in tents—for 179,591 Palestine refugee children. Another 41,602 were enrolled in government and private schools, covering the first nine school years.

Some 15,226 attended secondary schools, not provided by UNRWA but given allowances or subsidies, which in 14,000 cases were paid to the students themselves. Arab governments bear most of the costs of secondary schooling.

The UNRWA teaching staff of about 5,200 was seriously disrupted by the hostilities of June, 1967 and afterward. Arab nationals were at first not permitted by the Israelis to return to occupied territory. In Gaza, 48 were deported by the Israelis and six killed in the fighting that also destroyed many classrooms.

Youth activities centers

Strikes, curfews, mass arrests, demonstrations, detention of teachers, and intrusion of Israeli troops into rebellious schools seriously hamper the education of these children.

UNRWA operates 34 youth activities centers, a few preschool play centers for tiny Palestinian children and teacher training centers. There are three preservice residential teacher training centers; two in Ramallah, West Jordan, and one in Siblin, Lebanon. In Beirut, the Swiss Government initially financed a joint UNRWA-UNESCO Institute of Education. There are UNRWA vocational schools at Kalandia, near Jerusalem; Wadi Seer, near Amman, and in Damascus. A YWCA training center in Beirut also offers vocational courses to 100 Palestinian girls.

In Jordan, the record of job placement of UNRWA secondary-school graduates is impressive. Since June 1967, 130 local and 600 foreign employers' requests for graduates were filled up to the beginning of this year. Virtually all graduates of teacher training schools have found useful jobs.

Few graduates placed

Less successful has been UNRWA's program of placing graduates in on-the-job training with industrial firms in Western Europe. Only 27 out of 950 candidates were so placed last year. West Germany, however has agreed to accept more. For Palestinians without qualifications for vocational schools, UNRWA operates basic literacy and handicrafts courses in everything from cooking, sewing, and carpentry to first aid. There are also courses for blind or handicapped refugees.

What of the story, often heard in the West, that most Palestinians really do not want to go home, or have their own state? "The huge adherence to the guerrilla organizations disproves this," says a guerrilla leader. Last year, Professors Peter Dodd and Halim Barakat of the American University of Beirut's sociology department conducted searching case studies of 122 typical refugee families, about 800 people from all walks of life in all.

Their research showed that some 64 percent of "old" (1948) and 82 percent of "new" (1967) refugees definitely wished to return. Only 15 percent of old refugees and 2 percent of new refugees did not wish to return.

One of the Palestinian mothers questioned replied: "Your country is like your child. You cannot be separated from it for a long time. Your country is where you were born and no other country would be dearer to your heart."

ISRAELI VIEW

(By Francis Ofner)

JERUSALEM.—Over nine-tenths of the 1,300,000 persons who immigrated to Israel after the establishment of the state in 1948—and who now make up half of the country's Jewish population—were refugees when they fled from their countries of origin. But practically none of them now would think of themselves here as a refugee. Nor would other Israelis put them into this category.

For instance, Jacques Sadras was born in Alexandria, Egypt. When the Egyptian Army marched against nascent Israel May, 1948, Mr. Sadras was interned as a Zionist at the camp of Abukir in the Nile Delta.

After 15 months of detention, Mr. Sadras was taken handcuffed on board a ship in the Port of Alexandria and from there to Venice, Italy.

There he met and married Simha, also a refugee from Egypt. Emissaries of the Jewish Agency, who had come from Israel, soon put them on board a Haifa-bound vessel.

"After our arrival, we went to Kibbutz Ein Shemer, but left a few months later for personal reasons," Mr. Sadras says, "and the Jewish Agency stepped in again and put us up at the transit camp of Beit Lid, near Netania."

Couple lived in camp

Being a trained lathe operator, Mr. Sadras was sent to Beersheba, today a bustling city in the Negev, but then little more than an experiment in coexistence between immigrants from dozens of different countries. With so many newcomers arriving, the young couple had to live in a camp, even after their first boy was born.

The winter of 1949–50 was unusually cold for this warm region. "One February morning, I could not even open the hatch of the tent—we had been snowed in."

In the spring, the Jewish Agency gave the couple a newly built apartment consisting of one room, a shower cubicle, and a kitchenette.

The same year, Mr. Sadras was called up for his two years' compulsory military service.

"Those two years were hard for me and my wife," he recalls. "She and the boy had to make do with the monthly Army allowance."

While in the Army, he learned more skills, so that after his release in 1952 he was able to get a better job in Beersheba.

Further improvement came when Mr. Sadras' mother-in-law opened a very modest fish restaurant on the Jaffa seashore. It proved a great success. He joined her and now is prosperous, has a three-room apartment in Tel Aviv, a car, and three children.

"The years we went through were difficult," he now says. "But we are happy to be free in our own country—others have suffered more."

One of those who had it much tougher, is Mrs. Clara Landau-Bondi, a survivor of the Nazi extermination camp of Auschwitz and now a prominent ballet teacher in Jerusalem.

She was a student at the University of Zagreb, Yugoslavia, when World War II overtook her native country. For three years they were subjected to persecution under the Hungarian occupation forces, and in mid-1944, she, her sister, and their parents were deported to Auschwitz.

Fortunately her turn for the gas chambers had not come by the time the camp was evacuated in 1945 in view of the Soviet Army's advance. She survived the notorious "death march" back to Germany.

Successful ballet teacher

Eventually back in her home town of Sombor, in Yugoslavia, she heard that both her parents had been killed in Auschwitz. For a while, she took up her family's profession, ballet teaching and choreography.

In 1949, she asked the Jewish Agency envoy who had arrived in Yugoslavia, to take her to Israel.

"I arrived in Israel with one suitcase, no money and no knowledge of the language." But it did not take long to correct all three defects. Through a career as a midwife and a punch-card operator, she found her way back to ballet, married her pianist, and now runs the most successful ballet school in Jerusalem.

Another Israel refugee-turned-resident is Miss Tatiana Stepankova, formerly a commentator on Radio Prague, Czechoslovakia. When the Russians invaded her native coun-

try in 1968, she happened to be in Israel on a visit. She wanted to return home because she feels deeply attached to the Czech people. But she was advised by her friends in Prague and abroad not to return, because the Soviets would not allow journalists to exercise their profession freely, as they were beginning to before the invasion.

"I accepted with a heavy heart the invitation of my friends in Israel to join an Ulpan—a rapid Hebrew language course." By now she speaks Hebrew, but has declined an offer of a job from the Israel Broadcasting Service. Instead, she does public relations for a Tel Aviv hotel.

Tatiana's younger sister also went to an Ulpan and now is studying at the Hebrew University's Haifa branch. Their parents, who escaped later, have also found their niches in Israeli life. Unlike so many other families, this one is reunited.

Open nation

These three are true case-histories, including the names. They represent three major types of refugee immigrants—those from Arab and Moslem countries; from Hitlerian Europe, and from Communist-dominated parts of Europe.

The Israelis do not allow their immigrants to remain refugees for long.

The proclamation of independence states that "The State of Israel will be open to Jewish immigration and the ingathering of the exiles," and the "law of return" provides that "every Jew has a right to immigrate to Israel." That was one of the very first laws adopted by the Israeli Parliament over 20 years ago. The law further provides that every immigrant becomes a citizen with full rights as soon as he steps on the soil of the country, unless he specifically opts out.

Economically and socially, however, the process of shedding their refugee mentality and asserting their "Israeli-ness" takes more time. Still, the Israelis claim their record is second to none in their effort to integrate refugees with utmost speed.

It is estimated that nearly $2 billion has been spent for this purpose. This includes the payment of fares to Israel, the provision of housing at low rent or on long-term, publicly financed mortgages, the teaching of trades to newcomers, even reclaiming land for immigrants settling in farm villages, providing them with tools, working capital, and instruction.

To speed up the process of integration even more, a special government ministry was set up last year under Deputy Premier Yigal Allon. Whole series of training courses have been run to teach officials how to handle newcomers and in which way their countries of origin affect their adaptability.

At present, the country has 10 absorption centers and 11 immigrant hostels for newcomers with nearly 5,000 places. Another 10 such institutions with a total of 2,700 places are under construction and seven more, with 2,700 places are being planned.

Charge against Arabs

But the success story of refugee Jews does not diminish awareness here of the tragedy of the Arab refugees.

By now, little heed is being paid any longer to the question of who is responsible for their becoming refugees—whether the Israelis, as the Arabs claim, or the Arab leaders, as the Israelis assert.

The most important aspect of the problem, in the Israeli view, is that the Arab governments do not want to solve the refugee problem. Instead, the Israelis' say, the Arabs are anxious to keep it alive and to use the refugees as a political, propaganda, and military weapon against Israel.

It is perhaps little known that Israel has absorbed over 40,000 Arab refugees—5,000 of them before the 1949 armistice and the rest thereafter. They were all struck off the relief rolls of the United Nations.

The bulk of these refugees had come by 1952, but arrivals have been continuing under the reunion-of-families scheme at the rate of several hundred a year. In addition, some 14,000 permits for the return of 1967 war refugees have been issued, but so far only a fraction have been used.

As to a comprehensive solution of the refugee problem, the Israel government has repeatedly offered to pay compensation and to help in their resettlement, "provided it is part of a general solution of the refugee problem."

The return of refugees to Israel is considered unrealistic here. It would only create misery and unhappiness once more, Premier Golda Meir said in a recent speech. "What has taken place," she explained, "is actually an exchange of populations. We took some 600,000 Jewish refugees from Arab and Moslem countries, while about a similar number of Palestinian Arabs became refugees as a result of the 1948 war."

The number of the Arab refugees has been artificially inflated, the Israelis say, in addition to their natural increase. The root of the trouble is described here as the "stubborn refusal of the Arab governments to solve the problem."

EUROPE—STAGING POST FOR REFUGEES

(NOTE.—Twenty-four years after World War II, thousands of refugees are still on the move throughout Europe. West Germany received more than 28,000 in 1968. Tens of thousands fled Czechoslovakia following the Soviet invasion. But, as these reports show, wherever his destination and once over the initial changes, the European refugee settles quickly.)

GERMAN INFLUX

(By Harry B. Ellis)

GÖTTINGEN, GERMANY.—"We suggest they get housing more quickly if they choose a state like the Saarland," declared the West German official. "But relatively few take our advice."

He stopped, reflecting on hundreds of interviews over the years with German refugees from the Communist East.

"They say," he continued, "that the Saarland is too close to the frontier. We point out that the frontier is with France and friendly. But it makes no difference."

The official shook his head. "People who for years have lived close to a tense frontier want to bury themselves in the middle of Germany. They want no borders at all."

Speaking was Boris Schütz, representative of the West German Government at Camp Friedland outside Göttingen, four miles from the frontier with East Germany.

Hundreds of thousands of persons of German origin, some speaking little or no German, have flowed through the portals of Friedland, seeking new homes in the federal republic. They came—and still come, more than one thousand a month—from the Soviet Union, Poland, and the former Baltic states.

This mass of people forms part of the more than 12 million Germans who, since the collapse of the Third Reich in 1945, have fled or been pushed out of Communist lands in Central and Eastern Europe.

Every fifth person among West Germany's 59.8 million citizens came from areas now governed by Communist regimes, including Walter Ulbricht's East Germany.

In the immediate aftermath of the war Czechs and Poles, having suffered so much from Germans themselves, expelled indigenous Germans from the Czech Sudetenland and the Polish Oder-Neisse lands. Another huge group of Germans, fleeing Communism voluntarily, came west from East Germany.

Typical family seen

This flow continues. In 1968 more than 4,900 Germans escaped from East Germany, many of them risking fire from the guns of border patrols. Another 23,397 ethnic Germans came to the federal republic during the year from other Communist countries of Eastern Europe.

By the end of 1968, according to Kai-Uwe von Hassel, West German coffers had poured out $17.5 billion since 1952 to compensate refugees from the east and to reestablish them within the federal republic. Mr. von Hassel heads Bonn's Ministry for Expellees, Refugees, and War Injured.

The list of benefits is long. Take a typical family of four ethnic Germans—mother, father, and two children—arriving, bewildered and poor, at Camp Friedland from a Polish town.

Everything in the camp, food and new outfits of clothing, is free. The family's travel costs from Poland to whatever West German town they choose to settle in are paid by the federal government.

Each newcomer over 21 gets $25 in cash. Each child receives half that amount. The refugees, as new West German citizens, are entitled to a full range of social-security benefits.

The family is helped in obtaining public-financed housing. If the children speak no German they are enrolled in special schools, until they can catch up with other German youngsters.

"The family is free to choose what land [state] it wants to live in," Mr. Schütz remarked. "Theoretically each land sets a quota but in fact the refugee's choice has priority.

Losses assessed

"The problem is that popular states like Baravia or Baden-Württemberg have too many people and not enough housing. So we try to suggest places where they can get apartments quickly."

Germans leaving Poland legally are required by the Polish Government either to sell their property or to turn it over to the Polish Government. Many refugees arrive nearly penniless at Camp Friedland.

These property losses, too, are assessed "Perhap $7 billion has been paid out in this category," Mr. Schütz said.

German refugees from East Germany are processed at a number of camps, or transient facilities, throughout the federal republic. Camp Friedland and a similar installation at Nuremberg are reserved for ethnic Germans from nations other than East Germany.

A smaller facility at Zirndorf, on the outskirts of Nuremberg, processes all non-Germans seeking political asylum in the federal republic.

Friedland handles ethnic Germans from the northern tier of Communist states, excluding East Germany. The Nuremberg camp collects German refugees from Czechoslovakia and the Balkans.

"Our first effort," Mr. Schütz explained "is to determine that the immigrant is of German origin. Then we ask, Why did you come?"

How to qualify

The newcomer should have chosen the federal republic for German reasons—that is, as an expression of his Germanness—to qualify for refugee benefits.

"Ninety percent of our refugees come legally," an official observed. "The rest come illegally, by various routes."

The legal way takes time. Relatives already in the federal republic apply for their kinfolk in the east to join them. This application is filed through Mr. von Hassel's ministry.

The application then goes to the Communist government concerned. In Moscow the relay is through the West German Embassy. The American Embassy in Warsaw handles requests concerning Poles.

Communist authorities then decide "yes" or "no." For years—following the first mass expulsion—Polish officials continued to clear ethnic Germans from the "western territories." These were former German lands east of the Oder and Neisse Rivers, awarded to Polish "administration" by the Potsdam Agreement.

But the Poles allowed relatively little emigration from East Prussia, taken from Germany and divided between Poland and the Soviet Union after World War II.

"We applied 18 to 20 times," an East Prussian refugee explained at Friedland, "and always were turned down."

"The last year Gomulka [Communist Party chief Wladyslaw Gomulka] said over the radio: Whoever does not want to be a Pole, but prefers Germany, let him leave. So we applied again," the refugee added, "and received permission."

"Now," remarked Mr. Schütz, "we get 350 or more ethnic Germans from East Prussia monthly. Not from Soviet East Prussia," he amended. "None are left there."

The current exodus from Poland includes a number of German Jews, most of whom go to Israel. A surprising number of East European Jews choose the federal republic as their new home.

Emigration climbs

The number of ethnic Germans emigrating from Czechoslovakia climbed sharply during the 1968 détente, after Alexander Dubcek eased the Communist reins and before the Soviet-led invasion of Aug. 21.

"Those Germans who come from Czechoslovakia," one official observed, "often arrive with cars crammed with household goods. Those from Russia and Poland generally arrive dirt poor."

"Germany under Hitler," one observer stated, "caused much of the great human upheaval in Europe before and during the war. Now, ever since the Nazi collapse, Germans themselves have become the refugees."

"These people," remarked another source, "are a net gain to the federal republic. They work hard, driven by a compulsion to catch up with other Germans."

"Even an electric toaster," Mr. Schütz declared, "is a sensation to many people who come through Friedland. Men go out from here and beg to work 80 hours a week to get their families started."

Every able-bodied German who returns can find work. At the beginning of March, 1969, the federal Ministry of Economics listed 625,000 unfilled jobs in West Germany.

Since 1949, when both the federal republic and East Germany were founded, about three million Germans have deserted East Germany for the economic glitter and political freedom of West Germany.

Until the Berlin wall was built in 1958, the inflow from East Germany was far larger than from the rest of Eastern Europe combined. Now the reverse is true.

Means of exit limited

East Germans must run a gauntlet of barbed wire, mine fields, and machine-gun bullets to escape. Ethnic Germans from Poland, the Soviet Union, Czechoslovakia, and the Balkans still have legal—though limited—means of exit.

The loss of German citizens threatened the existence of East Germany. Exit of Germans from non-German Communist lands, on the other hand, often is regarded as purifying the country of alien elements.

Between 1950 and today nearly 650,000 ethnic Germans have entered the federal republic from Communist lands other than East Germany. This is in addition to the convulsive, uncontrolled expulsion movements at the end of the war.

The common denominator of the two great classes of German refugees—those from East Germany and those from elsewhere—is escape from communism.

Once in the federal republic the newcomers tend to blend with West Germans and soon are indistinguishable from them. This is the key differential the refugee question in West Germany has from the problem in other lands.

The word "refugee" connotes a displaced individual, eking out a meager existence on charity in an ugly camp. Millions of unfortunates—Arabs, Africans, and others—fit this concept.

Not so German refugees. West Germans have the money, jobs, and political will to absorb their ethnic brethren, uprooted in one way or another by the Nazi holocaust.

A CONTINENT THAT'S ON THE MOVE

(NOTE.—The creation of African states—particularly during this decade—has shifted the world's major refugees from Europe to this continent. As new states emerge, many minority groups flee—thus becoming refugees.)

(By Frederic Hunter)

Africa is a continent of refugees: political, ethnic, European, Asian, and, most of all, African.

People have always been on the move in this continent. But in the past they did not present the huge refugee problem they do today—that is a product of African nationhood and this decade.

Throughout history Africans have been populating a largely unpeopled continent, vast stretches of which are still sparsely settled.

Families, clans, and even tribes established themelves by fission. Empires built on trade rose and fell. Others built on military might dominated regions and their peoples for hundreds of years.

Some of those made homeless by war fled beyond the reach of their enemies into virgin land—or that of even weaker peoples. Others assimilated—or were assimilated by—the victors.

Before the era of colonialism the processes of movement inside Africa were largely unknown to the outside world. Africans displaced by the processes of movement outside the continent—by the European and Arab slave trades—were considered merchandise, not public charges.

Under colonial rule European administrations acted as higher authorities to settle the conflicts which displaced peoples. Colonialism tended to halt the age-old African migrations, to freeze the expansion and contractions of ethnic hegemonies.

DECEPTIVE AURA GIVEN

European rule, backed by the muscle of colonial armies, gave Africa a deceptive aura of stability and quiescence. This rule also imposed upon the continent a set of boundaries drawn in 1884 by European powers with little knowledge of African tribal territories.

The emergency of African colonies into nation-states—in large part a process of the last 10 years—has produced social and political, ethnic and economic upheavals virtually unparalleled in the continent's history.

Those upheavals have produced hundreds of thousands of refugees.

Most have fled from warfare or terrorism. The problems of minorities—usually ethnic ones—have triggered most of these conflicts. They have sprung from the failure of peaceful efforts to define the role of these groups within the nation-state.

In most cases these ethnic-minority groups have—in fact or in appearance—dominated a sector of activity. Other groups have seen this dominance as detrimental to their interests. Eventually they have reacted violently against it.

Other conflicts have resulted from pressures to resolve within the framework of the modern state the problems posed by large cultural minorities or by nonconforming religious groups.

MANY PEOPLE SURPRISED

These African conflicts surprised and shocked many people, especially in the early days of nationhood when many assumed that colonial calm would carry over into independence. But colonialism was itself a type of social organization based on political domination by a minority.

With the thawing of the colonial freeze Africans began to sort themselves out in the more fluid atmosphere of national independence.

But that atmosphere proved less fluid than many Africans expected. The legacy of colonialism, that part not to be rejected, imposed curbs just as colonialism itself did.

Among the most important were the national boundaries.

The resolve to preserve these boundaries is great—despite the lip service rendered the concept of Pan-Africanism.

Thus in the postcolonial era people who pushed across internationally recognized boundaries found that they were no longer free—as they had been before colonialism—to settle where they could. Instead they were international refugees.

Generally speaking, the colonial powers removed themselves from black Africa without large-scale conflicts. The exception, Portugal, is fighting anticolonial wars in the three African territories it retains. Thousands of refugees have fled from these territories: 61,250 from Portugese Guinea on the West African bulge, 30,150 from Mozambique. About 90 percent of the latter have fled to Tanzania, where most Mozambique liberation movements are headquartered.

CIVILIANS TERRORIZED

Black Africa's most violent anticolonial war has taken place in Angola where both sides have resorted to terrorism and intimidation of civilians. More than 360,000 refugees have left Angola, virtually all of them going to the Congo.

Even as a United Nations trust territory, Rwanda was essentially a feudal kingdom. In the years just prior to independence tribal warfare beset this tiny, densely populated central African nation. It pitted the ruling class, the tall, regal Tutsis, a mere 15 percent of the population, against the Hutus, their age-old vassals.

As the administration of Belgium, the UN trustee, was coming to an end, the Hutus succeeded in overturning Tutsi political domination in one-man, one-vote elections. Hutu representatives then deposed the Tutsi monarch. This action and the resumption of Tutsi-Hutu clashes, many of them bloody enough to evoke cries of Tutsi genocide, caused perhaps half the country's Tutsi population—about 200,000—to flee.

The problems posed by displaced Rwandese lodged in camps bordering their former home land illustrate some of the difficulties involved in resettling refugees in Africa and elsewhere.

An influential group of high-born Tutsis, called the Iyenzi, agitated within the camps against permanent settlement outside Rwanda. Some of them led attacks against their homeland, hoping to return to power. At one point they penetrated to within 12 miles of Kigali, Rwanda's capital.

OTHER PROBLEMS CAUSED

The unwillingness to resettle caused other problems. It prevented the camps from becoming self-supporting and tended to make the Tutsis professional refugees. It aroused the resentment of host-country citizens who received no outside support as did the refugees. In addition, the Tutsis, who measured wealth in cattle, took to agriculture reluctantly, disdaining it as Hutu work.

These refugees—and especially the revanchist Iyenzi—produced instability in the entire area surrounding Rwanda.

Their presence on Rwanda's borders posed more than strategic difficulties for Rwanda's

Hutu government. It also endangered the peaceful existence of the Tutsis remaining in Rwanda. This in turn impeded the country's development since the government depended upon this educated group in order to function effectively.

Tiny Burundi, Rwanda's neighbor to the south, approached independence in a similar state of feudalism. Due to less-defined ethnic divisions, however, it escaped intertribal clashes. But the entrance into Burundi of Rwanda's Tutsi refugees tended to upset this balance. Some observers point to the Tutsi influx as one of the factors which caused the assassinations of Burundi Premiers Prince Lewis Rwagasore and Pierre Ngendandumwe, the attempt to assassinate Premier Leopold Biha, and the 1966 overthrow of the monarchy.

Tutsi refugees also participated in the 1964 antigovernment rebellion in the Congo. Hopes of arming themselves for another attack against Rwanda seem to have motivated them.

Little conflict preceded the Congo's accession to independent nationhood. Due to the country's lack of preparation for self-government, however, and widespread misunderstandings as to what independence would involve, racial distrust deepened to the point of combustion just prior to the transfer of powers.

The conditions of the first weeks of Congo nationhood in 1960—uncertainty, a shaky, inexperienced government, a popular sense of betrayal by politicians, and the Army mutiny—ignited a panic among whites. They fled to Rhodesia and Uganda by car, to Brazzaville and Bangui by ferry, and to Rwanda across the eastern lakes at night. They flew from Leopoldville "loaded like cordwood," as some have recalled it. They arrived in Brussels owning only what they carried. Perhaps as many as 50,000 whites left the Congo at this time.

A similar situation gripped Equatorial Guinea a few months ago. There the actions of an inexperienced government caused Spanish settlers to panic and flee.

THOUSANDS DISPLACED

All of these situations arise from a common situation: in the displacement of a politically dominant ethnic minority or in attempts to displace such a minority.

This is the great African political adjustment of the decade.

The other great African adjustment causing the displacement of peoples is that due to domination—or fear of domination—by an ethnic minority in the economic sphere. It causes the displacement of one group in order to extend economic opportunities to another, usually a group more valuable politically to the leadership.

This process has displaced thousands of Asian merchants in East Africa. It probably will displace more. East Africans tend to regard the Asians as having a stranglehold on local retailing.

It also has displaced highly trained economic or administrative elites, distrusted by local peoples as controlling their government administration or certain fields of economic activity.

Among such displaced in the early 1960's were the Dahomeyans who staffed the colonial civil service in French West Africa. The Balubas of Katanga Province in the Congo, another administrative elite, fled fearing reprisals from other peoples of the region should the Katanga secession succeed.

About 300,000 Balubas returned to their ethnic homeland, Kasai Province, within the first year of Congolese independence. While the Katanga secession was being resolved, another 30,000 Balubas lived in a refugee camp in Elisabethville under United Nations protection.

The Ibos of Nigeria are perhaps a special case of this type of displacement.

Long resented in parts of Nigeria, especially the north, for their dynamism, their assumptions of superiority, and their control of administrative and retail posts, the Ibos were the victims of pogroms when resentment burst into violence after the assassination of northern leaders at the hands of a group of predominantly Ibo military officers.

MASSACRES BREAK OUT

Thus, in the Ibo case, the fears of economic domination combined with anxiety over political subjugation culminated in violent anti-Ibo massacres. These pogroms convinced many Ibos that they could not live safely outside their ethnic heartland—the Eastern Region of Nigeria. Several million of them fled there and later declared its secession as the Republic of Biafra.

During the near two-year course of the Nigeria-Biafra war, secessionist territory has been surrounded by federal forces. The difficulties of feeding, clothing, and caring for hundreds of thousands of refugees in a Biafra which is landlocked and cut off except from the air have been immense.

Other minority problems have caused the displacement of 121,000 Sudanese. There refugees have left their homeland due to more than a decade of sporadic civil war raging between the Arab north and the black cattle-raising nomads of the south. Basically at stake is the place in the Sudan, declared a Muslim state by the Arab majority, of a significant non-Muslim minority.

The position of large cultural minorities has caused similar problems in neighboring states. Ethiopia faces a serious separatist challenge in Eritrea, the province bordering the Red Sea. A dominant factor in this struggle is the place of a Muslim, Arab-influenced minority in the ancient Christian kingdom. More than 30,000 Ethiopian refugees have fled to the Sudan as a result.

BORDER WARS CALLED OFF

The ethnic solidarity of the Somali peoples, many of whom wander widely as shepherding nomads, have caused problems to Ethiopia, Kenya, and the French Territory of Afars and the Isaas, formerly French Somaliland. Although the Somali Republic has called off border wars with its neighbors, it still acts as the country of asylum for refugees numbered at more than 400,000 by some counts.

Some observers regard the 1964 Congo rebellion as largely an effort by minority tribes—the Tatela, Kusu, and related ethnic groups—to secure greater national influence. While the rebellion unified a wide variety of malcontents, these observers believe that Tatela-Kusu grievances acted as the engine behind it. The rebellion pushed more than 70,000 Congolese over the borders seeking refuge from the fighting.

Zambia has encountered special problems in trying to determine the place in a nation-state of nonconformist religious groups. Among these are the Watchtowers and the Lumpa sect of prophetess Alice Lenshina. These groups have instructed members not to participate in political activity, a prohibition which has led to suppression and coercive action by the Zambia Government.

VARIETY OF CLASHES

In a variety of clashes government forces have killed hundreds of sect adherents and have driven others from their villages. A number have fled beyond the borders of Zambia.

Mention must also be made of the continuing migrations from the countryside to the city. This process is one of the most significant now occurring in Africa. It has resulted from the desire of many young Africans to experience the opportunities and glamour of city living. It has swollen many African cities—Kanshasa, Lagos, Nairobi, and Accra, for instance—beyond their capacity to support the influx.

Those migrating to the cities are refugees in no customary sense. But many have fled, as refugees do; they have left behind stagnation, societies run by conservative elders, and economic deterioration especially onerous in rural areas. Many do not find employment in the cities. And, like refugees, those who cannot lodge with relatives are homeless and displaced.

One would like to write that African refugees problems—and the minority adjustments which underlie many of them—will soon be resolved. Little evidence, however, demonstrates this view.

For the moment Africa's minority problems remain—as do the efforts of the new African nations to harmonize the demands of nationhood to those of minority groups.

Africa's refugees also remain. They are the wages paid by the ethnically oriented societies of the past for emergence into non-ethnically oriented nationhood.

FLIGHT TO HONG KONG

(NOTE.—It's a tight squeeze in this British colony—400 square miles for 4 million people. And half the populace are refugees, with more arriving each day from mainland China. That is the problem in Hong Kong. But, thanks to British pragmatism and Chinese initiative, it is being kept at manageable proportions.)

(By John Hughes)

HONG KONG.—It is a night without a moon, and the mist hangs low over the South China Sea, clinging to the rippling wavetops.

Cautiously the "snake boat" works its way through the coastal waters that divide China from Hong Kong. Suddenly there is a challenge. A police boat looms through the mist. A searchlight flares. There are shouts and splashes as passengers on the snake boat fling themselves over the side. Some strike out for shore. The sturdier ones make it and stumble, gasping, inland.

Another batch of refugees from Communist China has found sanctuary in Hong Kong.

Such scenes as these occur daily in the waters of this British colony as Chinese, who have decided to put their homeland behind them, make the break for life in what still may be a Chinese city, but one over which the British flag flutters.

Of Hong Kong's nearly 4 million people, about half are refugees from the mainland. After World War II, Hong Kong was a drowsy little tropical outpost with a population of less than a million. Then the Communists took power in China. Peasants from Kwangtung and capitalists and rich businessmen from Shanghai came pouring across the narrow land border into Hong Kong. By the end of the 1940's, Hong Kong's population had doubled. By the end of the '50's it had trebled.

INFLOW WORKS BY CYCLES

Since the great influx of the '40's, the flow of refugees has gone in cycles, depending on conditions inside China. In the summer of 1962, after two bad harvests and a resulting food shortage, some 160,000 Chinese surged across the border, breaking down the chain-link fence in the attempt to gain refuge in Hong Kong. About a third were arrested by British authorities and returned to China. The others have remained.

In ensuing years, the flow took a dip until the chaos of the "cultural revolution" in 1967.

At the peak of violence in China, more than 1,000 persons a month were slipping past Communist security patrols and making for Hong Kong. The colony's director of immigration, William E. Collard, recently calculated the number of "illegal entrants" into Hong Kong during that year at 18,000. Now the number has dropped to somewhere around 400 a month.

But since 1962, when the land frontier was reinforced, the bulk of refugees have come by water. Occasionally shots are heard from the Chinese side of the border fence; it is presumed that Communist guards have

opened up on some escapee trying to cross by land.

However, most refugees trickle along the coast to Hong Kong in junks and sampans, or pay the price for a hazardous ride in a snake boat, whose owner makes a living running human cargoes through both Communist and British patrols.

Some of the most venturesome walk over land as far as they can, then try swimming across coves and bays which divide Chinese territory from British. At low tide, they can cover some distance by wading but must still swim part of the way through open sea.

Thus, because of its accessibility to the mainland, Hong Kong is still the magnet for those disillusioned by the direction of events in China. Tibetan refugees have fled to India, and there has been some movement to the Soviet Union from minority groups scattered along China's northwest border. But the bulk of refugees have come funneling out through Hong Kong and to some extent through the Portuguese colony of Macao, 40 miles away across the estuary of the Pearl River.

BASIC SERVICES STRAINED

For the British, this poses obvious problems. Hong Kong is but 400 square miles in area, counting all its outer islands. Hong Kong Island itself has an area of 29 square miles, and it is desperately overcrowded.

The British argue that they have a primary responsibility to the 50 percent or so of the population actually born in Hong Kong, as well as to the others who have since made it their home. There is only so much the government can do. Housing, the school system, and basic services are already strained. Further immigration must be limited unless Hong Kong is to be swamped. Thus goes the official argument.

QUOTA NEVER FILLED

This has led to considerable criticism from abroad, for the official British policy is to hand back to China those Chinese who enter Hong Kong illegally. "Legal" emigrants to Hong Kong from China are limited to 50 a day in terms of an agreement between the two governments. By this is meant emigrants who have sought the permission of their government to leave, who have been issued with the necessary documents, and who come by train or foot across the prescribed crossing point at Lowu, completing all necessary formalities on both sides of the border.

The Chinese have in the past encouraged the blind, the aged, or the maimed, considered useless to a Communist society, to quit China for Hong Kong. But the prospect of any able-bodied man, particularly one disillusioned with the regime, getting such permission is remote.

Thus the 50-a-day legal quota never has been filled.

Anyone else who heads for Hong Kong is considered by the British an "illegal immigrant." Not only must he circumvent Communist guards and patrols on the Chinese side of the border, but he also must run the gantlet of Royal Hong Kong Police patrol boats cruising the colony's water boundaries.

In practice, however, the rules get bent. Refugees who slip past the British patrols and reach land are allowed to stay. When they seek registration and identity documents no questions are asked. The rule of thumb is that they are supposed to be returned to China if caught at sea. However, since the cultural revolution even this provision has been waived. Because of its delicate relationship with China, the Hong Kong government is reluctant to discuss this waiver. But, in fact, no refugees have been handed back in recent times.

TAIWAN SCREENING STRICT

What do go back are the junks and boats on which the refugees fled China. For these, in a Communist society, are considered state property, and the British are scrupulous about sending them back, usually in tow of a Chinese tugboat.

One of the problems confronting the British is that few other countries throughout the world appear willing to absorb refugees from China. The Chinese Nationalist Government on Taiwan is apparently unenthusiastic, despite past promises. Chinese refugees who seek residence on Taiwan have to undergo strict political screening. Officials involved in the process also agree that the Nationalists seek only the best qualified and seem little interested in run-of-the-mill refugees.

Some Chinese arrivals in Hong Kong emigrate to Canada or the United States. But Canada primarily seeks experts, and though U.S. immigration laws have been liberalized, the ceiling for any one nationality is still 20,000 a year. Chinese who already have relatives in the United States can acquire visas fairly readily. For others the process is slow, and the 20,000 target has not yet been reached.

LABELING DEPLORED

The prospect for the bulk, then, is life in Hong Kong. But there are no refugee camps in Hong Kong, no sprawling settlements of easily identifiable escapees from China. Says one British official:

"When foreigners come, they say: 'Take me to your refugees.' And they find it difficult to understand when we tell them that the refugees are all around them. Their tourist guide may be one, their tailor, the man who drives their car, the boy who runs their hotel elevator."

"We don't set up refugee camps," he added. "In fact we don't even like labeling people 'refugees.' When you put them in camps you give them a refugee mentality. You insulate them from normal society. They lose the will to fend for themselves."

"This," as one official concedes, "sounds brutal. It's a policy which again gives rise to misunderstanding abroad. But in Hong Kong we believe it has been best to throw people into the community, releasing all their energy to fight for themselves."

This does not mean that the Hong Kong government has sat back and done nothing. The government has embarked on, and completed, some impressive programs of basic development and services. But these are across the board, for the entire community. Refugees participate.

Says one official: "After the 1962 influx, a lot of people from abroad came to us and asked us how they could help our refugees. I'm afraid many of them wanted a single identifiable refugee project with which they could be associated.

IMMIGRANTS BUILD PROGRESS

"But that wasn't the way we were thinking. We told people how best they could help the whole community—of which many were refugees. One of the most intelligent and understanding responses came from the Government of the United States. They built a badly needed technical college. It wasn't confined exclusively to refugees. But it helped tremendously in absorbing them into the community, which was our objective."
